This resolution is the highest evidence of the fact that the masses of the English people themselves have in their minds and hearts a public sentiment against the great naval and military program in England. The naval and military program in England is getting to be extremely burdensome to the taxpayers In Germany it is causing the increase of socialism; and in that country the last budget demanded by the Emperor has been held up in the Reichstag by the socialistic element, and you have not heard much lately of the German Government taking stock in international disputes. Germany has a dispute at home, and owing to the censored press in Germany it is doubtful whether the American people as a mass will ever know the enormous trouble they are having in the Reichstag over the Emperor's military budget.

The Japanese are to-day staggering under the Russian war debt and under their naval and military debt, caused by endeavoring to maintain a great army and a great navy. They tell me that in many instances the Japanese subject is called upon to pay one-third of his net income in the way of an income There is, however, a spirit in Japan that will tolerate more taxation by the Government than will ever be tolerated

in America.

If history teaches me anything, it teaches me that no government was ever preserved by enormous armies and by enormous It teaches that when you take away from the private citizen the substance which he has earned and convert it into salaries and expend it through the Public Treasury, the bur-dens of expense get to be so great that the people themselves destroy their own Government. The great Governments of the past have not been destroyed by outside influences. Some countries like Poland have been dismembered, but the pages of history teach that the great Governments have been destroyed by internal dissensions, caused by favoritism, caused by militarism, and caused by all those influences which follow overtaxation and the expenditure of too much money from the Public Treasury and the favoritism which always follows.

Now, since England makes us this proposition, unless we give the Declaration of Independence and all of the utterances of all of our great statesmen the lie by our action, we should give the example to the world by taking the lead in this great move-ment and showing that we are a Nation that believes in peace, and that we believe in the development of friendly trade relations with all the nations. These peaceful means can make this Nation the best beloved on earth, and make it the happy

country as well as a happy country in which people may live and rear their families. Now, unless we throw all these considera-tions aside and turn back on the dial of time the hands for centuries, and go back to a period when brute force ruled men, we must accept the resolution in good faith, and not only by invitation step up by the side of the Lord of the Admiralty of England and say "We will not only keep pace with you, but we ask you to-day to follow us in the vanguard and march toward peace and disarmament of the world." That brings about a condition where all the past experience of all the great Governments of the earth may be used for the benefit of humanity, making them better, making them purer, making them nobler, making them stronger physically and intellectually than they have been in the past, and not spend millions in destroying them and educating into them the flendish dis-

positions which cause nations to go to war.

It does seem to me that in all this age where so much is being said about peace, where we spend so much for public education here and throughout the world—it does seem to me as if we ought to reach a point somewhere during our day and generation when some nation can take some decided step, as the great head of the English navy has taken, for the disarmament of nations. When that time shall come we of this day and generation will be blessed by those that follow, and we have accomplished somewhat what the meek and lowly Nazarene taught would be accomplished when His principles found lodgment in the hearts and minds of men and found expression in governmental action, when a whole nation will act as one man, and that is, "Love your neighbor as yourself." Then all nations will be friends and not enemies.

When our people have reached that point we will be able to erect here on this American Continent a magnificent temple of liberty, in which shall dwell forever unity, love, and happiness, and all people will rise up and call us blessed. [Applause.]

May the Ruler of the Universe speed that happy day! How wicked, indeed, must be the human heart, how selfish naturally. if, with all the thousands of schoolrooms, with all the teachings of all the churches, whether you shall study the religion of Jesus of Nazareth, whether you shall study the religion of Mohammed, whether you study the religion of Ahura-Mazda, whether you shall study the religion of Buddha, whether you shall study the religion of Confucius—they all teach the same brotherly love, and they all teach that there is a unity of interest, that there is a common purpose, that there is a common destiny for men, and if we work out our destiny to the fullest fruition we must work it out by a harmonious plan agreed to by all the people of the earth. We can not live to ourselves

It is utterly impossible for nations to live alone. We must live with our neighbor nations, and, if we mean peace, we must take the first step which leads us toward peace. We can not cry "Peace! Peace!" and at the same time be preparing and standing for war, war, war; but if your neighbor, who was perhaps your friend, should go about among his neighbors and say, "I like my friend from Kansas, Victor Murdock, now, but I do not know what he may do in the future, and therefore I am buying myself a big pistol and a Winchester rifle, and I have a good stock of arms and ammunition, and if he ever turns against me I am fixed and ready for him," then my good friend, Mr. Murdock, with his good judgment, with his good sense, would at once go to work and prepare for his defense. So, as an individual prepares against an individual an aggregation of individuals prepares against an aggregation of individuals, with this difference: If the thing went too far with individuals the Government would step in and put both the individuals under bonds to keep the peace; but, unfortunately, there is no police or force that controls the nation. The nation must take the step of its own initiative, and therefore the nation must, in its sovereign will and determination, disarm itself by its own action and its own volition. We can not blame the nations of Europe for what they think of us. I have heard my good friend from Alabama [Mr. Hobson] talk about the great Japanese navy and the great German navy and our little Navy. By way of parenthesis, I am rather of the opinion that Germany would not care to dismantle her coast of her navy at any moment and bring it away across the sea to fight us. At any rate, they no longer hold up the German navy to scare us; that Japan. On the other side of the Pacific you will find Japan playing the United States. When the United States builds two battleships, England builds four, Japan breaks her back trying to build two, and Germany steps into line with two, and Frynce with two, and next year, if the United States finally compromises on one, then England has to do the same thing over again, and so with the other nations. So the merry march of arms,

ammunition, epaulets, officers, and expenses goes on, and the only people benefited are those who sell the arms and ammunition and those people who have navy yards in their districts and the merchants who sell goods to those in the Army and Navy and who work in the navy yards and the officers and men in the Army and Navy. The merry dance of war goes on. If two bankers, if two individuals, two farmers, two blacksmiths, two lawyers, yes, two negroes, if you please, on the humblest plantation in Mississippi, were to conduct their affairs in that silly manner, you could go to any court and get out the writ of inquirendo de lunatico and send both of them to the asylum, and yet great nations of people are doing that identical thing in reference to arming themselves against each other in time of peace. They do not seem to have the proper amount of initiative to begin to reach a settlement where they

may avoid this great expense.

Mr. Speaker, I wanted to make this speech for two reasons: First, because I am in sympathy with the resolution, and, second, because I have always been opposed not only to this useless naval and military expense, but to the expenditure of any public funds out of the Federal Treasury except for a proper governmental function; and if I could have my way no dollar would be expended out of the Federal Treasury unless a man could put his finger upon the clause of the Constitution authorizing it or could put it upon a clear implication-one of the necessary things that must follow that specific grant of power. If that was done, Government expenses would be very, very much less than they are now and would be very much more satisfactory. I was denounced from one end of the country to the other by that press that advocates big battleships and advocates great expenses of public money. What praise I got for the position I took in the last fight on the naval appropriation bill came from the peace papers of the country. The cosmopolitan press, which is controlled by the great purse strings of the country, undertook to denounce, and did denounce, me from one end of the country to the other; but I thank God that that time has not yet come in my public life, and I hope it never will come, when I shall be deterred from the performance of what I think to be my duty, irrespective of criticisms and of adverse comments. I would be unworthy to represent any constituency on this floor if the criticism of the military press of the country, that press which represents those agencies which enjoy the benefits of the expenditure of public money, were to deter me in my duty; and in the event it ever does, I ought to be driven from the floor by the voters of my district. If I shall represent my district only for this term, I shall represent it with the con-scientious feeling in my heart that I have done my duty as I see it; and I would rather have the approval of my own conscience and the condemnation of others than to have the approval of others and the condemnation of my own conscience. [Applause.] As long as I have the approval of my own conscience I can look the world in the face and feel that I am a man; but if I surrender my conscience in order that others may be pleased, then I shall become recreant to every trust reposed in me and can look no man in the face and feel that I am a Therefore I will still continue to pursue the course outlined by myself and I will continue to combat all expenditure of public money for useless and extravagant purposes and continue to make a fight for a reduction of naval expenses when I find they are too extravagant, notwithstanding the propaganda that may be set in motion against me. I intend again, if the Naval Committee shall bring in an outrageously extravagant bill, to do my best to defeat every extravagant item in it. Let us vote for this resolution and try this open door; tread this path a distance and see if it will not lead to something that will bring about the result much desired by all the good and God-fearing people throughout the earth. [Applause.]

The SPEAKER. The gentleman from Pennsylvania [Mr. Moore] is the next on the list, and is recognized for 58 minutes. Mr. Moore. Mr. Speaker, the speech of my eloquent friend from Mississippi [Mr. Sisson] proclaiming peace to all the world, subject to an agreement that is to be made by the President of the United States with such nations as will agree with him, reminds me of one of the classics told by Robert G. Ingersoll at a Clover Club dinner in Philadelphia, a story from his own lips which I had the pleasure of hearing. He was called upon to speak. He rose and said with some show of diffidence that he had not expected to be called upon; in fact, he said there was an agreement that he should not be called upon; whereupon one of the raconteurs in the back of the hall said, "You never heard of any such agreement? Then I shall go on, for you remind me of the story of the fox and the hen. Once upon a time there was a hen living upon the borders of a forest. At the close of the day when she had completed her daily tasks,

mindful of the fact that there were wild beasts about and that there were birds of prey in the air, she mounted the limb of a tree and tucked her head away under her wing. Presently she was aroused by the baying of a fox somewhere down the road. She lifted her head from under her wing cautiously. The sound became more pronounced, and presently the fox was directly under the limb upon which she sat. He looked up and said, 'Good evening, Miss Hen.' And the hen, looking down, said, 'Good evening, Mr. Fox.' 'Why, Miss Hen, I have been thinking what a beautiful moonlight night this promises to be and what a pleasant walk it would be for you and for me down by the side of the wood to the brook where we could sit together along the banks of the silvery stream.' 'Why,' she said, 'Mr. Fox, that is most delightful; a prospect I admire, an opportunity I would appreciate, but I am a little suspicious, Mr. Fox, that I ought not to leave my perch upon this limb.' 'Oh,' he said, 'I ought not to leave my perch upon this limb.' 'Oh,' he said, 'I know what your trouble is, I know how you feel, but you have not heard what has taken place recently. Do you not know of the agreement?' 'Why,' she said, 'no; what agreement?' 'Why,' he said, 'an agreement made between all the beasts of the field and all the fowls of the air, that hereafter all shall live in peace and amity together, and that there shall be no more strife amongst the creatures of the earth.' 'Why,' she said, 'no; that is news to me; I would really like to take that walk. Fox, are you sure there is such an agreement?' 'Oh,' he said, yes; take my word for it, there is such an agreement; we are all to live in peace and harmony hereafter; come.' But she said, Wait, wait. I just heard the familiar bark of my friend, the watchdog. He will be here presently, and then the three of us will go together.' 'Oh,' he said, somewhat curtly, 'come with me; he is all right; but come with me.' But she said, 'No; wait until he comes; he is very near; do not you observe it; can you not hear him?' The bark was now so distinct that the hen, beginning to fluff her wings, coyly remarked, 'I believe I will accept your invitation and we will take the walk along the moonlit pathway, but wait for my friend the dog.' The dog came nearer and nearer and the fox growing restless, said, 'Come, come now. This is my party and I want you to go with me.' And the hen said, 'I will, just as soon as my friend the dog comes.' But the fox said, 'I do not like the dog.' 'Why, Mr. Fox,' said the hen, you just told me of an agreement entered into by all of the fowls of the air and the beasts of the field that we are all to live in peace and amity together, and my friend the dog is in on that. You remember the agreement.' 'Yes,' he said, as the on that. You remember the agreement.' 'Yes,' he said, as the bark of the dog came close to his heels, 'there is such an agreement, but that son-of-a-gun has not heard of it.'" [Laughter.]

Now, it would be a splendid thing, indeed, if we could all live in peace and amity together, if we all could manifest toward each other that spirit of brotherly love that was evinced just now by the gentleman from Mississippi [Mr. Sisson]. It would be splendid, indeed, if we could make an agreement in this House of Representatives to live in peace and amity together, but some of our constituents have not heard of any such agreement being effectuated, although we have been in business more than 100 years.

I take it that a man builds a home with which to shelter himself and that a man puts a lock upon his door in order to protect himself against the stranger. I take it that a nation does exactly the same thing, and that that nation is not wise which, being strong otherwise, does not throw around itself sufficient safeguards to protect its own and maintain its dignity abroad, We have before us now a resolution which proposes to impose upon the President of the United States an obligation to secure a treaty of peace for all the nations of the world, disarming those nations so far as battleships are concerned for a period of one year. That is not wholly a new proposition. It has come from the interior of this country time and time again. It has come not from those along the coast line, who understand a little better the question of coast defense than do our friends in the interior. But I take it if the man living in the interior, far away from any neighbors, finds it necessary to protect himself by putting a lock upon his door or putting his trusty rifle behind it, with which to meet the marauder should he come, that it is just as wise for this great Nation to put its gun behind the door and have it in readiness in the event of the great marauder coming. We have had the marauder upon these shores before. It is not impossible that we may have him come again. Then are we to depend wholly and solely upon interior improvements made possible by our creative power, without authority to support them if necessary, or are we going to en-courage those internal improvements by extending abroad our influence in commerce, by having ourselves prepared for any emergency should it come?

Some one in this discussion has referred to that very happy condition which prevails on the Great Lakes, where in consequence of the War of 1812, and an American victory recently celebrated there, we entered into an agreement with Great Britain to practically disarm so far as the Great Lakes are concerned.

No other nations are involved in that proposition but the two-United States and Great Britain-and it was just as wise for Great Britain as it was for us that that agreement should have been made. We have no questions confronting us there in which other nations are concerned at all. That is a matter where it was possible and where it was wise to enter into a mutual agreement not to have warships upon the seas. But that condition does not prevail along the coast line, neither upon the Atlantic nor the Pacific, nor along the Gulf.

Some gentlemen, too, have referred to the fact that the construction of battleships is a burden upon the people of this country. Some have made special reference to the fact that vessels are sometimes cast aside and assigned to the scrap heap because they are no longer serviceable. There is a very ready and a very quick answer to that. Every other nation is in the same position in regard to the casting off of battleships as is the United States, and it is because of the improvement of battleships by foreign countries that certain American battle-ships have been cast into disuse as no longer serviceable.

The race between the nations is on; it is not of the making of the United States, but it is by the insistence of foreign powers to maintain strong navies, to increase the size of their battleships. This induces the United States, as a measure of preparedness, to also build battleships.

Mr. SLAYDEN. Will the gentleman yield?

The SPEAKER. Will the gentleman from Pennsylvania [Mr. Moore] yield to the gentleman from Texas [Mr. SLAYDEN]?

Mr. MOORE. Yes. Mr. SLAYDEN. Mr. Speaker, I would like to ask the gentleman if he thinks that because other nations are tryingand I am endeavoring to quote the words he used just now—that other nations have the same experience in discarding warships that we have, therefore the building of them is not a burden on the people? That is the inference from his statement and I want to know if he meant that.

Mr. MOORE. The gentleman has asked a question which I

think I can answer. I have some views upon that subject, and

I am glad to come to them now.

Mr. SLAYDEN. I do not want to interrupt the sequence of

the gentleman's argument.

Mr. MOORE. Not at all, because the gentleman's question is timely. I want to take up the question which is recounted in the resolution, that the construction of warships is a burden upon the people. It is not a burden upon the people. It is an assistance to the people. It is an assistance to the farmers of this country. It is an assistance to the workingmen of this country, to the industrialists and to the mechanics, and the moment you stop the construction of battleships you turn out of employment not only men upon the farm, men engaged in agricultural pursuits, but you will also turn men out of the great factories and great industries of the country. Witness 700 men laid off in one of the armor-plate establishments of Pennsylvania during the past week because, perforce, the Secretary of the Navy prefers to have armor plate built elsewhere than in the United States. Do you say this is a burden upon the people to take away from the American workingman the employment that he has had and to transfer it to armor-plate factories in Germany and in Great Britain?

Mr. PALMER and Mr. SLAYDEN rose.
The SPEAKER. To whom does the gentleman yield?

Mr. MOORE. I will yield to my colleague from Pennsylvania [Mr. PALMER]

Mr. PALMER. Where does the gentleman get his informa-tion that 700 men have been laid off in one of the armor-plate establishments of Pennsylvania within the past week?

Mr. MOORE. I get it from a dispatch printed in the Philadelphia Ledger of yesterday, which, in view of the gentleman's query, I will be very glad to have the Clerk read, so that the gentleman may say what he pleases about it. I pass this up to the Clerk's desk to be read.

The SPEAKER. Without objection, it will be read.

The Clerk read as follows:

MEN OUT OF WORK APPEAL TO PAIMER—BETHLEHEM STEEL WORKERS ASK THAT PRESIDENT KEEP PROMISES.

BETHLEHEM, PA., December 2, 1913.

More than 700 mechanics who lost their places with the Bethlehem Steel Works after Charles M. Schwab had failed to get an order for armor plates from the Navy Department have written to Congressman A. MITCHELL PALMER imploring him to get President Wilson to make good a promise to the effect that, if any man lost his position, he, the President, would adjust matters. If the Government institutes an inquiry, it is said, the Bethlehem officials will reply that they will gladly give the men work, provided that the Government gives them orders.

Congressman Palmer, whom the Bethlehem workers say they elected,

has as yet taken no action. As he is chairman of the Ways and Means Committee, the men say he is in a position to solve their difficulty.

Mr. PALMER. Mr. Speaker, will the gentleman yield? The SPEAKER. Does the gentleman yield?

Mr. MOORE. I do.

Mr. PALMER. I assumed when the gentleman made his statement that he was relying upon information contained in a couple of Philadelphia newspapers yesterday and to-day, one of which he has had read from the Clerk's desk.

Mr. MOORE. Yes; and others which I have here, but will

not have read unless they are needed.

Mr. PALMER. I will say, Mr. Speaker, that the Bethlehem steel plant is located in my district. From all the information I can obtain from persons connected directly with the company by wire to-day there have been no men laid off to the extent of anything like 700; nothing more than the usual changes at this time of the year. No men have been laid off because of any refusal of the Government to give a contract to the Bethlehem Steel Co., and none of the Bethlehem Steel Co.'s employees have written to me asking for jobs or asking for any such thing as is there stated in that article in the newspaper. That part of it, at least, is absolutely without foundation in fact, and I trust the gentleman will not base his argument against peace between the nations upon any such flimsy foundation as that which he has brought here now. [Applause on the Democratic side.]

Mr. MOORE. Of course, we always have applause from that

side of the House

Mr. SLAYDEN. For righteous causes

Mr. MOORE. For any statement that indicates that labor is not being laid off now by reason of the tariff conditions. But we shall produce the evidence as it comes along, and there will be plenty of it in the next few months.

I accept the gentleman's statement, because it is only fair that he should have the chance to make it. However, he admits that hands are laid off, and to that extent he confirms

the newspaper statement.

Mr. PALMER. No; Mr. Speaker, I did not say that. I said there had been no laying off of hands by reason of any failure to get a Government contract. There have been some changes usual at this time of year.

Mr. SLAYDEN. Mr. Speaker, will the gentleman allow me

to interrupt him?

The SPEAKER. Does the gentleman yield?

Mr. MOORE. I will.

Mr. SLAYDEN. Just before the gentleman engaged in this interesting debate with his colleague he stated positively and plainly that the construction of battleships at public expense was not a burden upon the taxpayers, and that therefore the collection of taxes and their expenditure in that way was not a burden. On the other hand, the gentleman went forward and stated it as a positive benefit not only to them but to the

Mr. MOORE. I said an advantage.

Mr. SLAYDEN. Is not that true?

Yes. Mr. MOORE.

Mr. SLAYDEN. Very well. Now, if it be true that the manufacture of 5,000 tons of armor plate and the purchase of two battleships is an actual benefit to all the people and is not a burden, why not manufacture 500,000 tons of armor plate and build 50 battleships, because it will be no burden but will distribute benefits?

Mr. MOORE. That would probably be unnecessary, and therefore it would not be an advantage. I think that is a complete answer to the gentleman's question.

Mr. SLAYDEN. Would it not be a distribution of these

advantages on a greater scale?

Mr. MOORE. I would not expend all the money of this country in building battleships nor in improving rivers and harbors, nor would I spend it all in building post offices; but I would try to equalize the distribution so that if a man's occupation was that of a mechanic, he could have employment; so that if his occupation was that of an agriculturist, he could have a market for his produce; so that if he was an engineer, there might be something for him to do.

Mr. SLAYDEN. Then the gentleman adheres to his position that the collection of taxes and their expenditure for battle-

ships and armor plate is not a burden but a benefit?

Mr. MOORE. I do to the extent that it is a reasonable col-

lection and a reasonable expenditure. I say that it is for the benefit of the working people, and for the benefit of the rank and file, to have some money spent for battleships.

Mr. SLAYDEN. But you said it was not a burden.
Mr. MOORE. I say it is not a burden, because the term
"burden" has come to be purely a political term, in use only

by one party in this country; a term that was used during the discussion of the tariff bill, and a term which is now used in this resolution with the expectation that it will influence the

people.

This resolution provides that we shall have this peace agreement because it will tend "to lessen the enormous burdens of the people and avoid the waste of the investment in war mate-; and my discussion with the gentleman from Pennsylvania [Mr. Palmer] was only incidental, and my answers to the gentleman from Texas [Mr. SLAYDEN] are only incidental to what I intended to say upon that subject, which I will come to in a

Mr. MANN. Will the gentleman yield for a question? Mr. MOORE. I do.

Mr. MANN. If the collection of taxes for the various governmental functions is a burden, why do they not stop it?

Mr. MOORE. They have the opportunity to, but the trouble is they can not now raise sufficient-

Mr. SLAYDEN. Some burdens are avoidable and some are

unavoldable.

Mr. MANN. But the test of whether a thing is a burden is not taking it by itself but taking it in connection with what necessarily goes with it; and if the collection of taxes for the building of post offices is a burden, we ought not to collect the You can not judge whether it is a burden until you know what you are going to do with it.

Mr. PALMER. Will the gentleman yield further?

Mr. MOORE. I do.

Mr. PALMER. I suppose, on the same theory, the gentleman would argue that war is a good thing, because if, for instance, the war should result in killing a hundred thousand able-bodied men that would make it possible for those remaining to have more employment.

Mr. MOORE. Do not misunderstand me at all. I am as much

in favor of peace as the gentleman is.

Mr. PALMER. Is not that what the gentleman's argument

Mr. MOORE. The gentleman [Mr. PALMER] is arguing against preparedness for war, which is the customary precaution to secure peace, a precaution which every ordinary householder

takes in his everyday affairs.

Now, I want to answer the gentleman from Texas—and I am delighted that he has asked the questions he put with regard to the "burdens" to which he referred. For the last seven years since I have been in this House I have listened to the story of "the burden upon the backs of the American people," and that burden has always been dilated upon by our friends upon the other side. I have looked up and down the streets and avenues and along the country roads and I have not seen the man carrying that burden, except as he pleased. He may carry it during the next six months, perhaps, but up to this time he has not done it; because if he were a mechanic making armor plate, he was getting wages and was being paid, and he lived happily until the change came that turned him out at the Bethlehem Steel Works the other day. If he is a farmer, he has not carried any burden except for a profit, to sell it at a good price to the consumer in the city.

Now, I do not see that battleships are a burden to the farmer, if he furnishes, directly or indirectly, the material that goes into the construction and operation of those ships. The gentleman from Mississippi [Mr. Sisson] gave us some philosophy a little while ago about brotherly love and that kindly feeling that we all ought to entertain toward one another, which everybody aspires for. I take it he will agree that perhaps every-

thing we use originates in the earth or in the sea

I take it that the timber that goes into the ship comes from the forest. I take it that the steel that goes into the ship comes from the mine. I take it that all the wood, the iron, the steel, the glass, and other material that enters into the finishing and the decorating of the ship comes from the soil. I take it that the carpets that go into the ship come originally from the wool of the sheep as grown by the farmer; that the cotton goods come from the planter, and that workmen of every kind along the line had a hand in ultimately fitting out the ship. If you spend fifteen millions constructing a battleship, you do not waste a cent of the people's money; you do not waste a cent of the farmer's or the mechanic's money, but you circulate through them the volume of money you put into the ship. I do not care whether it is in fixing up an electrolier or whether it is in building the ways on which the ship slides to the sea or whether it is in making the military mast, every dollar of that money goes back to the mechanic or the man who produces something from the soil of the land. The moment you take that \$15,000,000 appropriation and turn it into some other institution, into a pub-

lic building, you take it away from these men who have been getting and using it along the line from the producer to the

finisher of the battleship now owned by the Government.

I think that answers philosophically, if not materially, the question raised by the gentleman from Texas. There is another very serious question in regard to this proposition that we shall disarm for a year.

Mr. HENSLEY. Will the gentleman yield?

Mr. MOORE. I will.
Mr. HENSLEY. The gentleman from Pennsylvania evidently does not agree with Mr. Churchill when he declares that if we take a naval holiday for one year with the different nations entering into that agreement, that at the end of the year their positions will be exactly the same relatively, our positions unchanged, and then there will be millions, countless millions, of money that can be used by the nations the world over for other and better purposes?

Mr. MOORE. Can the gentleman tell me what other and better purposes the expenditure of \$15,000,000 might be used for than the encouragement of the products of the soil and the forest and the mines and the factories, all of which enter into the

construction of a battleship?

Mr. HENSLEY. Internal improvements of various kinds that I could enumerate to the gentleman.

Mr. MOORE. Building post offices?

Mr. HENSLEY. The reclamation of thousands of acres of land where men can go and till the soil instead of being compelled to remain in the crowded districts of the country

Mr. MOORE. To enrich private owners of land and to further increase the swollen fortunes of men that own thousands of acres of waste land that is not tillable to-day? Is that what the gentleman means?

Mr. HENSLEY. It would not enrich the private owners of

the great Steel Trust.

Mr. MOORE. Ah, yes; if you are going to put it that way we might put it back and say that if it is for a speculative purpose, it applies alike to the men who make the swollen fortunes of industry and to the men who combine in agriculture

Mr. HENSLEY. Does the gentleman mean to say it would not have the same effect, and a more glorious effect, if you put it to improving the roads throughout the country?

Mr. MOORE. Not at all; but if the gentleman means to relieve every State of its responsibility, no matter what its area, to build thousands and hundreds of thousands of miles of roads at the expense of a few people in populous centers, then I do differ with him.

I say there is a more serious question, even in the expression of this sentiment, as contemplated by the resolution, than any of us have given careful thought to. The President of the United States, in the message delivered here "from the throne" the day before yesterday, gives voice to the fear that some people in administration circles now entertain with regard to people in administration circles now entertain which the decadence of the American merchant marine. Shortly you the decadence of the American merchant marine. Shortly you are going to pass or attempt to pass here a seamen's bill. are writing into it conditions that, it is said, threaten the very existence of the merchant marine of the United States-that plying on inland waters and that plying on the high seas. does the President of the United States say? You passed that bill in the last session of Congress, and the Senate has passed it in this. It is going to come back here. In that bill you propose to establish conditions that will make it impossible for any youth in this land to qualify as an able-bodied seaman on a merchant vessel. That is what you propose to do now. The only place from which we could get these able-bodied seamen would be from the battleships of the country, where, in time of peace, they are in training.

Mr. HENSLEY. Mr. Speaker, will the gentleman yield?

Mr. MOORE. Certainly. Mr. HENSLEY. I would like very much if the gentleman from Pennsylvania would say whether or not he thinks it was a wise proposition on the part of the United States Government and the British Government to enter into a treaty that brought about the disarmament on the Great Lakes something like a hundred years ago.

Mr. MOORE. The gentleman was out of his seat at the time when I said that that was a treaty made between two nations, where no other nations were involved, and where each nation would have been foolish if it had not availed itself of the oppor-

would have been was concerned in the Great Lakes except Great Britain and the United States?

Mr. HENSLEY. Would it not be the same thing if all of the nations of the world agreed to this proposition?

Mr. MOORE. Does the gentleman think he can get an agreement with Japan on this proposition?

Mr. HENSLEY. If all the nations of the world would enter into this agreement, does the gentleman from Pennsylvania then think it unwise to pass the resolution?

Mr. MOORE. What is the use of talking universal peace and the brotherhood of man until everybody goes into it? I would like to ask the gentleman if he would like to go into

this agreement and leave out Japan? Mr. HENSLEY. If the other nations will enter into an agreement such as I hope they will, I would gladly say that the United States Government and the other great governments can

afford to do so.

Mr. MOORE. Mr. Speaker, I heard one of the greatest minds that this country has ever produced, Mr. Henry George, declare for universal free trade. God grant we might have it. Philosophically it is correct, but you are not prepared for it and neither am I; and when I had the temerity to ask Mr. George why he eliminated the Chinese he said because they were not assimilable. How are you going to bring all of the nations of the earth together when some of them are not assimilable?

Mr. HENSLEY. I would like for the gentleman to answer

Mr. MOORE. When some of them are civilized, some half civilized, and some of them savage.

The SPEAKER. Does the gentleman from Pennsylvania yield

to the gentleman from Missouri?

Mr. MOORE. Certainly.
Mr. HENSLEY. I would like to ask the gentleman whether or not he would favor this plan if all the nations, Japan with

the others, were to enter into it?

Mr. MOORE. If my vote would determine that question, I would vote for the assimilation of all of the nations and for universal peace and for the millennium, but I have got to keep my hand on my pocketbook to-day, just as the gentleman does. There is some one prowling around about that might get our pocketbooks if we did not.

Mr. HENSLEY. Then the gentleman will not answer the

direct question?

Mr. MOORE. Certainly I do. If the gentleman will show me—and I am not from Missouri, as the gentleman is—how we can bring all of these nations together, I will support him.

Mr. TOWNSEND. Oh, by this resolution.

Mr. MOORE. We have passed many resolutions in the House, and they have got no further than the preliminary stage.

Mr. HENSLEY. Is not the gentleman willing to take the pre-

liminary step?

Mr. MOORE. Yes; but I am hardly yet prepared to make a joke of the President of the United States by starting him out on a wild-goose chase, as this resolution proposes to do.

Mr. HENSLEY. Has the gentleman inquired into the matter and found out what the President's position is and what he

thinks about it?

Mr. MOORE. I have read the resolution, and there is absolutely no basis in it upon which the President could act, because there is nothing in the preamble of the resolution but an indication of some newspaper report that Winston Churchill said so-and-so, which is hardly sufficient to induce the Congress of the United States, the greatest legislative body in the world, to act upon it seriously, and attempt to bring all of the nations to terms when they have all got their battleships in their docks ready for business

Mr. HARDY and Mr. BUCHANAN of Illinois rose.

The SPEAKER. To whom does the gentleman from Pennsylvania yield?

Mr. MOORE. I yield to the gentleman from Texas [Mr.

HARDY].

Mr. HARDY. This resolution says nothing about leaving Japan out, but simply says the United States expresses its willingness to cooperate with other Governments to secure one year for the suspension of naval construction. Now, can the gentle-man see any possible objection to the United States endeavoring to get an agreement among the leading nations of the earth, including Japan, say, for example, Germany, England, France, Russia, Japan, and the United States? Could the gentleman object to trying to get them to agree to suspend naval construction

Mr. MOORE. I can see no earthly objection to the adoption of a resolution by this House which would say, We believe in brotherly love, in affection toward our fellowman, in peace rather than war, in amity rather than hatred. I am in favor of all that, but I do not believe it would amount to very much, except as a sentiment, but I do think it is a grave error on the part of even the majority of this House, capable as it is of making errors, to pass a resolution which would put the President of the United States in the position of going expressly to all the

nations of the earth, based upon a newspaper article that Winston Churchill, of Great Britain, said something about peace.

Mr. HARDY. If there had been no newspaper report, if nobody had said anything about it, would it be absurd or ridicu-lous or in anyway objectionable for this country to endeavor to secure from these great nations an agreement to suspend battleship construction for one year?

Mr. MOORE. If the gentleman from Missouri [Mr. HENS-LEY], the author of this resolution, should bring in a resolution of his own which would set out substantially this: That we, the people of the United States, believe in peace and amity and good will toward all the nations and hope there will be no more war. or words to that effect, I will vote for it.

Mr. HARDY. But if he should put in his resolution the re-

quest that there shall be a suspension for one year in naval con-

struction, will the gentleman vote for it?

Mr. MOORE. I have not any objection to entering into any

agreement that is made universal.

But would the gentleman be willing to vote for that resolution to secure a suspension of naval construction for one year?

Mr. MOORE. If I thought my vote would make it effective, without-

Mr. HARDY. Will the gentleman vote against any definite effort to secure a suspension of naval construction for one year? Mr. MOORE. I will tell the gentleman why I think it wise

Mr. HARDY. Then the gentleman will vote against it?

Mr. MOORE. I will tell the gentleman why. I have more concern about the peace of this country than I have about the peace of some other countries, and the peace and happiness of this country depends absolutely upon a steady and profitable employment of the people, and if I vote to suspend the construction of battleships or to suspend the production of cotton or to suspend the production of tobacco or to suspend the operation of the mines for one year I am dismantling thousands of business establishments and industrial plants and putting out of work tens of thousands of people of this country and so disorganizing the great industrial and business system that instead of bringing peace and harmony to my own country I would bring discord and disruption.

Mr. HARDY. Then I understand the gentleman is in favor

of a general declaration for peace-

not to do it.

Mr. MOORE. Yes. Mr. HARDY. And opposed to any definite effort to establish it?

Mr. MOORE. I am opposed-

Mr. HARDY.. The gentleman is opposed to any effort to es-

tablish peace, but he is in favor of peace?

Mr. MOORE. I believe we will maintain peace better by keeping in a condition of preparedness to maintain our national dignity and to be ready to defend ourselves if anyone should assail us.

Mr. BUCHANAN of Illinois. Mr. Speaker-

The SPEAKER. To whom does the gentleman yield? Mr. MOORE. May I ask how much time I have?

The SPEAKER. The gentleman has used 36 minutes.

Mr. MOORE. Then I have 36 minutes left?

The SPEAKER. No; the gentleman did not have 72 minutes. He has used 36 minutes.

Mr. MOORE. I misunderstood the Chair. I yield to the

gentleman from Illinois [Mr. BUCHANAN].

Mr. BUCHANAN of Illinois. I want to know if I understood the gentleman rightly. Did he say this seamen's bill we passed last Congress and will pass this one will bring about a condition where the young American workman or any American workman would be unable to work on our seagoing vessels?

What I intended to convey was, and I hope Mr. MOORE. the gentleman does not misunderstand me, that under the sea-'s bill as proposed no man can be employed as an ablebodied seaman unless he has had three years' experience. gentleman understands that an American boy must have three years' experience as a seaman to qualify as an able-bodied seaman? Now, I will observe to the gentleman that there are few American seamen to-day-very few native-born seamen-so that-

Mr. BUCHANAN of Illinois. That is what I wanted to ask the gentleman.

Mr. MOORE. Under this proposed law there is no place but the Navy for the American boy to begin, and we are dependent upon foreign-born seamen to run our American ships.

Mr. BUCHANAN of Illinois. Is it not a fact that they are

running them?

Mr. MOORE. That is true to a large extent; and those who control or manage the ships are obliged to depend on foreignborn seamen to operate them.

Mr. BUCHANAN of Illinois. Does not the gentleman know that the Seamen's Union and the trade-union movement of this country have indorsed this bill and have been working for its passage during the last 15 years?

Mr. MOORE. I know that Mr. Andrew Furuseth has been in attendance upon several sessions of the Congress interviewing gentlemen here in regard to it.

Mr. BUCHANAN of Illinois. Does the gentleman believe in legislation or law that will prevent young Americans working or securing employment on those vessels?

Mr. MOORE. If you will show me how they can get in under this law, I may change my opinion in regard to that feature of it; but that bill provides that anyone who qualifies as an able-bodied seaman will have to have three years' experience, and there is no way in the United States by which an American boy now can qualify as an able-bodied seaman, because he must have had three years' experience on ships without being able to acquire it in the merchant marine, and the Navy is about

the only place where we may secure merchant sailormen.

Mr. BUCHANAN of Illinois. Then evidently the labor men
who have been working for this bill are ignoramuses, inasmuch as they have been working for a bill which makes it impossible for American workmen to work on seagoing vessels?

Mr. MOORE. The gentleman is adroit, but he does not draw me into any such statement as he proposes. I have as much right to talk intelligently to the man who wants to be a seaman as some who think they know more about it; and I do not mislead the man who wants to obtain employment.

Mr. RAGSDALE. Mr. Speaker-

The SPEAKER. Does the gentleman from Pennsylvania [Mr. MOORE] yield to the gentleman from South Carolina [Mr. RAGSDALE]

Mr. MOORE.

Mr. RAGSDALE. A few moments ago the gentleman from Pennsylvania stated that he was opposed to the suspension of cotton growing, or anything of that character. Does not the gentleman know that he and his party have never voted for anything directly to go to the producers of wealth in this country, and that it is not at all parallel to refer to the suspension of the development of agriculture along with shipbuilding? Does he not know that all the appropriations for the Navy come directly out of the Treasury, while he and his party have never been willing to appropriate anything directly to help the agricultural interests?

Mr. MOORE. Has the gentleman read the Bartlett bill?

Mr. RAGSDALE. Yes; but that is no appropriation to the farmer directly, while appropriations for the Navy may go direct to the manufacturer.

Mr. MOORE. The gentleman proposes now that it will be entirely legal to limit production and arbitrarily fix the prices

that the consumer pays.

Mr. RAGSDALE. Will the gentleman do anything to reduce

that?

Mr. MOORE. I shall do what I can to reduce the cost of living.

Mr. RAGSDALE. Even at the cost or expense of any other

business other than building great warships?

Mr. MOORE. I have just stated that the construction of great warships gives employment to the gentleman's own

Mr. RAGSDALE. And it comes out of the Treasury? Mr. MOORE. Out of the Treasury of the United States.

Mr. RAGSDALE. And does the gentleman contend that he has ever favored any bill that has gone directly toward the development of agriculture in this country?

Mr. MOORE. I have stood here favoring agriculture from

the beginning of my service in this Congress.

Mr. RAGSDALE. And to raise the price of any commodity?

Mr. MOORE. I never voted to raise the price on any commodity to the consumer, and I have voted to raise wages as high as I could.

Mr. RAGSDALE. In what respect—on the farm?
Mr. MOORE. Of course I have. I have voted to keep the farmer as busy as possible by supplying him with a profitable market, and the gentleman from South Carolina, unfortunately, has voted, if he voted in the last session of Congress, to so prevent the farmer from finding a profitable market that the

farmer is going to be poorer this year than he was last year.

Mr. RAGSDALE. Does not the gentleman know that the
farmer is getting now more benefits from the Government than he ever got?

Mr. MOORE. I voted to put a duty on wool, hoping that that which has happened would not happen, in order that the American farmer might get a decent price for his wool; but the gentleman voted for free wool, and now the farmer does not get a decent price.

Mr. RAGSDALE. Does not the gentleman know that he does

get a decent price?

Mr. MOORE. I know that he does not.

Mr. RAGSDALE. Does not the gentleman know that there is less complaint from the farmer about wool than there is from the gentleman when opposition is made to a further raid upon the Treasury?

Mr. MOORE. No. In the last week warehouses have unloaded at our ports free wool upon the American farmer, thus

putting American wool temporarily out of business.

Mr. RAGSDALE. Is it not the high cost of living to the consumer that we are trying to stop?

Mr. MOORE. Does the gentleman mean by combinations to increase the price of cotton? You already have a monopoly.

Mr. RAGSDALE. Oh, the gentleman knows there is no com-

Mr. MOORE. The gentleman from South Carolina knows there is a monopoly in the production of cotton.

Mr. RAGSDALE. The gentleman from Pennsylvania is un-

willing to extend a credit from the United States Government

to the producers of this country.

Mr. MOORE. The gentleman from South Carolina contends

for a movement to legitimatize a monopoly in cotton.

Mr. RAGSDALE. We do not get any help from the gentle-

man or from his party.

Mr. MOORE. We take the gentleman's cotton, and we are glad to get it. The gentleman has a monopoly. I have told the gentleman that twice.

Mr. RAGSDALE. The gentleman from Pennsylvania has

done all he could to keep down the price of that product.

Mr. SLOAN. Mr. Speaker, will the gentleman yield? The SPEAKER. Does the gentleman from Pennsylvania

rield to the gentleman from Nebraska?

Mr. MOORE. I yield to the gentleman.
Mr. SLOAN. Touching the colloquy between the gentleman from Pennsylvania and the gentleman from South Carolina respecting the encouragement given to cotton growing, I will ask the gentleman from Pennsylvania if he has not voted for the agricultural appropriation bill for the last five or six years, when each year there has been appropriated for the direct use and benefit of the cotton growers of the United States from \$300,000 to \$400,000 a year?

Mr. MOORE. I have always done that consistently, notwith-standing it is "special privilege," which is almost as bad to gentlemen on the other side as "the burden upon the backs of

the American people." [Laughter.]

was saying a few moments ago that this question of our ability to obtain boys to engage in the merchant marine is a serious one, and the maintenance of our Navy is the only way now by which we can get boys to go on our ships. I will say to the gentleman from South Carolina that a bill has been introduced by his colleague from Texas [Mr. HARDY], a bill that the gentleman will hear more about, because it is a restrictive measure. But now I will refer the gentleman to a very high authority, one that ought to have some weight and standing on that side of the House, inasmuch as he delivered an address here personally two or three days ago. At the close of his address to the joint meeting of the House and Senate here the President of the United States said:

An international congress for the discussion of all questions that affect safety at sea is now sitting in London at the suggestion of our own Government. So soon as the conclusions of that congress can be learned and considered we ought to address ourselves, among other things, to the prompt alleviaton of the very unsafe, unjust, and burdensome conditions which now surround the employment of sailors and render it extremely difficult to obtain the services of spirited and competent men such as every ship needs if it is to be safely handled and brought to port.

The President of the United States has had notice from the large business interests of this country that we must proceed with caution in this matter of the American merchant marine, else we may find ourselves ultimately without any merchant marine whatever. You have here in the Navy the only training school for able-bodied seamen, who must have three years' experience; and if you do not maintain the Navy in times of peace, even for this purpose, you must look for your seamen in the merchant marine to foreign countries, and take such men

as in our own ports recently have mutinled on the ships.

Mr. TOWNSEND. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman from Pennsylvania

yield to the gentleman from New Jersey?

Mr. MOORE. Mr. Speaker, I will ask again, how much time bave I?

The SPEAKER. The gentleman has 10 minutes left.
Mr. MOORE. I yield to the gentleman.
Mr. TOWNSEND. I wish to ask just a question, so that I may inform myself more accurately.

Mr. MOORE. I shall not be able to yield after this. I must proceed.

Mr. TOWNSEND. I want to ask the gentleman this question.

Mr. MOORE. Very well.
Mr. TOWNSEND. Which would the gentleman consider the greater benefit—the expenditure of \$15,000,000 for a battleship which would go on the junk heap in five or six years or the expenditure of that respectable sum of money to make a channel of 35 feet up to the city of Philadelphia for the better conduct of peaceful commerce?

Mr. MOORE. I understand the gentleman's point exactly. He is bringing it right home to me, because I advocate deeper

channels.

Mr. TOWNSEND. I had that in mind.

Mr. MOORE. I would have them both if we had the revenue for that purpose, because it would be absolutely useless to dig channels if we did not have the ships, and one of the questions I will not now have time to discuss is that we have put the cart before the horse in Panama by constructing out of Government resources a great enterprise there which it will take us years and years to approach along the Atlantic or the Pacific or the Gulf seaboards.

Mr. TOWNSEND. Just one more brief question and then I will not interrupt the gentleman any more. Would not the expenditure of \$15,000,000 for the improvement of the channel of the Delaware River result in putting as many dollars in wages into the pockets of the workingmen as the building of a

\$15,000,000 battleship?

Mr. MOORE. It would put men on the dredges and put contractors at work and would raise the very question suggested by the gentleman from Missouri [Mr. Hensley]—that some-body might make money out of it. That is always a question of administration, and the administration that can not meet it ought to be rebuked and held to account. But the expenditure of that money would be as useful as the expenditure of money on battleships. But what is the use of building that channel if we do not have the ships to float in it?

The commerce of Philadelphia is not Mr. TOWNSEND.

falling off, is it? Mr. MOORE.

No; but, to answer the gentleman's other question: I would not turn out of employment one man in a shippard; I would not turn out of employment one man in a navy yard; I would not turn out of employment one man upon a dredge if I could keep him there employed with Government money if he gave a fair return for the compensation he received.

Mr. Speaker, this resolution seems to me to be not only improper and impracticable at this time, but extremely inconsistent as well. It flies directly in the face of the positive recommendations of the Secretary of the Navy. It comes at an extremely inopportune time for this Congress, immediately following the presentation to it by the Secretary of the Navy of his report, recommending the construction of two battleships and of certain torpedo boats and torpedo-boat destroyers to say to him, and in his teeth, "We propose to disarm, we propose to suspend, we propose to stop the factories, we propose to stop work in the forests, we propose to stop work in the mines for The Secretary of the Navy does not take that view of The Secretary of the Navy is highly complimentary of the efficiency of the Navy. He talks of its preparedness. He says at the very outstart:

The men who compose the Navy, and upon whom the country leans, are earnest to prevent war. Their advocacy of an "adequate navy" is prompted by fair faith that the surest guaranty of peace is a navy strong enough to command world-wide respect.

I would like to quote more extensively from his report, but I have not the time. It concludes, however, with this paragraph; these are the words of your own Secretary of the Navy, my Secretary of the Navy, whom I want to support:

The Republic will approve generous appropriations to keep the Navy fit for every use, and to give instruction and education to the 60,000 men, so that in peace the Navy is training men for useful pursuits of industry, if happily war may not fall upon our long-favored country. We must keep our Navy in a state of preparedness, therefore, for peace as well as for war.

Now, in spite of the fact that almost all of the naval vessels of the United States to-day are round about the Mexican coast, the gentleman would stop building. In spite of the fact that one shot upon Panama would drive every vessel of the United States to the defense of that canal and leave both our eastern and western coasts and the Gulf undefended, the gentleman

would stop. Why? Because he read in some newspaper somewhere that some distinguished British statesman suggested, because the harbors of England were not sufficiently deep, perhaps, or because they do not want to spend any more money on warships, though they now have the lead, that it would be a good thing if we could all make an agreement like that of the fox and the hen, to live in peace and amity together. I do not find the other great nations of the earth indulging in any such thought. I do not find the great Empire of Germany doing any such thing. I do not find the Empire of Japan making any such proposition. I do not find France proposing entering into it, Each and every one of these nations keeps on nor do you. fortifying itself, building more battleships, and being prepared to maintain peace.

We are asked to stop for a year, to put our factory fires and furnaces out of business, because, as a mere matter of sentiment, it would be a good thing for us to live in peace and

brotherly love.

Mr. Speaker, in my judgment, these resolutions would put the President of the United States, no matter how good are his intentions, in such a hole that we would all regret it. I do not object to the mere expression of sentiment; but I would like to know first if Winston Churchill made any such proposition-I would like to know if any committee of this House has had before it any declaration upon this subject from any department of the Government in an official way; I would like to know whether the idea originated solely in the breast of the gentleman from Missouri. These things we ought to know before this great House of Representatives commits itself on this important world-wide proposition. We ought to know our authority before we accept the second clause of this resolution, which directs the President of the United States to hunt around among the nations of the earth and see how they feel on the subject. They have not asked him, they have not even told him that they wanted anything of this kind, and we have not had submitted to us anything that would justify us in asking him to do it.

It is not for me to argue your case, but tegether with you I want to sustain the President of the United States. I have had some experience with international resolutions. I have observed how difficult it is for a Secretary of State to acquire action in certain respects. The Secretary of State to-day does not ask the nations of the earth to take a single step to relieve the thralldom of the Jews of Roumania. If he has asked it of some of them, he has been rebuffed. Now, you want the President to enter into these negotiations, to go around among the civilized and uncivilized nations of the earth and say, "We want you to agree with us upon this naval holiday." They would say, "No, Mr. President Wilson, we are going to protect our own; there are a few savages on our shores; there is an overbearing nation beyond us, or there is a mighty giant over there, and we are going to keep the gun behind the door.

If you want to take yours away, you can do it."

Put your President in a hole if you want to. I protest, as one who does not want to see any such humiliating condition

brought about.

Mr. Speaker, I would like to yield the balance of my time to the gentleman from Minnesota [Mr. STEVENS], and I hope that

he may have some more time in his own right.

The SPEAKER. The gentleman has three minutes remaining. Mr. STEVENS of Minnesota. Mr. Speaker, I would like to discuss for 10 or 15 minutes the question concerning similar propositions which have come before this House and Congress concerning the initiating by this Nation with other nations of similar attempts to secure cooperation for some limitation of military burdens.

Mr. SLAYDEN. Mr. Speaker, I ask unanimous consent that the gentleman from Minnesota may be given 15 minutes.

The SPEAKER. The gentleman from Texas asks unanimous consent that the gentleman from Minnesota may have 15 minutes. Is there objection?

There was no objection.

Mr. STEVENS of Minnesota. Mr. Speaker, I thank the gentleman and appreciate the courtesy of the House. I am in sympathy with the principles of this resolution. I am in hearty sympathy with the eloquent and forceful remarks which have been made on this floor in support of the resolution. The only question which comes to me is as to whether at the present time it is in a proper shape for passage by this House, and as to whether or not the effect so much desired will be accomplished by it.

The history of the remarks by the Right Hon. Winston Churchill, the First Lord of the Admiralty for the British Government, is about as follows: On the 26th day of March last Mr. Churchill, when he was speaking in the House of Commons on the naval estimates, submitted the following statement:

"Now, we say in all friendship and sincerity to our great neighbor, Germany, 'If you will put off beginning to build your two ships for 12 months, we will put off in absolute good faith the building of our four ships for exactly the same period."

If Great Britain and Germany took the lead, Mr. Churchill added, there was a good prospect of success in getting other powers to agree to a naval holiday, thus relieving the taxpayers of a burden of millions of dollars.

"The proposal I put forward in the name of the British Government."

to a naval holiday, thus relieving the taxpayers of a burden of millions of dollars.

"The proposal I put forward in the name of the British Government for a naval holiday is quite simple," he said. "Next year, apart from the Canadian ships or their equivalent, and apart from anything that may be required by any development in the Mediterranean, we shall lay down four great ships to Germany's two. Now, we say to Germany, 'If you will put off beginning to build your two ships for 12 months we will put off in absolute good faith the building of our four ships for exactly the same period."

Mr. Churchill then expressed the opinion that if Great Britain and Germany took the lead, all the other great countries would follow suit, and they would all be just as great and as sound as if they had built the ships at present projected. If Austria and Italy did not build, the obligation, he said, would be removed from France and Great Britain, and the fact that the triple alliance (Germany, Austria-Hungary, and Italy) was building no ships would make the proposal possible without the slightest danger or risk. The first lord then added:

"Isn't it likely that so great and memorable an event would produce an effect on the naval construction of the United States and Japan? Scores of millions would be rescued for the progress of mankind."

Mr. Churchill added: "That is the proposal I make for the year 1914, or, if that year is thought to be too near, for 1915."

The other European powers gave no attention to his address and made no expression concerning it. So on the 18th day of October, at a great meeting at Manchester, in England, he renewed his proposal that Great Britain and Germany agree to take a year's holiday in battleship building in substantially these words:

Next year, apart from the Canadian ships or their equivalent, and apart from anything that may be required by the new developments in the Mediterranean, we are to lay down four great ships to Germany's two. Now we say in all sincerity and friendship to our great neighbor: "If you will put off beginning to build your two ships for 12 months we will put off in absolute good faith the building of our four ships for exactly the same period." That will mean a complete holiday for a year, so far as big ships are concerned. By this spread of the appropriations Germany would save nearly \$30,000,000 and Great Britain \$60,000,000, and the relative strength of the two countries at the end of three years would be absolutely unchanged.

A more copious extract from his remarks at that time has been placed in the Record by the gentleman from Missouri, Mr. Hensley. But the proposition submitted by him was substan-

tially the same in both speeches.

The German Government at once, in its own way, unofficially refused to consider that proposition or in any way to act upon it. In an interview Grand Admiral von Tirpitz, naval secretary of state, in charge of naval affairs of the German Empire, is reported to have said:

The German Navy has a purely defensive function and no aggressive purpose. Like the army, it is to maintain the security of the Empire and its trade, besides enabling Germany to raise her voice in the affairs of the world. Why should this be denied her? \* \* Great navies are rising everywhere. France, Russia, the United States, even Greece and the South American States, not to speak of Austria-Hungary and Italy, are all building great fleets. Is not Germany, then, to have a fleet for her protection?

I think that occurred about the latter part of October. Still later I noticed a statement in the Associated Press of this country—I think about the latter part of November, as I re-call; about November 22—in which the German Government in an unofficial way again distinctly refused to consider the proposition of an agreement toward the limitation of naval armament.

Mr. BARTHOLDT. Mr. Speaker, will the gentleman yield?
Mr. STEVENS of Minnesota. Certainly.
Mr. BARTHOLDT. I think the gentleman is mistaken. The
German Government could not refuse to do something before
anything was officially before it.

Mr. STEVENS of Minnesota. Certainly not, but the German chancellor, as reported by the Associated Press in an unofficial way—and all of these remarks are unofficial, both of the British and German representatives—and possibly in a semiofficial statement the chief of the navy said that the German navy was for the purpose of peace, and the German Government must pursue its own policy in its own way for its own best interest and defense. I think I have somewhere seen that also such a remark was made by the German chancellor. If I may be permitted to so state, I think the German Government is entirely right, and is only fulfilling its high purposes for the proper care of its own people and destiny.

Mr. Speaker, now appreciate the close of this spectacle. In a speech in London on the 10th day of November last, Right Hon. Winston Churchill practically abandoned these positions which he had previously taken as to the limitation of naval armament. I have here a sheet of the London Financier of Tuesday, November 11, which doubtless has been sent to every Member of this House, containing the remarks of Mr. Churchill at the inau-

guration of the lord mayor of London, at Guildhall, on the

guration of the lord mayor of London, at Guildhall, on the evening before, in which he practically abandoned the position which he had previously twice taken. I here insert a clipping from such newspaper relative to his speech:

Mr. Winston Churchill, responding to the toast of "The imperial forces of the Crown," which was proposed by Mr. Alderman and Sheriff Humphrey, said that people were strangely ignorant of the part which Londoners played in maintaining the naval power of the British Empire. Next year they would have in the regular professional service of the navy 150,000 sallors and marines, a total which for the first time would exceed the largest numbers ever raised for the royal navy in the greatest crisis of the Napoleonic war. Of these 150,000 officers and men 1 in every 4 came from the home counties around London, and 1 in every 10 was a native of the metropolis. Proceeding, Mr. Churchill said they met that evening in circumstances more free from any danger of European war than was the case on either of the two occasions that he had had the honor at that banquet of responding to that toast. They met that night with a greater development of naval force and power, actual and relative, than was the case on the two previous occasions; but they must not suppose that any relaxation of their efforts was possible at present, nor must they expect that the burden which they bore, which would be a crushing one for any other country but ourselves, was likely to be diminished in the near future. The pressure of unbroken development of the German navy, the simultaneous building by many powers, large and small, all over the world of large and modern ships of war, would undoubtedly require from us expenditure and exertions greater than they had ever made in time of peace.

NEXT YEAR'S NAVY ESTIMATES

Next year it would be his duty to present to Parliament estimates which he was afraid would be substantially greater than even the enormous sums charged to the credit of the naval service during the present year. But His Majesty's Government would express upon and ask on every opportunity for the cessation of the competition of naval armaments, which was the bane and the reproach of modern Europe. But what was necessary had got to be done [applause], and they would not hesitate, once they were satisfied of the needs, to ask for those supplies of men and money which the House of Commons, whatever its party complexion, had never refused to give in living memory for the vital services of the State.

The premier of Great Britain, Mr. Asquith, the practical head of the British Government, at that same meeting, as appears in the same paper, stated also in substance that, much as Great Britain would like to adopt a policy of cooperation for the purpose of limitation of armament, yet he had practically no immediate hope or expectation, and so such a matter was not under consideration. Substantially the same was stated by another prominent British statesman on Tuesday, when the Hon, H. L. Samuel, postmaster general of Great Britain and a member of the cabinet, said at a luncheon given him in New

England, I may claim, is nowadays free from that love of military aggrandizement which has been through all the chapters of human history the curse of the world. \* \* It is true that we have been obliged in recent years largely to extend our navy, but this has been wholly against our own will and by no means dictated by any spirit of aggression. \* \* This great increase in our navy is not inspired by any aggressive spirit, by any desire for domination, but is purely in the interest of what we regard as vital—the defense of our coasts, our commerce, and our colonies.

That is what I wish this House to understand, that the basis for this resolution has been abandoned by its original sponsors. It is not now considered by any responsible Government or officials to be entitled to any consideration. Yet this resolution in its terms sets forth that, in the opinion of this House, the declarations of Mr. Churchill—

Here is a means of immediately lessening the enormous burdens of the people and avoiding the waste of investment in war material.

Manifestly, from a full knowledge of the whole situation, no responsible officials anywhere would entertain any such opinion as in this resolution. The very basis of our opinion has been nullified by facts occurring subsequent to its introduction. But the declaration of Mr. Churchill has been abandoned, his overtures have been refused. No one else thinks anything practical can be based upon it. Under these circumstances is it not well and wise for this resolution to be brought up to date, take into consideration affairs as they actually are, and not endeavor to have this House not only humiliate itself by a futile action, but in addition probably cause an embarrassment to the administration by attempting to make effective the second paragraph of the resolution?

This is no new proposition or situation. Hague conference was called by Russia the Russian authorities distinctly set forth before the other nations that one of the most important questions to be considered at that conference was the gradual disarmament of nations and the limitation of armament. I here insert a statement as to the discussion and consideration of this most important matter in this conference:

The Czar of Russia deserves the credit of being the first head of a great State in modern times seriously to take it up. When he called the first Hague conference in 1899 his fondest hope was that the burdens of the overgrowing and ever-growing armaments that were impoverishing the peoples of the world might in some way be taken off their backs. Accordingly the question of the limitation of armaments was the "frontispiece" of the circular of the Russian Government, and the Russian delegation strained every nerve to have the conference take

some action in the matter. Col. Gilinsky, who had charge of the question, prefaced the introduction of his proposals with these words:

"Will the peoples represented in this conference be entirely satisfied if, in going hence, we take them arbitration and the laws of warfare, but nothing for times of peace—of this armed peace which is so heavy a burden on the nations, which crushes them to that point where it can be sometimes said that open war would perhaps be better than this state of secret war, this incessant competition in which all the world pushes forward larger and larger armies—larger now in time of peace than they used to be in times of greatest warfare? The various countries have engaged in war only once in every 20 or 30 years, but this armed peace lasts for decades; it precedes war and follows it."

Despite all of Russia's efforts to the contrary, the conference adjourned after having passed the following resolution:

"The conference is of the opinion that the restriction of military charges, which are at present a heavy burden on the world, is extremely desirable for the increase of the material and moral welfare of mankind."

It also added the following wish (vocu):

"The conference expresses the wish that the Governments taking into consideration the proposals made at the conference may examine the possibility of an agreement as to the limitation of armed forces by land and sea and of war budgets."

The delegates from the United States strongly supported that main proposition, and it also had the support, but not so hearty, of Great Britain. But the other nations strongly objected, with the result as stated.

During the interval between the first and second Hague conferences the only two utterances by responsible heads of States against this militaristic aggrandizement were made by the British prime minister, Sir Henry Campbell-Bannerman, who held "that the growth of armaments is a great danger to the peace of the world," and proposed a league of peace to consider the question, and by President Roosevelt, who suggested that

is a great danger to the peace of the world," and proposed a league of peace to consider the question, and by President Roosevelt, who suggested that—

"The most practical step in the diminishing of the burden of expense caused by the increasing size of naval armament would, I believe, be an agreement limiting the size of all ships hereafter to be built."

England and the United States accordingly "reserved the right" to bring up the discussion of the limitation of armaments at the second Hague conference, especially as Russia had abandoned her championship of the cause and was proposing to bar it out of the discussion. Not, however, until after the conference had been in session over eight weeks was the subject introduced. Then England made the following tentative proposition, although Germany, Austria, Russia, and Japan had announced that they would take no part in the discussion:

"The Government of Great Britain will be ready to communicate each year to the powers that will do the same its plan of constructing new warships and the expenditures which this plan will require. Such an exchange of information will facilitate an exchange of views between the Governments on the reductions which by common agreement may be effected. The Britannic Government believes that in this way an understanding may be reached on the expenditures which the States that agree to pursue this course will be justified in entering upon their budgets."

After Mr. Choate, in behalf of the American delegation, had "expressed his sympathy for the views which have been stated by his excellency the first delegate of the British delegation." The discussion was solemnly dropped, and the whole question was tabled again in the following resolution:

"The second peace conference confirms the resolution adopted by the conference of 1899 in regard to the limitation of military expenditure; and inasmuch as military expenditure has considerably increased in almost every country since that time, the conference declares that it is eminently desirable

Later the question has since been agitated concerning a third Hague conference, but there is so little sentiment for disarmament or limitation of armament among the great nations of the world that there is danger of postponement of a third Hague conference, ordinarily due in 1915, in part on that account. Further, the Speaker of this House will remember I know, as some of the older Members will, that in 1910 this Congress passed a joint resolution which is now on the statute books, as follows:

as follows:

That a commission of five members be appointed by the President of the United States to consider the expediency of utilizing existing international agencies for the purpose of limiting the armaments of the nations of the world by international agreement, and of constituting the combined navles of the world an international police for the preservation of universal peace, and to consider and report upon any means to diminish the expenditures of Government for military purposes, and to lessen the probability of war: Provided, That the total expense authorized by this joint resolution shall not exceed the sum of \$10,000, and that the said commission shall be required to make final report within two years from the date of the passage of this resolution. (Approved June 25, 1910.)

It is found in the statutes of 1910 on page 885. It was approved on the 25th of June, 1910, I think. It provided that a commission of five members would be appointed by the President of the United States to consider the expediency of utilizing existing international agencies, in substance, for the reduction and limitation of armament, using the existing one for a police power. That passed the Congress and is now upon the statute books. There was a limitation as to the time of its report, so that it is not now available.

The President of the United States did not appoint those delegates, and for a very good reason, which is important for you gentlemen who propose to support this resolution to consider. In an unofficial way the President sounded the great powers of the world for the purpose of ascertaining whether or not this Government would be humiliated in making open overtures for

the consideration of these questions. He soon found that he could do nothing; that further action on his part would be futile or worse, might lead to some resentment and so retard the progress of this great movement. So the President never did appoint those delegates for that reason, as he knew that our Government would be humiliated; that his overtures would meet with rebuff. It is quite one thing to have an intense desire and zeal for a laudable result and quite another matter to tactfully and efficiently adopt the right means for its accomplishment. President Taft did not cause any resentment or ridicule against our Government or the movement by his tactfulness and care. Such a resolution as this is quite liable to cause both ridicule and resentment among the other nations to be approached. Ridicule, because it is manifestly based upon a proposal abandoned by its sponsor and rejected by every responsible Government to be affected, and this resolution of ours does not seem to know these most important facts. Resentment, because the other nations have intimated in the most forceful yet polite way to our Government no less than three times, that they do not desire to consider such a matter. The last rejection is most re-Is it not about time we realized that there may be such a thing as an international nuisance which may do more harm than good for this cause we pretend to advance? I state these facts so you gentlemen can consider that situation which existed three years ago and which is even worse now, and I feel, as the gentleman from Pennsylvania [Mr. Moore], does. We do not desire our Government to be humiliated. We do not desire our President and his administration to be rebuffed, and the cause of peace and lessening burdens receive a bad setback. He is our President as well as your President; we are equally proud of him and the honor and dignity of our country, and fear that the same experience would come to him, if this resolution were passed and he would be forced to attempt to make it effective, would have come to President Taft after the passage of the resolution in 1910, and to our Department of State in the suggestions concerning the treatment of the Jews in Roumania.

Mr. SHARP. Will the gentleman yield?

Mr. STEVENS of Minnesota. I yield to the gentleman.
Mr. SHARP. Does not the gentleman think that the Presi-

dent we have to-day has had some better success and less humiliation offered to him by other powers in his recent negotiations in regard to the Mexican situation?

Mr. STEVENS of Minnesota. Now, Mr. Speaker, if the gentleman will allow me, I will be glad to answer him if I have

Mr. SHARP. Is it not also true that great national and international reforms which have been brought about from time to time have met with these rebuffs and they have been from time to time set back and discouraged, but all the time such declarations as are provided in this resolution have been a step in advance and finally brought about the result wished? Is not that the history of all great reform movements?

Mr. STEVENS of Minnesota. Mr. Speaker, the gentleman is entirely right. There is no question about it that these things will come sometime and after repeated attempts. What impresses me is that this resolution will not accomplish that fact, could not be welcomed, might be resented and, worse yet, ridiculed. This resolution is based upon this situation I have stated, which has been abandoned and rejected, and is now nothing but a last year's bird's nest. It has been abandoned by those who originally initiated it. It has already been rebuffed and refused in advance by those who will be obliged to come in under it. The gentleman realizes the Mexican situation is not yet concluded, and I do not wish to embarrass the administration by frankly discussing it now.

Mr. HENSLEY. Will the gentleman yield right there?

Mr. STEVENS of Minnesota. Certainly. Mr. HENSLEY. Is the gentleman aware of the fact that when the United States Government, through its representatives to Great Britain, proposed a disarmament on the Great Lakes that for three years the representatives of the British Government refused and gave no encouragement to the representatives of the United States and said that Great Britain could not think of such a thing, but the persistence of the representa-tives of the United States Government brought about an agreement which resulted in the disarmament on the Great Lakes, and Great Britain in that instance, I desire to say to the gentleman, had 74 boats upon the Great Lakes, and 70 of the 74 were dismantled.

Mr. STEVENS of Minnesota. Yes, Mr. Speaker; the gentleman is right; but the situation is entirely different now for two reasons. In the first place, Great Britain would agree with us, and it would be for its interest to agree with us now, as it did then. Great Britain would be very glad to see a limitation of armament and has several times suggested it; but

the other nations will not so agree, and they do not think such limitation would be for their interest. If the gentleman will allow me to answer his question in the brief time I have, there are two reasons the other nations will not consent to such a limitation: First, it is not for their interest to do so, and, secondly, they would—

Mr. HENSLEY. That was the argument made by the representatives of the British Government when the United States Government proposed a disarmament on the Great Lakes.

Mr. STEVENS of Minnesota. But the gentleman does not realize the situation. The trouble is not with Great Britain, but the trouble is with the continental European nations necessarily, and if the gentleman will spare me a moment I will show him why. The great nations of Europe are divided into two great groups, one known as the "Triple Alliance," composed of Germany, Austria, and Italy, and the other known as the "Triple Entente," composed of Great Britain, France, and Russia. Now, the great powers of Europe are divided into those two groups facing each other, each having some common interests sufficient to hold them together, and the smaller nations group themselves with one or the other as circumstances may be. These are the great groups of powers facing each other, and they maintain peace by continuing practically the same sort of military organization and power, one comparing with the other. Now, if one of these groups should reduce its strength without the other similarly reducing its force, the result would be that the equilibrium would be disturbed. France would not dare to reduce without Germany or Germany without France. Now, as I said to the gentleman from Mis souri [Mr. BARTHOLDT], the position is this: The German Empire is in many respects one of the best-governed nations in the world; it has possibly the best administrative system and has a most splendid industrial system which is being rapidly extended. It has a fast-growing people as well as industry, and it must have an opportunity to grow, expand, and flourish and not to cease to move. But on the east of Germany is the great empire of Russia in a sense antagonistic to Germany. There is a sort of sore, so to speak, on the eastern boundary of Germany which always requires watching on the part of the authorities of that Government. On the west of it stands the agitation and trouble of Alsace-Lorraine, about which we have seen in the newspapers the last few weeks.

Now, the German Empire, in order to maintain its own position among the powers of the world, must have a large defensive force, and, more than that, Germany has only a few colonies in the distant lands, and in order to support its people and industries must have a great expansion of its foreign commerce and influence. Its population is growing very rapidly and needs It must have a large force to maintain its lines of communication all over the world, for the great German authorities know well, and have stated repeatedly, that no nation can live, no nation can flourish, unless it does maintain its lines of communication and industry and expansion and protect them all over the world whenever and wherever need may be. For that reason the German Government maintains its large army and its large navy, and it is obliged to do so for the defense of its own institutions and the interests and prosperity of its people. During the last 25 years the head of the German Empire, Emperor William II, has done more for the cause of peace in Europe than all other forces put together. [Applause.] During the last two or three years, as those who have studied European conditions well know, it has been in his hands to decide for peace or war and make or avert an awful conflict. Matters have come so that it would have been in some respects for the interests of his people that there should have been war, but Emperor William stoutly adhered to his policy of peace and decided against it. He compelled peace, and the rest of the great European powers were obliged to submit to the dictates of Emperor William, because he had the force behind him, the great naval and military force behind him, the great German Army and the German Navy, to carry out what he ordered. So the great German force has made for peace among the powers of the world, and the world should be grateful for what he has done. As long as that condition exists on the eastern and western frontier and the necessity for the extension of German possessions and interests beyond the sea, the Germans can not reduce their army or their navy, and they will not, and there is no use for us to exercise ourselves over a last year's bird's nest in an attempt to so persuade them.

Now, that is the trouble. Perhaps I may differ with some, but it seems to me that the only possible way that we can get a reduction or limitation of military burdens in the near future must come through the action of France. Now, the French people are extremely proud, extremely sensitive, extremely rich, and very powerful. The old sore of Alsace and Lorraine rankles

with them. For that reason they maintain their army, possibly as a sort of protection against Germany. As long as France maintains its army Germany must maintain its army, and the rest of us must maintain our armament in considerable amount on account of that old sore between the nations. That is one of the troubles which must be realized.

Gentlemen ask us why can we not take the initiative to remove that and to persuade France and Germany to reduce and It seems to me there is a little light on the sky. I think the action of the French Parliament only a few days ago in overturning their ministry indicates that there is a large part of the French people tired of the burdens of maintaining a warlike armament in time of peace. I hope that that indicates that the French sometime may be willing to consider some overtures if made in the right way. But, Mr. Speaker, whether that be true or not—and I believe there is some foundation for it-those overtures can not come from the United States or by a resolution such as this. It must be done with the utmost care and tactfulness and not by a legislative proposition manifestly ridiculous and abandoned. This Nation is not in a position now to undertake overtures to the great nations of Europe, with the standing that we have among the powers of Europe. And, unfortunately, the reason is this: We did have the prestige to do that 10 or 13 years ago, I think, at the time of the Boxer troubles in China. Our Department of State took the initiative, and we had such a very great influence among the powers that Secretary Hay urged them to cooperate and preserve the entity and integrity of the Chinese territory. The situation is entirely different now. Since that time the European nations and European publicists and the thoughtful Europeans have repeatedly stated that they take no stock in the promises or performances of this country. It is one of the unfortunate things in the recent career of this country and the record of our Congress, for which each one of us is more or less to blameand I confess my share of it—that we have not respected our international obligations and our international promises and our international treaties; and for that reason we are distrusted and even disliked; and any overtures we should make would be discounted in advance on account of our recent record.

I think it was over 10 or 12 years ago when we acquired Panama Zone from what was formerly the territory of Colombia. A great majority of the nations of the world believe we did it by breaking our solemn treaty with that country. My own opinion may be different, and I voted to sustain that, and think I had good reasons for it. But the opinion of many of the thoughtful people and nations of the world is that we did violate that treaty and have been unwilling to make reparation. When we came to abrogate our treaty with Russia, the resolution which passed this House was almost brutal and of uncalledfor severity of language against the great Empire of Russia, notwithstanding that that nation had been the traditional friend of this country for a century. [Applause.]

of this country for a century. [Applause.]

The SPEAKER. The time of the gentleman has expired.

Mr. BUCHANAN of Illinois. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended five minutes.

The SPEAKER. The gentleman from Illinois [Mr. Buchanan] asks unanimous consent that the time of the gentleman from Minnesota be extended five minutes. Is there objection?

There was no objection.

Mr. STEVENS of Minnesota. I am very grateful to the gentleman from Illinois and the House for the courtesy. The nations of the world realize, all the nations of the world appreciate, the somewhat precipitate language of the action of the House. The resolution was changed in the Senate for the better, and when the final action came to be taken it was done in the proper way; but we did not adopt our resolution in the proper way, and I am willing to assume my share of the shame and responsibility for it.

In the case of Panama there was a great difference of opinion among us as to whether or not we violated the treaty with Great Britain and Panama concerning the question of tolls on the Panama Canal. But on the other side of the water they believe we did violate that treaty. They believe that the United States would violate it for its advantage and did violate that treaty; and, more than that, in that connection the question as to whether we did violate that treaty was one capable of arbitration under the agreement which we ourselves had urged and for half a century had loudly advocated; but we have refused to abide by that treaty and have refused arbitrating that Panama Canal question under our solemn agreements.

Moreover, there are pending right now, as the President of

Moreover, there are pending right now, as the President of the United States urged from that desk only two days ago, the ratifications of five treaties in the Senate, and one of the great reasons why those treaties are not ratified is because some of the gentlemen over there who have favored free tolls do not believe those treaties should be ratified, because their ratification might affect that question of tolls and arbitration.

However, I am not arguing that matter.

I think the seamen's bill has been adverted to in this debate. Some question has been raised about that bill violating 10 or 20 treaties. I believe the venerable and honorable senior Senator from Georgia, the chairman of the Senate Committee on Foreign Relations, Mr. Bacon, in a debate stated that that bill did violate quite a number of treaties, and such is the record on that subject.

You will further recall the Underwood bill as it passed this House contained the provision for a 5 per cent discriminatory duty on imports in American vessels. Many foreign nations objected that it violated their treaties, so the clause was But we did our worst and disregarded our inter-

national relations and obligations.

The point is that this Congress and this House has repeatedly, time and time again, by the votes of most of us, done something which violates, or at least it is claimed by foreigners that

it does violate, our international agreements.

The result is that the action of this House is not taken seriously abroad-is not respected as we believe it should be. They look at it as some European publications did this past fall in discussing the very question that I am discussing before you now, as to the attitude of the United States toward foreign I think it was one of the great reviews of Paris which stated that there seemed to be an epidemic in the Congress of the United States for violating treaties with foreign nations.

The result will be that if you instruct our President by this resolution to take up the question of the limitation of armaments or the diminution of armaments, we would be met by a very polite and courteous rebuff. There would be a humiliation for the President and his administration. Foreign nations would not take us seriously. We have not the influence now with any of the great nations of the world necessary to initiate

Mr. HENSLEY. Mr. Speaker, will the gentleman yield? The SPEAKER. Does the gentleman from Minnesota yield

to the gentleman from Missouri?

Mr. STEVENS of Minnesota. I will yield to the gentleman. Mr. HENSLEY. I will ask the gentleman from Minnesota whether or not he has read Mr. Winston Churchill's speech discussing these propositions of which you now speak?

Mr. STEVENS of Minnesota. I read both of them, and I have read his last speech, in which he abandons them. his last speech right here, and I will insert that part of it in

the RECORD.

The point I am urging, Mr. Speaker, is that this resolution will not accomplish what the gentleman seeks. I want to support something and vote for something which will tend to the limitation of armaments and that will tend to reduce the military burdens of our people and the other peoples. I believe that this resolution, however, would lead to resentment on the part of the other nations. We have tried it before. We have met with rebuffs before. If we try it again we shall get exactly the same thing in additional measure for what we have done in discussing these other matters. They believe we are doing it for our local or party or sectional purposes. They call it "a Yankee trick" in doing these certain things. They discuss it among themselves in that atmosphere and in that spirit, and that causes resentment among thoughtful people and among those who control the destiny of their Governments.

If the gentleman wishes to accomplish something, my own

judgment is that this resolution should be referred to the Committee on Foreign Relations, so that it could be reshaped. Leave out the proposition which has been abandoned by Mr. Winston Churchill and the British Government and so strongly and repeatedly rejected by Germany. Frame the resolution so as to express our sincere desire to cooperate with the nations of the world in limiting armaments and reducing the burdens of our people and request the President at the opportune moment to cooperate with any Governments whose heads have manifested a similar disposition. In that way we would not meet humiliation; in that way we would express our sympathy and support of that kind of a movement, and I believe that is as far as we can go right now in helping to accomplish the things

that we all want to do.

I thank the House. [Applause.]

The SPEAKER. The time of the gentleman from Minnesota has expired. The gentleman from Missouri [Mr. Bartholdt] is

recognized for one hour.

Mr. BARTHOLDT. Mr. Speaker, my views on the subject of world peace, I believe, are fairly well known, and I take the floor only for the purpose of demonstrating that love of peace is not a monopoly of one party; in fact, that there is no par-

tisanship in this great question at all. Naturally I also desire to go on record as heartly favoring the resolution offered by my colleague from Missouri [Mr. Hensley].

Before I enter upon a discussion of the general questions involved in that resolution, permit me to refer briefly to some of the statements made by the opposition on last Tuesday and

The gentleman from Minnesota [Mr. Stevens] has just said that the proposition of Mr. Churchill was an unofficial proposition, made at a political meeting, and that when it met with no response from Germany it was practically abandoned. I do not believe this statement. On the contrary, reading London newspapers as I do, I know that if a sincere proposition should be made either by this or any other country—I mean made officially—Great Britain would gladly and readily join hands in observing what is called a naval holiday for one year.

But supposing Mr. Churchill actually had abandoned that proposition, what difference does that make? This proposition has now become an American proposition; and it is going to be made, not at a political meeting, in a political speech, but it is going to be made by the President of the United States upon

the authority of the Congress of the United States.

The gentleman from Minnesota [Mr. Stevens] also said that President Taft failed to appoint the commission on disarmament because he feared humiliation. This is not in accordance with the information I have. As I had the honor of being the author of that resolution, I know what was in the President's mind when he declined to appoint these commissioners. At that time his great arbitration treaties were pending and the President simply did not want to complicate the question of those treaties with a new proposition looking to the appointment of a peace commission. That was the reason and the only reason that actuated him in not making the appointment in time.

The gentleman from Pennsylvania [Mr. Moore], whose zeal in the defense of the interests of his district and his city we all admire, and who has just made a most able defense of an indefensible cause, stated in his speech on last Tuesday that this question involves "the employment of labor, the expenditure of capital, and the national welfare to a large extent.

Mr. Speaker, I have always looked upon it as a most lamentable contradiction that battleships should be constructed in Philadelphia, that these modern monsters of destruction should be sent out on their bloody mission from a city which proudly calls itself "the City of Brotherly Love." [Applause.]

Besides, I was sincere in my expectation that a proposition looking to universal peace would be hailed with delight by the Quaker sentiment of that city; and, indeed, I need stronger proof than the present attitude of my friend to convince me to the contrary. As to the employment of labor and the invested capital, let me assure my friend that it would pay the Government, in return for being relieved from the necessity of building battleships, to grant to every workman employed in the shipyards a pension for life, and it could well afford besides to permanently pay a fair rate of interest on the capital invested. The Treasury would be the gainer to the extent of hundreds of millions of dollars by such an arrangement. The employment of labor is an incidental benefit of naval construction-I might almost say the only one-but surely it is not the aim and object of maintaining a navy or even a valid argument for continuing a policy which the enlightened sentiment of the day desires to change.

But my distinguished friend from Pennsylvania raises another, to my mind more interesting, objection to the passage of this resolution. He says the resolution is based merely on newspaper reports of a political speech made by Winston Churchill, the First Lord of the British Admiralty, and hence we are asked, he says, to act on something which is not officially before us. It is true, Mr. Speaker, that the proposition has not yet been made officially by the British Government, and that is the reason, by the way, why Germany has not yet answered. It is not true that the German Government has, as the gentleman from Alabama said, "ignored or rejected" the naval holiday At Berlin they are simply waiting for a tangible proposition, for a bill of particulars, especially with regard to the three battleships which Canada proposes to contribute to the British Navy. But what of that? I think as Americans we have reason to rejoice that the honor and the glory of making a formal proposition to the nations of the world looking to a cessation of the mad and life-sapping rivalry in naval construction is reserved to the United States, and particularly to the American Congress. I shall endeavor to show later on why the United States would be but true to its mission in the politics of the world if it would grasp the scepter of leadership in this great movement.

I am glad we have heard from the gentleman from Alabama [Mr. Hobson] on this proposition, for he is by far the ablest and most eloquent champion of naval expansion here. None is so skillful as he in sugarcoating with sweet peace professions the big naval bills—or pills—which it is annually proposed to administer to the choking taxpayers of the country. And I can not help but notice how the war party has changed its face. Its policy used to be that of blood and iron, as Bismarck called it. Its stern mien betokened conquest, war, and death. To-day it is all smiles. It speaks of battleships and peace in the same breath and tells us cajolingly that armaments are for peace and not for war. The idea of enduring peace founded on the rock of law instead of force is invisible, like every idea; but in this change of front I can perceive the most tangible evidence of the growth of the peace movement. As is well known, our aim is to establish a world judiciary and a world parliament, to be followed, in order to perfect the international organization, by a world police force, to which all the nations shall contribute.

Militarism to-day is even willing to aid us in the attainment of these great objects if we but agree to keep on increasing armaments. Unfortunately this is an impossible condition, because it is asking the nations to commit suicide. But let us see how our friend from Alabama puts it. He says we must establish an equilibrium in both oceans; that is, we should have a fleet equal to that of Germany in the Atlantic to maintain the Monroe doctrine and a fleet equal to Japan's in the Pacific to maintain the open door in Asia. We are told that dreadnoughts alone count nowadays, and of those Germany will have 26 when her present program is carried out and Japan 10, while we have To be equal with those two powers we should have to build 24 new dreadnoughts in the immediate future. This is the minimum, in the opinion of our friend. Will he please inform us where and how we could procure the extra \$300,000,000 for that purpose, especially if he had his way, in the wiping out of over two hundred millions of internal revenues? And if we were building at such a furious rate, would not this be an incentive for the other nations to follow suit, and would not the relative strength of the nations be the same at the end of such a feverish period as it is now? No, my friends. Let me lay this down as a general proposition: If the open door in China and the Monroe doctrine depended for their maintenance solely upon the naval strength of the United States, then we would have to have a navy equal or superior to the combined navies of the whole world, for spoils of war have the same cohesive power in the case of nations as public plunder has in the case of parties, and it would not be impossible to effect a combination of the powers for the exploitation of South America and of Instead of two we should have to build a hundred battleships. That is exactly where the gentleman's logic will The fact is, however, that in increasing its armaments not a single European nation has any thought of the United States. England is sapping her lifeblood to keep up the so-called double standard from fear of Germany; and Germany, on the other hand, is increasing her army and navy in proportion to the increase of her population—the army with an eye to her neighbor across the Rhine and the navy with an eye to her rival across the channel. America, I say again, is left entirely out of the equation, and every one of our diplomatic representatives in Europe will bear out the assertion that in no country is there entertained the remotest idea of any serious difficulty with the United States. European statesmen certainly no more dream of comparing their naval strength with ours than they would think of guarding against sun spots. Our position, battleships or no battleships, is looked upon by them as impregnable, with envy, it is true, but with a feeling of absolute resignation and helplessness on their part. The references of the gentleman from Alabama to Germany, a nation which has been our steadfast friend from the beginning of the Government, are on a par, therefore, with his prediction made a few years ago of a war with Japan within 10 months. And for the United States to join in the mad race for naval su-premacy seems not only a reckless waste of the people's money, but also a needless betrayal by the present generation of the high mission of this Republic. It is nothing more nor less than a cheap imitation of European insanity.

Now, what is proposed here? Simply that the President of the

Now, what is proposed here? Simply that the President of the United States secure the consent of the powers to a proposition to stop naval construction for the period of one year. We are asking the world to have a breathing spell, a holiday, a rest from its exhausting race, and we are asking it in the hope that at the end of the year the nations, having come to their senses, will readily agree to an extension of the holiday for another year, for 5 or 10 years, or indefinitely. Such an agreement would injure no one, give no nation an advantage over the other, and

leave them all in exactly the same position as to relative strength in which they are to-day, while, as I said on Tuesday, in one single year about two hundred and fifty millions of the people's money would be saved. The mere prospect of such an agreement makes the peoples of Europe, who are now groaning under intolerable burdens, heave a sigh of relief, and if the plan succeeded this great Republic would become the object of their blessings and benedictions. And remember that they are not only our fellow beings and brethren, but also our customers whose purchasing power, by any relief from taxation, would be considerably enhanced. In this connection let us be honest enough to admit that the American people themselves are not as indifferent as to saving involved in this plan as it might seem to the rest of the world. Owing to the enormous sums swallowed up by the military and naval establishments our expenditures have increased by leaps and bounds in spite of the honest efforts of both parties to economize. A glance at these vast amounts expended for unproductive purposes suffices to explain the high cost of living under which we are laboring, and there is no use denying that we do suffer, the same as all other nations, from this cause. We are paying city taxes, county taxes, State taxes, corporation taxes, and for the first time in the history of the country we are now obliged to pay a direct tax to the National Government based on our incomes. The American people, therefore, have every reason to mingle their prayers with those of their European brethren for relief from burdens which never before have been imposed in times of peace. Peace? "What is called peace in our present state of civilization," says one of the weeklies, "is an irony. It means merely the absence of some great war. When will real peace come? When will the lives of hundreds of thousands of wage earners cease to be devoted to keeping up armies? When will the nations cease to be merely resting after one war or getting ready for another?

You need not go to meetings of peace societies to hear protests against the burdens of militarism. Labor, which bears the brunt of every sacrifice of blood and treasure, is rising in solemn protest all over the world, and I shall never forget when two years ago I witnessed a monster mass meeting at Berlin protesting against war on account of Morocco, and when, after speeches from 16 different platforms, on a given signal 150,000 hands were raised to heaven pledging as many workingmen not to countenance war. There was no war. Just as strong for peace is the sympathy of American labor. And recently the farmers, too, have taken up the cudgels. They are now passing a resolution, first adopted by the Massachusetts State Grange, which reads as follows:

as follows:

The State grange, in annual convention assembled, renews its earnest pledge to the commanding cause of the world's peace and order, to which the granges of the country have been steadily devoted. Keenly sensible that the burden of taxation for the present monstrous armaments of the nations falls most heavily upon the agricultural and industrial classes, we gratefully hall the warm response of our Secretary of the Navy to the recent proposal of the head of the British Admiralty for international cooperation in the limitation of naval armaments and expenditure. We gratefully recognize the enlightened and courageous action of Congress in the last two years in cutting down our own battle-ship program; and we urge uncompromising adherence to this progressive policy and to all measures which tend to the supplanting of the rule of force by the rule of justice and reason among nations.

In England recently both labor and capital, as well as religion, have raised their voices in no uncertain tones against this mad naval rivalry.

The president of the recent International Cooperative Alliance Congress in England, Mr. William Maxwell, spoke as follows upon the terrible burden of armaments, and his sentiments were afterwards embodied in a resolution which was carried with great enthusiasm:

Apart from the horrors of war and its attendant miseries, which fell heavily upon the workers, financial burdens all over Europe were becoming intolerable to the worker, and all in order that one Government should have more engines of destruction than others. International cooperation was the very antithesis of international strife. He urged all cooperators to use their influence to blot out these huge armaments of war, which disfigured the civilization of the present century. Let them hope that the growing sense of harmony between nations, which that great congress represented, would in a very short time wipe out many of those deadly engines of destruction on which so much hard money was spent.

Equally emphatic was the Trade-Union Congress in condemnation of the warlike expenditure. Turning to the capitalist side, I note the presidential address of Sir Algernon Firth at the Antwerp Congress of the British Chambers of Commerce. After giving the enormous figures representing the capital sunk by the nations in this ghastly game of beggar my neighbor, Sir Algernon concluded thus:

At the present rate of increase, Europe in 10 years would be spending on armaments sufficient to replace the mercantile marine of the whole world to-day. That was a stupendous fact. It should cause every man, not only in Great Britain, but in Europe, to pause and consider whither this waste was leading them. It fell almost entirely upon the productive capacity of the countries concerned. It increased the cost of liv-

ing and thus of production. The congress could draw attention to the danger and with no uncertain voice call upon statesmen to get together and devise a better system.

My concluding quotation is from the Bishop of Winchester, taken from his address as president of the Church Congress:

The age of armaments as we knew it with its colossal, intelerable burdens, its naked international selfishness, its apparent contempt of the great common vocations from God, which should draw the Christian nations into common service of world-wide liberty and spiritual progress, could not last long; one way or another it must change by thunderous and unimaginable catastrophe; if not, by some better way of moral transformation.

Here, then, we have labor, capital, and religion raising their voices-speaking for the best public opinion in their bodies-to tell the chancellor of the exchequer, who asked for strong expression of public opinion on the matter, "It is time this should Mr. Lloyd George has himself recently declared that the menace of revolution confronts Europe if some way can not be found to check the present insane rivalry and expenditure.

It is impossible to leave the subject without recalling this solemn warning of Lord Rosebery, for, though four years have passed since it was uttered, it is more timely than ever:

When I see this bursting out of navles everywhere I begin to feel uneasy at the outcome of it all, to wonder whether it is ever going to stop, if it is merely going to take Europe back into a state of barbarism, or whether it will cause a catastrophe in which the workingmen of the world, at any rate, will say, "We will have no more of this madness and this foolery, which is grinding us to powder."

And now, gentlemen of the House, after we have heard from labor, capital, and religion, let me read to you something which a few years ago came from a most unexpected source. It runs

"The maintenance of general peace and a possible reduction of the excessive armaments which weigh upon all nations present themselves in the existing condition of the whole world as the ideal toward which the endeavors of all governments should be directed. The present moment would be very favorable for seeking, by means of international discussion, the most effectual means of insuring to all peoples the benefits of a real and lasting peace, and, above all, of putting an end to the progressive development of armaments. Hundreds of millions are devoted to acquiring terrible engines of destruction which are destined to-morrow to lose all value, in consequence of some fresh discovery in this field. National culture, economic progress, and the production of wealth are either paralyzed or checked in their development. Economic crises, brought on in great measure by the system of developing armaments to the utmost, and the constant danger that lies in this massing of war material, are transforming the armies of our days into a crushing burden, which the people have more and more difficulty in bearing. It appears evident, then, that if this state of things is to be prolonged, it will inevitably lead to the very catastrophe which it is desired to avert and the very thought of whose horrors makes every man shudder. To seek the means of warding off the calamities that are threatening the whole world is the supreme duty that is to-day imposed on all States."

What do you think I am reading from? Is it from a peace pamphlet or from the speech of a Socialist? No. These words, gentlemen, were uttered by a crowned head, by one of the greatest rulers on earth. They are from the rescript of the Czar of Russia, in which he proposed the first Hague conference of the nations, a conference which-I again quote his own words-"would unite in one powerful combination the efforts of all nations which are sincerely seeking to make the great idea of universal peace triumphant." How much more true are these words to-day than they were 15 years ago, when the Czar startled the world with his democratic proclamation, for within that time more than twenty billions—that is, twenty thousand million dollars—have been filched from the pockets of the taxpayers to maintain the world's armaments. How much longer, I ask, will those who seize the people's bread in order to shed the people's blood be deaf to the people's voice? How long will civilization pour uncounted millions at the shrine of ravening savagery and waste the substance of its people in the murderous enginery of war?

We can rest assured that the same Czar who thus described the curse of militarism will be one of the first rulers to join hands with President Wilson if this resolution passes. in fact, he who made the first proposition of this kind. In a conversation with William T. Stead, shortly after the rescript had appeared, Czar Nicholas is reported to have said:

"Why are they always talking of disarmament? I never used the expression; it does not appear in the rescript. I know only too well that immediate disarmament is excluded. It is, indeed, difficult to speak of the diminution of armaments. Surely, the most practical step, and the first that should be taken, would be an attempt to come to an agreement to refrain should succeed in securing the consent of the nations to his

from increasing armaments for a term of years. After four or five years we should learn to trust one another and to keep our word. By this means we should secure a basis for a proposal to reduce the armaments."

Let us wish that these memorable words may prove prophetic. That they are authentic appears from the second circular which the Russian foreign office issued, and in which a program of eight points was suggested. The very first point was this:

1. An agreement not to increase, during a fixed period, the present strength of the armed military and naval forces, nor the budgets pertaining thereto, and a preliminary examination of the means by which a reduction might be effected in future in the forces and budgets above mentioned.

From this it will appear that the real author of the plan for naval holiday is not Mr. Churchill, of England, but Czar Nicholas of Russia.

Mr. Speaker, it is my deliberate opinion that there will not Oh, it is still possible, but there is not be another great war. a responsible human being living to-day who wants war as an absolute frank, outspoken purpose of destruction. itself the age has invented a new delusion. "War," as Dr. Green said at St. Louis recently, "in its grim reality is the sole survivor of medieval barbarism. Everything else has been banished. We have eliminated pestilence, we have removed slavery, we have prevented famine. We have driven superstition and ignorance before the advancing light of civilization and culture. War alone of all remains to flaunt its horrid crest in the face of the twentieth century. An age whose loudly lauded ideals are the protection, the development, the evolution of human life can not justify war. For war deliberately plans the ruthless, inhuman destruction of myriads of living men. It makes possible the agony and the nameless suffering incident to torn and mangled bodies. It inflicts upon the innocent and the defenseless the hideous torment of bereavement; the lasting, gnawing grief of broken-hearted solitude; and the sunless future of dreary, unalleviated poverty and want. It takes from a generation its strongest and most virile and leaves the decadent and the unfit to the fatherhood of generations to come. It destroys homes, it despoils widows, it bereaves orphans. It exalts murder into virtue. It halos cruelty with the excellency of courage. It drags down the human brotherhood and fills the world with the foul dissonance of fiends let loose from hell." [Applause.]

All this, and indescribably, unspeakably more, is war; and so no one justifies war. Nobody wants war. We are fighting a delusion. We have invented a new economy that protests with fulsome platitudes its humanitarian purposes. It loathes war; it loves peace; and the only way in which we can make peace certain, the only way in which we can insure life, liberty, and the pursuit of happiness is to be ready at any cost, however enormous, to compel peace even by barbaric force, for each individual nation to be so strongly, so invincibly armed as to make all other nations peaceful and affectionate, even if one has to shoot them into obedient tranquillity. So not war but an insane militarism is throttling the world. It is a disease—reason destroying, insensate, incoherent; a pestilence self-nourished. It respects neither present good nor future evil, and to-day the world's greatest problem is, Can civilization save itself? Has it an antiseptic for this cancerous distemper? Is there any end possible save chaos?

To safeguard peace the nations prepare for war. Stupendous armies, magnificent navies, are hailed as the supreme safeguards of civilization. Statecraft juggles with words; clothes itself with pretense; presents to the historic judgment of a century to come the pitiful spectacle of a deluded age that increases its armaments at the expense of two billion dollars a year only for the purpose of making those armaments useless; an age when nations are willing to confess that they are bankrupting

themselves to keep from fighting.

I ask you in all seriousness, is it not time, high time, for the thinking people of the United States to take stock of the great world problems as they exist to-day and to determine whether we are to be mere imitators, tagging at the heels of the moth-eaten, suicidal policies of the nations of Europe, or are we to be brave enough to rise to our opportunity and at least point the way to the threshold of a new era, whose accentuating notes shall be a cessation of the ruinous expenditure for military armament, the absolute elimination of war between civilized nations, and the establishment of courts of arbitration for the settlement of all international disputes?

Thank heaven, we are rising to this golden opportunity now. and it will redound to the everlasting glory of this Congress if it passes this resolution the same as it will shed lasting luster on American humanitarian statesmanship if Secretary Bryan great plan, according to which there shall always be a year's investigation before ever again human blood can be shed. To the people of the world these two American propositions are two new stars of Bethlehem. [Applause.]

The rulers of the Old World, it seems, will not voluntarily abolish either militarism or war. The relief must come from a country where the people rule, and the millions in other lands are looking to this great Republic for deliverance. Germany will not listen to England, and France will not listen to Germany, general distrust being the true diagnosis of the disease from which the world is suffering to-day. But they will all listen to America. Will she say the word? The American people have proclaimed the liberty of man and demonstrated the possibility of self-government. They have set new standards and taught the world new lessons of freedom under the people's rule. They have broken with the traditions of the Old World in matters of government; will they not also depart from them, for the sake of justice, humanity, and peace, in the matters of settling differences between nations? I have an abiding faith that they will. Their own welfare and their unwritten obligations to the world require it.

True, we have made some sad mistakes. The contagion, with its glamor and its barbaric fascination, says the same speaker above quoted, has touched our sober judgment. Providence flung us for a moment into the forefront of the world, but instead of remembering that we stood for a new age and a new philosophy we dressed ourselves in the uniform of modern savagery and began to ape the insanity of the older world. We are not by instinct a military Nation. It does not set well with the genius of our Republic. There is nothing attractive to the young men of America in being shut up in dusty barracks and burning up in practice marches. If they want to march, they want to march for something and to some place. But we are spending over sixty cents of every dollar for militarism. The whole public-school system of America in 1912 cost the sum of \$426,250,434, while, think of it, we lavished \$444,000,000 on our pet delusion. A single battleship costs \$15,000,000, and every time a gun is fired it burns \$1,000 to ashes; and all this while people starve in our slums, children die like flies for lack of pure milk, and half-famished girls sell their virtue for the price of life. And all this without an enemy in the world-without a single power to challenge us to combat.

Let America stop. We have nothing to lose. imperishable immortality to gain. More, we can teach our own people a higher, loftier purpose of life than the sordid greed for territory and power that dominates the policy of the world. We can pour out our millions for the people's good. We can fight poverty and want. We can campaign against vice and unrighteousness. We can make of our armies conquering battalions who shall bear the triumphant banners of accomplish-We can bridge our rivers, scale our mountains, make ample our harbors and fertile our arid lands. We can harness our waterfalls until the whir of machinery shall make a sym-

phony keyed to the music of peace.

Let America stop.

That, too, was the keynote of the great American Peace Congress recently held in the city of St. Louis, when Dr. Green in a masterful speech summed up the case in the following im-

pressive exhortation:

"Let America stand before the nations clad in simple honesty, panoplied in elemental justice. Let her appeal to the common conscience of the world. Let her say to the war-mad powers of Europe, 'There is a way out, and we will lead. We will help you police the sea, we will give our quota to a constabulary of peace, but we are through. No great standing army, no more leviathan battleships. We trust to what we boast of as the highest attainment of the age, the innate justice of civilized humanity.

"'Touch us if you dare. Violate at your peril the sacred

egis with which we panoply the world's peace.
"'We shall have our problems, but for their solution you will go with us to The Hague, you will stand beside us at the bar of international arbitration, and you will abide by the decision of that court, or we shall hold you up to the scorn and contempt of the enlightened conscience of the world.'

Within 30 days of such a pronouncement the nations of the earth will stand behind America, thanking God for the moral courage of a people who had dared not to fight for peace, but to

live to make peace.

It is America's supreme opportunity. It will demand of us clean hands and a pure heart. They must be without re-

proach who bear the banner of righteousness.

"Heaven grant us the courage to be what our fathers dreamed, and when the day shall come, as come it must, when in company with earth's mighty past this great Republic shall lie large, and it ought to be reduced rather than increased; but

down at last, its duty done, its mission ended, may they write above her resting place, not 'This was the greatest Nation in the world,' not 'This was the richest Nation in the world,' but, above her may they write in letters of light, that all the ages to come may read and glorify, the proudest epitaph a nation may win, 'This, this was America, the peacemaker of the world.' "

[Loud applause.]

Mr. MONDELL. Mr. Speaker, in supporting the resolution offered by the gentleman from Missouri [Mr. Hensley], which provides that we shall request the President of the United States to take such action as he may deem proper to bring about a cessation of naval construction for one year, I desire to say that I harbor no dream of universal peace. I doubt if the time will ever come when there shall be no more war among the nations of the earth. If that time ever comes, it will be after the millennium has been ushered in and human nature has been entirely redeemed. I do not expect that time to arrive

in the near future.

On the other hand, the world has been progressing away from war. Back yonder in the barbaric times of our race war was the principal occupation of mankind, and the temporarily strong and war-like tribe frequently secured a considerable portion of its substance by preying upon the less war-like or more indus-When nations were organized the practice of trious tribe. acquiring, or attempting to acquire, wealth by levying on the foreigner still continued to be popular. As monarchies were established the effort to perpetuate dynasties became one of the most potent sources of war. And so wars have been waged, wars of conquest, wars of pride of opinion, wars for the perpetuation of kingly lines, wars waged to hasten and wars tending to prevent the establishment of liberty among men. In latter years wars happily have been less frequent, not as infrequent as they should have been and should be, but less frequent than formerly and for many reasons. First, because men have come to realize more than ever before that war, as a great general once said, is hell, and as the common people who in war are the food for powder acquire more power in government their influence is generally exerted toward the prevention of those conditions under which they and their kind are the principal sufferers. For rulers and privileged classes who bring on wars, and who are generally responsible for them, usually suffer not at all from them directly or indirectly, but are frequently largely The increasing good sense of mankind, benefited by them. awakening realization of the waste and woe of war, have been effective in reducing the number and the length of wars. Increasing cost of war has also had a tendency to reduce the number and the extent of wars. As time has passed war has became more and more expensive.

In the olden days, in the feudal times, and as late as two and a half centuries ago, there was no such thing as a national credit in the sense in which we now understand it. could not be mortgaged to the extent to which it can in these days of great princely lending houses. In those days rulers were compelled to finance their wars as they went along, but wars were not expensive as they are in these latter days, first, because the soldier served with but little pay, was poorly fed, and indifferently cared for, and the implements of war were, in comparison with those of modern times, inexpensive.

But as time passed and man began to build permanent fortifications, costing many millions of dollars, mounting upon them great guns firing missiles weighing half a ton, costing hundreds of dollars per shot; as we launched upon the deep seas battleships costing four and five, and then ten, and now fifteen millions of dollars each; as the world became an armed camp, these conditions of extraordinary expenditure for war have been one of the compelling causes in the maintenance of peace.

I did not have the pleasure of listening to all of the speech of the gentleman from Minnesota [Mr. Stevens], but in his closing remarks, which I was fortunate enough to hear, he expressed the opinion that the vast armaments maintained by Germany during the last quarter of a century had contributed more to the maintenance of peace in Europe than all other causes combined. That is true in a sense. It shows how an evil may become great enough to work somewhat for good, for, following the lead of Germany, pressed on to greater and greater armaments by her fear of France and by her ambition overseas, Europe has become so tremendously, so fearfully armed that all of her chancellories realize that war, even if successful, threatens bankruptcy.

Do we realize how the nations have been advancing in war expenses in the last few years and how they stand in the matter of debt? We have a national debt of approximately \$1,000,000,000, with almost a hundred million people and the richest country in the world. Our debt is quite sufficiently France labors under a debt more than six times as great as ours, with half our population and a quarter of our wealth. many has an interest-bearing debt more than three and a half times as great as our own. England is paying interest on a debt more than four times as great as ours; and Austria-Hungary, without a seacoast worth while, without a navy, has a debt, if I recollect rightly, nearly four times as great as ours. part of our national debt-as, for instance, the cost of the Panama Canal—represents expenditure for useful and peaceful purposes. Practically all the debt of Europe represents the waste of war. Most of these great debts have been incurred within the past century, and much of it within 50 years.

Do we realize that this increase of national debts can not continue indefinitely; that there must be a halt; that it is utterly impossible that the world shall continue to increase its expenditures for arms and armaments as it has the last quarter of a century for a quarter of a century more? There is not a nation, save our own, among the great nations of the world that can continue to increase its army and its navy for another 25 years in the same proportion as they have in the past 25 years without so impoverishing its people as to bring as an inevitable result bankruptcy, revolt, and revolution. There must be a halt, and all of the military men and most of the public men of the world realize it. The question is, How is it to When is it to come?

The gentleman from Minnesota [Mr. STEVENS] made some confessions in regard to Congress and its attitude toward treaties with which I somewhat agree. I said a year ago in discussing a matter affecting an international treaty-and I said it with regret-that I thought it was a mistake for anyone to argue with the House that a thing ought not to be done, because it violated a treaty obligation, because there seemed to be a temper and disposition to do the thing which seemed at the moment desirable, regardless of our treaty obligations.

Mr. SHERLEY. Will the gentleman yield for a question?

Mr. MONDELL. I will be glad to do so. Mr. SHERLEY. Did that fact, which is a very pertinent fact not only in this country but in every other country, that when a paper agreement gets in the way of the march of events it speedily gets out of the way, did that fact ever suggest to the gentleman that the remedy lies not so much in not breaking treaties but in not making foolish treaties in the first instance?

Mr. MONDELL. I can not answer the gentleman's question without saying I can not agree with its premises. I fear it is based on the theory that the particular treaty which was under discussion at the time was an unwise treaty and that we should break it because it was unwise.

Mr. SHERLEY. No; if the gentleman will permit, I did not mean to confine it to a particular case, but the gentleman's remarks did give, it seems to me, opportunity for what I consider to be a proper expression, and that is that we have gotten into the habit recently of thinking that because of a few men sitting around a table and coming into mental agreement with each other, that thereby they have brought great nations into agreewhich is not the fact and never has been and never will be.

Mr. MONDELL. My suggestion is that when we find a provision in a treaty that we do not approve the proper thing for us to do is to seek to have the treaty amended in a proper way.

Mr. SHERLEY. If the gentleman will permit in order that I may not be misunderstood

Mr. MONDELL. Certainly.
Mr. SHERLEY. I thoroughly agree with the gentleman, but I am trying to point out that which should be brought home to the other branch of the legislative body, and that is the very great importance of considering the far-reaching effect of treaty

obligations before we enter into them.

Mr. MONDELL. I thoroughly agree with the thought the gentleman has last expressed. We may have made some treaties which were not entirely wise in all respects. I think we have, but it is unfortunately a fact that to some men the idea that anyone anywhere has taken any action that can not be immediately and forthwith overturned by the action of Congress is intolerable. We do need to remember that international obligations are sacred, and if we do not approve of all the things they contain there is a way to remedy them. I do not believe there is an American constituency anywhere that after calm consideration will aphold its Representative in proposing or insisting upon a line of action on the theory that it shall be carried out, international obligations to the contrary notwithstanding.

I did not, however, take up this line of thought with a view of entirely agreeing with the gentleman from Minnesota [Mr. STEVENS]. We are human here, as folks are the world over, but

world, and I think, take it as a whole, while I regret the disposition to which I have referred, take it as a whole, by and large, and as the years have run, we have kept our treaty obligations with the nations of the world quite as well as any people on earth; and I can not agree with the gentleman from Minnesota that the Governments of Europe do not and will not seriously consider any action we may take because of their opinion that we have not always been as careful to observe our treaty obligations as we should have been. Let us not forget-

Mr. HARDY. Will the gentleman yield?

Mr. MONDELL. In just a moment. Let us not forget that the heads of foreign Governments affected by treaties with us may consider it their duty in maintaining the interests of their nations to insist that we have violated our treaty obligations in case the action we take is not what they desire; but because some foreign Governments have expressed the opinion that we have violated some of our treaty obligations it does not follow that in all such cases we are in the wrong. I want to reiterate that, in my opinion, we have as a nation a better record for treaty keeping than most of the nations of the earth, and I think that is generally realized and appreciated among the nations of

Mr. HARDY. I want to say I have been very much interested in what the gentleman is discussing. I am not a student of international law to any great extent, and therefore I want to predicate what I have to say on this proposition with this

apology. I believe

That a treaty which in itself contains stipulations by which it may be abrogated and in conformity to which it may be abrogated with perfect good faith is not broken if we by our actions take steps to abrogate it in accordance with its own terms. Now, does the gentleman know of any case in which the United States has simply willfully broken a treaty with any nation on earth?

Mr. MONDELL. I do not recall of any such case in all the

history of our country— Mr. HARDY. Neither do L.

Mr. MONDELL (continuing). Where a treaty has been flagrantly violated or interpreted in a way that a majority of mankind would say constituted a violation of its provisions.

Mr. HARDY. I want to say right along that line that as near the violation of a treaty as has been made since I have been in public life was in connection with our action in reference to the Panama Canal, giving preferential or free passage te our own ships and charging tolls to other ships. And my understanding of that situation has been that those who voted for that proposition did so with the declaration of the belief that it was not a violation of our treaty with Great Britain, and, further, with the statement that if our court should hold it was a violation the law itself would be deemed void as to that toll discrimination. Therefore I believe we can say in good conscience that America is very far from violating her sacred honor.

Mr. MONDELL. The case the gentleman refers to is one I had in mind, because I am one of those who believe that the action we took in regard to coastwise tolls was a violation of a fair interpretation of our treaty, although there may be sufficient ground for a difference of opinion that men's consciences need not smite them because they took a different view.

Mr. STEVENS of Minnesota. May I ask the gentleman a

question?

Mr. MONDELL. In just a moment. Unfortunately during the debate on the Panama Canal bill there were suggestions on both sides of the Chamber that if we had made a treaty which seemed to obligate us in a certain way and we believed that obligation, if it existed, prevented us from taking action along lines we approved, we should interpret the treaty favorably to the action we desired to take.

Mr. STEVENS of Minnesota. May I ask the gentleman a

question now?

Mr. MONDELL. Certainly. Mr. STEVENS of Minnesota. Conceding that there was a difference of opinion as to whether or not the Panama bill violated the treaty concerning the canal-and there was a very great difference of opinion-does not the gentleman recall that that very difference of opinion between the Governments of Great Britain and the United States concerning that identical point was to be submitted to arbitration or submitted to some tribunal to investigate and report concerning it under the provisions of another treaty made between the United States and Great Britain, and so far the Government of the United States has distinctly refused to comply with the provisions of that treaty?

Mr. MONDELL. The answer to the gentleman's question I do not think we are any more human than the balance of the involves an expression of opinion as to whether that other treaty to which he refers did include among the questions that were made justiciable under it the question to which we have referred. There is ground for a difference of opinion on that point also.

Mr. STEVENS of Minnesota. Mr. Speaker, it is not a matter of opinion of yours or mine, but are we not forced into this position, then, that no matter what treaty we may make with any nation, we have a perfect right to do as we please, claim that our action does not violate the treaty, no matter what our action may be, and then when the other nation claims to be aggrieved, we claim we will not submit to any arbitration, no matter how much we have agreed to submit, on the ground that that question is not justiciable and we do not have to submit to it?

In other words, is it not our position that we are not obliged to submit to any treaty unless they can subdue our Government in case of war?

Mr. SHERLEY. Is not that true until you have an outside party big enough to make the two contracting parties agree, and must not that always be true of sovereignties?

Mr. MONDELL. I agree with the gentleman from Minnesota largely on the matters he refers to. I believe our action with regard to tolls was unwise economically, and, second, I believe there was and is a very great question as to whether it did not violate our treaty, and, furthermore, I believe that we should allow that question to be carried to an international tribunal for decision, unless we shall remove all cause for contention by reconsidering our action. I think that is the thing to do, and I believe Congress would vote to reconsider and revise our action if its Members were given the opportunity.

Mr. TOWNER. Mr. Speaker.

Mr. HARDY. Mr. Speaker, will the gentleman yield right

Mr. MONDELL. In just a moment; one at a time, please. But while that is true, "one swallow does not make a summer." One question between two nations does not necessarily create a condition under which either nation loses confidence in the other. It is unfortunate that we have had this disagreement, but the disagreement has not been such as that any man can honestly say we have clearly and beyond all question violated our obligations, though there are many who believe we have.

Now I will yield to the gentleman from Iowa.

Mr. TOWNER. Is it not true that always, throughout the entire history of international treatment with regard to treaties, nations have reserved the right to determine for themselves whether or not a question which was claimed to be affected by a treaty was or was not a purely domestic question? Is not that the gentleman's understanding of the law and the history of the interpretation of treaties?

Mr. MONDELL. I am not an international lawyer, nor a lawyer of any sort. As an American citizen I believe that there are very few questions between civilized nations that can not safely be left to the judgment of an international court. I have not overmuch patience with that disposition that we have seen displayed in some quarters to insist that almost every question of international disagreement either involves national honor or is domestic in its character, thus including in these two categories practically every disagreement between ourselves and the civilized world. We certainly have reached a point in the development of mankind when there is intelligence enough and good faith enough among men to warrant us in trusting an international court, as we would trust our own courts, to settle any question except one that clearly and beyond reasonable controversy is purely domestic or involves our national existence and our national honor.

But I did not intend to follow this line at length. I simply referred to these matters in order to express my dissent from the position taken by the gentleman from Minnesota [Mr. STEVENS], that the nations of the world would not seriously or respectfully consider, would not give any considerable amount of weight to any expression or declaration that we might make. I take an entirely different view of it. My opinion is that no people on earth are so happily situated as are the people of the United States to take the initiative and to lend their support at all times to every movement tending to reduce armaments to remove causes and temptation to war and to promote peace.

Mr. STEVENS of Minnesota. Mr. Speaker, let me ask the gentleman there

Mr. MONDELL. We are the only Nation on the face of the earth that can indorse a proposition for a naval holiday or for a reduction of armaments without being charged with having some reason for it affecting our national safety or our national

Mr. STEVENS of Minnesota. Mr. Speaker, may I ask the gentleman a question?

The SPEAKER. Will the gentleman yield?

Mr. MONDELL. I shall be glad to.

Mr. STEVENS of Minnesota. Is not the gentleman aware that at three separate and distinct times the United States has either taken the initiative or expressed its hearty cooperation in the attempt or proposal to do the identical thing desired by the gentleman, and the other nations have refused to participate or to permit the matter to go any further, and that the last occurrence was only three years ago?

Mr. MONDELL. Well, I do not know how far the scriptural

injunction to turn your right cheek, or your left cheek-I have forgotten which it is-after the other cheek has been smitten, should carry us in international intercourse.

Mr. BUTLER. You could not stand it twice on the same

cheek. [Laughter.]

Mr. MONDELL. Yes; I am persuaded that although in the past foreign nations, for reasons that have seemed good to them and not always with the greatest courtesy imaginable, have declined to follow our suggestions with regard to these matters; yet in this good cause, infinitely more important to them than to us, we can afford to renew our efforts, and if we do not at

first succeed, to try, try again. [Applause.]

I said a moment ago that there was not a nation in Europe, including Great Britain, that could continue for another quarter of a century to increase its war expense in the same proportion and degree hereafter as during the last 25 years without inviting bankruptcy and revolution; therefore it might be said with reference to any of those nations that they proposed reduction of armaments, cessation from building programs, because they were approaching the limit of their income and credit. That very fact might exert a potent influence with their rivals to continue in the expenditure that has brought rival nations to the point where they were ready to cry "Hold! Enough!" But we, of all the people of the earth, are free from the possibility of having our actions so judged. For while we are not going to do it, while the American people do not desire it, while Congress has too much wisdom to attempt it, we could build as many battleships as Germany and England combined and raise the necessary revenue without seriously crippling or impoverishing our people. We could add \$100,000,000 or \$150,000,000 to our annual military and naval expenditures and feel it less than any nation in Europe would feel an addition of a quarter of that amount to her present expenditure. We do not fear for our continental territory. If every warship now bearing the American flag and proudly floating the deep was sunk, all the world knows that all the nations of the earth combined could not permanently conquer any square mile of our continental territory. [Applause.] We are the only nation in the world absolutely self-sufficient and secure. I notice the gentleman from Kentucky [Mr. SHERLEY] and the gentleman from Minnesota [Mr. STEVENS] smile.

Mr. SHERLEY. I was just suggesting that that statement be referred to the gentleman from Alabama [Mr. Hobson], who might not agree with you. I do. It was that which caused the smile.

Mr. STEVENS of Minnesota. I was smiling assent. [Laughter.1

Mr. MONDELL. I say this in no spread-eagle Fourth of July spirit. I say it because it is true. All the world knows it is true. We have maintained a Navy, we do maintain a Navy, we shall maintain a Navy, we should maintain a Navy so long as the balance of the world does. And yet if we did not have a Navy probably the only difference it would make in the next decade or next half century would be that we might lose some territory 7,000 miles away, over yonder in the Pacific, that apart from our duty and responsibility as a Nation we would be better off without. With the exception of that far-off possession—possibly also Hawaii—there is not a foot of American territory that a foreign nation could take and hold if we had no Navy.

We do not fear aggression. We have no reason to fear aggression, and all the world knows it. We are rich enough to build all the navies that our people may desire; and if we had the ambition that Germany has had to increase naval arma-ments, if we felt the necessity that England feels to increase naval armaments so long as Germany increases hers, we should not be building in a halting or hesitating way, but we would build in a way to make ourselves absolutely secure, and we could do it without danger of national bankruptcy.

We are the only Nation on earth thus situated, secure in our continental isolation, rich enough to spend money thus wastefully, if it were necessary, and if it was necessary it would not be wasteful-able to spend all we need to spend for war purposes and without burdening our people.

Therefore when we say to the world, "We want to join with you in reducing war burdens, in putting an end to this mad race for battleships that is impoverishing you; we want to join with you in now putting an end to a constantly increasing expenditure which under no circumstances can you continue for another quarter of a century and live," there can be no suspicion of any but worthy motives on our part.

I think there are few of us who realize the enormous debt of European countries, the tremendous burden upon their people of their military establishment, the rate at which they are progressively moving toward that fatal day when there must be a reckoning, when the nations shall have builded armaments so great, battleships so numerous, and shall have men under arms in such numbers that they will not be able to afford the means to use them as fighting instruments. One of the things that pre-

vents war now is the fact that all the resources of the nations in Europe are used in the maintenance of great military organizations, and they have nothing left with which to wage wars.

That is the only sense in which these great armaments have been peace-promoting establishments. They have been peace promoters in the same way that the leeching of two belligerent individuals simultaneously might reduce their hot blood to a

point where they have no reserve strength for an encounter.

France—the fair land of France—with over \$6,000,000,000 of debt, with her vast army riding her industrious people into poverty, with her military establishment growing so enormously that even her rich soil and the matchess industry of her people, is not sufficient to keep it going without still further mortgaging the future; Germany believing she is menaced by France; France certain she is menaced by Germany; England fearful of Germany; and Germany suspicious of England; and so it goes, a complete circle of menace and suspicion, and largely a menace of ghosts; because while these peoples believe that they live in constant danger of war all the time, that danger is most of the time far remote. The world has been living for the last 25 years in an atmosphere of war ghosts. When we are young many of us fear ghosts. We listen with blanched cheeks and bated breath to blood-curdling ghost stories, and we travel fast through dark hallways and passages and fear the friendly dark, but as we grow older most of us get over our fear of these intangible creations of the imagination. But the grown men of the nations of the world have been living for the last 25 years in haunted houses, and occasionally even here the ghost walks. It generally makes its appearance in its most fearsome form about the time that the naval bill comes up for consideration. [Laughter.]

Mr. BUTLER. The gentleman from Wyoming is doing very well, but he will spoil his speech if he goes into that. [Laugh-

ter.]

Mr. MONDELL. Mr. Speaker, I do not spring from those devout and God-fearing people who have forsworn the use of force. I do not want to feel that I am more of an apostle of peace than the distinguished representative of these good folks, my friend who has just spoken. Of course, the naval bill will come in, and it will carry an appropriation for some ships, and we will vote for them within reason, because there has been no international action on this resolution as yet. The world is still engaged in its crazy pursuit of overlordship in its willful, wasteful military expenditure, and we must do a little of it, if for no

other reason than to be in style.

Even in connection with that bill I will say to my good friend from Pennsylvania, now that he has mentioned it, I have a notion that we should mix watchful patriotism with our belief that we have a mission in the world as a Nation. If we can not persuade the nations of the earth from squandering their wealth, from impoverishing their people with these futile war expenditures, we can at least give them to understand that we will not be stampeded to the fore front of this mad and foolish naval extravagance, that we will linger in the quiet waters of moderation. While we shall build battleships so long as the world builds them, and the best that are built, and man them as well or better than any others are manned, we shall not shy and shudder at every ghost that is ushered in when the naval bill is before us; we shall not in a moment of fear and trembling attempt to outfoot the nations of the earth in the foolish rush for the biggest navy afloat.

Mr. HENSLEY. Will the gentleman yield?

Mr. MONDELL. Certainly.
Mr. HENSLEY. Does the gentleman realize how much more money the Government has expended for increased armament during the last 10 years than has Japan?

Mr. MONDELL. I have an idea that we have increased our

expenditure very much more rapidly than Japan.

Mr. HENSLEY. I desire to say to the gentleman that the United States Government has spent more than \$1,000,000,000 in excess of Japan for naval armament within the last 10 years. peace among the nations without the application of force.

Mr. MONDELL. I thank the gentleman for that statement of fact, but it will, I fear, have no effect, as it has not in the past in reducing the number or moderating the fearsome character of the Japanese war ghosts that will be paraded before us when we reach the naval bill.

A curious thing about these expenditures for war are the influences that favor them. I shall refer to some of them only briefly. There were most humiliating revelations in Germany recently when it was proven that German manufacturers of munitions of war were carrying on a ghost dance with France in order to persuade her of the necessity of increasing her war expenditures to meet those of Germany. Then, with every fresh expenditure in France, these same patriotic gentlemen paraded the war ghost in Germany in order that the German treasury might be induced to further invest in war material. When the game was not being played between France and Germany, Austria, and even poor, impoverished, defeated Turkey served when there was no larger game in sight. And so these gentle-men whose business it is to make sales at good profit of the guns that make war hell are found behind a large portion of the appealing arguments and literature that often persuades patriots to vote the money of the people in order to ward off imaginary dangers.

We hear one day that Germany proposes great increases in fighting strength and the next that France has matched her or gone her one better, as in the case of the recent extension of her period of enlistment, by which she proposes to rob the cradle and attempt to cheat the grave. In due time all suggested additions to foreign armaments are paraded in our newspapers and certain gentlemen, of whose patriotism I have no doubt, but whose judgment I question, immediately have their patriotic impulses so stirred that they insist that we must meet these alleged increases that in numbers of cases never ma-

As I said at the beginning of my remarks, I cherish no dream of international peace. The world is made up of men like you and me, with ambitions and pride and tempers, and as in-dividuals fall out, so nations will fall out; but as the years have rolled along individuals have found that it does not pay to fight out their private quarrels.

Mr. TOWNSEND. With arms.
Mr. MONDELL. With arms or without; that only under the most flagrant provocation is a man justified in resorting to arms or blows with his fellow man; only under extraordinary conditions is it permissible to do so. We have learned that we get along very much better if we bear somewhat with each other, if we curb our tempers and refer our difficulties, if we must, to the courts. The nations have learned the same lesson. They know that modern war is and will be fearfully destructive. The common people of the world have learned that it is they that are the food for powder, and they are getting tired of paying taxes in order that national pride may swell at the sight of \$15,000,000 leviathans floating the briny deep. As we have influenced the world for good all the years of our national life, in furnishing an example of the possibility of free self-government, in upholding the standards of justice and of liberty, so we have an opportunity few people have had in all the history of the world of saying to the nations of the world, not because we are impoverished, not because we fear aggression, but in the interest of all mankind, in order that no people may be burdened, no peace-loving people destroyed, we desire to join with them in reduction of expenditures for the purposes of war.

Mr. STEVENS of Minnesota. Mr. Speaker, I ask unanimous

consent to extend my remarks in the RECORD. The SPEAKER. Is there objection?

There was no objection.

Mr. BUTLER. Mr. Speaker, I shall not tire anyone, I hope, nor shall I provoke anyone to anger with what I may say. If there is a subject in this wide world that will arouse a discussion, or feed one after it is aroused, it is one involving fighting. To me it is extremely amusing, having spent well on to a fifth of a century in this House, to hear men talk for peace and vote for war. I must be included among the number. Yet we are right. It is extremely interesting to me to see the different sides of character, to see the struggle between good man and bad brute—a contest that will go on forever.

Mr. Speaker, few men rise at a time when an opportunity presents itself. Here we have an instance where a plain, unassuming man, with deep sincerity, has become a national character because he embraced where others overlooked. He is the man who introduced this resolution-perhaps not as noticeable as some others—but hereafter the name of Walter Hensley of Missouri will be connected with all attempts to maintain

[Applause.] Some day unselfish hands will write in his record that he did well for humanity. I congratulate him, and I congratulate the country, that there is among us some man who is willing to stand boldly for a policy he sincerely espouses, and especially when it embraces peace among the peoples of the earth. I believe the country owes him a debt of gratitude for the effort that he is making, and in it he should be helped by American encouragement. Knowing how earnestly he feels on this moral question I thoroughly appreciate the greatness of his undertaking, which has only met with failure during the ages past behind us. I propose that my remarks shall be few, and thereby hasten the pleasure which a vote for this resolution will give me. [Applause.] No; what I have said is not worthy of applause, my friend.
Mr. TOWNSEND. Well, the vote for it is worthy of ap-

plause

Mr. BUTLER. It is a conviction that I am in the right. The resolution raises a contest between what civilization would do and what brutality has done, and I am on the side of better civilization if I know where to find it. [Applause.] nothing in this resolution except the proposition that we are in favor of maintaining peace without resorting to force if it can be maintained; nothing more. It is not a resolution against further armaments at this time. And I expect, Mr. Speaker, during the present session of the present term of Congress, and at the next session of this term, to vote for guns and battle-ships, because I do not believe that the people of the world are yet ready to abolish the old-time fashion of settling disputes by a resort to arms. The passage of this resolution by the American Congress will be but the bright glimmer of the ap-The passage of this resolution by the proaching dawn. There are but few of us here, Mr. Speakeryou being one, our friend Mr. MANN another, Mr. FRED STEVENS, and a few more-who, in 1898, voted for a war. We all deplored the grave necessity, and some of us have been wondering since whether it was an absolute necessity. I am willing, as Mr. Stevens has done, to continue such responsibility as I then assumed, and I am willing to carry it as a part of my record, and I am willing to stand by it; but if I had the question submitted to me again, and I believe if you had it again submitted to you, Mr. Speaker, both of us would longer hesitate. I know I would have cast my vote differently, because I think in greater delay and more forbearance some method could have been found by which to settle the dispute without resorting to arms. But the whole Nation was affame; the Maine had been blown up, and the demand was made upon us by the militant spirit found in Americans that we should declare war against a wornout old nation that was unable to defend itself. And we yielded. This describes the situation as I then saw it. Oh, it is true the Spaniard destroyed some property belonging to us. It is true he killed our people and outraged our honor. It is true we heard the cry that came from the south of oppression upon his own subjects; and because of these considerations we intervened. When you come to examine the record of the day we resolved to move for strife, look for those who voted against the resolution authorizing the President of the United States to intervene.

Not one vote was cast in this House against it. This according to my best recollection. Mr. Speaker, the American people did not know, and the American Congress was equally ignorant of the fact, that when the war agitation was the highest we had not the powder with which to recharge the magazines upon our ships. I came here for the purpose, among others, of joining in a movement to oppose expensive armament and a further increase of them. When the information was given us on that cold, stormy day in February, 1898, when we sat disconsolate in the Naval Affairs Committee room, when we hardly knew what news was to come and what was to be expected of us, I say, sir, when the information was given us by the trusted servant of the department that we had not the powder with which to recharge the magazines on our ships, I resolved that hereafter, as long as I remained in the Congress, I would assist in making adequate preparations for a conflict which could be settled by no other means. Well, we know the history. Was I less for peace while I prepared for the safety of my Government? I think not, and I am ready for the dispute. We also know the history of the struggles we have had to keep this armament up to anything of the size that would be considered commensurate with the strength and dignity as well as the safety of our Nation. I do not believe there is a gentleman in this Chamber charged with the great responsibility that is upon him who would not gladly have our Nation agree with all the other nations of the world that we should no longer settle our disputes by the application of force. We dispute here as to the character of the legislation to be initiated. Some join the gentlemen in a movement to secure disarmament not

gentleman call it buncombe, some call it moonshine, scare, any name they see fit to lightly apply to the resolution. I do not have any issue with gentlemen who talk about their consciences. They may keep theirs right; I have enough trouble with my own. [Applause.] I always think when a man begins to belittle a movement that is made by the good for the benefit of the bad, he has a serious trouble on his hands to convince himself that he is not wrong. It is true if gentlemen were drawing this resolution, after a great deal of consultation, they might, perhaps, frame it differently, but it is headed in the right direction; it is on the side of the church and the gospel behind it [applause], and no man can afford, in my judgment, to vote against it on the mere ground that it does not quite suit him in its phraseology. [Applause.]

This resolution, Mr. Speaker—

Mr. TOWNSEND. Mr. Speaker, I suggest to the gentleman

that he take the desk there. We want to hear him.

Mr. BUTLER. Oh, no. I thank the gentleman from New
Jersey, however. He gave me a suggestion last night. I always
like to quote a man who can think as well as he can and who can express himself with such clearness. If I dare venture to quote him, he was of the opinion that this resolution means no more than this, that we are ready to hang up our firearms when the other Governments are ready to do likewise, but until they signify their willingness we should not hesitate to prepare for an occasion that we all struggle to avoid and all earnestly hope will never come. This resolution requests the President of the United States to make a venture. It is really suggestive and nothing more. It provides that a copy of this resolution be furnished to the President of the United States, with the request that, so far as he can do so, having due regard for the interests of the United States, he shall use his influence to consummate the agreement suggested by the Right Hon. Winston Churchill, which simply means that for a year we would not build these instruments of war, and that we would endeavor in the meantime to find some other method to settle our disputes. Now, who among us is going to stand against that civilized suggestion? I know my militant friend from Pennsylvania [Mr. FARR] by his look does not agree with me altogether. can he place himself against that resolution? It is simply a request to the President of the United States that he endeavor to bring about a better order of things. It is only a request that he search for peaceful ways in which our people can travel. I hope that Mr. Winston Churchill will abandon the suggestion, and that it will be adopted by this Government, that this Government may have the credit of inaugurating it and not let the credit go elsewhere. Suppose he does abandon it? furnish us a reason why we should not make the effort, even although it may fail? It does not mean that we are going to abolish our old ideas, but to absorb new ones. If Mr. Churchill has seen the futility or inadvisability of continuing his work in this direction, my friends, let us pursue it.

I doubt very much indeed whether the efforts of the gentleman from Missouri [Mr. Hensley] will be successful in the near future. I only hope they will, not on his account alone, but on account of everybody. This may be the beginning of a great era and may point to a solution. Who can say that it may not? I care nothing about the burden that is upon us. That condition does not appeal to me, sir. I know, however, these expensive armaments do create a burden, and I do not agree with the gentleman from Pennsylvania [Mr. Moore] in his view that they do not. I know it imposes a burden to always faithfully discharge one's responsibility, especially when it is to be discharged through the pocketbook. It takes a cheerful heart to hand out the necessary money without a grunt. I know it is a burden to improve the rivers and to carry the mails. All of these expenses borne directly by the people are burdens, but, in my judgment, they are necessary ones. They are part of the governmental ship, and, in my judgment, have nothing to do with the consideration of the moral question in-

I have been charged by the gentleman from South Carolina [Mr. Johnson] in a private conversation with having once delivered in this House some remarks which he judged were perhaps as good as any he had ever read on the side of the barbarian. These remarks were delivered about eight years ago, in a dispute had with the now Senator from Ohio [Mr. Burron] and the gentleman from Missouri [Mr. BARTHOLDT].

You may charge me with inconsistency if my speech to-day entitles me to it. I believe in greater armaments than these gentlemen do, and therein is our difference. At the same time we have all earnestly expressed the hope that a time might soon come when we could dispense with them. I pledged myself to inconsistent with what I deemed would be safe to the welfare of the American people. It is not worth calling your attention to, perhaps, but in this debate, in which the gentleman from Missouri [Mr. Bartholdt], the present Senator from Ohio [Mr. Burton], and a number of us took part, I made the prediction that if there ever was a time when armaments would be reduced or abandoned it would be when the burdens which they entail would be no longer suffered by the people who had to bear them. Here is the prophecy I made at the time stated:

When the people grow tired of the burdens which great armaments entail, their militant spirit will surrender to their cupidity, and, groaning under the fear of bankruptcy, they will demand the reduction of armaments through the mediation of international tribunals. When that great day comes we will rise to the supreme task which civilization imposes upon us and lead in the movement to diminish, but not debilitate. The weight of our word will be measured by the weight of our armaments,

Will it be fulfilled? I believe it will. We can not secure and maintain peace through love. The nations have not the same ideals. We speak different languages, and our forms are dissimilar. We will have peace by agreement when war and its necessary implements are too expensive to provide for. That

condition is close at hand.

I do not know how much Germany has in the way of a burden; I do not know how much France may have or how much England may have. But, let me repeat, the greater the burden the more likely they will be at an early date to repudiate it. I believe that the more expensive these ships of war become and the more destructive they become, the earlier we shall be willing to discard them and resort to other means to avoid

But how are we to do it? Has the gentleman from Mississippi [Mr. WITHERSPOON], who I know favors this resolution, ever examined the number of attempts that have been made to secure peace and maintain it without resort to force? The first was made 500 years before Christ lived. The attempts continued down through the time of William Penn, the greatest of all the peace apostles the whole world has known. When William Penn made his peace program and submitted it, he doubted its success, because it would abolish sovereign power and the strongest and richest would not agree to it. It must also be remembered that Penn did not advise disarmament. Why? Because, as he said, force would be required to enforce the decrees of the court to which he would have all disputes referred. I do not believe the time will ever come when it will be safe for the nations of the world to entirely disarm, but I believe the time will come, and for the reason stated, when we will reduce armaments to a minimum. We will substitute in-ternational agreement for the armed peace we are now maintaining. Are the peacemakers themselves ready for a peace which they advocate? Let us see. Mr. Speaker, I have looked at the Record, and I fail to find the name of one Member of Congress recorded against the resolution which brought us into a war with Spain, and therefore I find myself repeating that men do vote for war who at the same time talk for peace. How can they reconcile their conduct with their speech? When that declaration was made it became necessary to make a large appropriation of money, amounting to \$50,000,000, to be handed over to the President of the United States, with which to conduct a war. Every Member present voted for the appropriation. I believe.

It had been determined there was no place to which this dis-pute that had arisen between Spain and her subject, Cuba, could be referred and disposed of. Our people were moved. Even those who favored another way of settling all disputes, international or otherwise, insisted that a war should be waged, and those of us who were here at that time and still remain can speak with certainty and with accuracy of the awful pressure that was brought to bear upon the American Congress when the

whole country was aroused.

I do not refer to this event in our history except to show a reason for apparent inconsistency, not to excuse one if made. I do not care about the criticism which my colleagues here may have made of my course when I can justify it by a similar course taken by themselves. I have no apologies to make because I have assisted for 17 years, if you will permit me to make a personal reference, to obtain the appropriations for naval armaments. Such conduct does not render me unfit to secure harmony by more peaceful means when offered. estimate made by the gentleman from Missouri [Mr. Hensley] is, I believe, correct. We have expended enormous sums of money in naval armaments, and I believe thereby have prevented troubles which we might otherwise have had. It was well understood in 1898 that if we had had the Oregon on this side of our continent there would have been no war with Spain. In that view the then Secretary of the Navy, Mr. John D. Long,

of Massachusetts, coincided. I wish that this country were filled with patriots like him-men whose advice is unselfish and worthy of acceptance. If they mastered, we could make progress every day in civilizing the world. I repeat, the Secretary was of the opinion that if the Oregon had been here, where she could have been seen and where her influence could have been felt, ships that were sent over by Spain would have remained at home and the American people have been saved a great fright as they waited day after day for some attack that might be made upon our coast. You will recall how all the Atlantic seaboard cities were in a tremble. Boston was demanding that some sort of protection should be given her. Philadelphia was alarmed, and so was Atlantic City and every other city along the Atlantic coast. Who will say that it was wasteful of the public money to provide the people with what they Yet many of these same people whose fears possessed them then now demand a naval program without ships of war. Is this fair toward us who have the responsibility of making the decision? Many statesmen who have given the subject consideration believe that that war might have been prevented had our armaments been greater.

It might be of interest to the gentleman from Missouri [Mr. HENSLEY] to look at the record of these expenses, beginning in 1898, because the naval appropriation bill for the year prior to that time carried, according to my recollection, an appropriation

of only about \$25,000,000.

Mr. HENSLEY. Mr. Speaker, will the gentleman yield? The SPEAKER. Does the gentleman yield?

Mr. BUTLER. Yes.

Mr. HENSLEY. What is the gentleman's judgment, with reference to what the history of this country might have been if the battleship Maine had not been in the harbor of Habana?

Mr. BUTLER. There would have been no war.

Mr. FARR. But it was there.

Mr. BUTLER. I repeat, I do not think there would have been any war if she had not been on the Cuban coast at the time. You know how responsive we are, my friends. You know how we rise and fall with the demands of our constituents and the demands of the country. Members may deny it, but I have felt it, and I know how it is with others. I have known men to show a spirit of strong independence until they heard from their constituents, and then they became feeble. I believe that any demand that had been made on us for intervention would have been resisted had not the loss of the *Maine* been charged upon Spain, and properly, I believe.

Mr. Speaker, the awful blunder which we were about to make-one into which this House was swiftly drifting-that of declaring war before we had powder with which to make it, oftentimes comes to me when considering the necessity for military preparation. While much I have said does not sustain the pending resolution, it does justify the American Representatives in providing the necessary implements in case the other people want a fight and will not be satisfied without it. This will be so until poverty compels us to adopt some other remedy.

We might perhaps have gotten through that war without powder, caught the Spaniards with our bare hands. It was unfair to send our men upon ships of war; to send Americans to fight battles for their native land without powder, and that was the first time in history that they crossed the seas for that purpose. I, for one, was unwilling that they should be sacrificed; that they should be subjected to dangers that ample supply might avoid. Some of us baffled the resolution offered recognizing the belligerency of Cuba, and thus postponed action until we could obtain the powder, \$500,000 worth of it, to put in the magazines of our ships of war. I do not give this information to you, my friends, as an excuse for conduct, but I give it to you as a reason for it. Who will say that this war material was purchased for the benefit of the manufacturers?

I am firmly convinced that had it not been for that war these armaments would never have developed to the size that they I am firmly convinced that had it not been brought to some Members of this House, a realization of how absolutely un-prepared we were, they would not have been so rapid in their increase. We believed that there were certain honors that this Government must protect. And if you will look at the record made by our commissioners at the last meeting at The Hague, it will almost frighten you. If peace commissioners can not make peace, who in the name of conscience can make it? Listen to this:

Nothing contained in this convention shall be so construed as to require the United States of America to depart from its traditional policy of not entering upon, interfering with, or entangling itself in the political questions or internal administration of any foreign State. Nor shall anything contained in the said convention be construed to

require the relinquishment by the United States of America of its tra-ditional attitude toward purely American questions.

Mr. TOWNSEND. Will the gentleman state what he is reading from?

Mr. BUTLER. I am reading from the agreement made at the last Hague conference, to which our commissioners would subscribe without this amendment.

Mr. TOWNSEND. A report?

Mr. BUTLER. An amendment proposed by us to the offered agreement looking toward international settlement. They withheld from the agreement everything that affected purely American questions.

There was yet another occasion that induced gentlemen to vote for warships. They believed that there were questions that we might never be able to submit. There is the Monroe doctrine, which has been talked about so much in this discussion. I do not know exactly what the Monroe doctrine covers. do not know exactly what its limitations are. I have no fear of its violation. Especially have I no fear if we should agree to reduce our armaments. I am sure that this preparation that we have been making, costing millions of dollars, has not been wasted. It has preserved an armed peace. Let us have that if we can not provide another method, but let us at the same time try for another. It is a fact that the Spanish-American War cost this Government \$500,000,000, and perhaps we are not through with the expense of it. I believe if we had had \$50,000,000 of ships and had them upon the seas at the time that the declaration of war was made it would have been unnecessary to make it, and we would yet have our treasure and good American lives would not have been lost.

Mr. HENSLEY. That is the point I want to emphasize.
Mr. BUTLER. Men who are in favor of war say that the
trade of soldiery is a good one. I will admit it is an honorable
one. But we can not maintain military establishments to gratify vanity or furnish employment. Perhaps there is nobody living who has a greater respect than I have for the soldier, for the man who is willing to stand by his colors and take his nation's part; and, as far as I am able, I do not propose to see that he is slighted. I mean to stand consistently by what I consider to be the requirements of the American soldier and sailor, to assist him in obtaining the best munitions of war, in order that he may not only protect himself but that he may the better protect the American Government. [Applause.] While doing this I can consistently be for this resolution.

I thank you, gentlemen, for this opportunity.

The SPEAKER. The gentleman from Ohio [Mr. Sherwood]

is recognized for one hour.

Mr. SHERWOOD. Mr. Speaker, as I claim to be a civilized American, I am for this humane and patriotic resolution. I am for it because it is in the interest of economy and retrenchment, as we promised the country in the Baltimore platform. I am for it for ethical reasons, because it stands for our muchprofessed Christian civilization. It is a humiliating thought to every peace-loving American citizen that the Lord of the Admiralty of Great Britain, voicing the dominating spirit of the most commanding imperial monarchy around the world, should be a Christian exemplar to the greatest Republic around the world. The most potential cause of the revolt of the American Colonies was the presence of the standing army of Great Britain, eating out the substance of the people. The all-pervading genius of Democracy—Thomas Jefferson, who wrote the Declaration of Independence—made the protest against the standing army of Great Britain in the American Colonies the most vital paragraph in the Declaration of Inde-Colonies the most vital paragraph in the Deciaration of Independence. In all the grievances protested against in that immortal document the standing army of Great Britain, as a menace to the peace and prosperity of the Colonies, was mentioned in three separate paragraphs, while every other grievance was mentioned but once. Let me call the attention of the Members on this floor, especially those professing devotion to the Democratic ideas of Thomas Jefferson, to the record. In 1801 Thomas Jefferson wrote:

Hamilton is ardent for the introduction of monarchy; eager for armies, making more noise for a great naval establishment than better patriots who wish it on a national scale only commensurate to our wants and our means. This class ought to be tolerated but not trusted.

Here is a fateful admonition for this very hour; and I call up Jefferson again, because his voice in the last year of the eighteenth century should be the voice of this Republic to-day. In 1799 Jefferson wrote to Eldridge Gerry these words of su-preme wisdom, that every Representative of the people should study and ponder well.

I quote from Jefferson:

I am for relying for internal defense on our militia solely till actual invasion, and for such a naval force only as will protect our coast harbors from depredations, and not for a standing army in time of peace

which may overcome the public sentiment, nor a navy which by its own expenses and the external wars in which it may implicate us will grind us with public burdens and sink us under them.

Let us not fail to note that all the great students and scholars and humanitarians on both sides of the Atlantic are to-day for peace and arbitration. The ethical movement of the age is against standing armies and big navies. No man of heart or capable thought believes that a big army and navy are messengers of peace. Even an ordinary dog fancier knows better. He knows that peace among the canine tribe would never be promoted if every man should breed and train a fighting bulldog. And the dogs of war, whether canine or human, are just the same. [Applause.]

I was for war myself when I was a semibarbarian and did not know it, like the eloquent and persuasive gentleman from Alabama [Mr. Hobson], but after I had been in some 30 or 40 battles I was convinced that war is hell, and I have been a Quaker ever since. [Laughter and applause.] And what we need now, and need more than anything else to advance our much-boasted Christian civilization, is more Quakers and

fewer battleships.

Let me quote from one of our greatest jurists and humani-tarians, who has recently passed away. I refer to Justice David J. Brewer, of the Supreme Court. His work, his mission for the cause of peace, will make his name a sacred memory as long as the Republic shall live. I quote from an address delivered by Justice Brewer in June, 1909, at Atlantic City, N. J.:

delivered by Justice Brewer in June, 1909, at Atlantic City, N. J.:

For untold centuries the battle field settled all tribal or national disputes. Then, 20 centuries ago, there came a change. The heavens above the plains of Bethlehem were filled with a white-robed choir, and the only song of the heavens ever heard by the children of men broke the stillness of night. Peace on earth was the angel song. In a manger in the little town of Bethlehem lay a newborn child. The increasing multitudes who have looked up to Jesus of Nazareth as their leader have taken his life and words as promise and prophecy and faith in the coming of universal peace as the inspiration of humanity. If anyone doubts it, I am content to quote the words of Gen. Sherman, that "war is hell." The less of hell individuals and nations have the better. In order to bring about the condition of peace a minimum of army and navy is the most effective way. There never was yet a nation that built up a maximum of army and navy that did not get into war, and the pretense current in certain circles that the best way to preserve peace is to build up an enormous navy shows an ignorance of the lessons of history and the conditions of genuine and enduring peace.

And now in the early years of the twentieth century in a

And now in the early years of the twentieth century, in a Nation exploiting itself as the avaunt courier of Christian civilization, we have a Cabinet minister at the head of one of the great departments—the Navy—who, in the presence of a \$600,-000,000 Navy, the greatest impediment to the reduction of the appropriations for the support of the Government, is demanding two more of these useless battleships, eight destroyers, and three more submarines, reaching an aggregate amount of hard-earned dollars this year of probably \$165,000,000 for the Navy alone. And this, too, by a distinguished Democrat of the old North State, a State that produced the famous Mecklenburg declaration of independence against militarism a year and forty-five days before Jefferson and his compatriots issued the famous defi to Great Britain in Independence Hall. In 1901 our entire appropriation for the Navy was \$48,099,969. Then we had more Navy than we knew what to do with. Now, with the promise of re-trenchment and reform as a sacred pledge to the American people in our national platform, it is proposed to establish a high-water mark for extravagance and criminal waste of the people's hard-earned tax money by making any economy in administration impossible.

I dislike to classify the eloquent gentleman from Alabama [Mr. Hosson], who has the gait of a Christian and the voice of a Christian and the face of a baby angel, as a semibarbarian on the question of national defense, but I am here to tell the truth, scotch the cruel war spirit, and shame the devil.

[Laughter.]

It is a humiliating thought that this resolution should have its inspiration from a leading statesman of the greatest empire of heredity rule around the world. It is a serious reflection upon us, as the representatives of over 92,000,000 American citizens in a Republic devoted to democratic ideas and ideals, that we must look across 3,000 miles of ocean to an Old World mon-

archy for guidance in the humane domain of civism.

Let me refer to the startling and sudden increase in Govern-

Let me refer to the startling and sudden increase in Government expenses following our war with Spain and our wicked and cruel exploitation of militarism, imperialism, and vampireism in the acquisition and control of the Philippine Islands.

Let us see what only eight years' increase in Army and Navy has cost the American people: The average annual cost of Army and Navy for the eight years preceding the Spanish War (1890–1898), \$51,500,000; the average annual cost of Army and Navy for the eight years since the Spanish War (1902–1910), \$185,400,000; the average yearly increase in the latter period as compared with the former, \$134,000,000, making a

total increase in eight years of \$1,072,000,000, or 360 per cent, all raised by heartbreaking taxation of the industrial classes.

This eight-year increase exceeds our entire national debt by \$158,000,000. It is three times the estimated cost of the Panama Canal, including purchase from the French company. It

is \$60 for every family in the United States.

In December, 1823, when James Monroe sent his seventh message to Congress embodying the Monroe doctrine, he declared as a basis of that doctrine that as we did not propose to interfere with European policies or politics we do not propose to have the empires of the Old World interfere with our policies or politics, or of any country on this hemisphere.

This was a defi by President Monroe to the whole formidable

array of Old World monarchies, far more defiant and sweeping than Jefferson's defi to Great Britain July 4, 1776.

#### THE NAVY THEN.

Did we have an adequate Army and Navy 2t that time? Let us see. We had only 10,000 soldiers in the Regular Army, including Infantry, Artillery, and riflemen. And how about our Navy? We had 7 wooden battleships, 9 small frigates, 2 corvettes-low sloops with one tier of guns-5 sloops, 2 brigs, and 5 small schooners-30 war craft all told. And how many sea dogs of war did we have then? Let us see. We had 30 captains, 30 master commandants, 9 chaplains, 356 midshipmen, 53 sailing masters, 16 boatswains, and 18 gunners-all told only 512, besides the lieutenants, quartermasters, and Army surgeons. What was the entire population of the United States at that critical period—1823? By the census of 1820 we had, including critical period-1823? Indians, not taxed, 9,633,822. How much did our Navy cost us in 1823? Nine hundred and twenty-nine thousand five hundred and three dollars all told.

## MANY MILLIONS NOW.

These figures are official. How does \$929,503, when we defied all Europe, compare with \$165,000,000 now, when we are at peace with all the world, with no defies out inviting war? member of the Naval Committee of this House said less than nine months ago at a public meeting in Washington that the way we are legislating now our budget will reach \$250,000,000 in five years. Do you not think it is time for some one somewhere to brace up and make some kind of a fight to try and scotch this damnable militarism and criminal waste and do something to cheapen the poor man's breakfast? [Applause.] The Dem cratic Party promised to do this in the last national platform.

When it is stated that our military establishment is now costing the taxpayers almost three times as much as our entire civil government and that, too, at a time when we are at peace with all the world, the average citizen will conclude, if he concludes rightly, that instead of being a leading Christian Nation we are an aggregation of semibarbarians. Besides this enormous standing Army and Navy, sucking ounce by ounce the lifeblood of the people, we have about 162,000 men and officers in the National Guard who are an integral part of our enormous military aggregation, making all told an army of almost 260,000 men. And unless we shake off speedily the white man's burden in the Philippine Islands, where we now have about 13,000 soldiers, besides the battleships and cruisers of the Navy, we shall probably fall to reduce the military budget in the future.

Let us see what we have now: In 1913, 29 modern battleships,

9 other battleships, 38 in all; 15 first-class cruisers, 3 second-class cruisers, 14 third-class cruisers, 32 in all; 21 gunboats, 49 destroyers, 32 torpedo boats, 35 submarines, and 10 monitors. Whole outfit of war's horrid array-217 engines of wholesale murder, costing the taxpayers, merely for the building, over \$600,000,000. And yet in our whole 130 years of national life not a single nation or empire or kingdom around the world has ever declared war against the United States. In the old Senate which died on the 4th of March, 1913, two more of these useless battleships were ordered in the naval appropriation bill, running the aggregate cost of this bill up to over \$155,000,000 for the current year. In the House of Representatives the two additional battleships program was defeated by a very close margin. Let me state facts here that should be illuminating:

Quite recently 12 of our useless and extravagantly expensive war craft were discarded and cast into the junk heap. The 26,000-ton battleship North Dakota cost \$12,000,000 originally, and when discarded had cost the taxpayers \$28,000,000. This \$28,000,000 would build 14,000 churches at \$20,000; would buy 7,000 farms at \$4,000; would furnish a college education for

14,000 poor young men at \$500 a year.

Taxing the whole American people on everything they wear and consume for \$28,000,000 in order to gratify the barbaric yawp of war-mad semilunatics that are a serious menace to our Christian civilization does not strike me favorably as a proposition either in economy or ethics.

We have heard much talk on this floor about the declaration in the Baltimore platform for an adequate Navy. Let us see exactly what that declaration is. Here it is:

The party that proclaimed and has always enforced the Monroe doctrine and was sponsor for the new Navy will continue faithfully to observe the constitutional requirements to provide and maintain an adequate and well-proportioned Navy sufficient to defend American policies, protect our citizens, and uphold the honor and dignity of the Nation.

Does this declare for any more battleships or cruisers or submarines? No. Does it declare we have not an adequate Navy now? No. Any American citizen with as much brains as a plume-tailed Alabama coon can see there is no declaration, even by implication, that the size of our present Navy should be increased. Did we have an adequate Navy in 1813 in our war with Great Britain? The record shows that we had. Did we have an adequate Navy on the Great Lakes in the War

of 1812?

The Battle of Lake Erie, the most signal battle ever fought on fresh water, shows that we had. And was that Navy made up of trained officers or graduates of naval schools? Not at all. We have just celebrated the centennial of Perry's victory, known as the Battle of Lake Erie, fought on the 10th of September, 1813, near Put-in-Bay Island-a battle that settled the supremacy of the United States on all the Great Lakes. And this was a battle of volunteers and pick-ups and hired men, who were out of jobs, against the trained and seasoned regulars of the british Navy. Not only was this victory the most remarkable in heroic achievement, but the most far-reaching in results, in heroic achievement, but the most far-reaching in results. Commodore Perry's fleet, were built of green timber at Presque Isle, now the harbor of Erie, out of the green forest trees of Pennsylvania, under the direction and supervision of Commodore Perry. The British fleet consisted of two big warships, dore Perry. two brigs, a schooner, and a sloop. Perry's fleet carried 54 guns, while the British fleet was equipped with 63 guns, and the guns of the warships were all of longer range than any of the American fleet. Our volunteers and pick-ups were commanded by a young man, only 28 years old, who was never before under fire, while the British fleet, manned by regulars, was commanded by Capt. Barclay, a distinguished and ex-perienced officer, who had commanded a warship, eight years before, in the signal victory of Lord Nelson at Trafalgar.

Did we have an adequate Navy when President Monroe, in December, 1823, defied all Europe, when he proclaimed the Monroe doctrine? We had, as I have stated, practically no Navy as compared with our present Navy. And we did not

need any.

We are spending now fully 68 per cent of our Government income on wars past and preparation for war. Lloyd-George, chancellor of the exchequer and leader of British statesmanship, in carefully prepared statistics estimates that the amount expended annually by the nations to maintain vast armaments amount to \$2,250,000,000. Two billions and a quarter drawn from productive industry and directed to the channels of destruction in the insane rivalry for great armies and navies. Were the 68 per cent spent by the United States for war purposes cut down to one-half that sum and the other half devoted to the advancement of commerce and industry, our country might show less of pomp and pageantry and vulgar display, but would be a first-class power in the true sense of national greatness, based on the thrift and prosperity of the people. estimate of the greatness of a nation is not in the size of its cities or the tons of steel in its continental stretch of railroads, but in the kind of men and women the country turns out.

Let us pass this resolution because the United States in all its history has never been attacked and began every foreign war it ever had, and is too important a customer for any great

nation to wantonly attack us now.

Let us pass this resolution because, as a result of a compact with Great Britain, we have maintained on nearly 3,000 miles of Canadian border line a hundred years of peace and good will without a frowning fort or hostile cannon on either shore or a dreadnaught on any of the peaceful waters of the Great Lakes.

Let us pass this resolution as a notice to the civilized nations on both sides of the Atlantic and the Pacific Oceans that in the future we will lead the world in the greatest humane movement of the twentieth century for international arbitration of all international disputes.

Let us pass this resolution as the voice of a great Christian people, devoted to the benign doctrines of the lowly Nazarene-

the Prince of Peace. [Loud applause.]

Mr. Speaker, I yield 10 minutes to the gentleman from Indiana [Mr. GRAY].

Mr. MANN. I would like to ask if the gentleman desires to

Mr. HENSLEY. It is not my purpose to go any further

#### THE OHIO CORN BOYS.

Mr. ANSBERRY. Mr. Speaker, I ask unanimous consent to have read by the Clerk an editorial from an Ohio paper.

The SPEAKER. The gentleman from Ohio desires to have read by the Clerk an editorial from an Ohio paper. Is there objection?

Mr. MANN. Reserving the right to object, what is the sub-

ject?

Mr. ANSBERRY. The Ohio corn boys.

I have no objection. Mr. MANN. The SPEAKER. Is there objection?

There was no objection.

The Clerk read the editorial, which will be found in the Appendix in connection with the remarks of Mr. Ansberry.]

Mr. ANSBERRY. Mr. Speaker, I ask unanimous consent to extend some remarks in the RECORD upon this subject.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The gentleman from Ohio [Mr. SHERWOOD] The SPEAKER. has occupied 27 minutes and has 33 minutes left, of which he has yielded 10 to the gentleman from Indiana [Mr. Gray].

## ADJOURNMENT.

Mr. HENSLEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 14 minutes p. m.) the House adjourned until to-morrow, Friday, December 5, 1913, at 12 o'clock noon.

#### EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of Commerce, transmitting detailed statements of "Contingent expenses" of the Department of Commerce and Labor and the Department of Commerce, and "General expenses" of the Bureau of Standards during the period from July 1, 1911, to November 30, 1913 (H. Doc. No. 372); to the Committee on Expenditures in the Department of Commerce and ordered to be printed.

2. A letter from the Secretary of the Treasury, transmitting a detailed report of the expenditures under the appropriation "Preventing the spread of epidemic diseases" during the fiscal year ended June 30, 1913 (H. Doc. No. 384); to the Committee on Expenditures in the Treasury Department and ordered to be

printed.

3. A letter from the Secretary of the Treasury, transmitting a copy of a communication from the Assistant Secretary of War submitting reports from the Chief of Engineers, the Chief of the Bureau of Ordnance, and the Surgeon General of the Army, showing the proceeds of the public property during the fiscal year ended June 30, 1913 (H. Doc. No. 383); to the Committee on Expenditures in the War Department and ordered to be printed.

4. A letter from the Secretary of the Treasury, submitting a report of the expenses, in detail, of the Revenue-Cutter Service for the fiscal year ended June 30, 1913 (H. Doc. No. 382); to the Committee on Expenditures in the Treasury Department

and ordered to be printed.

5. A letter from the president of the United States Civil Service Commission, transmitting statement of travel expenses of officers and employees of said commission for the fiscal year ended June 30, 1913 (H. Doc. No. 381); to the Committee on Reform in the Civil Service and ordered to be printed.

6. A letter from the Postmaster General, transmitting a report of the finances of the Post Office Department for the preceding fiscal year and a report of the amount expended in the department (H. Doc. No. 380); to the Committee on Expenditures in the Post Office Department and ordered to be printed.

7. A letter from the Secretary of Agriculture, transmitting a detailed statement of expenditures by the Department of Agriculture for the fiscal year ended June 30, 1913 (H. Doc. No. 385); to the Committee on Expenditures in the Department of Agriculture and ordered to be printed.

8. A letter from the assistant clerk of the Court of Claims, transmitting a list of French spoliation cases filed under the act of January 20, 1885, which were dismissed by the court for nonprosecution (H. Doc. No. 379); to the Committee on Claims and ordered to be printed.

9. A letter from the Secretary of the Treasury, transmitting a communication from the Acting Secretary of Labor sub-

mitting a statement of expenditures from the appropriation "For expenses of regulating immigration" for the fiscal year ended June 30, 1913, up to and including November 30, 1913, and without reference to outstanding obligations still unsettled (H. Doc. No. 378); to the Committee on Expenditures in the Department of Labor and ordered to be printed.

10. A letter from the Secretary of the Treasury, transmitting letter prepared by the Secretary of Agriculture showing the number of persons employed in meat inspection, the amount paid, etc., for the fiscal year ended June 30, 1913 (H. Doc. No. 371); to the Committee on Agriculture and ordered to be

11. A letter from the Secretary of the Treasury, transmitting a statement of the proceeds of all sales of old material, condemned stores, supplies, and other public property for the fiscal year ended June 30, 1913 (H. Doc. No. 370); to the Committee on Ways and Means and ordered to be printed.

12. A letter from the Acting Secretary of Labor, transmitting detailed statements of expenditures from the appropriation for contingent expenses, Department of Labor, from May 1 to November 30, 1913, and of travel performed by officers and employees of the department since the creation of the department, March 4, 1913 (H. Doc. No. 377); to the Committee on Expenditures in the Department of Labor and ordered to be

13. A letter from the Doorkeeper of the House of Representatives, transmitting a report of the amount of money received from sale of waste paper from December 1, 1912, to December 1, 1913 (H. Doc. No. 376); to the Committee on Accounts and

ordered to be printed.

14. A letter from the Acting Secretary of the Navy, transmitting a report of expenditures under the contingent appropriations for the Navy Department for the fiscal year ended June 30, 1913 (H. Doc. No. 375); to the Committee on Expenditures in the Navy Department and ordered to be printed.

15. A letter from the Acting Secretary of Labor with reference to appropriation for an additional story on baggage and dormitory building at the immigrant station, Ellis Island, New York Harbor (H. Doc. No. 373); to the Committee on Appropriations and ordered to be printed.

16. A letter from the Secretary of the Treasury, transmitting a communication from the Secretary of War submitting an urgent deficiency estimate of appropriation required by the Isthmian Canal Commission for material and expenses on the Isthmus, sanitary department, Panama Canal, for the service of the fiscal year ending June 30, 1914 (H. Doc. No. 374); to the Committee on Appropriations and ordered to be printed.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows

By Mr. FRANCIS: A bill (H. R. 9818) providing for the appointment of a board for the purpose of selecting a suitable site for a naval armor plant in the Ohio Valley in the Steubenville manufacturing district and to submit a report of the cost and

availability of said plant; to the Committee on Naval Affairs. By Mr. MAHAN: A bill (H. R. 9819) authorizing a survey of the Thames River, New London County, Conn.; to the Committee

on Rivers and Harbors.

Also, a bill (H. R. 9820) authorizing survey to be made at the mouth of the Mystic River; to the Committee on Rivers and Harbors.

By Mr. CALDER: A bill (H. R. 9821) granting pensions to certain enlisted men, soldiers, and officers who served in the Civil War; to the Committee on Invalid Pensions.

By Mr. THOMAS: A bill (H. R. 9822) establishing the Mammoth Cave National Park; to the Committee on Appropriations. By Mr. ABERCROMBIE: A bill (H. R. 9823) providing for the appointment of a board of survey for the purpose of selecting a suitable site for a naval armor plant at or near Tuscaloosa, Ala., and submitting an estimate of the cost thereof; to the

Committee on Naval Affairs.

By Mr. FERRIS: A bill (H. R. 9824) granting relief to persons who served in the Military Telegraph Corps of the Army

during the Civil War; to the Committee on Invalid Pensions.

By Mr. KITCHIN: A bill (H. R. 9825) for the erection of a monument to Nathaniel Macon; to the Committee on the Library.

By Mr. FERRIS: A bill (H. R. 9826) authorizing the Secretary of the Interior to sell a portion of an abandoned town site to the town of Grandfield, in Tillman County, Okla., to be used for cemetery purposes; to the Committee on the Public Lands. By Mr. KENNEDY of Connecticut: A bill (H. R. 9827) au-

thorizing survey to be made from the mouth of the Housatonic

River in Long Island Sound to the head of navigation in the

city of Derby, Conn.; to the Committee on Rivers and Harbors. By Mr. GOULDEN: A bill (H. R. 9828) for the cession to the State of New York, in exchange for the lands required for the project approved by Congress March 4, 1913, of certain lands in the bed of the Harlem Ship Canal, heretofore ceded to the United States, free of cost, and now to be abandoned for the

more direct channel; to the Committee on the Public Lands.

By Mr. FERRIS: A bill (H. R. 9829) granting the Caddo
County Agricultural and Mechanical Fair Association of Oklahoma the right to purchase a tract of unused remnant ceded lands for fairground and park purposes; to the Committee on

By Mr. LINDBERGH: A bill (H. R. 9830) for the construction of a bridge across the Mississippi River where the same is intersected by the road between Cass Lake, Minn., and the Cass Lake Indian School in said State; to the Committee on Appropriations.

By Mr. NELSON: A bill (H. R. 9831) authorizing the Secretary of War to donate to the village of Blanchardville, Wis., two cannon or fieldpieces; to the Committee on Military Affairs.

By Mr. LAFFERTY: A bill (H. R. 9832) to protect the public health and to further prevent frauds in the interstate sale of food and drugs; to the Committee on Interstate and Foreign Commerce.

By Mr. SMITH of Texas: A bill (H. R. 9833) to authorize the construction of an addition to the Federal building at Abilene, Tex., and making appropriation therefor; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 9834) to provide for a public building at Big Springs, Tex.; to the Committee on Public Buildings and

Also, a bill (H. R. 9835) to provide for a public building at Sweetwater, Tex.; to the Committee on Public Buildings and

By Mr. CANTOR: A bill (H. R. 9836) making the 12th day of October in each year a legal holiday; to the Committee on the Judiciary.

By Mr. WICKERSHAM: A bill (H. R. 9837) to establish mining experiment stations at Juneau, Valdez, Fairbanks, and Nome, Alaska, and for other purposes; to the Committee on Mines and Mining.

By Mr. FIELDS: A bill (H. R. 9838) for the better protection of employees and passengers on railroads; to the Committee on Interstate and Foreign Commerce.

By Mr. SELDOMRIDGE: A bill (H. R. 9839) relating to the jurisdiction of the courts of the United States over controversies to which corporations, copartnerships, or associations are parties; to the Committee on the Judiciary.

Also, a bill (H. R. 9840) prohibiting shipments and delivery to or from any person, persons, or corporations engaged in or interested in any trust, combination, monopoly, or conspiracy concerning interstate commerce; to the Committee on the

Judiciary.

By Mr. TRIBBLE: A bill (H. R. 9841) to provide for cooperative agricultural extension work between the agricultural colleges in the several States receiving the benefits of an act of Congress approved July 2, 1862, and of acts supplementary thereto, and the United States Department of Agriculture; to

the Committee on Agriculture.

By Mr. JOHNSON of Kentucky: A bill (H. R. 9842) to require the recital of the real consideration in deeds to propret the recital of the real consideration in deeds to propret the committee on the erty in the District of Columbia; to the Committee on the

District of Columbia.

By Mr. GARDNER: Resolution (H. Res. 328) directing the Secretary of Labor to send to the House of Representatives a statement as to the truth of the facts alleged in a certain article transmitted to a member of the Committee on Immigration and Naturalization by Assistant Secretary of Labor Louis F. Post; to the Committee on Immigration and Naturalization.

By Mr. SINNOTT: Joint resolution (H. J. Res. 157) authorizing the Secretary of War to designate two officers from the Corps of Army Engineers to act with engineers from Department of the Interior or the States of Oregon or Washington as a board of consulting engineers in connection with the investigation of the Columbia River power project near The Dalles, Oreg.; to the Committee on Rivers and Harbors.

By Mr. EDMONDS: Joint resolution (H. J. Res. 158) in-

structing the Isthmian Canal Commission to keep strictly to the act of August 24, 1912; to the Committee on Interstate and

Foreign Commerce.

By Mr. NELSON: Joint resolution (H. J. Res. 159) proposing an amendment to the Constitution of the United States; to the Committee on the Judiciary.

By Mr. BUCHANAN of Illinois: Joint resolution (H. J. Res. 160) authorizing the payment of mileage to officers and employees of the Senate and House of Representatives; to the Committee on Appropriations.

## PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions

were introduced and severally referred as follows:

Jane M. Drown; to the Committee on Invalid Pensions,

Also, a bill (H. R. 9869) granting an increase of pension to Julia Richards; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9870) granting an increase of pension to Annie M. Hathaway; to the Committee on Invalid Pensions. Also, a bill (H. R. 9871) granting an increase of pension to

Mary McCarthy; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9872) for the relief of Clara Dougherty. Ernest Kubel, and Josephine Taylor, owners of lot No. 13; of Ernest Kubel, owner of lot No. 41; and of Mary Meder, owner of the south 17.10 feet front by the full depth thereof of lot No. 14, all of said property in square No. 724, in Washington, D. C., with regard to assessment and payment for damages on account of change of grade due to the construction of Union Station, in said District; to the Committee on the District of Columbia.

By Mr. PADGETT: A bill (H. R. 9873) granting a pension to Israel W. Bennett; to the Committee on Pensions.
Also, a bill (H. R. 9874) granting an increase of pension to Leroy B. Linzy; to the Committee on Invalid Pensions.
By Mr. POST: A bill (H. R. 9875) granting an increase of pension to William A. Morris; to the Committee on Invalid

Also, a bill (H. R. 9876) granting an increase of pension to Sarah B. Dutton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9877) granting an increase of pension to

John A. Dickey; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9878) granting an increase of pension to

R. J. Parkhurst; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9879) granting an increase of pension to James F. Lott; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9880) granting an increase of pension to Morgan H. Shealor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9881) to remove the charge of desertion

from the record of Jacob Snyder; to the Committee on Military

By Mr. RAUCH: A bill (H. R. 9882) granting an increase of pension to William Bowman; to the Committee on Invalid Pen-

By Mr. ROUSE: A bill (H. R. 9883) granting an increase of pension to Ella C. De Ford; to the Committee on Invalid Pen-

By Mr. STEENERSON: A bill (H. R. 9884) to amend an act entitled "An act granting an increase of pension to Marie J. Blaisdell," approved May 24, 1900; to the Committee on Invalid

By Mr. STONE: A bill (H. R. 9885) granting an increase of pension to James H. Pemble; to the Committee on Invalid

By Mr. SELLS: A bill (H. R. 9886) granting a pension to Samuel B. Walker; to the Committee on Pensions.

Also, a bill (H. R. 9887) granting a pension to Will M. Lillard; to the Committee on Pensions.

Also, a bill (H. R. 9888) granting a pension to Lemuel Tilley; to the Committee on Pensions.

Also, a bill (H. R. 9889) granting a pension to Robert Blevins; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9890) granting an increase of pension to J. F. Bullock; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9891) granting an increase of pension to John Stanton; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9892) granting an increase of pension to Isaac Zimmerman; to the Committee on Invalid Pensions.

By Mr. THOMAS: A bill (H. R. 9893) granting a pension to Filen Whalin; to the Committee on Pensions.

#### PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid

on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petition of sundry citizens and voters of the fifth congressional district of the State of Minnesota, favoring the passage of the Kenyon red-light bill; to the Committee on the District of Columbia.

Also (by request), petition of Frederick Jansen, private, Company K, Twenty-ninth Infantry, Fort Niagara, N. Y., asking an investigation by Congress of courts-martial and everything pertaining thereto; to the Committee on Military Affairs.

By Mr. ASHBROOK: Petition of C. Wrand and five other merchants of Port Washington, Ohio, favoring a change in the interstate-commerce laws relative to mail-order houses; to the Committee on Ways and Means.

By Mr. CANTOR: Evidence to accompany bill (H. R. 9848)

for the relief of the New England Steamship Co.; to the Committee on Claims.

By Mr. DALE: Petition of United Spanish War Veterans, Camp John E. McEwen, No. 6, of Duluth, Minn., favoring granting of a pension to Theodore T. Simon under bill H. R. 9112; to the Committee on Pensions.

By Mr. DOOLITTLE: Petition of business men of the fourth congressional district of Kansas favoring the passage of legislation compelling concerns selling goods direct to the consumer by mail to contribute their portion of the funds for the development of the local community, county, and State; to the Committee on Ways and Means.

By Mr. DYER: Petition of the Kansas City Motor Co., of Kansas City, Mo., protesting against the act by Congress giving three years of patent, etc., protection without cost to importers who exhibit their goods at the Panama-Pacific Exposition; to the Committee on Patents.

By Mr. FRANCIS: Petition of Division No. 103 of the Amalgamated Association of Steam and Electric Railway Employees of America, Wheeling, W. Va.; Local Union No. 73 of the American Flint Glass Workers Union, Toronto, Ohio; Local Union No. 359, Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers of America; and the Division No. 285 of the Amalgamated Association of Steam and Electric Railway Employees of America, of Steubenville, Ohio, all favoring the passage of H. R. 1873, known as the antitrust injunction and limitation measure: to the Committee on the Judiciary.

By Mr. GALLAGHER: Petitions of Al. J. Cairo and Elizabeth Jenkins, of Chicago, Ill.; favoring the passage of the seamen's bill; to the Committee on the Merchant Marine and Fisheries.

Also, petition of Local Union No. 21, United Garment Workers of America, of Chicago, Ill., favoring the passage of the seamen's bill; to the Committee on the Merchant Marine and Fisheries.

Also, petition of the Chicago Wheel & Manufacturing Co. and Solarine Co., of Chicago, Ill., favoring a revision of the Kahn law eliminating from that law all reference to patents or trade-

marks; to the Committee on Patents.

By Mr. GRAHAM of Pennsylvania: Memorial of the Commercial Exchange of Philadelphia, Pa., favoring the selection of Philadelphia as one of the regional reserve centers under the new Federal law; to the Committee on Banking and Currency.

By Mr. LONERGAN: Petition of the Socialist Party of Hart

Ford, Conn., favoring the appointment of a Committee on Woman's Suffrage; to the Committee on the Judiciary.

By Mr. MAHAN: Papers in case of Albert Smith (H. R. 8572); to the Committee on Invalid Pensions.

By Mr. MacDONALD: Petition of 2,305 citizens of Houghton and Keweenaw Counties of the State of Michigan, favoring the adoption of a resolution providing for congressional investigation of the strike in the copper mines in that locality; to the Committee on Labor.

Also, memorial of board of directors of the Marquette Commercial Club of Marquette, Mich., favoring legislation providing for the ownership by the United States of buildings for its embassies and representatives abroad; to the Committee on Foreign Affairs.

By Mr. MOORE: Memorial of the Merchants and Manufacturers' Association of Philadelphia favoring Philadelphia as a regional reserve city; to the Committee on Banking and Cur-

By Mr. NEELY of West Virginia: Petition of F. L. Hickman and 144 others of Clarksburg, W. Va., favoring legislation restricting immigration; to the Committee on Immigration and Naturalization.

By Mr. REILLY of Connecticut: Petition of the Connecticut Woman's Suffrage Association, of Hartford, Conn., protesting against the use of the Hetch Hetchy Valley for the San Francisco water supply; to the Committee on the Public Lands.

By Mr. STEVENS of Minnesota: Memorial of the Current Topics Club of St. Paul, Minn., favoring the enactment of the Glass-Owen currency bill; to the Committee on Banking and Currency.

By Mr. SCULLY: Petition of the council of the borough of Sea Bright, N. J., and other citizens of the third congressional district of New Jersey protesting against the passage of the seaman bill (S. 136) to increase the equipment and size of the crews on all boats; to the Committee on the Merchant Marine and Fisheries.

## SENATE.

# Friday, December 5, 1913.

The Senate met at 10 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. Wesley L. Jones, a Senator from the State of Washington, appeared in his seat to-day.

The Journal of yesterday's proceedings was read and approved.

PANAMA CANAL EQUIPMENT (S. DOC. NO. 258).

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Isthmian Canal Commission, transmitting, in response to the resolution of August 23, 1913, a letter from Col. Goethals, chairman of the Isthmian Canal Commission, containing information showing the amount, character, and value of construction machinery, equipment, and material which it would be possible to transfer to Alaska on the completion of the Panama Canal.

The Chair desires to direct the attention of the senior Senator from Oregon [Mr. CHAMBERLAIN] to the fact that the Isthmian Canal Commission has made a report. He desires what committee the communication shall be referred. He desires to ask to Mr. CHAMBERLAIN. I ask that the communication and accompanying papers be referred to the Committee on Territories, which reported the Alaska railroad bill.

The VICE PRESIDENT. The communication will be referred

to the Committee on Territories and printed.

#### SENATOR FROM MARYLAND.

The VICE PRESIDENT. The Chair lays before the Senate a communication from the secretary of state of the State of Maryland, transmitting a certificate of the governor of Maryland showing the election of BLAIR LEE as a United States Senator from Maryland. The communication and accompanying certificate of the governor will be printed in the RECORD and referred to the Committee on Privileges and Elections.

The matter referred to is as follows:

EXECUTIVE DEPARTMENT, Annapolis, Md., December 4, 1913.

To the President of the Senate of the United States, Washington, D. C.

Sin: By direction of the governor I inclose herewith his certificate showing the election of Blair Lee as a United States Senator from Maryland to fill the unexpired term of the late Senator Isidor Rayner.

Respectfully,

ROBERT P. GRAHAM, Secretary of State.

To the President of the Senate of the United States:

This is to certify that at an election held on Tuesday, November 4, 1913, pursuant to the law of the State of Maryland and a writ of election issued by the governor of said State in compliance with the provisions of the seventeenth amendment to the Constitution of the United States, by the electors in said State having the qualifications requisite for electors of the most numerous branch of the State legislature, Blair Lee, of Montgomery County, was by said electors duly chosen a Senator from said State in the Senate of the United States to fill the vacancy in the unexpired term of the late Senator Isidor Rayner.

to fill the vacancy in the unexpired term of the late Senator Islac. Rayner.

That at said election, so held as aforesaid on Tuesday, the 4th day of November, 1913, the candidates for the said office of United States Senator were Blair Lee, Democrat; Thomas Parran, Republican; George L. Wellington, Progressive; Finley C. Hendrickson, Prohibitionist; and Robert J. Fields, Socialist, each of said candidates having been duly nominated in accordance with the primary election law of said State.

That the names of each of said candidates was placed upon the ballots at the said election held as aforesaid, said ballots being the official ballots for said election, held as aforesaid on Tuesday, November 4, 1913, as required by the laws of said State, and the returns from said election having been duly canvassed by the board of State canvasser of said State in accordance with law, the result of said election has been declared and certified by said board, as follows:

That—

Votes.

112, 485

Blair Lee received 112, 485
Thomas Parran received 73, 300
George L. Wellington received 7, 033
Finley C. Hendrickson received 2, 405
Robert J. Fields received 2, 982
all of which appears from the certified copy of the declaration of the result made by the board of State canvassers and hereto annexed, which I hereby certify to be full, true, and correct, as follows:

DECLARATION OF THE RESULT OF THE ELECTION OF 1913 FOR THE OFFICE OF UNITED STATES SENATOR.

(Made by the State board of canvassers.)

(Made by the State board of canvassers.)

We, the undersigned, constituting a majority of the board of State canvassers of the State of Maryland, in pursuance of the power and authority vested in us under and by virtue of the provisions of section 85 of the election law, do hereby certify that at an election held in said State on Tuesday, November 4, 1913, for a United States Senator to fill the unexpired term of the late Senator Isidor Rayner, it appears from the certified copies of the returns of said election, that—

	VOLUES.
Blair Lee received	112, 485
Thomas Parran received	73, 300
George L. Wellington received	7,033
Finley C. Hendrickson received	2, 405
Robert J. Fields received	2, 982
We therefore determine and declare that Plair Lee having	received

we therefore determine and declare that Blair Lee, having received the greatest number of votes cast for the several candidates for said office, has been and is duly elected United States Senator to fill the unexpired term of the late Senator Isidor Rayner. In witness whereof we have hereunto set our hands this 20th day of November, 1913.

ROBERT P. GRAHAM, Secretary of State.
EMERSON C. HARRINGTON,
Comptroller of the Treasury.
MURRAY VANDIVER, State Treasurer.
C. C. MAGRUDER,
Clerk of the Court of Appeals.

And I further certify that the following is a full, true, and correct copy of the writ of election aforesaid:

WRIT OF ELECTION.

WRIT OF ELECTION.

To the people of the State of Maryland and to the members of the several boards of supervisors of elections of Baltimore City and the several counties of the State and to the sheriffs of Baltimore City and the several counties of the State and to the board of police commissioners for the city of Baltimore, greeting:

Whereas a vacancy now exists in the term of a United States Senator from Maryland, caused by the death of the late Senator Isidor Rayner; and

Whereas I have heretofore, by virtue of the authority vested in me by the Constitution of the United States, temporarily appointed Senator William P. Jackson to occupy a seat in the United States Senate "until the next meeting of the legislature" of this State:

Therefore I. Phillips Lee Goldsborough, governor of the State of

Phillips Lee Goldsborough, governor of the State of g by and under the authority and direction contained Therefore Maryland, acting by

In the seventeenth amendment to the Constitution of the United States, hereby issue, publish, and declare this my writ of election for a special election to be held throughout the State of Maryland on Tuesday, the 4th day of November, 1913, and I do hereby direct that a special election shall be held on that day in order that there may be chosen at said election a Senator of the United States from the State of Maryland to fill said vacancy and to represent the State of Maryland in the Senate of the United States until the end of the term for which said Senator Isidor Rayner was originally elected.

And I further order, declare, and direct that the Senator to be chosen by virtue of this writ shall be nominated and elected in conformity with all the provisions of the general election laws and State-wide primary election laws of this State made and provided for the nomination and election to an office filled by the vote of all the registered voters of the State of Maryland.

To this end and as authority and direction therefor have you then and there this writ.

Witness my hand as the governor of the State of Maryland this 2d day of August, 1913, and the great seal of the State of Maryland.

[GREAT SEAL.]

P. L. GOLDSBOROUGH.

By the governor:

By the governor:

ROBERT P. GRAHAM, Secretary of State.

ROBERT P. GRAHAM, Secretary of State.

In witness whereof I, Phillips Lee Goldsborough, governor of the State of Maryland, have hereunto set my hand and caused to be hereto affixed the great seal of the State of Maryland, attested by the signature of the secretary of state, and done at the capitol in the city of Annapolis this 4th day of December, in the year of our Lord 1913. P. L. GOLDSBOROUGH.

[SEAL.] By the governor:

## PETITIONS AND MEMORIALS.

Mr. THOMPSON. I present a letter, signed by the chairman of the Kansas Yearly Meeting of Friends, favoring the wise and righteous course the administration has taken in maintaining an attitude of peace and friendship toward Mexico during the recent and now pending troubles. I should like to have the letter read at the desk and ask that it be referred to the Committee on Foreign Relations.

There being no objection, the letter was read and referred to

the Committee on Foreign Relations, as follows:

FRIENDS UNIVERSITY, Wichita, Kans., October 10, 1913.

To His Excellency the President of the United States and to the Hon. William J. Bryan, Secretary of State, and to the Senators from Kansas and Oklahoma:

William J. Bryan, Secretary of State, and to the Senators from Kansas and Oklahoma:

We, the members of the Society of Friends of Kansas and Oklahoma, in our yearly meeting assembled, desire to express to you our highest appreciation of the wise and righteous course the administration has taken in maintaining an attitude of peace and friendship toward Mexico during the recent and now pending troubles. We believe that any other course would in all probability lead to unrighteous war and wicked bloodshed, and we highly commend the President and those associated with him in withstanding the pressure for intervention. Your faithfulness has doubtless prevented the shedding of much blood and lasting unfriendly relations between the two nations.

On the other hand, we regret to learn through the press of the proposition to spend \$148.000,000 in building battleships and in other military enlargement. The rivairy between the nations in building great navies, which they protest they do not mean to use, we regard as a foolish, wasteful, and wicked policy that has been outgrown by our Christian civilization.

Would not \$1,000,000 spent in developing a spirit of brotherhood among the nations be a better defense than the expenditure of a hundred million on forts and battleships? "Public sentiment is mightler than the armies of Empires." Let our Nation build a sentiment of brotherhood rather than more battleships.

We desire to call attention to the seemingly forgotten fact that the last Hague conference adopted 13 "conventions," which are, in fact, 13 international laws, the sixth of which says, "No army or navy shall attack an unfortified coast or town."

This should make the United States immune from attack. But, better still, we have no enemy in the world that wants to attack us. Then, why build a larger Navy? The one we have is larger than we need.

In the spirit of brotherhood and good will we ask the President and those in national authority to consider these things.

red.

In the spirit of brotherhood and good will we ask the President and nose in national authority to consider these things. We ever pray the blessing of God upon you.

Signed by order of Kansas Yearly Meeting of Friends.

EDMUND STANLEY, Chairman, HENRY H. TOWNSEND, Clerk,

Membership, 12,000; in Oklahoma, 3,000.

Mr. THOMPSON presented the petition of R. T. Keefe and sundry other citizens of Arkansas City, Kans., praying that early action be taken on the pending currency bill, which was ordered to lie on the table.

Mr. WEEKS presented a petition of the congregation of the Providence Methodist Episcopal Church, of Easthampton, Mass., and a petition of the congregation of the First Methodist Episcopal Church of Northampton, Mass., praying for the passage of the so-called antipolygamy bill, which were referred to the Committee on the Judiciary.

He also presented the memorial of Robert J. Fuller, superintendent of schools, and sundry teachers of North Attleboro, Mass., and a memorial of sundry citizens of Marlboro, Mass., remonstrating against the passage of the so-called Hetch Hetchy bill, which were ordered to lie on the table.

Mr. GALLINGER presented a resolution adopted by the Commercial Club of Keene, N. H., favoring the enactment of legislation providing flood protection for the lower Mississippi Valley, which was referred to the Committee on Commerce.

SAN FRANCISCO WATER SUPPLY.

Mr. ASHURST. Mr. President, I have received upward, I should say, of 4,000, or at least 3,500, communications with reference to the so-called Hetch Hetchy bill. I have this morning a number of letters and telegrams on this subject. I shall not ask that the letters be incorporated into the RECORD, but as the telegrams are from citizens whose judgment I value I desire to incorporate the telegrams into the RECORD. First, I ask that there be read a telegram from Hon. F. A. Jones, a member of the corporation commission of the State of Arizona, urging me to vote for the bill. When Mr. Jones was a candidate for the position of corporation commissioner in the State of Arizona in 1911, various corporations in Arizona pursued the same tactics the Spring Valley Water Works Co. is now pursuing in attempting to defeat the Hetch Hetchy bill and spent several thousands of dollars in trying to defeat Mr. Jones. I ask that the telegram be read at the desk.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read the telegram, as follows:

PHOENIX, ARIZ., December 4, 1913.

Senator HENRY F. ASHURST, Washington, D. C .:

A resident of 20 years in California and complete knowledge of San Joaquin Valley, Hetch Hetchy, and San Francisco conditions induce me to urge that you vote for bill. Make contents of this wire known to Senator SMITH and to the New Mexico Senators.

Mr. ASHURST. Mr. President, I request that there also be incorporated into the Record a telegram from a gentleman who was for 20 years a citizen of Arizona, who was always interested in promoting the general good and not "special interests." He removed from Arizona to Los Angeles some years ago and is there a respected and useful citizen of the State of California. I ask that a telegram from that gentleman, Mr. Max Salzman, be incorporated in the RECORD and read at the desk.

The VICE PRESIDENT. Is there objection? The Chair

hears none, and the Secretary will read as requested.

The Secretary read the telegram, as follows:

Los Angeles, Cal., December 4, 1913.

Hon. H. F. ASHURST, Senate, Washington, D. C.:

The passage of the Hetch Hetchy bill is of vital importance to all California, and I earnestly urge you as representatives of sister States to vote in favor of the Hetch Hetchy bill.

MAX SALZMAN, President Salzman Co.

Mr. ASHURST. Mr. President, Mr. Salzman has a son who was born in Arizona. After he removed to the city of Los Angeles he became one of the successful lawyers of his city. He is a young gentleman for whom I predict a very useful and successful career. I value his opinion highly, and I ask that his telegram be read at the desk.

The VICE PRESIDENT. Is there objection? The Chair

hears none, and the Secretary will read as requested.

The Secretary read the telegram, as follows:

Los Angeles, December 4, 1913.

Hon. HENRY F. ASHURST, Senate, Washington, D. C.:

Permit me to suggest that Hetch Hetchy bill should receive your serious consideration, the probabilities being that San Francisco is justified in its demand and no doubt in need of a greater water supply.

MAURICE SALZMAN,

Treasurer Arizona State Society.

Mr. ASHURST. I now present a telegram from the mayor of

Los Angeles, and request that his telegram be read.

The VICE PRESIDENT. Is there objection? The read as requested. The Chair

The Secretary read the telegram, as follows:

Los Angeles, Cal., December 4, 1913.

Hon. H. F. ASHURST, Senate, Washington, D. C.:

Los Angeles asks you as a true friend of California to vote for the Hetch Hetchy bill and thus give to the people of San Francisco their rights to a pure abundant supply of water free of control by a private monopoly, which is striving to defeat the will and welfare of the citizens of a great city.

H. H. Rose, Mayor of Los Angeles.

Mr. ASHURST. I further present a telegram from a prominent citizen of the State of California, who, for more than 20 years, was a commercial traveler down through the Southwest. He was a "traveling man" in the early days, before we possessed the railroad facilities we now have, and when traveling was not so pleasant as it now is. This gentleman urges me to vote for the pending bill, and I ask that his telegram be read at

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read the telegram, as follows:

Los Angeles, Cal., December 4, 1913.

Hon. H. F. ASHURST, United States Senate, Washington, D. C.:

Inasmuch as pure water in abundance is the life of a great city, it is the duty of every public-spirited citizen of this and every other State to urge you to do everything possible to secure a water supply for San Francisco. Knowing you to be a friend of California and that there is much in common between California and your State, as a citizen of Los Angeles I earnestly urge you to vote for the Hetch Hetchy bill.

JOHN S. MITCHELL, Hotel Hollenbeck, Los Angeles.

Mr. ASHURST. I now present sundry other telegrams.

The VICE PRESIDENT. Does the Senator desire that they be inserted in the RECORD?

Mr. ASHURST. I ask that they may be inserted in the REC-

ORD without reading. There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

Los Angeles, Cal., December 4, 1913.

Hon. H. F. Ashurst, Senate, Washington, D. C.:

The Hetch Hetchy water project for San Francisco is worthy of serious consideration and deserving of your vote. It is wanted by all California residents to provide and care for the requirements of the present and rapidly increasing population of San Francisco.

W. W. Woods,

Vice President Citizens' National Bank of Los Angeles.

Los Angeles, Cal., December 4, 1913.

Hon. H. F. ASHURST, Senate, Washington, D. C.:

California and its citizens urge you to vote for the Hetch Hetchy bill and give San Francisco its much-needed water. As representative of a sister State, we know you will appreciate the vital necessity of a purewater supply, and we trust you will give us your aid by voting in favor of this bill.

H. S. McCallum,
President Federated Improvement Association of Los Angeles.

Los Angeles, Cal., December 4, 1913.

Hon. H. F. ASHURST, Senate, Washington, D. C.:

It is the earnest wish of the people of southern California that you, as representative of sister State, vote for the Hetch Hetchy bill which will give San Francisco its essential water supply. I earnestly urge you to do a great public good by voting for the bill.

JAMES R. H. WAGNER,

President of the James R. H. Wagner Co.

SANTA ANA, CAL., December 4, 1913.

HENRY ASHURST,

Senate, Washington, D. C.:

I believe it would be wise to give San Francisco privileges wanted in Hetch Hetch Valley, and urgently request you to vote for bill giving San Francisco concessions asked.

W. A. ZIMMERMAN.

W. A. ZIMMERMAN,
President Associated Chambers of Commerce of Orange County,
and President Santa Ana Savings & Trust Co.

Henry F. Ashurst,
Senate, Washington, p. C.:

Respectfully urge your favorable consideration Hetch Hetchy bill.
Overwhelming majority people of California favor measure. Is of
State-wide importance. Opposition to it is generally regarded as emotional, based on misinformation or inspired by selfish metives. Earnestly
ask your help for San Francisco as the paramount interest.
700,000 BOOSTER CLUB OF SOUTHERN CALIFORNIA.
ALBERT CHAPELLE, Secretary.

Los Angeles, Cal., December 4, 1913.

Hon. HENRY F. ASHURST, Washington, D. C.:

Los Angeles, with water from the Sierras now within her gates, earnestly requests you to aid the future greatness of San Francisco. Your vote and help for the Hetch Hetchy bill will do this. May we count on you?

ROBT, MARSH, President Robt, Marsh Co.

Los Angeles, Cal., December 4, 1913.

Hon. HENRY F. ASHURST, Washington, D. C .:

Your earnest support of the Hetch Hetchy bill is besought by southern California in unison with San Francisco as one of the best means of assuring prosperity to California and the Southwest. Please vote and work for its immediate passage.

ARTHUR LETTS, Prest. Retail Dry Goods Assn.

Los Angeles, Cal., December 4, 1913.

Hen. Henry F. Ashurst, Washington, D. C.: California, with whose interests Arizona's are vitally linked, wants immediate passage for the Hetch Hetchy bill. Please give us your active help and vote for the Hetch Hetchy bill.

ROBERT A. ROWAN,

President R. O. Rowan Co., Los Angeles.

LOS ANGELES, CAL., December 4, 1913.

Hon. HENRY F. ASHURST, Washington, D. C .:

Southern California united with north in urging the speedy passage of the Hetch Hetchy bill, that San Francisco's immediate wants and future needs may be provided for. Its enactment will tend to greater prosperity for the coast and southwest. We carnestly urge you as representative of our sister State to vote for it. ROGER M. ANDREWS.

Los Angeles, Cal., December 4, 1913.

Senator H. F. ASHURST, Washington, D. C .:

For the great benefit of more than a million Californians in and about San Francisco, and for the benefit of the State at large, it is imperative that the Hetch Hetchy bill be passed, and Californians urgently request that you, the representative of our sister State, vote in favor of this bill.

Col. E. S. Ormsey, President of the Federated State Societies of Los Angeles.

ALHAMBRA, CAL., December 4, 1913.

Senator Ashurst,
Washington, D. C.:

Gentlemen, please lend every assistance consistent with the national policy to secure this Hetch Hetchy for San Francisco.

GEO. W. CAMERON,
President Board of Trustees of Alhambra.

ALHAMBRA, CAL., December 4, 1913.

Senator Ashurst, Washington, D. C .:

California looks to you for favorable influence in the Hetch Hetchy project and will certainly appreciate such generous actions.

ROBERT JORDAN,

President Chamber of Commerce of Alhambra.

ALHAMBRA, CAL., December 4, 1913.

Senator Ashurst, Washington, D. C .:

San Francisco is entitled to an adequate water supply, and the Government in granting to that city the Hetch Hetchy Basin would be practically following its recent policy toward Los Angeles,

Newton W. Thompson,

Senator Thirty-first District of California.

ALHAMBRA, CAL., December 4, 1913.

Senator Ashurst, Washington, D. C.:

If the Hetch Hetchy Valley is necessary to the welfare and prosperity of San Francisco, I am heartly in favor of its acquisition by perity of that city.

MRS. HARRY E. ROSE, President of Women's Club.

RIVERSIDE, CAL., December 4, 1913.

Senator ASHURST, United States Senate, Washington, D. C.:

The crying need of city of San Francisco for an adequate water supply is imperative. I do not consider that the building of a storage reservoir in the Hetch Hetchy will destroy the valley's natural beauty, but several hundred thousand human beings will be cared for.

J. R. GABBERT,

Editor Riverside Enterprise.

RIVERSIDE, CAL., December 4, 1913.

Senator Ashurst, United States Senate, Washington, D. C.:

United States Senate, Washington, D. C.:

I believe with all lovers of nature that our national parks and beauty spots should receive all reasonable and proper protection from the Nation. I think, however, that municipal water needs are paramount, even to beauty, and therefore urge granting Hetch Hetchy reservoir site to San Francisco under all reasonable and proper restrictions.

WILLIAM L. PETERS, Mayor, City of Enterprise.

PASADENA, CAL., December 4, 1913.

Senator H. F. ASHURST, Washington, D. C .:

Feeling it is to the best interests of not only San Francisco and California, but to the entire Southwest as well, we urge you to do your utmost to secure the passage of the Hetch Hetchy bill and give to San Francisco the water supply that rightly belongs to the people of that city.

D. M. LINNARD, Manager Maryland and Huntington Hotels, Pasadena, Cal.

Mr. ASHURST subsequently said: Mr. President, I had incorporated into the Congressional Record this morning sundry telegrams from citizens of Arizona and California urging me to vote for the Hetch Hetchy bill. I ask permission now to have read at the desk a telegram from Hon. Reese M. Ling, of the State of Arizona, a gentleman of wide information, and who is the Democratic national committeeman for the State.

The PRESIDING OFFICER. Is there objection? The Chair

hears none, and it is so ordered. The Secretary read the telegram, as follows:

PHOENIX, ARIZ., December 4, 1913.

Senator H. F. Ashurst, Washington, D. C.:

The importance to the city of San Francisco of securing the right to the Hetch Hetchy water supply can not be overstated. It is the only method of relieving the monopolistic control of its water supply. Should the right to this water be denied them the opportunity to secure

municipal ownership of its water supply will be prevented. Knowing your desire to be of service to the people in every possible manner, I feel your support of San Francisco's right will be forthcoming, and I trust I do not presume too greatly in requesting that you give it your

REESE M. LING.

Mr. GRONNA. Mr. President, I also have received some letters from citizens of San Francisco, asking me to support the Hetch Hetchy bill, which I ask may be read.

The VICE PRESIDENT. Is there objection? The Chair

hears none, and the Secretary will read as requested.

The Secretary read the letters, as follows:

75 SUTTER STREET, San Francisco, November 14, 1913.

Senator GRONNA, Washington, D. C.

Washington, D. C.

DEAR SENATOR: I note by the daily papers that you are opposed to the granting of the Hetch Hetchy water right to the city of San Francisco.

As one of your countrymen, I appeal to you in behalf of the many thousand Norwegians residing in this city to favor this grant.

If you knew how sadly the city of San Francisco needed this right, you would certainly favor our city. Why not give San Francisco what Los Angeles, Portland, and Seattle have received from the Federal Government in the shape of water rights?

Trusting that you will give this your favorable consideration, I have the honor to remain,

Yours, respectfully,

J. R. Donaldson.

Hon. A. J. GRONNA, Washington, D. C .:

Hon. A. J. Gronna, Washington, D. C.:

The undersigned organizations, composed of Swedish residents of the city of San Francisco, appeal to you as Senator from the State of North Dakota, where a large number of men and women of our nationality are numbered among your constituents, to lend your active support to the bill granting San Francisco necessary water rights in the Hetch Hetchy Valley. It is absolutely essential to the future welfare of the city that the bill be passed when it comes before the United States Senate in December.

Our need is imperative. No sound arguments have been advanced against devoting this water supply to its highest possible use—to provide the people of a large city with a pure and adequate supply of water and to insure the city against any possible recurrence of a water shortage, which now threatens.

Hetchy Hetchy is the only adequate available water supply to which San Francisco can turn. Suggested alternative supplies are either inadequate or involve an expenditure of money which the city can not at this time meet, due to the heavy financial burden the city is now bearing as a result of restoring public buildings and public works destroyed in the fire of 1906.

The construction of the proposed dam will not mar the beauty of the valley, but will rather enhance it by placing there a beautiful lake and building roads, which will make accessible a region now visited only by a few hardy camping parties.

We earnestly request you to help us.

The World's Fair Committee of the Swedish-American Patriotic League of California,
Per Alex. Olsson, Secretary.

The Swedish Singing Society,
Per Carl Moller, Secretary.

The Swedish American Patriotic League of California (Inc.),
Per Karl Swanson, Secretary.

Odin Looge (Odd Fellows, No. 393),
Per J. Johnson, Secretary.

Mr. KERN. I send to the desk a telegram in the nat

Mr. KERN. I send to the desk a telegram in the nature of a

memorial, which I ask to have read.

The PRESIDING OFFICER. In the absence of objection, the Secretary will read as requested.

The Secretary read the telegram, as follows:

Modesto, Cal., December 4, 1913.

Hon. J. W. KERN, Congress Hall, Washington, D. C.:

I am from Indiana. Invested heavily here. Will be ruined if Raker bill passes.

Mr. KERN. Mr. President, I send to the desk three telegrams Mr. KEEN. Mr. President, I send to the desk three telegrams in the nature of memorials, which are samples of perhaps a hundred that I have received recently from former citizens of Indiana who have settled in the San Joaquin Valley. I desire to say in this connection that, while my mind is open as to the passage of this bill, I must be convinced that the rights of these people will not be substantially prejudiced before the bill shall have my support. I ask for the reading of the three above. shall have my support. I ask for the reading of the three short

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read the telegrams, as follows:

Modesto, Cal., December 4, 1913.

Hon. John W. Kern, Senate, Washington, D. C.:

Formerly from Indiana. Hundreds others here from our S.ate. Raker bill will do us untold damage. I have invested my all and in debt. Will be ruined. Please do all in your power to save us.

J. W. Deardorff.

Modesto, Cal., December 4, 1913.

Hon. J. W. Kern, United States Senator, Congress Hall Hotel, Washington, D. C.:

Am one of your own people. Many located here from Indiana. Have built good homes; invested our all. Raker bill will do us untold damage. Have used all entire river last two years. Will you protect our homes?

S. S. KELLER.

Modesto, Cal., December 3, 1913.

Hon. John W. Kern, United States Senate, Washington, D. C.:

Sentiment in whole San Joaquin Valley is strong against Raker bill or any bill having for its object the taking of any water out of the valley. All the water is absolutely needed for irrigation use here. With water taken to San Francisco under Raker bill, large territory in valley will forever be left arid and unproductive. San Francisco has other and equally good sources of supply. We earnestly request you to oppose bill.

T. J. WISECARVER, Chairman Democratic County Central Committee.

Mr. STONE. Mr. President, I desire to have a telegram read in this connection.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read the telegram, as follows:

Modesto, Cal., December 4, 1913.

Hon. WILLIAM J. STONE, Washington, D. C .:

Blood is thicker than water, particularly Hetch Hetchy water. California valleys are settled by Missourians, who have made them blossom as the rose. Stanislaus is leading dairy county of coast. Water users unanimous against any bill aiming to deprive them of water. Raker bill is not party measure. It is a power grab. Stand by your brothers and defeat it.

T. BRAMHALLE, Editor Alfalfa.

Mr. PERKINS. Mr. President, I desire to present to the Senate statements of prominent citizens of California and editors of leading newspapers of that State urging the passage of the so-called Hetch Hetchy bill. A few of those who indorse the bill are:

Hon. William J. Bryan, Secretary of State.

Hon. Franklin K. Lane, Secretary of the Interior.

Hon. David F. Houston, Secretary of Agriculture.

Hon. Clump Clark, Speaker of the House,

Dr. Rupert Blue, Surgeon General of the United States,

Charles J. Pack, president of the Conservation Association.

Dr. George Otis Smith, Chief of the United States Geological Survey,

Hon. Gifford Pinchot, former Chief Forester and father of conserva-

on.
Jane Addams, of Hull House,
Mrs. John A. Logan.
Mrs. Phoebe A. Hearst.
The president of the University of California.
The president of Leland Stanford University.
The women's clubs of California.
Henry S. Graves, United States Chief Forester.
The members of the Senate Committee on Public Lands, unanimously.
The members of the House Committee on Public Lands, unanimously.
The Members of the House of Representatives, by a vote of 183 ayes
48 navs.

The Members of the House of Representatives, by a vote of 183 ayes to 43 nays.

Hiram W. Johnson, governor of California and recently candidate for Vice President.

James Rolph, jr., mayor of San Francisco.

Edward Robson Taylor, former mayor of San Francisco, who was appointed and subsequently reelected to succeed Ruef-Schmitz réglme.

James D. Phelan, former mayor of San Francisco.

Rudolph Spreckels, San Francisco, who carried on the graft prosecution

Rudoiph Spreckels, San Francisco, who carried on the graft prosecution.

Francis J. Heney, who prosecuted the grafters.
Hon. George C. Pardee, former governor of California, now chairman of the conservation commission of that State.
Hon. James R. Garfield, former Secretary of the Interior.
The American Federation of Labor.
The California State Federation of Labor.
The Chamber of Commerce of San Francisco.
The Native Sons of California.
The Native Baughters of California.
Col. John Biddle, Col. Spencer Cosby, Col. Harry Taylor, United States Army engineers.
John R. Freeman, noted hydraulic engineer.
The mayors and other officials of Oakland, Berkeley, Alameda, Richmond, San Jose, Palo Alto, and other municipalities around San Francisco Bay.

cisco Bay.
W. F. McClure, State engineer of California.
Hon. Victor Metcalf, ex-Secretary of the Nayy.

I do not care to take the time of the Senate in having these statements read, and I ask that they lie on the table and be printed in the RECORD.

There being no objection, the statements were ordered to lie on the table and to be printed in the RECORD, as follows:

on the table and to be printed in the Record, as follows:

This is what Director of the Geological Survey George Otis Smith said before the House Public Lands Committee, June 25, 1913:

"Hetch Hetchy Valley must eventually be made into a reservoir.

"Now, I believe it can be stated that the sooner that dam site is actually used, the sooner that reservoir is utilized, the better, under the plan as set forth in the provisions of this bill, and I believe that from the standpoint of economics the plan will appeal to you by reason of the fact that the cost of storage will be assessed not only upon irrigation interests, but equally, if not to a larger extent, upon municipal water and municipal power. In this way there will be a division of the whole initial cost of storage. I think that in this way practical conservation will be secured for to-day, and it will leave opportunities for such extension of this utilization in the future as will be necessary to meet future conditions.

BEST FOR ALL CONCERNED.

DECEMBER 5.

"There remains the question, leaving the question of the largest utilization, whether the provisions of the present bill are adequate to protect all interests and to recognize all equities. There are three parties, it seems to me, to this proposition. San Francisco, by reason of its claim for the highest use of the water; the Turlock-Modesto irrigation districts, by reason of their prior use and their actual dependence upon the Tuolumne watershed for their water; and, thirdly, the general public, which is interested in the full utilization of our water resources here as elsewhere and also interested by reason of special rights which they have in the national parks.

"I believe that the citizens of San Francisco and the other bay cities will receive pure water from the cheapest source, and they will also receive municipal power at a low price.

"The irrigation interests, with their prior rights, are assured under the terms of this bill of a larger supply than they at present have upon what seems to me to be absolutely equitable terms.

"The third party to this contract in the form of legislation is the general public. The visitors to the park, if this plan is carried out, will have the northern part of the Yosemite National Park made more accessible, if not indeed also more attractive. And right there I would say that, in my opinion, natural beauty has little value unless there is the human eye to see it.

will have the morthern part of the rosemite National Park made more accessible, if not indeed also more attractive. And right there i would say that, in my opinion, natural beauty has little value unless there is the human eye to see it.

"To sum up, the proposed legislation appears to me to serve present needs without in the least compromising the future needs. If we look ahead, there is also in this project some future possibilities of general increased degree in which these national playgrounds of the high silveras will be made more attractive to the general public, because they will be more accessible."

James R. Garfield, in testifying before the House committee hearing on January 9–12, 1909, stated:

"My personal feeling is with the very highest public interest, and the highest use to which the water can be put is the domestic water supply of a great chief the desire to keep this open as the playgrounds and parks for the people for camping.

"I say that those interests ought always to give way to the highest interests of domestic use.

"Of what importance is it, gentlemen, that 100, 200, 3,000, or 10,000 men who are able to spend their vacations camping should have this water supply if it is needed for the hundreds and thousands and the millions of men. women, and children who are in the great cities in and about San Francisco, who have no opportunity to take vacations, who have no opportunity to get out into the country and enjoy the privileges of camping and seeing these natural beauties?

Mr. Allen Hazen is one of the most noted experts on city water supplies in America. He was in charge of the Massachusetts State Experiment Station, 1880–1893; had charge sanitary engineering Chieago exposition; author standard work on filtration playing the city the right, because it would preclude their selling their interests to the city. Mr. Allen Hazen is one of the most noted experts on city water supplies in America. He was in charge of the Massachusetts State Experiment Station, 1880–1893; had charge sanitary e

Mr. William Mulholland, chief engineer of the Los Angeles Aqueduct, which has just been completed, and which supplies Los Angeles with a pure water supply from the Sierras, says:

"Let San Francisco have water from the Sierra Nevadas, and have

"Let San Francisco have water from the Sierra Nevauas, and late it at once.

"The whole State is with her in this fight, and none more heartily than we Los Angeles people, who are now testing the blessings of six years spent in bringing an uncontaminated water supply from the snow-capped Sierras.

"San Francisco's only opposition in this fight has been a coterie of alleged nature lovers, who have cried out against the desecration of one or two little lakes far back in the mountains.

"Those who know the Sierras know that these 'nature lovers' are not sincere in their objections, and it is hoped that an opposition based on selfish design and voiced by ignorant sentimentalism will not prevail in the Senate. San Francisco's water problem is a very serious one. That city's present supply is barely adequate. There will be a shortage in the future unless additional water is developed.

"It is incredible that the Senate will give San Francisco a setback by refusing so reasonable a request."

Of the board of Army engineers who reported in favor of the Hetch Hetchy project as against all others, Col. John Biddle, now in Washington, was the senior officer.

In reply to a request from the city engineer of San Francisco for a special statement of his reasons for selecting Hetch Hetchy as against all the projects proposed, which were given a year and a half of examination, Col. Biddle referred to his testimony before the House Committee on Public Lands, writing as follows:

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, November 29, 1913.

JOHN BIDDLE, Colonel, General Staff, Senior Officer Board of Army Engineers. EMPHATIC IN DIRECTNESS.

The colonel's statements before the House committee were emphatic in their directness and fully indorse the desires of San Francisco and the bill now under consideration. Here are some paragraphs from his striking testimony.

"The board took into consideration all possible sources of water

"The board took into consideration all possible sources to supply.

"The Hetch Hetchy supply is estimated to cost \$77,000,000, spread over a number of years. The second and third sources are estimated to cost from \$97,000,000 to \$99,000,000.

"Mr. Taylon of Colorado. If you know any reason why we should pass this bill, tell us that reason.

"Col. BIDDLE. The reason why you should is that San Francisco has to have the water; that is a perfectly practicable way and by far the most economical that "A propose development in the Hetch Hetchy is greater than it is at any other source of supply. There is no question in my mind that the Hetch Hetchy is the best water supply for San Francisco, and that it is the most economical that can be obtained; it can be obtained more promptly and is better in every way.

"The CHAIRMAN. With the information before you, coupled with the

obtained; it can be obtained more promptly and is better in every way.

"The Chairman. With the information before you, coupled with the results of these two investigations, if you were a member of this committee, having due regard for the rights of the irrigation people and having due regard for the rights of the nature lovers, who believe that you should not interfere with the Yosemite National Park, and having due regard for the needs of San Francisco, which system would you vote for?

"Col. Biddle. I would vote for the Hetch Hetchy system."

"The Chairman. You would vote for the Hetch Hetchy system?

"Col. Biddle. Yes, sir."

"The Chairman. Would you feel, in casting a vote of that kind, that you had inflicted a greater wrong upon the irrigation people and the nature lovers than if you voted for one of the other systems?

"Col. Biddle. No, sir."

Col. Harry Taylor, Corps of Engineers, United States Army, was a member of the Corps of Engineers detailed by President Taft in 1910 to investigate all California water sources for San Francisco under act of Congress. Here follows the statement he made before the House Public

investigate all California water sources for San Francisco under act of Congress. Here follows the statement he made before the House Public Lands Committee:

"There is not the slightest question in my mind but that this Hetch Hetchy should be used as the source of water supply, and not only that, but that it will be used as a water supply in a very short time independently of whether this project is adopted or not. I think that the pressure will be so great to conserve the water up there that it will be used as a storage reservoir. It is by far the best storage reservoir in that section of the country, and water is so valuable up there that they can not afford to let it run to waste. If you deny the use of it to San Francisco, sooner or later the water will be put to other uses. Somebody will be asking for permission to utilize the Hetch Hetchy Valley as a storage reservoir for irrigation purposes. This water will certainly be used for the city of San Francisco or for irrigation purposes."

Maj. William T. Littebrant, acting superintendent of the Yosemite National Park, is also heartly in accord with San Francisco's project for the utilization and beautification of the mountain gorge.

VISIONARY IDEALS BLOCKED.

He reported from Yosemite to Secretary Lane as follows, under date of October 19 last:

"Six: I beg to acknowledge the receipt of your letter of August 12, inclosing copy of letter and newspaper clipping from the New York Times on the Hetch Hetchy controversy, the author of both inclosures being Robert Underwood Johnson. The reply to your letter has been delayed, due to the fact that I had never been in the Hetch Hetchy Valley and no opportunity occurred to visit there until recently. I have just returned from there.

MUCH OVERRATED CLAIMS.

"It is believed by me that the Hetch Hetchy Valley as a scenic attraction is much overrated.

"In the lower portion of the Hetch Hetchy Valley there is a depression in which the flood waters settle, forming a lake, which annually disappears through evaporation.

"No fish get in this lake, and it becomes a breeding place of mosquitoes, so that the people who visit the Hetch Hetchy during the spring and summer or live there are obliged to wear nets and gloves.

"The water in this lake, judging from the shore marks, stands at about 8 feet deep when its connection with the river is severed, due to receding waters.

"There are other valleys in the park that are just as interesting for the tourist who might wish to gain access to them, either mounted or afoot. These canyons are, notably, Jack Main Canyon, Kerrick Canyon, Stubblefield Canyon. Benson Lake, Matterhorn Canyon, and Virginia Canyon. The Grand Canyon of the Tuolumne is now accessible by a wagon road, namely, the Tioga Road, but there is no evidence that any

people avail themselves of this road to visit any of the scenic wonders in the eastern portion of the park.

"The length of the road from Hog Ranch to the floor of the Hetch Hetchy Valley will be about 10 miles, 5 miles of it being through rock cutting. No estimate of this work has been made, but from our experience in rock cutting here it is believed that this road can not possibly be constructed for less than \$150,000, whereas \$250,000 would probably be more near its ultimate cost, it is believed that no circumstance or emergency would at present justify this expenditure, especially when that sum, if expended on the roads of and the approaches to the Yosemite Valley and the trails of the park, would place within reach of all the people a greater number of and more interesting attractions than the same sum if expended on the construction of a wagon road that would make the Hetch Hetchy Valley accessible by wagon transportation.

"There is already an excellent saddle-horse trail from the Hog Ranch to the floor of the Hetch Hetchy, and out of it in three different directions. Furthermore, it is believed that if the city of San Francisco constructs a reservoir in that valley and a wagon road around it on one of the upper benches of the bluffs that the charm of the location will be enhanced rather than injured.

San Francisco's opper.

be enhanced rather than injured.

SAN FRANCISCO'S OFFER.

"In case the city of San Francisco secures this right I am assured that it will construct a wagon road from the Hog Ranch, the steepest grade being 4 per cent, that will make this location accessible. The beholder will then observe not a mosquito-infested valley, but a beautiful mountain lake surrounded by vertical cliffs, from the road around which the gorges north and east of the Hetch Hetchy, not now easily accessible, will be more easily within reach.

"The undersigned does not believe that any person is deterred from visiting the Hetch Hetchy through the difficulty of the approach, nor is it believed that good hotel accommodations in there would present a sufficiently attractive feature to cause a larger flow of travel. At any rate, the difficulties at present encountered in securing better hotel accommodations in this valley do not justify any efforts being made by the Government to establish hotel accommodations in a place where the mosquito plague is so objectionable, and, if made, the probability is that no capital could be interested in a project the conditions surrounding which would doom the venture to failure in advance.

"It is therefore recommended that no action be taken toward the construction of the road, as advocated by Dr. Johnson.

"Very respectfully,

"Major, First Capalary, Acting Superintendent."

"WM. T. LITTEBRANT,
"Major, First Cavalry, Acting Superintendent."

The League of California Municipalities, representing all the cities and chief towns of the State, has given the Hetch Hetchy project the following enthusiastic indorsement, the resolutions being adopted at a largely attended State convention of the league in Venice, Los Angeles County:

County:

Whereas there is now pending in the Senate of the United States a bill known as the Raker act, which measure has already passed the House of Representatives; and

Whereas said Raker act is a grant from the United States to the city and county of San Francisco and the other cities on San Francisco Bay, wherein the subject of the grant is reservoir sites in the Hetch Hetchy Valley, Cherry River Valley, and Lake Eleanor Basin, said sites to be used for the purpose of supplying water to the communities around San Francisco Bay; and

Whereas the needs of San Francisco and adjoining cities are such that immediate relief is necessary to insure adequate supplies of water for domestic purposes: Therefore be it

Resolved. That the League of California Municipalities, representing

domestic purposes: Therefore be it

Resolved, That the League of California Municipalities, representing
185 cities and towns, in its sixteenth annual convention assembled in
the city of Venice, does hereby approve the said Raker bill, and respectfully urges its passage in the Senate of the United States.

I hereby certify the foregoing to be a true copy of a resolution adopted
by the League of California Municipalities October 10, 1913.

H. A. Mason, Secretary.

Joseph Sailer, mayor of Oxnard: "The Hetch Hetchy bill is of interest to all California. I have always been in favor of the passage of the bill, and I am still of that opinion. The people of the city have a right to the water that other people are not using."

- C. W. Holbrook, mayor of Venice: "To San Francisco belongs just what she is seeking, and that is a pure and adequate supply of water from the Sierras, and if the city is going to allow private interests to prevent them from getting it they are going to allow a blot to be placed on the good name of their city that time alone will be able to efface. Congress should never allow the plea of the people of San Francisco to pass unheeded, and I have no reason to believe that it will."
- R. E. Dow, mayor of Santa Monica: "The opposition that is being made against the Hetch Hetchy bill is simply one that is being made that the citizens of San Francisco may be kept from their own. The only practical source for water for that city is from the mountains, and this should be realized by Congress."
- J. H. Cavanaugh, mayor of Redondo Beach: "It should be the unanimous request of the people of all California to urge the United States Senate to pass the bill granting the necessary land rights in the Hetch Hetchy Valley, whereby San Francisco may obtain an adequate and necessary water supply for the present and future use."

Robert Jordan, president Alhambra Chamber of Commerce: "I am profoundly in sympathy with our sister city, San Francisco, in her endeavor to provide a water system adequate not only for the present but for a greater future. We of Los Angeles are to-day rejoicing over the acquisition of a water supply similar to that for which San Francisco is struggling, and if we of the southland can help her to obtain that which will be a lasting and increasing benefit it is our moral duty to stand by her."

T. D. Allin, city commissioner of Pasadena: "There is an abundance of water in the Hetch Hetchy Valley, and it can be and must be used to the people's advantage. There is no justice in discriminating against the needs of the people of San Francisco and its vicinity for the sake of sightseers."

Victor H. Metcalf, former Secretary of the Navy, president Union Savings Bank, Oakland, Cal., says:

"A bigger water supply for all the bay district than the one now available is absolutely necessary, and there is no question that the Hetch Hetchy is the logical solution. There is no doubt in my mind that the legislators will see it that way, and any fights against it are more than likely made for no other but business reasons."

OAKLAND, CAL., December 2, 1913.

By W. M. Parker, president Chamber of Commerce of San Bernardino, Cal.: "The securing of the Hetch Hetchy reservoir site by the city of San Francisco will not in any way tread on the rights of others, and it will be of untold benefit to the thousands in that city who are dependent upon this enterprise for a good and pure supply of water to promote good health and happiness. I can see no good reason for blocking the plan."

Louis E. Aubury, former State mineralogist of California: "I have been familiar with the Hetch Hetchy country for over 30 years, and knowing that region as intimately as I do I unhesitatingly indorse San Francisco's case. I have mapped all that country and know its characteristics thoroughly. Hetch Hetchy is difficult of access, particularly so from the Yosemite Valley. It is an arduous trip, and very few people at present go in there annually. I believe the work the city plans to do there would open the beauties of the country to 100 persons for every person who now visits Hetch Hetchy."

By Mrs. A. P. Black, president of the California Club: "There are several things that San Francisco very much needs, but the things that, it occurs to me, we are wanting the most is good water and plenty of it. By that I mean the Hetch Hetchy water. If the Spring Valley could be developed to meet our needs, that would be a great Improvement on existing conditions, but the Hetch Hetchy would give what I really have in mind, and that is pure mountain water."

Mark L. Requa, president Alameda County Tax Association: "We stand fast with the people of San Francisco in asking the Government to give us the Hetch Hetchy project. It will be needed. We must have it. By 1926 every possible near-by water supply will be exhausted. The situation is far more serious than people suppose."

Wells Drury, secretary Berkeley Chamber of Commerce: "The sentiment here is overwhelmingly in favor of Hetch Hetchy, throughout the entire region of the eastern side of the bay. We should exert ourselves to secure this great supply, not from a selfish motive, for we will derive as much benefit as San Francisco."

#### RESOLUTION BY BERKELEY CHAMBER OF COMMERCE.

The following resolution was adopted by the Berkeley Chamber of Commerce and forwarded to Washington when the Hetch Hetchy bill was first discussed in Congress:
"Resolved, That the Berkeley Chamber of Commerce is in favor of the pending legislation which proposes to place in operation the so-called Hetch Hetchy plan for supplying pure water to the city of San Francisco and the other communities of the district about the Bay of San Francisco."

## RESOLUTION FROM CITY OF RICHMOND, CAL.

The following resolution was passed by the Discussion Center of the City of Richmond:

City of Richmond:

Whereas the Discussion Center of Richmond. Cal., has heard a thorough discussion of the Hetch Hetchy project, affording it an opportunity to hear a complete exposition of arguments for and against the utilization of this valley as a source of water supply for San Francisco and the bay cities; and Whereas the members of the Discussion Center are convinced as a result of this discussion that in all fairness, justice, and common sense San Francisco should be granted access to Hetch Hetchy for water-supply purposes; and
Whereas the city of Richmond is one of the cities which will share in the inestimable benefit of bringing this pure and adequate supply of water to the communities of the San Francisco Bay district; Therefore be it

fore De It

Resolved by the Discussion Center of Richmond, That this organization unequivocally indorses the Hetch Hetchy project and earnestly
urges the United States Senate to pass the Raker bill, pending before
that body, granting San Francisco the necessary rights to proceed with
the development of this greatly needed and now wasted supply of water.

D. J. Hall, President.

Mrs. C. F. Smith, Secretary.

M. J. Burke, mayor of Sacramento: "I am very strongly in favor of the Hetch Hetchy proposition for San Francisco. I hope that the United States Senate will pass without delay the bill giving San Fran-cisco its much-needed right to use the water of the Hetch Hetchy Reser-voir site."

Otto R. Ludwig, mayor of Richmond: "Not only must the Hetch Hetchy proposition be consummated for the benefit of San Francisco, but for that of all the cities about the bay and for California. The metropolis of our State must have an adequate water supply. The Hetch Hetchy Valley is not the scenic paradise that some people imagine it is. The rugged valley will look vastly more beautiful with a lake resting between its walls. This is a battle of the people against insidious interests working with selfish motives of private gain. We know the need San Francisco has for this water supply, when we consider what an inestimable boon it would be to Richmond could our mains be connected with such a flow of water, pure and sufficient, to serve any size population."

Frank Otis, mayor of Alameda: "I am strongly in favor of the Hetch Hetchy project, and am glad that, as far as the source of the supply is concerned, the question is settled. You may count me among the loyal supporters, first, because I think the proposition is a splendid one, and, second, because I have hiked and climbed all over the Hetch Hetchy site, love it, and like to see it acquired by the bay cities."

Thomas Monahan, mayor of San Jose: "It is only simple justice to San Francisco that the Government should permit the use of the Hetch

Hetchy Valley and Lake Eleanor for a water supply for San Francisco. Los Angeles has just completed a big aqueduct, bringing water from the southern part of the Sierras to that city, and the question is every bit as paramount to San Francisco as it is to Los Angeles.

"The fact that several Secretaries of the Interior and the Army Engineering Corps have approved the Hetch Hetchy is proof that it is the only available supply for San Francisco.

"I fully expected that when the lower House of Congress passed the Hetch Hetchy bill that the Senate would immediately concur. I am very much surprised at the action of Senator John D. Works in opposing this bill, as I believe the interests of the irrigationists are amply protected."

That the Sacramento Valley will permit no diversion of waters of the McCloud River is the unanimous assertion of the valley press elicited by recent attempts to exploit what is known as the McCloud River project.

Alert to the interests of their readers not only the three powerful newspapers of Sacramento, the Bee, Union, and Star, but newspapers generally throughout the upper Sacramento Valley have given emphatic expression to their protests against any such proposition.

They oppose:

First. Any lessening of navigable depths in the upper Sacramento River during the river's low-water months.

Second. The diversion for use of San Francisco or any other community of water needed during the low-water months for irrigation.

[The California press, both of the northern and southern portions of the State, is practically unanimous in favoring the Hetch Hetchy bill. Following are a few brief articles and the papers in which they ap-

SET SAN FRANCISCO FREE FROM MONOPOLY.

[From the Los Angeles Examiner, Saturday, Nov. 29, 1913.]

San Francisco has reached the crucial point in her fight for the Hetch Hetchy water supply. Final action on the Raker bill, giving the city its natural rights in the valley will be taken on December 6, and on that action depends the welfare of a great metropolis and the half

Hetch Hetchy water supply. Final action on the Raker bill, giving the city its natural rights in the valley will be taken on December 6, and on that action depends the welfare of a great metropolis and the half million people.

In considering the opposition to the project, the Los Angeles Examiner directs the attention of the Senate to the objections brought forward by so-called lovers of nature and self-appointed custodians of the Nation's scenic wonders. These well-meaning but misinformed persons assume that covering the floor of the Hetch Hetchy Valley with water will destroy its beauty and injure the wonderful Yosemite, of which California and the Nation are so justly proud.

Leaving out of consideration the well-founded suspicion that this portion of the opposition has been crystallized and brought to bear on the Senate by the water and power companies for their own selfish ends, the argument advanced is not supported by the facts.

In the first place, the Hetch Hetchy basin has no part in the scenic beauty and majestic grandeur of the Yosemite. The Yosemite would still be the Yosemite if the Hetch Hetchy did not exist at all. Moreover, to assume that an expanse of water like a lake spread over the floor of the Hetch Hetchy would detract from rather than enhance the beauty is pure assumption, since not one in a thousand of those who signed the petition have ever seen the Hetch Hetchy Valley or ever will. It is the most talked-of and the least visited scenic spot on earth.

As a matter of fact, men who love nature quite as well as do these signers of the opposition petition and who are competent judges by reason of their familiarity with the region, are firmly of the opinion that the charm of the Hetch Hetchy will be enhanced by turning the swampy floor of the valley into a beautiful mountain lake. And when it is considered that San Francisco undertakes to construct a magnificent driveway around the margin of this lake, how can tibe limgined that one of the earth's beauty spots will be destroyed?

But setti

not be worth a song. But as those rights were obtained in careless time and at little cost the loss to the company would be prospective, not actual.

If San Francisco is denied her rights and the attention of Senators is called to this point, the Yosemite Power Co. will impound the very same waters of the Tuolumne for private profit and will compel the city of San Francisco and the farmers of the Irrigable regions to pay more for the power developed from these waters than the water and power together would cost if San Francisco is permitted to carry out its great undertaking.

This private corporation would be in a position to dictate its own terms and fix its own prices. In fact, it would hold the city of San Francisco and the farmers of all the irrigable lands affected at its mercy. It would mean that millions upon millions of dollars would be wrung from the people for a necessity—as much so as the very air they breathe—and all for private profit. It would be a reversal of the first principle of democracy—an overturning of the foundation stone of the Republic in conferring the greatest good on the smallest number. That would be a calamity, indeed.

It is inconceivable that the great United States Senate will thus deliberately make it possible for a private corporation to hold up and sandbag a great municipality just emerging fresh and fair from a calamity in which the lack of water played so important a part.

It is inconceivable that the greatest deliberative body in the world in this enlightened age and in this era of supposed freedom will establish on the mountain side a tyrannical power like the robber baron of a benighted age, whose castle crowned the hill and who dwelt in the valley.

The days of the robber barons lie behind us. Too often have we

The days of the robber barons lie behind us. Too often have we imitated them in the last few years by the laxity displayed by city, State, and Nation in granting permits and bestowing rights and fran-

chises. Let us make no more mistakes. The refusal to grant what San Francisco asks would be one of these mistakes.

It would be no mistake, however, to place a great city forever in undisturbed possession of so imperative a necessity as an abundance of life-giving and life-preserving water. It would be no mistake to get San Francisco free for all time from the greedy grasp of a montrever representation.

strous monopoly.

The Los Angeles Examiner earnestly hopes the Senate will give our sister city what, after all, is hers by all the laws of right and justice and what the vast majority of the people of California, and we believe of the country generally, will concede as belonging to her.

# [Bakersfield Californian.]

[Bakersfield Californian.]

[The Californian, leading newspaper of Bakersfield, Kern County, is published in a region absolutely dependent for its agricultural prosperity on irrigation from the waters of the Sierra streams. Yet this is the unprejudiced view it takes of San Francisco's request for the Hetch Hetchy overflow:]

Whether from the standpoint of the utilization of the water for irrigation, or from that of sentiment, the Californian has scant patience with the opposition that is developing to San Francisco's project of securing a water supply from the Sierras. The prosperity of the metropolis of the State is a matter in which all of California is interested, and it can not continue to expand unless it is assured of a permanent and an abundant water supply.

The Hetch Hetchy waters ran down to the sea for all the years that California has been occupied by white men. So San Francisco occupies a very different position from that of Los Angeles a few years since. The latter city coveted the waters of Owens River—water that water it was necessary to take over rights that again made a desert of a large acreage. There was, of course, strong opposition to a city acquiring that water.

But no such struction confronts San Francisco. It is asking for was appropriate was necessary to take over rights that again many water it was necessary to take over rights that again many of a large acreage. There was, of course, strong opposition to a city acquiring that water.

But no such situation confronts San Francisco. It is asking for that which has not been directly utilized, and to seek to block the movement savors too much of the dog-in-the-manger policy.

#### [From the Colton (Cal.) Daily Courier.] WATER WORTH MORE THAN SCENERY.

WATER WORTH MORE THAN SCENERY.

Bet a nickel not one of the women who helped place the Federation of Women's Clubs on record against the Hetch Hetchy project ever saw the valley or know personally whether the plans San Francisco has in mind for taking her domestic water from that country would injure the valley or not or in any way impair its scenic beauty.

An organization like the club women, organized for the betterment of mankind, ought to be chary about opposing any public enterprise, and especially one so necessary as that of procuring an ample and desirable supply of pure water.

Especially should southern Californians keep away from such entanglements. Down this way we need every drop of water there is obtainable. When there is some to be had we do not cavil about "scenic beauty" or the chance of impairing attractiveness of mountain valleys; we go and get the water wherever it is to be had.

But these ladles who condemn the San Francisco project ought to know that it will actually make the valley where the lake is to be created more attractive. Let them ask themselves whether they would prefer a mountain valley full of brush and nothing done to make it accessible or to have a beautiful lake placed in its center and ample driveways created, where one may take an automobile through some of the grandest scenery in our mountains.

That is just what San Francisco proposes to do. This is disputed by the Spring Valley Water Co. and its emissaries, who fought San Francisco at every turn she has made to get a decent supply of water.

## [From the Santa Barbara Press, Nov. 29.]

[From the Santa Barbara Press, Nov. 29.]

The United States Senate must soon decide whether the future development of San Francisco and the other bay cities is of more consequence than the preservation for scenic purposes of the Hetch Hetchy Valley in its present inaccessible and isolated condition. Federal engineers have declared that the Hetch Hetchy is the one available source of water supply for the populous bay district. A number of eastern newspapers of the influential class have bitterly opposed the bill that would establish a reservoir site in the Hetch Hetchy; and while their sincerity is not questioned, there is reasonable ground for belief that their attitude has inspiration from the corporate interests that now furnish San Francisco, Berkeley, and other municipalities in that vicinity with an indifferent supply of water at very profitable rates.

## [From the Santa Monica Outlook, Nov. 29.]

The Outlook takes the position that the furnishing of an adequate water supply to a great city—a supply that will be pure and lasting—is of paramount importance, and that no sentiment should interfere with the furnishing of such a supply. It seems that the Hetch Hetchy is a typical case of the sentimentalist trying to overbalance the practical.

[The Los Angeles Herald, the leading evening newspaper of the great city of southern California, printed an editorial on Saturday last heartily indorsing the Hetch Hetchy project. From that editorial the following excerpts are taken:]

the following excerpts are taken:]

We call upon the United States Senate not to deny, but to supply San Francisco's water needs.

Why is it that San Francisco has not received justice at the hands of the National Government at Washington? That city has prayed for the privilege to secure pure water for her needs. Her prayer has not been positively denied, but it has been and is most grievously deferred. Washington was not appealed to in vain by Los Angeles when this city sought its water supply from the mountains of Inyo County. It is our hope that our sister city may fare as well at the hands of this administration as we did during Roosevelt's rule.

San Francisco's water supply is inadequate. Her case is more necessitous than was ours. We apprehended a shortage and sought to provide against such contingency.

Fortunately we received not only fair treatment but prompt treatment, which is what has been denied San Francisco so long that her needs are now most imperative.

Approximately a million people around the Bay of San Francisco are interested in the securement of an adequate provision of pure water for now and the time to come.

Before the proposed reservoir and aqueduct can be constructed and connected with San Francisco and vicinity over a million human beings will be in need, perhaps in distress, for water.

What is asked is a permit to create a magnificent artificial lake in the Hetch Hetchy Valley in the Sierras. The creation of such a lake would make even more beautiful an already picturesque scenery. It would not injure the landscape. It would not harm a living Iting. It could create no nuisance, no menace, and be of no detriment to anybody or anything.

Capital has clutched at this proposition of municipal ownership to strangle it. The slimy trail of that dragon of capitalistic greed can be trailed to the Capitol at Washington.

[From the San Diego Sun, Nov. 29.]

An open battle has been waged against the Hetch Hetchy plan by nature lovers whose sincerity there is no reason to doubt; but the Sun is convinced that the real opposition to the plan comes from the Power Trust, which is against the plan because the development of the Hetch Hetchy system will develop enough hydroelectric power to run San Francisco's municipal electric street railway and to light the city and other bay cities, and to previde water enough, not only for San Francisco, but for irrigation in the vicinity. The Power Trust does not care a hoot about the beauty of nature; it is worrying because if the plan goes through it will lose a lot of revenue which it would get if the municipal power was not developed. Write to your Senators and ask them to work for the Hetch Hetchy bill.

[From the Venice (Cal.) Vanguard, Nov. 29.]

In the matter of the Hetch Hetchy Valley reservoir project, it is only just to San Francisco that the metropolis of the north should be blessed with the water supply which she now seeks from the Sierras. All right and fair minded people are profoundly in sympathy with San Francisco in this fight for what we consider to be hers with all justness. This is particularly true when it is remembered that by the Hetch Hetchy reservoir, as planned, no injury can come to the farmers of the north.

## [From the Monrovia (Cal.) News, Nov. 29.]

It is unfortunate that so many well-meaning people have signed remonstrances against the Hetch Hetchy project of the city of San Francisco without hearing both sides of the controversy fairly and fully stated. From the beginning the fight has been made against the people of San Francisco on a mere pretense, and people who have never seen the Hetch Hetchy Valley have enthusiastically responded to this pretense and rushed into the fray with the honest intention of frustrating a scheme to destroy one of California's beauty spots. Fudge! The provisions of the Raker bill, should it become a law, will greatly increase the beauties of the valley. It will also frustrate the selfish designs of some of the big power corporations of the State, and it will provide the people of San Francisco perpetually with a supply of wholesome mountain water for domestic and other purposes. The Raker bill should pass.

# [From the Alhambra (Cal.) Advocate, Nov. 29.]

If San Francisco is denied the right to utilize the Hetch Hetchy water supply in providing itself with that greatest of municipal necessities—pure water—this whole Nation will point the finger of scorn at a Congress which allows private water-franchise grabbers to gobble up and withhold from a great city that which contributes to the very life and health of a million people.

[From the Lake Elsinore (Cal.) Press, Nov. 29.]

This is a case of the Common People of San Francisco v. The Yosemite Power Co. et al. When it is public profit versus private plunder the former should rule.

## [From the South Pasadena (Cal.) Record, Nov. 29.]

It would seem that the least Congress could do would be to allow San Francisco the same privilege in the matter of securing a municipal water system that has been granted to other cities. The Bay City asks the Government for only a few hundred acres of land in the Hetch Hetchy Valley for reservoir purposes and in all justice the request should be granted.

[From the Marin Journal, Nov. 28.]

What is good for San Francisco is good for the entire State.

This is no time for quibbling or indulging in sentimentalism. Water these cities must have, and in Hetch Hetchy lies their only hope of meeting the needs of the immediate future.

If these cities are to expand, they must have water. This can only be supplied from a few sources in this State. Every available supply outside of Hetch Hetchy has had claims piled upon it knee deep, and in order that San Francisco could acquire any of these supplies years would have to be spent in litigation, together with millions in meney.

#### [Editorial from the Sentinel, Santa Cruz, Nov. 28.1

As far as known, the people of Santa Cruz stand with San Francisco in her determined effort to secure the Hetch Hetchy water supply. She must have this water.

# [Editorial from the Evening Surf, Santa Cruz, Nov. 28.]

The writer yields to no one in his estimate of the value of national scenery. He is willing to stand in the ranks of conservationists and enthusiasts, but we are also not unmindful of the fact that pure water and plenty of it for a population of 10,000,000, as there will be about the Golden Gate in the distant future, is a requirement beyond price or comparison.

# [From the Tribune, San Luis Obispo, Nov. 28.]

Readers of San Francisco papers for many months have not yielded the energy displayed by that city for a suitable system of water works appropriate for the population which is destined to come with the advent of the 1915 exposition and the opening of the Panama Canal. In fact, it is rarely that the Hetch Hetchy project is overlooked by the progressive citizens and the municipality, owing to the importance of

the project, which means a water system for the city, furnishing an ample supply of the fluid for a rapidly growing community.

[From the Oroville (Cal.) Mercury.]

The nature lovers, speculators, and those interested in the Spring Valley Water Co. are making one last desperate struggle to deprive San Francisco of the Hetch Hetchy water rights. The people of the whole northern part of the State rally to the support of the metropolis.

GOOD FOR SAN FRANCISCO AND ALL. [From the Napa (Cal.) Daily Register.]

What is good for San Francisco is good for the territory paying tribute to that great commercial center, and to this extent, at least, we are interested in the Hetch Hetchy bill now in the United States Senate, and hope to see it enacted into law.

GIVE SAN FRANCISCO A CHANCE. [From the Santa Ana (Cal.) Blade.]

It is difficult to understand why any part of the State should oppose the movement to get for San Francisco the best water system obtainable. Give San Francisco every chance to grow and develop, say we, and the sentiment should be universal.

WHY WASTE 200,000 HORSEPOWER? [From the Chicago Record-Herald.]

Why should such an asset as 200,000 horsepower be allowed to go to waste?

[Oxnard Courier, Nov. 29.]

San Francisco has been trying for so long a time to establish a water supply adequate to the rapid growth of the city that many wonder what is delaying the project. The city has chosen the site for reservoir in the high Sierras, known as the Hetch Hetchy. It has already acquired the title to most of the land in the floor of this valley and many water rights. The demand of a city of several hundred thousand for water can not be denied. San Francisco is entitled to the water and will get it.

[Editorial from the Antioch Ledger, Antioch.]

Petitions circulated here this week for the purpose of learning how many were favorable to the Government granting to San Francisco the Hetch Hetchy Valley for a water system were signed freely. This is right, as that city is not asking anything unreasonable. Furthermore, if the request is granted no doubt but that the Bay City will sooner or later change to municipal ownership, which is the practical solution of the public-utility question.

## TAGGART ASTON.

Mr. THOMAS. Mr. President, during the course of the remarks of the Senator from North Dakota [Mr. Gronna] last night the senior Senator from New Hampshire [Mr. Gallinger] caused to be read into the RECORD a letter dated November 26, addressed to him and signed by Taggart Aston. I shall not reread the letter, which will appear in the remarks of the Sena-

I deem it my duty, however, to call the attention of the Senate to the fact that this man Taggart Aston was, and probably still is, the "consulting engineer," as he calls himself, of the Sierra Blue Lake Water Co., a malodorous scheme engineered and fostered by Eugene Sullivan, to which I took occasion to refer somewhat at length the other day. It was developed in the hearings that Mr. Taggart Aston had a large contingent interest in that scheme, my recollection being that he was to receive 10 per cent of the proceeds in the event its promoters should succeed in their scheme to sell it to the city of San Francisco.

This gentleman now appears here as a volunteer proponent and champion of the Spring Valley water system. relations to it may be I do not know, but it is a fact that he has a large contingent interest in a scheme which not only will not bear investigation but seems to have been the subject of some pretty sharp practices during the course of its progress from the hands of Mr. Sullivan to the attention of the city of San Francisco, and the Senate should be apprised of the fact.

Mr. GALLINGER. I wish to say a single word in response to what the Senator from Colorado [Mr. Thomas] has said. This letter came to me as a personal communication, apparently. I inquired of other Senators if they had received a similar letter, and they said they had not. Had such a letter been sent to each Senator I would not have introduced it. I know nothing whatever about Mr. Taggart Aston.

Mr. THOMAS. Mr. President, I am perfectly aware of that, for I know the Senator would not have introduced into this controversy a letter from a man of this character without hav-

ing made a statement of the fact.

Mr. GALLINGER. I presented the letter for what it was worth. There is one feature about this discussion, however, that seems a little peculiar, and that is that almost every com-munication or statement that is submitted in opposition to this scheme is met by the suggestion that the men presenting such statements are engaged in malodorous practices and that they

are representing corporations or individuals whose conduct will not bear the light of day.

Mr. President, I know nothing about Mr. Aston, and, of

course, he will answer for himself.

Mr. THOMAS. Mr. President, I am sure the Senator from New Hampshire will bear out the statement that I have not indulged in any criticism of the writers of any letters, except as I have presented to the Senate such facts connected with them which appear upon the record or which have come to my knowledge from reliable sources.

#### REPORTS FROM COMMITTEE ON PRINTING.

Mr. FLETCHER. Mr. President, on yesterday certain communications were referred to the Committee on Printing for action. I find that they have been ordered printed by the House of Representatives, and I therefore report them back and ask that they be referred to the appropriate committees.

The VICE PRESIDENT. The communications will be re-

ferred to the appropriate committees, without printing.

The communications are as follows:

A communication from the Secretary of War, transmitting, pursuant to law, a statement of the travel of officers and employees of the War Department from Washington to points outside of the District of Columbia (H. Doc. No. 364); to the Committee on Appropriations.

A communication from the Secretary of the Interior, transmitting, pursuant to law, a report of disbursements for the fiscal year ended June 30, 1913, made in the States and Territories from the proceeds of public lands for the support of colleges of agriculture and the mechanic arts (H. Doc. No. 361); to the Committee on Agriculture and Forestry.

A communication from the Secretary of Agriculture, transmitting, pursuant to law, a detailed statement of the expenditures of the Department of Agriculture for the fiscal year ended June 30, 1913 (H. Doc. No. 385); to the Committee on Agri-

culture and Forestry.

A communication from the Commissioners of the District of Columbia, transmitting the annual report of the Commissioners of the District of Columbia for the fiscal year ended June 30, 1913 (H. Doc. No. 403); to the Committee on the District of Columbia.

A communication from the assistant clerk of the Court of Claims, transmitting a list of French spoliation cases filed under the act of January 20, 1885, which cases were dismissed by the court for nonprosecution (H. Doc. No. 379); to the Committee on Claims.

## AMENDMENT OF THE BULES.

Mr. GALLINGER, from the Committee on Rules, to which was referred Senate resolution 221, to amend Rule XIX of the standing rules of the Senate, submitted by himself on the 26th ultimo, reported it without amendment and submitted a report (No. 135) thereon.

Mr. BACON, from the Committee on Rules, to which was referred the resolution (S. Res. 227) to amend Rule XIV of the standing rules of the Senate, submitted by himself on the 3d instant, reported it without amendment and submitted a report

(No. 136) thereon.

Mr. BACON, from the Committee on Rules, to which was referred the resolution (S. Res. 202) to amend Rule XII of the standing rules of the Senate, submitted by himself on October 30, 1913, reported it with an amendment and submitted a report (No. 137) thereon.

Mr. SHEPPARD. Mr. President, I ask that the report may be read. It seems to me that any amendment of the rules

ought to be read, as it is important.

Mr. SUTHERLAND. Mr. President, I should like to ask the Senator from Georgia a question. This is a report from what committee?

Mr. BACON. From the Committee on Rules.

Mr. SUTHERLAND. When did the committee meet, may I ask the Senator?

Mr. BACON. It met on yesterday. Mr. SUTHERLAND. While the Senate was in session? Mr. BACON. It did. It had a very large accumulation of

business, which it was impossible to dispose of during the time when so many Senators were absent from the city, and since the beginning of the regular session the long continuous ses-

sions have made it impossible to meet at any other time.

Mr. SUTHERIAND. The Senator from Georgia has been here longer than I have, and I should like to ask him by what authority a committee of the body sits while the Senate itself

is in session?

Mr. BACON. The only necessity for any authority to a committee to sit during the sessions of the Senate is not to give it. the power, but to give Senators the license to be absent from

the Chamber-there is no restriction upon the time when a committee shall sit; there is, however, a restriction upon Senators being absent from the Chamber—a license which I am sorry to say a great many Senators abuse, as we have had illustrations frequently of late; but I know of no rule of the Senate or any principle upon which the sitting of a committee during the ses sions of the Senate is illegal. The only point, I repeat, about it is as to the right of a Senator to be absent from his seat in the Chamber, and the object in asking that a committee may sit during the sessions of the Senate is to give a Senator practically a leave of absence from the Senate; it is not to give the committee any authority to act while the Senate is in session.

Mr. SUTHERLAND. Mr. President, I am aware of the fact that there is no express rule of the Senate with reference to the sitting of a committee while the Senate itself is in session; but I know it has been the practice of the Senate, and I am not certain but that it has been the uniform practice of the Senate, whenever it has been desired that a committee should sit during the sessions of the Senate to obtain the leave of the Senate to

Mr. BACON. I repeat that the purpose of that is to give to a Senator the right to absent himself from the Chamber. It is not for the purpose of conferring any special authority upon the

I will illustrate in this way, if the Senator will permit me: Suppose the Senate were in session and a measure were deemed of such importance that the committee should desire to have it brought to the attention of the Senate before the conclusion of the session, and the members of the committee should assemble in a corner of the Chamber and pass upon it. Would the Senator question the legality of that course, Senators all remaining in the Chamber during the time?

Mr. SUTHERLAND. I am not questioning the legality of it at all. I am simply asking the Senator a question with refer-

ence to it.

Mr. BACON. I think the better practice is for the committee to ask leave, not because the committee needs authority, but because the members of the committee need the permission of the Senate to absent themselves.

Mr. SUTHERLAND. I will say to the Senator that while I do not question the legality of the action of the committee I do question the propriety of a committee or committees sitting

while the Senate is in session,
Mr. BACON. I will say to the Senator that I entirely agree with him; and I think the question of propriety there involved is exactly the same as the question of the propriety of the course of any Senator who was absent from this Chamber last night.
Mr. SUTHERLAND. Mr. President, I was absent from this

Chamber last night.

Mr. BACON. I said nothing to that effect.
Mr. SUTHERLAND. No; I know the Senator did not. was also absent from the Chamber the night before; and I will say to the Senator now that, except when I am compelled by the action of this body to attend the sessions of the Senate, I propose to be absent from the Senate Chamber during the night sessions hereafter.

Mr. BACON. Mr. President, I think I have the floor. Mr. SUTHERLAND. Wait just a moment, if the Senator I come here in the morning at 10 o'clock, and I am to stay here until 6 o'clock in the evening. That is as willing to stay here until 6 o'clock in the evening. long a time as in decency any Member of the Senate ought to be required to attend. A majority of this body has seen fit, in order to wear out the minority of the body, as it has been openly confessed upon the floor of the Senate, to require the Senate to be in session during the hours of the night as well. The Senator's party is responsible for that order. The Senator desires the order, and he and his side of the Chamber must take the burden of seeing that it is carried out.

Mr. JAMES. Mr. President-

Mr. BACON. I hope the Senator from Kentucky will permit

me to proceed. I will yield to him in a moment.

I think it is a very unusual spectacle for a Senator to stand on the floor of this body and boldly and defiantly say to the Senate that he does not propose to abide by the rules of the It is a rule of the Senate, as it is a rule of every parliamentary body-whether expressly written or not I do not remember—that a Senator shall be present unless he is absent by permission. Senators are frequently absent because that permission is considered as tacitly granted. Nobody disputes that, and nobody considers that a Senator who absents himself in that way is violating the rule. But when a Senator stands on this floor and says that he proposes and intends to absent himself purposely and in violation of the order of the Senate, then I say the Senator is so far affronting the Senate as to defy it and to say that he will not obey its order.

Mr. CHAMBERLAIN. Mr. President, I rise to a parliamentary inquiry.

The VICE PRESIDENT. The Senator will state it.

Mr. CHAMBERLAIN. I really should like to know what is before the Senate. I have been waiting here to introduce a

The VICE PRESIDENT. Reports of committees are in order. Mr. SUTHERLAND. Let me say just one word, Mr. President, in answer to the Senator from Georgia.

Mr. BACON. I yield to the Senator for that purpose.

Mr SUTHERLAND. I thought I had the floor. Perhaps I

am mistaken

Mr. BACON. No; I think that the Senator has not. Possibly

he is right about that, however.

Mr. SUTHERLAND. In my experience, Mr. President, the spectacle never has been presented to the Senate heretofore of the majority of the body passing an order of this kind for the express purpose, the openly stated purpose, not of legitimately transacting the business of this body, but of compelling Senators to attend for the purpose of wearing them out. Whenever the majority of this body undertakes to make me do something for the purpose of wearing me out I am going, to the best of my ability, to prevent myself from being worn out.

Mr. JAMES. Mr. President—

Mr. BACON. I hope the Senator from Kentucky will permit

me to reply to the Senator from Utah.

Mr. SUTHERLAND. When that statement was made the other day the Senator from Georgia was the only Member upon the majority side to repudiate it. He did repudiate it. Every other Member of the majority sat silent and accepted it, and I supposed by that course acquiesced in the statement of the purpose of the resolution.

I say it is an unfortunate thing and an inexcusable thing for the majority of this body to propose an order of this kind for If the business of the Senate required it, or if it were reasonably debatable that the business of the Senate required it, then it would be quite a different matter. here all night long, night after night, when I thought the business of the Senate required it; but I repeat to the Senator that I do not intend to jeopardize my health by attending these night sessions unless I am compelled to attend them.

Mr. BACON. Mr. President, the Senator from Utah says the purpose has been avowed to hold these sessions for the purpose of wearing out Senators. If that were so, I think the complaint would very well come from one not blessed with so much youth

as the Senator from Utah.

To show how inconsistent is the Senator, however, one Senator made the remark of which he complains, and there was no general acquiescence in or repudiation of it. Another Senator disavowed it. In each instance the Senators on this side of the Chamber sat silent. Yet the Senator takes silence in one case as an acquiescence by all on this side and takes silence in the other case as a failure to repudiate. Where is the consistency of the Senator?

The remark was made by a Senator in a running debate, and did not call for any general expression one way or the other from this side of the Chamber. In the same running debate there was a disavowal of it by another Senator. The silence is

no more significant in one case than in the other.

I wish to say to the Senator from Utah, as I have said before, that the purpose of the majority in proposing to have these sessions was the one I indicated—the purpose to give to the Senate full opportunity to have all right of unlimited debate, and, at the same time, in the exercise of that unlimited debate, which we knew would be necessarily protracted, to have, in the interest of the country, the passage of the bill effected as soon as practicable.

Mr. CLARK of Wyoming. Mr. President, will the Senator

from Georgia yield to me for one moment?

Mr. BACON. I want to yield to the Senator from Kentucky before I yield to any other Senator, because he asked me to do so and kindly forebore until I had concluded what I was saying.

Mr. JAMES. I merely wanted to suggest to the Senator from Georgia that he might inquire of the Senator from Utah whether or not he made such violent protests as he now makes when the Senate sat, not until 10 or 11 o'clock, as we do, but all night long, when the Vreeland-Aldrich bill was under consideration, and was in constant session almost 48 hours, when the Senator from Wisconsin was forced to stay upon his feet 19 hours. simply wanted the Senator to inquire whether or not the distinguished Senator from Utah, then a Member of this body, absented himself or protested against that action as having the purpose of exhaustion or as being unprecedented and a wholesale denial of the rights of the minority.

Mr. SUTHERLAND. The Senator from Utah on that occasion did neither, because it was perfectly apparent upon that occasion-and I make no complaint against the Senator from Wisconsin-that the Senator from Wisconsin was engaged in fili-Whenever it is apparent that the minority or any bustering. Member of this body, for the mere purpose of delaying action, is engaged in protracting the debate the majority is perfectly justified in resorting to unusual hours; but I remind the Senator from Kentucky that nothing of that kind has occurred. order was brought in on the very first day of the session, before there had been the slightest opportunity of discovering whether or not anybody was going to engage in protracted debate.

Mr. JAMES. Then the purpose of the Senator's own party in keeping the Senate in session night and day when the Vreeland-Aldrich currency bill was up for consideration was the

purpose of exhaustion, was it?

Mr. SUTHERLAND. No; it was not for the purpose of exhaustion. It was for the purpose of getting a vote in spite of the filibuster. I ask the Senator from Kentucky whether he believes there is any filibuster in operation upon this side of

Mr. JAMES. So far as I am individually concerned, I believe there is a purpose upon the part of certain Senators on the other side of the Chamber to delay the passage of the currency bill, which is demanded by the American people almost irrespective of political party. The business interests of the country are being held up while a lot of Senators demand the right to stand here upon the floor and speak for hours and hours.

Mr. SUTHERLAND. I will say to the Senator that, in my

judgment, he is entirely mistaken.

Mr. JAMES. It is merely a difference of opinion. The coun-

try agrees with me and not the Senator.

Mr. SUTHERLAND. Let me tell the Senator why I think he is mistaken. Some weeks ago the order under which the Senate is now operating was made by unanimous consent. It was submitted to the entire body, and the entire body at that time agreed that this whole week, six days, should be devoted to the discussion of the Hetch Hetchy bill.

Mr. BACON. That is a mistake.

Mr. SUTHERLAND. It was the opinion of the Senate that would require that length of time to dispose of it.

Mr. BACON. That was not the order.

Mr. CLARK of Wyoming. It was the intention.

Mr. JAMES. If the Senator from Georgia will permit me, I merely wish to call the attention of the Senate and the country to the fact that Senators upon the other side of the Chamber, when they were in control and the Vreeland-Aldrich bill was under consideration, did not stop at adjournment at 11 o'clock, but kept the Senate of the United States constantly in session for two days and nights, until the Senator from Wisconsin was physically exhausted, in order to force a vote. Now, because we merely ask that the Senate shall remain in session until 11 o'clock, it is said that we are violating all precedent and that we are brutally running over the rights of

We are doing nothing of the sort. The country looks upon this as a body that ought to be, at least, responsive to the public will. The public will is known upon this currency bill, and the country wants the Senate to enact it into law.

Mr. CLARK of Wyoming. Mr. President-

Mr. BACON. If the Senator will pardon me a moment, I will yield the floor. Does the Senator wish to interrupt me I have but a word or two more to say, and then I will yield the floor.

Mr. OVERMAN. Will the Senator yield to me before he

yields the floor?

Mr. BACON. Yes. I will yield also to the Senator from

Mr. OVERMAN. I wish to ask the Senator if it is not customary, and has not been for years, for the Committee on Rules to meet while the Senate is in session?

Mr. BACON. It has generally been the case.

Mr. OVERMAN. According to my recollection—and I have been on the committee for years—we step down here in the room of the Committee on Rules, when we have anything to do, and meet while the Senate is in session. I wish to say, also, that on yesterday I gave notice to the Senate that the Committee on Rules was in session.

Mr. CLARK of Wyoming. Mr. President—
Mr. BACON. I yield to the Senator from Wyoming.
Mr. CLARK of Wyoming. I did not want to ask a question. I desire simply to make an observation on the subject matter that is before the Senate, and to give what I consider an additional reason why committees should not meet during the sessions of the Senate except by permission asked and obtained. It is that it deprives either the committee or the Senate of the services of the individual members of the committee at that particular time. If the Senate should happen to be engaged upon business of interest to a member of the committee, it would not only deprive the committee of his services, but it would deprive him of his opportunity to be before the committee and assist the committee with advice in the consideration of such matters as might come before it.

While, as I remember, we have no rule prohibiting a committee from meeting during the sessions of the Senate, I think the practice is a very wise one that the committees should not meet during the time the Senate is actually in session, both for the general reason I have urged and for the reason which

is personal to the committeeman himself.

Mr. OVERMAN. Mr. President, when the Senator's party was in power I never attended a meeting of the Committee on Rules that was not held during the sessions of the Senate. I think the Senator from New Hampshire, who has been an honored member of the Committee on Rules for a long time, will bear me out in the statement that for the last five years no committee meeting has been held by the Committee on Rules, so far as I can recollect, except during the sessions of the Senate.

Mr. GALLINGER. The Senator from North Carolina makes

a correct statement on that point.

It is rather surprising to me that Mr. CLARK of Wyoming. both the Senator from North Carolina and the Senator from Kentucky should want to cut their pattern according to Republican cloth. They are not in the habit of doing that.

Mr. OVERMAN. What I am complaining of is that the Sen-

ator should criticize us for doing it.

Mr. CLARK of Wyoming. It seems to me a little strange that those Senators should cite as a precedent what the Republicans have done in the past. That, of course, is aside from the question, however. My observation was directed to the question itself, and I think to a valid reason why ordinarily meetings of committees should not be held while the Senate is in session.

Mr. OVERMAN. I want to remind the Senator from Wyoming, who was a great chairman of the Committee on the Judiciary, that at frequent times we have had meetings during the

sessions of the Senate.

Mr. CLARK of Wyoming. If the Senator will examine the records of this body and of the Judiciary Committee, he will find that almost universally-I attended to it myself-permission was asked and granted by the Senate; and it was seldom, seldom indeed, that a meeting of the committee was held without such permission.

Mr. BACON. I desire to suggest to the Senator that it very frequently occurred that the Judiciary Committee was in session when the Senate met, and that it would remain in session

for a half hour or more before it adjourned.

Mr. CLARK of Wyoming. I call the attention of the Senator also to the fact, as the records of the Senate will show, that prior to that time the permission of the Senate had been given for the meeting of the committee while the Senate was in session.

Mr. BACON. Possibly.

Mr. CLARK of Wyoming. Oh, I think it was always the

Mr. WORKS. Mr. President-

Mr. BACON. If the Senator from California will pardon me, I will yield the floor in a moment.

Mr. WORKS. I desire to address myself particularly to the

Senator from Georgia. Of course I will wait, if he wishes it.

Mr. BACON. Of course, I will yield to the Senator now, if he desires to address himself particularly to anything I have

Mr. WORKS. The statement has been made here a number of times that the opportunity for debate on the Hetch Hetchy bill has been used for the purpose of delaying action on the currency bill. If that be true, I have been one of the worst offenders.

Mr. BACON. I have not made that statement.
Mr. WORKS. I was going to ask the Senator from Georgia
if he really believed that I extended my remarks on the Hetch

Hetchy bill with such a purpose as that.

Mr. BACON. Certainly I do not, and I have made no such statements as to any Senator. I certainly have said nothing to indicate it in the slightest degree. If I had continued, I should have said something before I concluded which would have absolved, so far as I am concerned, any Senator who has spoken from any imputations of that kind.

Mr. WORKS. Certainly that never entered my mind.

Mr. BACON. I am sure of that. Mr. WORKS. I think I was induced to extend my remarks beyond what some Senators may think was reasonable because of the necessity on my part to explain the laws of California, with which I should have been more familiar than other Sen-

Mr. BACON. Mr. President, I want to say just one word more as to the motives which inspired the Democrats in the effort to secure longer sessions. I say for myself, and, I believe, for Senators on this side generally, if not universally, that whatever may have been the impulse of the moment in any utterance that has been made, we were confronted by a condition where we thought it important that there should be an early conclusion of the debate and early action of the Senate on the bill. We recognized the fact that one rule of the Senate which Senators had the full right to enjoy was that of unlimited debate, and we had to reconcile the two things-unlimited debate and an undue prolongation of the time. It was the thought and the purpose, I will say, so far as the utterances in that conference could be construed, to give time for unlimited debate and at the same time not to go so far as to postpone to too late a date the action of the Senate upon the bill. That was the sole purpose

I heard no word, Mr. President, which indicated that it was done for the purpose of defeating any anticipated filibuster. have heard a suggestion that some Senators would like if the bill be not passed early, but I have heard no suggestion of a filibuster, and this was not done in anticipation of a filibuster.

I think I speak with the utmost candor and correctness when I allege that as the motive and purpose of the Democratic side in proposing to have extraordinarily long sessions, and if necessary to surrender the Christmas holidays. We do not, if we provide for a continuous session during the Christmas holidays, impose anything upon Senators on the other side that we do not impose upon ourselves, and we thus take the burden upon ourselves also. We are willing to ourselves make sacrifices. We desired that Senators on the other side should have the opportunity for unlimited debate, and for this purpose we were willing to make the sacrifice of unusual hours. Some of us are not so young as the Senator from Utah, and we have found it perfectly consistent with our health and comfort to be present, and we are not worn out by what has occurred, and do not anticipate being worn out by what may occur hereafter in attending the sessions during these long hours.

Mr. GALLINGER. Mr. President—

Mr. BACON. I yield to the Senator, Mr. GALLINGER, I simply want to make an observation which will take but one moment, and that is to say to my good friend that I have talked personally with almost every Senator on this side of the Chamber, and there is but one opinion expressed, and that is that we want as early action as possible on the currency bill after it has been properly debated.

Mr. BACON. I think so, Mr. President.

Mr. GALLINGER. There is no other feeling or purpose. Mr. BACON. I give full credit to Senators on the other

side for that; and the only purpose in having extraordinarily long sessions is that there may be had full debate; and yet there is a condition of affairs in view of which every must recognize as one which as soon as possible should be brought to an end, to wit, the necessary suspense and uncertainty in great business circles as to what is to be the outcome, and they should be given the opportunity soon to adjust themselves to what may be the outcome and consequences of this legislation.

Mr. SMOOT. Mr. President-

Mr. BACON. I yield to the Senator from Utah.

Mr. SMOOT. Mr. President, I want to say to the Senator in all frankness that I would join with him or anyone else upon the other side of the Chamber to prevent any sort of a filibuster. It is not in my heart-

Mr. SMOOT. I want also to say to the Senator that I believe this bill will be passed by the Senate before the holidays.

Mr. SMOON. I hope so.

Mr. SMOOT. That is what I believe, and I do not see why it should not be.

Mr. LANE. Mr. President-

Mr. BACON. If the Senator will pardon me, I will be through in one minute.

Mr. LANE. Very well.

Mr. BACON. The present debate is on the Hetch Hetchy bill. Last night, when Senators were absenting themselves, some on this side, I am sorry to say, and almost all on the other side, the time was taken up by an interesting and legitimate argument by a Senator on the other side of the Chamber

upon the Hetch Hetchy bill, the Senator from North Dakota [Mr. Gronna]. I am sorry that Senators were not here to hear him. Although I did not agree with the position taken by the Senator, I must recognize the fact that he was making an interesting and logical argument on that question. How could that be charged as an effort to wear out the Senate? I have not heard a single word from a Senator on either side of the Chamber which indicated that a word on the Hetch Hetchy bill has been spoken for the purpose of delay. It is a question in which there is a great deal of interest, a great deal of feeling, and in which large interests are involved. Senators feel the deepest interest in it, and I think every minute of the time we have been in session has been legitimately employed.

It may be that some of us have thought that the argument was pressed to a greater degree than was necessary to estab-lish certain points the Senators wished to present, but that is for Senators to determine for themselves. There has been no minute of this time that any word has fallen in this debate which indicated to my mind that a word was spoken for the purpose of delay. How can the criticism be that this particular week it is for the purpose of wearing out Senators? We are to vote to-morrow, and I think all the time intervening is going to be taken to finish that debate, if we sit here even until 11 o'clock. I believe the Senator from Utah will agree with me about that.

Mr. President, I want to call attention to just one thing. have the highest regard and personal friendship for the Senator from Utah [Mr. SUTHERLAND]. I think he knows that Yet I must deprecate and sincerely regret that the Senator from Utah would utter upon this floor what he uttered to-day in saying that he intended to disobev the order of the Senate. Here is a rule of the Senate, Rule V, paragraph 1;

No Senator shall absent himself from the service of the Senate without leave.

I repeat that is not construed to mean that every Senator before he leaves the Chamber for a day or for a longer period of time shall obtain the direct consent of the Senate. There is a tacit consent on the part of the Senate that Senators shall be absent when their interests require it. They are tacitly left to determine that each for himself. But a Senator stands on the floor and says that he absents himself not because he has the tacit consent or the implied consent of the Senate, but that in defiance of the order of the Senate he does not intend to obey this rule. I say the Senator from Utah has, in my judgment, done an injustice to himself in making such an utterance on the floor of the Senate.

Mr. WILLIAMS. Mr. President— Mr. SHEPPARD. Mr. President, I rise to a question of order. The VICE PRESIDENT. The Senator from Texas will state the question of order.

Mr. WILLIAMS. I wish just a moment or two.
Mr. SHEPPARD. The Senator from Georgia has reported an amendment from the Committee on Rules. I should like to have that reported amendment read. Should the amendment be read on the request of any Senator? That is the question I wish to submit.

Mr. WILLIAMS. I ask the Senator from Texas to with-

hold that request for just a moment.

The VICE PRESIDENT. Is there objection to the reading of the report?

Mr. WILLIAMS. I have no objection to its being read, but it can be read, I think, as well after I am through.

Mr. SHEPPARD. I will withdraw the request until after the

Senator concludes.

Mr. WILLIAMS. Mr. President, as I seem to be the "bad man from Bitter Creek" in this controversy and am somewhat held up to the country as the author of legislative ruffianism, pronounced in a voice of complaint that might have been characteristic of a martyr at the stake somewhere back in the Middle Ages, it may be well that I should say a few words, although I do not want to join in the evident scheme of taking up the time of the Senate.

The Democratic caucus was faced with a situation. It had a bill of the highest importance to 90,000,000 people. The banks and the bank reserves and bank operations were waiting upon its passage. It was necessary therefore to take whatsoever steps were necessary upon our responsibility as a party charged with legislation in order to put that bill through at the earliest date possible, to hurry up its consideration, and to speed its conclusion.

Now, the caucus being in that situation, the Senator from New York [Mr. O'GORMAN], as he said yesterday, moved that the Senate should begin on Monday to meet at 10 o'clock; whereupon I moved an amendment that when it met at 10 o'clock it should stay in session until 6 and take a recess until 8

and remain in session until 11, unless otherwise ordered by the Senate. That is the resolution which is now before this body. There is no secret about its being a caucus resolution. There is no mystery about it whatsoever. It comes as a voice of the party charged with the obligation of legislation.

In the course of the debate upon that question the Senator from Nebraska [Mr. Norris] asked me a question, and when I am asked a question I answer it truthfully or I do not answer it at all. He asked me if one of the objects was not to hurry the Senate to a conclusion, to hurry it to a vote, and I responded by saying, "Yes; wear the talkers down, wear the talkers out." Some of you stated that I said "Wear the minority out." I did not. There are just as many talkers on this side as on that, and I said the object was— Mr. SUTHERLAND. Mr. President—

The VICE PRESIDENT. Does the Senator from Mississippi yield to the Senator from Utah?

Mr. WILLIAMS. I do not just at this time. The object is to reach a vote. What are the means adopted to bring about the object? It is to begin the talking early, to continue the talking late, to continue it continuously, until men fond of talking get

tired and quit, and then the Senate can vote.

I express my own opinion. The Senator from Georgia [Mr. Bacon] expressed his. Neither one of us has any authority to express what the party meant or what the party purpose was when it adopted this resolution; but I say that if when the party adopted this resolution its object was not to get an early vote and the means adopted by it was not to wear out the talkers in order to do it, then it did a senseless and foolish thing.

There is nothing in this resolution that interferes in the slightest degree with the right of unlimited debate. Upon the contrary, we have given you 11 hours a day instead of 5 to speak in, to debate in, to debate banking and currency, to debate Hetch Hetchy, and for the most part you have been debating the resolution. We gave you 6 more hours to talk in, and you have been claiming that we have cut off the right of debate

because we gave you 6 more hours to talk in.

As I said, when I answer a question that is put to me here or elsewhere, if I answer it at all—it might be sometimes wiser not to answer it at all-I answer by stating the truth as I understand it. The truth as I understand it is that we were apprehensive that this bill might go over until after the holidays. We were apprehensive that that might have a bad effect upon the country; that it might continue a condition of things which is not for the good of the country. We therefore concluded that it was our duty to put it through as soon as we can, and put it through before the Christmas holidays, if possible.

We therefore adopted this caucus rule, the object of which was to speed consideration, to speed debate, to give fuller opportunity for debate, and to speed the conclusion by a vote. That was the object, and the means adopted to do it was to make the talkers talk early and talk late and talk continuously, so that they might possibly get tired of talking and let us have a vote. We were apprehensive otherwise that the debate might go on

for months.

So much for that, Mr. President. I hope that it will not be considered by anybody, in spite of Sir Oracle Rebuke of one description or another, that I have apologized or intend to for

simply stating the truth as I understood it.

I go further and say that under the rules of this body whenever there is much debate on a great question, where Senators are determined to debate forever, there is no way of arriving at a conclusion in this body under its rules except by wearing the talkers out. You have resorted to it on that side when you were in power. We have resorted to it on this side when we were in power. We are resorting to it on this side when we are in power. As the Senator from Kentucky [Mr. James] said, you resorted to it in the Aldrich-Vreeland bill. You resorted to it a dozen times in history. I remember in 1893 the Senate was in session not all night for one night, but all night substantially for nearly a week. With what purpose? With the avowed purpose of bringing the free-silver discussion to a close, and it did finally bring it to a close. What we are saying to the country and to everybody is just this: "You shall have all the debate you want; you shall have your stomachs full of debate, but you must begin to debate at 10 o'clock in the morning and you must continue to debate until 11 o'clock at night with two hours' intermission to give you a rest, which was more than you gave the Senator from Wisconsin [Mr. LA FOLLETTE] on the Vreeland-Aldrich bill."

Our purpose is when one man is through talking another man shall follow him, and if not the bill shall be read, and when that man is through talking another shall follow him, and if not listen to a speech that he does not want to hear. You have to

the bill shall be read, and that no man shall get up here and hold up the business of 90,000,000 people by saying: "Mr. President, I desire to make a few remarks upon this bill; I am not prepared right now, but I will be upon next Wednesday, or I will upon day after to-morrow," or rise in another way familiar to the Senate, reminding you of a minister of God giving notice that he is going to administer the sacrament, when he says: God willing, I purpose upon a certain day to administer "-Senator gets up here with 90,000,000 people waiting on him and says substantially: "Heaven willing, on Thursday next"—not to-day, not now—"I purpose to make a few remarks" upon such and such a subject.

We wanted to bring this bill to a conclusion. You say you want to do it. I have no reason to doubt your veracity when you say it. Those of you who are honest with yourselves and honest with God know as well as I do that under the rules of the Senate there is no way of securing the speedy consideration and conclusion of a vexed question except by keeping the Senate in session for unusual hours and keeping up early and late continuous debate. That is all there is to it. There is no mystery about it. There is no secret about it. There is no

legislative ruffianism about it.

I can not help but feel sorry for the Senator from Kansas [Mr. Bristow]. He looked like one of those old pikemen of Oliver Cromwell when he was protesting against the tyranny of the Stuarts. You would have thought we were about to put him in a dungeon under the sea somewhere, fasten his hands and his feet and gag his mouth and keep him from talking, keep him from debating, keep him from voting. An invasion of the rights of the minority! What are the rights of the minority?

I have been in a minority long enough to know. Great heavens, you do not know what are the shackles that can be put upon a minority. You have never had any experience of it. For six years in the House of Representatives I had it. But at the utmost what are the rights of a minority? To propose amendments, to protest, to debate, to enlighten, to illuminate all they can. There is nothing more precious in a free country than a minority-a live, fighting, thinking, working minority. It is absolutely necessary to free government, and for that reason a system of dual parties has always been found absolutely necessary to the perpetuation of free government-a party in power alive with a program and a party out of power alive with a program and alive with good reasons to give why the major-'s program should not win. From the clash of opinion comes public enlightenment and, later on, public action in favor of the majority or in favor of the minority; but a minority's right never extends to the end of defeating that which the majority has determined upon, unless it can be defeated by convincing enough of the majority that the majority is wrong. That is ali.

I a "legislative ruffian"! A mild-mannered, bland sort of a

man like me scaring the Senator from Kansas [Mr. Bristow] to death! [Laughter.] I could not scare the Senator if I met him out in a back alley at night all by myself and he all by himself. A better piece of acting I never witnessed than that of the Senator from Kansas. I never knew before that he was a good actor, but he proved it upon that occasion by the solemnity of his countenance, the seriousness of his expression, and the violence of his gesticulations as he protested against being manacled and bound and gagged and generally manhandled in an ugly way. Now, you know, every one of you, just as well as I do-and anybody who says anything to the contrary utters what he knows between God and himself to be a hypocritical pretense-that there is nothing in this resolution that cuts off at all your right to debate. On the contrary, we are giving you 11 hours a day in which to talk instead of 5.

Mr. SMITH of Arizona. And as many days as they want to

keep it up.

Mr. WILLIAMS. And as many days as you want to keep it up. That is for you under your responsibility to the country. My own private opinion is that the longer you keep it up the worse it will be for you; but still that is a matter for you to determine, not for us to determine. We are ready to go on with the debate.

You say you have no idea of delaying us. Granted, because I have no reason to dispute your veracity at ali; you say it; but I should like for some Senator to tell me why every day for the last three days pretty nearly every hour or two the point of no quorum has been made and Senators been brought in here and the time wasted upon a roll call because Senators were not interested in the debate.

You know as well as I do that while you can lead a horse to water you can not make him drink. You can not make a man

conquer the attention of this body like that of any other body. Here are men who have made up their minds how they are going to vote upon a question, and they want to be doing something else. Indeed, speaking for myself, I had a great deal rather when I am talking that those who do not desire to hear me would retire into the cloak rooms, so that I may have order in the Chamber, than that they would be forced to sit unwilling listeners. I do not care to be a bore to anybody, and, what is more, I do not want anybody to bore me. I would not have a man dragged in here to hear me talk, and a man ought not to be dragged in here to hear anybody talk. We are grown, "free, white, and twenty-one," Senators of the United States, presumed to have sense enough to know whether we want to hear a speech or not, presumed to have sense enough to know whether we think we will get any edification from it, presumed to know whether it may change our point of view and our vote.

As a matter of fact, when Senators are interested in a subject matter and interested in a speech, they are going to be in this Chamber to listen to the debate upon that subject matter and to the speech made by the Senator who interests them upon it. Otherwise you can not make them listen. You bring Senators in here to listen to a speech that I am making, for example, or which is being made by the Senator from Oklahoma [Mr. Owen], or the Senator from Indiana [Mr. Kenn], we will say. A Senator listens a little while, and says, "That is familiar ground; there is nothing new in that; I believe I will go into the cloak room to take a smoke, or I believe I will go down and get lunch; I do not see that my education is being particularly added to; I think I will run over and dictate a few letters and come back if there is a call of the Senate." Are you going to treat a lot of grown men who are Senators of the United States like a lot of school children and say, "Here is your bench, buddy, sit on it?" I do not think any man who has pride and thinks much of himself wants unwilling listeners. He wants them willing or not at all.

I apologize for having taken up any time at all. I am playing for these few minutes exactly the game that I do not want played by anybody

Mr. SHEPPARD. Mr. President, I renew my request that

the resolution be read.

Mr. SUTHERLAND. I want to say just a single word.

Mr. SHEPPARD. I withheld the point of order until the Senator from Mississippi [Mr. Williams] finished, and I now want the resolution reported by the Senator from Georgia [Mr. BACON] read.

Mr. SUTHERLAND. If the Senator desires to insist upon it, I shall take my own time to say what I have to say.

Mr. SHEPPARD. It is a very short report.
Mr. CLARK of Wyoming. A parliamentary inquiry, Mr.
President. Under the rules of the Senate is a report of a committee to be read except by unanimous consent?

The VICE PRESIDENT. The Chair was about to rule that, if there was an objection, the question would be submitted to the Senate as to whether the report should or should not be read.

Mr. CLARK of Wyoming. I object, Mr. President; at least I shall do so unless the Senator from Utah [Mr. Sutherland] is given the opportunity to be heard.

Mr. SHEPPARD. I shall read a portion of paragraph 4 of

Rule XIV, and then resume my seat:

4. Every bill and joint resolution reported from a committee, not having previously been read, shall be read once, and twice, if not objected to, on the same day, and placed on the calendar in the order in which the same may be reported.

Mr. SUTHERLAND. Mr. President, I would have finished-

The VICE PRESIDENT. The rule which has just been read by the Senator from Texas refers to a bill or a joint resolution. Mr. SHEPPARD. Does the Chair hold that it does not apply

to a Senate resolution?

The VICE PRESIDENT. It does not apply to a Senate resolution. There now being an objection to the reading of the report of the Committee on Rules, the question is for the determination of the Senate. Shall the report of the Committee on Rules be read? [Putting the question.] The ayes have it, and the report will be read.

The Secretary read the resolution and report, as follows:

Senate resolution 221, submitted by Mr. Gallinger November 26, 1913.

Resolved, That the rules of the Senate be amended by adding the following paragraph to the nineteenth standing rule, to be numbered and known as paragraph 6 of said rule, to wit:

"Par. 6. Whenever confusion arises in the Chamber or the galleries, or demonstrations of approval or disapproval are indulged in by the occupants of the galleries, it shall be the duty of the Chair to enforce order on his own initiative, and without any point of order being made by a Senator."

[Senate Report No. 135, Sixty-third Congress, second session.] CONFUSION IN THE CHAMBER OR GALLERIES.

Mr. Gallinger, from the Committee on Rules, submitted the following report, to accompany S. Res. 221:

The Committee on Rules, to whom was referred Senate resolution 221, to amend Rule XIX of the standing rules of the Senate, having considered the same, recommend the passage of the resolution by the Senate.

The VICE PRESIDENT. The resolution will be placed on the calendar. The Secretary will read the next report from the Committee on Rules,

The Secretary read the resolution and report, as follows: Senate resolution 227, submitted by Mr. Bacon December 3, 1913.

Resolved, That Rule XIV of the standing rules of the Senate be amended as follows: At the conclusion of the second paragraph of said Rule XIV strike out the period and insert a semicolon in lieu thereof and add the following proviso, to be thereafter a part of said second

paragraph, to wit:

"Provided, That the first or second reading of each bill may be by title only unless the Senate in any case shall otherwise order."

[Senate Report No. 136, Sixty-third Congress, second session.]

READING OF BILLS.

Mr. Bacon, from the Committee on Rules, submitted the following report, to accompany S. Res. 227:

The Committee on Rules, to whom was referred Senate resolution 227, to amend Rule XIV of the standing rules of the Senate, having considered the same, recommend the adoption of the resolution by the Senate.

The VICE PRESIDENT. The resolution will be placed on the calendar.

The Secretary. Mr. Bacon also reports from the Committee on Rules, with an amendment, S. Res. 202, as follows:

Resolved, That the rules of the Senate be amended by adding the following paragraph to the twelfth standing rule of the Senate, to be numbered and known as paragraph 3 of said Rule XII, to wit:
"PAR. 3. No request by a Senator for unanimous consent for the taking of a final vote on a specified date upon the passage of a bill or joint resolution shall be submitted to the Senate for agreement thereto until, upon a roll call ordered for the purpose by the Presiding Officer, it shall be disclosed that a quorum of the Senate is present; and when a unanimous consent is thus given, the same shall operate as the order of the Senate."

[Senate Report No. 137, Sixty-third Congress, second session.] UNANIMOUS CONSENTS,

UNANIMOUS CONSENTS.

Mr. Bacon, from the Committee on Rules, submitted the following report to accompany S. Res. 202:

The Committee on Rules, to whom was referred Senate resolution 202, to amend Rule XII of the standing rules of the Senate, having considered the same, report the resolution back to the Senate with the recommendation that it be adopted with the following amendment:

At the end of said resolution add "but any unanimous consent may be revoked by another unanimous consent granted in the manner prescribed above."

The VICE PRESIDENT. The resolution will be placed on the calendar.

Mr. SUTHERLAND obtained the floor.

Mr. CUMMINS. Mr. President-

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Iowa?

Mr. SUTHERLAND. I yield to the Senator.

Mr. CUMMINS. I happened not to be here at the regular time, and out of order I desire to make a report from the same committee, the Committee on Rules, on Senate resolution 218, proposing an amendment to the standing rules of the Senate. I ask to have the report read, so that the whole matter may appear together.

The VICE PRESIDENT. The Senator from Iowa submits a report from the Committee on Rules, which the Secretary will

The Secretary read the resolution and report, as follows:

Senate resolution 218, submitted by Mr. Cummins November 22, 1913.

Senate resolution 218, submitted by Mr. Cummins November 22, 1913.

Resolved, That there shall be a standing committee of the Senate known as the committee on public documents. It shall be composed of three Senators elected in the same manner as the members of other standing committees.

No book, pamphlet, article, paper, address, or other matter requiring the consent or order of the Senate in order to be printed as a public document shall be so printed or an order therefor entered until the request or motion for such order shall have been referred to the above committee, and its report thereon received: Provided, That nothing herein contained shall be construed to interfere with the right of the Senate to discharge the committee from the further consideration of any such request or motion.

In making its report the committee shall describe the general character of the matter sought to be printed as a public document, and shall specifically state whether it is of such value to the country that it ought to be printed and circulated at the expense of the Government. [Senate Report No. 138, Sixty-third Congress, second session.]

[Senate Report No. 138, Sixty-third Congress, second session.]

COMMITTEE ON PUBLIC DOCUMENTS.

Mr. CUMMINS, from the Committee on Rules, submitted the following report, to accompany S. Res. 218:

The Committee on Rules, to whom was referred Senate resolution 218, to amend the standing rules of the Senate, having considered the same, recommend that the resolution be adopted by the Senate.

The PRESIDING OFFICER (Mr. WILLIAMS in the chair). The resolution will be placed on the calendar.

Mr. OWEN. I ask that it go to the calender under Rule IX. Mr. SUTHERLAND. I have the floor, and yielded to the Senator from Iowa [Mr. CUMMINS].

Mr. OWEN. Mr. President-

The PRESIDING OFFICER. The present occupant of the chair was temporarily out of the Chamber. He will inquire if the Senator from Utah had been recognized?

Mr. SUTHERLAND. The Senator from Utah had been recog-

nized and had yielded to the Senator from Iowa.

Mr. OWEN. When a resolution of this character is going to the calendar, as a matter of order I submit to the Chair I have a right to ask that it be placed on the calendar under Rule IX.

Mr. GALLINGER. No, Mr. President; not when it is first

Mr. OVERMAN. When it comes up in its regular order for consideration the Senator can make that request.

The PRESIDING OFFICER. The Chair thinks the order

was entered that the resolution should go to the calendar.

Mr. OVERMAN. Whenever the resolution comes up regularly the Senator from Oklahoma can ask that it be placed under Rule IX, but not at this time. As I understand, it takes its place on the calendar until it comes up regularly for consideration.

Mr. SMOOT. The Senator from Oklahoma can move that the resolution be placed on the calendar under Rule IX.

Mr. OWEN. I give notice that I will make that motion.
Mr. ASHURST addressed the Chair.
Mr. SUTHERLAND. Mr. President, I have but a single word to say, and I hope the Senator from Arizona will allow me to

Mr. ASHURST. Mr. President, if the Senator from Utah will yield to me for a moment, I am called from the Chamber by a constituent, and I only want to consume two minutes.

Mr. SUTHERLAND. I yield to the Senator. Mr. ASHURST. With the kind indulgence of the Senator, I merely wish to incorporate into the RECORD some telegrams of importance similar to those I had read a while ago. I thank the Senator.

Mr. SUTHERLAND. The Senator does not ask to have them read, as I understand.

Mr. CLARK of Wyoming. That is not in order.

Mr. ASHURST. If I am out of order, of course I will not attempt to do so at this time. The Senator seems to indicate that I am out of order.

The PRESIDING OFFICER. The Chair will say to the Senator from Arizona that he can have them added to the telegrams he had inserted in the RECORD this morning.

Mr. ASHURST. I thank the Chair, but I wish them read

at the desk.

Mr. SUTHERLAND. Mr. President, I have but a word or two to say, and I should have concluded long ago if I had been

permitted to proceed.

Very naturally, it is a matter of some grief to me that my conduct does not meet with the approval of the Senator from Georgia [Mr. Bacon]; but, after all, we are all equal in this body, and I am no more accountable to the Senator from Georgia for my conduct than the Senator from Georgia is accountable to me, and I have no apologies to make to him.

Mr. BACON. But, Mr. President, I said nothing indicating

that I thought the Senator was responsible to me.

Mr. SUTHERLAND. I have the floor, and I prefer to proceed. The Senator saw fit to read me a lecture, and that is entirely within his power, if it may be subject to criticism from another point of view.

Mr. President, I said what I did say because of the extraordinary circumstances. I should not under any other circumstances have ventured to say upon the floor of the Senate that I had voluntarily absented myself from a night session or that I intended to do so in the future; but the circumstances that are presented here to my mind, whatever they may be to the

mind of the Senator from Georgia, are extraordinary.

The Senator from Mississippi [Mr. Williams] very frankly says—and he is always frank—that he meant exactly what he said upon this subject two or three days ago. His position radically differs from that of the Senator from Georgia. Of course, I speak only for myself, but I venture to entertain the opinion that the Senator from Mississippi voiced the sentiments of the majority in this Chamber much more accurately than did the Senator from Georgia. While the Senator from Mississippi was entirely frank, he has forgotten precisely what was said upon that subject, and I desire to call it to the attention of the Senate. What he said was in answer to a question propounded by the Senator from Nebraska [Mr. Norris]. After the Sena-

tor from Mississippi had made some statement respecting the purpose of this resolution the Senator from Nebraska then said:

Well, the object of it is to wear men out.

And the Senator from Mississippi replied: Absolutely; and there is no other way of doing it.

Mr. President, I have already said that whenever it becomes apparent that any man or any set of men in the Chamber have deliberately engaged in a filibuster for the purpose of preventing a vote upon a matter, the majority is justified in resorting to extraordinary hours; and that is wholly aside from the question as to whether or not the individual or the set of men who engage in the filibuster feel entirely justified in doing so. The engage in the filibuster feel entirely justified in doing so. majority have the right to have their views prevail; but that is not the situation which confronts us here.

This resolution was offered on the first day of this session, before there had been the slightest opportunity of determining whether or not there was going to be any attempt to delay action upon the currency bill. I say to the Senator from Mississippi—and I have as much right to entertain that opinion as he has to entertain the opposite—that there never has been the slightest intention or the slightest desire on the part of anybody on this side of the Chamber, so far as I know, to delay for one moment the final disposition of the currency bill. I say for myself that I am quite willing, after the debate shall have proceeded a reasonable time, to consent to fix a day or a time for voting upon the currency bill. Personally I see no reason in the world why it should not be disposed of before the Christmas holidays, and that simply by holding the Senate in session for ordinary and reasonable hours.

I think it is good sense to have the Senate in session simply for a reasonable length of time every day. What has resulted thus far? The first two hours of every day during this entire week have been devoted to a discussion of this very resolution. Time has been consumed in calling for quorums, and time will be consumed in the future in doing so. Last night, in pursuance of the order made by the Senate, you met here at 8 o'clock, and at the end of an hour or two you found yourselves without a quorum. The call of the roll, about 10 o'clock, as I am informed, or before 10 o'clock, showed only 30 Democratic Sena-tors present and 22 absent. So you are not able even to carry

out your own order with your own people.

Mr. THOMAS. Mr. President-

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Colorado?

Mr. SUTHERLAND. I do.

Mr. THOMAS. The reference which the Senator has made to the condition in which the Senate found itself last night is a most pertinent one. The majority of this body is Democratic. We therefore have control of it and control of the legislation of the country. It is this majority which formulated and which is seeking to enforce this rule. Upon it rests the responsibility of maintaining a quorum of this body at all times. The surest way to have a quorum here is for Democratic Senators to be in their places. If they are in their places, we may take it for granted that Republican Senators will be in their places.

I have stayed here all summer long for the purpose of attending to the business of the country, and I have been present at substantially all times for the purpose of maintaining a quorum that can do business. I do not believe we are going to escape responsibility for our own derelictions of duty by reproaching Republican Senators for their absence from the Senate Chamber.

We might just as well face this matter as it is now, for we must face it sooner or later. The country is going to hold us responsible for the legislation of this session, and for our failures to legislate, and this is wholly just. Hence, without reference to Republican nonattendance, we should every one of us be here in our seats while the Senate is in session.

Mr. SMITH of Arizona. So ought every other Senator. Mr. THOMAS. So should every other Senator; but if we are in our seats, you may be sure that Republican Senators will be in theirs.

I came here last Wednesday night to conclude an unfinished speech and had to wait until a quarter of 9 o'clock before we could get a quorum. I noticed that there were just as many vacant seats on this side of the Chamber as upon the other side. I sat here yesterday and listened to a very important speech upon the currency question which was made by the junior Senator from Missouri [Mr. Reed]. I noticed that he received quite as much attention, from fully as many Senators, from one side of the Chamber as from the other.

If each of us upon this side will be here in his seat ready to attend to business there will be no more waste of time, in my judgment, and certainly nothing like the waste which has so

far characterized the course of this session.

Mr. SUTHERLAND. Mr. President, I quite agree with what the Senator from Colorado has said, and he has saved me from the necessity of saying something that I otherwise intended to say; but I suggest to him that if his side of the Chamber at the beginning of this session will provide for reasonable hours of meeting, there will be no difficulty whatever in keeping the members of the majority in their seats as well as the members of the minority.

I have taken up entirely more time than I intended upon this subject, and I simply wish to conclude with this observation: When the Senator from Mississippi says the purpose of this order—to quote his own words—is "absolutely to wear men out, and there is no other way of doing it," I take the liberty of dissenting from that sentiment and of undertaking to protect myself, at least as far as I can, from being worn out in any such way

Mr. BRISTOW. Mr. President—
Mr. KERN. I call for the regular order.
The VICE PRESIDENT. The regular order is the reports of committees and the introduction of bills and joint resolutions. [After the introduction of bills and joint resolutions, which appear under their appropriate heading,]

Mr. WALSH. If that order of business is concluded, admonstrated by the appropriate heading.

ished by the experience of the week and this morning, before passing to the next order of business I desire to ask unanimous consent for the present consideration of Senate bill 2860, in the hope that we may actually accomplish something. This is a measure that was reported from the Committee on Privileges and Elections a week or ten days ago, and the report has been printed for the information of the Senate.

Mr. BORAH. What is the number of the bill? Mr. WALSH. Senate bill 2860.

The VICE PRESIDENT. Is there any objection to the present consideration of the bill?

Mr. TOWNSEND. I desire to be heard briefly on the resolution offered by the Senator from Indiana [Mr. Kern], but I do not want to be accused of having talked for the purpose of putting it over. If by taking up his matter the Senator from Montana is going to prevent us from considering the resolution which will come up as the next order, I shall have to I have no objection to the consideration of the bill, but I do not want to be accused of having talked in order to put over the resolution.

Mr. WALSH. The Senator from Montana has no purpose whatever except to accomplish something. It appears that it is intended that the entire morning hour shall be again consumed in the discussion of this resolution. As the measure referred to by me is particularly urgent, and its passage is asked for by a large number of Senators, and in all probability it will give rise to no debate and probably to no dissent, I thought we might

take it up and pass it.

The VICE PRESIDENT. Is there any objection?

Mr. TOWNSEND. Does the Senator prefer to take up this bill now rather than to pass the resolution which is before the

Mr. KERN. We have only 10 minutes more in which to

Mr. SMITH of Georgia. We can not take up a new matter, Mr. President.

The VICE PRESIDENT. Is there any objection? Mr. SMITH of Georgia. I object. The VICE PRESIDENT. Objection is made.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WALSH:

A bill (S. 3551) to increase the limit of cost for the Federal building and site therefor at Billings, Mont., and to authorize the provision of quarters for United States courts in said building (with accompanying paper); to the Committee on Public Buildings and Grounds.

A bill (S. 3552) for the relief of J. D. Savage; to the Committee on Claims.

By Mr. BRISTOW:

A bill (S. 3553) granting a pension to James W. Banks (with accompanying papers); to the Committee on Pensions.

By Mr. OWEN: A bill (S. 3554) to authorize the acceptance and administration of savings by the Postal Savings Bank service of the Post Office Department for crescent life annuities (with accompany-

ing paper); to the Committee on Post Offices and Post Roads. By Mr. WEEKS: A bill (S. 3555) granting an increase of pension to William H. Allen (with accompanying papers); to the Committee on Pensions.

By Mr. McLEAN:

A bill (S. 3556) granting an increase of pension to Rowena M.

Calkins (with accompanying papers); and A bill (S. 3557) granting an increase of pension to Amanda Smith (with accompanying papers); to the Committee on Pen-

By Mr. O'GORMAN:

A bill (S. 3558) granting a pension to Judson P. Adams; to the Committee on Pensions.

By Mr. WILLIAMS:

A bill (S. 3559) granting a pension to Clarence McMillan; to the Committee on Pensions.

#### ELECTION OF SENATORS.

Mr. SUTHERLAND submitted an amendment intended to be proposed by him to the bill (S. 2860) providing a temporary method of conducting the nomination and election of United States Senators, which was ordered to lie on the table and be printed.

#### AMENDMENT OF THE RULES.

Mr. SHEPPARD. I desire to give notice, in accordance with Rule XL, that during the session of the next legislative day of the Senate, or at a later day, I shall offer an amendment to Rule XXV of the standing rules of the Senate, as follows (S. Res. 231):

Insert after the paragraph which reads "A Committee on Revolutionary Claims, to consist of five Senators," a new paragraph, to read as follows: "A Committee on Roads, to consist of 17 Senators," to which shall be referred all proposed legislation relating to the construction and maintenance of roads.

The VICE PRESIDENT. The notice will be entered.

#### PRECEDENCE OF THE SENATE.

Mr. GALLINGER. Mr. President, on yesterday there was published in the Washington Post a most interesting communication from the pen of the senior Senator from Georgia [Mr. BACON] in reference to the Senate's rights of precedence. It is, to my mind, a very important matter, and I fully concur in the views so admirably expressed by the Senator from Georgia, whose long and distinguished public service entitles his utterances to the fullest confidence. Recognizing the value of the paper, I ask unanimous consent that it may be printed in the RECORD, and that it be referred to the Committee on Printing with a view to having a report from that committee as to the propriety of making it a Senate document.

The PRESIDING OFFICER. Senators have heard the request. Without objection, it will be complied with.

The communication was referred to the Committee on Printing and ordered to be printed in the RECORD, as follows:

TAKES A HIGH RANK—BACON EXPLAINS THE SENATE'S RIGHTS OF PRECEDENCE—QUESTION IS A LIVE ISSUE—POINTS OUT THAT CONGRESS CREATED MANY GOVERNMENT OFFICIALS—ONLY THE PRESIDENCY AND VICE PRESIDENCY AND THE SUPREME COURT, HE SHOWS, WERE CREATED BY THE CONSTITUTION IN ADDITION TO CONGRESS—PERCEDENCE IS YIELDED TO THE SECRETARY OF STATE AS A MATTER OF COURTESY ONLY.

Although the winter social and official season has just started, the question of the relative rank of Senators and the precedence to which they are entitled already has become an issue.

In view of the interest which this arouses, Senator Bacon, chairman of the Committee on Foreign Relations, one of the senior Members of the Senate in point of service and familiar with the precedents and the functions of that body, in response to a request from the Post gave his views yesterday regarding the relative rank of Senators, as compared with other public officials.

### SETS FORTH SENATE'S ATTITUDE.

Senator Bacon avoids mention of any other officials over whom the Senate claims superior rank, and only speaks generally of all statutory officers. His statement clearly sets forth the attitude of Senators, which they doubtless will insist upon maintaining. His views follow:

"It is not altogether pleasant to discuss a matter personal to those with whom I am officially classed; but as the issue is made by some not familiar with the precedents, it is proper that answer should be made. You ask what is the proper relative rank of Senators.

"There should be no difficulty in answering that question by anyone who recalls the fundamental and controlling fact that the Constitution of the United States creates no offices except that of the Presidency and Vice Presidency, the Supreme Court, and the Congress, composed of the Senate and House of Representatives.

CONGRESS CREATED THE OTHERS.

"All other offices of the United States, excepting only those above mentioned, have been created by act of Congress.

"All officers of the United States, excepting only the President and Vice President, and the judges of the Supreme Court, and the Senators and Representatives have, without exception, been created by act of Congress; and, if deemed necessary, Congress can at any time abolish any one of these offices and create others in their stead. These offices, while most honorable positions, are nevertheless the mere creatures of Congress, nothing more. Within recent years Congress has created some of them, and has also abolished some of them.

"It is a plain proposition that the creature can not be greater than his creator. The Senate, as the upper branch of Congress, can not be the inferior in rank of offices which are the mere creatures of Congress.

WHERE THERE IS NO CONTROVERSY.

"There is no controversy as to the relative rank of the officers created by the Constitution. Of course, the President and Vice President in their order stand first without any question.

"In former times the question of precedence was in dispute between the Supreme Court and the Senate; but later the Senate courteously yielded the right of precedence to the Supreme Court. When, then, the Senate as the head of the legislative branch of the Government recog-nized the precedence of the head of the executive branch, and also of the head of the judicial branch, it has always declined to concede more

in this regard.

"This consideration of the difference between constitutional and statutory officers is of itself sufficient to establish the rank of Senators, but there are still other reasons. The public officer takes his rank from the dignity and power of his office.

#### WHAT THE SENATORS REPRESENT.

"Senators represent great Commonwealths which are as sovereign within their sphere as is the Government of the United States within its sphere. So the Supreme Court of the United States has repeatedly decided. They represent States with an average population of 2,000,000, and running up in increasing numbers to 10,000,000 in one instance.

"Further, the Senate has greater and more varied functions than any other branch of the Government. With the House of Representatives, it shares the legislative power in the making of laws for 100,000,000 people, a vast power not limited to one department or division, but embracing the unlimited control of every department of the Government and extending the exercise of its innumerable great functions, not only in our domestic affairs, but including the making of war and peace with foreign nations.

SHARES POWERS WITH PRESIDENT.

"With the President it shares the executive power, and no treaty can be made with a foreign Government unless ratified by the Senate, and no officer of the United States, excepting those of insignificant consequence, can be appointed without the consent and approval of the Senate. Sitting as a court of impeachment, the Senate exercises the highest judicial power, and by its judgment can remove from office any officer of the Government from the highest to the lowest, and from its judgment of removal there is no appeal.

"There is no other legislative body of any Government in the world with such extensive and varied powers. To assign to Senators an inferior rank can not be harmonized with the possession and exercise of such powers.

"There is one exception to the claim of precedence over statutory officers which Senators, as a courtesy, seem willing to concede, and that is in the case of the Secretary of State. The late Senator Allison, who served for more than 30 years as a Senator and who was naturally very jealous of the dignity and rank of the Senate, said he was willing to concede this precedence to this officer who is the immediate representative of the President in our far-reaching foreign relations, but he would go no further.

EXISTED UNDER THE CONFEDERATION.

EXISTED UNDER THE CONFEDERATION.

"It may be further said, in recognizing as a proper courtesy the precedence of the Secretary of State, that he holds a great office, dealing as it does with world-wide and most momentous international questions, and that it existed under the Confederation before the adoption of the Constitution of the United States and before the creation of the office of President.

"Senators under other circumstances would be willing that they, as well as other officials, should forego all distinctions of rank, but that is impossible in the official life of Washington. In official circles Senators will of necessity be assigned to a certain rank and, that being so, they will insist on being accorded their proper rank; and, speaking generally, they prefer not to be present at any function, public or private, where this proper rank is not recognized and accorded to them.

"If this were a matter which related only to the personal dignity of a Senator, he might, if he saw fit, waive the question of his precedence touches him in his official station his duty to his State leaves him no option in the premises.

PERMANENCY OF THE SENATE.

PERMANENCY OF THE SENATE.

"One thing might properly be added. The Senate is the only branch of the Government which can not be abolished by an amendment to the Constitution of the United States. By constitutional amendment the office of the President could be abolished. By such amendment the Supreme Court or even the House of Representatives could be abolished. But in the Constitution itself it is solemnly covenanted that each State shall always have an equal representation in it, thereby pledging in advance that the Senate shall never be abolished even by constitutional amendment.

SERVE THROUGH MANY TERMS.

"The permanence of no other legislative body in the world is so securely safeguarded. Not only so, but Senators as a body, by reason of their lengthy service, constitute the most stable officials of the Government. It is rarely that a Senator serves during the term of one administration only, while many Senators serve through the terms of many administrations as each with its entourage periodically comes and goes.

"This insistence by Senators of their superior rank is not made in any depreciation of other officials. No officer of the United States, saving only the President and Vice President, is depreciated in being placed second in rank to Senators."

# HOUR OF DAILY MEETING.

The VICE PRESIDENT. If there be no concurrent or other resolutions to be presented, the Chair lays before the Senate a resolution coming over from a previous day, which will be read.

The Secretary read Senate resolution 225, submitted by Mr.

KERN on the 1st instant, as follows:

Resolved, That the hour of daily meeting of the Senate be 10 o'clock a. m., and that the Senate shall on each day at 6 o'clock p. m. take a recess until 8 o'clock p. m. and adjourn at 11 o'clock p. m., until otherwise ordered.

Mr. BRISTOW. Mr. President, I desire to say a few words in reply to the suggestions and insinuations made by the Senator from Mississippi [Mr. WILLIAMS].

As has been said, this resolution was proposed on the first day of the session, upon the presumption, as I infer from the discussion that has been had, that there was to be a very long debate on the currency bill.

I do not believe there is to be a very long debate on the currency bill. If these unusual hours had been proposed after

that debate had begun and run a reasonable time, and it had been demonstrated that there was to be a long and unusual debate, and that the interests of the country demanded unusual hours in order to terminate it, there would not have been a single objection, in my opinion, from this side of the Chamber.

Such a course, however, was not followed. It has been elected by the majority in this Chamber to take the bill into their caucus and have the debate in secret, so that the RECORD does not show what the bill is, its merits or its demerits. Those of us of the minority who have been studying the bill simply ask that we be given a fair opportunity to present to the country amendments to the bill, and explain to the country, as we view

the matter, its defects.

We think we ought to be permitted to do that in a reasonable and normal way. If it appears that there is a conspiracy on the part of Republican Members or anybody else in this Chamber to prolong the debate to an unreasonable degree, or if for any other purpose it appears that the debate is to be of unreasonable length, then the resolution might be justified. Under the circumstances, however, in my opinion it is unprecedented, unnecessary, and will not result in so prompt a determination of the measure as would a more reasonable and sensible resolution.

So far as the Senator's reference to me in a personal way is concerned, I care nothing about it and give it no consideration

and no concern whatever.

Mr. TOWNSEND. Mr. President, the resolution before the Senate provides that we shall meet at 10 o'clock in the morning and hold sessions, with an intermission of two hours at 6 o'clock, until 11.

I note that a great many Senators on this side state that they are going to vote for the resolution. I assume they are going to vote for it, although I know they are opposed to it, on the ground that they might be considered obstructionists in some way if they voted against it. As for myself, sir, I shall vote against the resolution, because I do not believe it is offered in the interest of promoting deliberate and wise legislation.

As has been stated, the resolution was presented to the Senate on the first day of the session, after the Senate had made an order setting aside this entire week for the consideration of the Hetch Hetchy bill. When the resolution was taken up it was known that the Hetch Hetchy bill had the right of

way during this whole week.

Democratic Senators have risen here many times and have suggested that they were tired of talk. They have seen fit to pronounce as irrelevant and improper and tiresome the discussion given by Senators on this important measure-Senators who were posted, who were vitally interested, and who were intelligently submitting their views to the Senate and to the The Senators who have made these criticisms have assumed that only such things as they considered proper should be presented to the Senate. If we are to take their viewpoint of being opposed to debate, they have simply imposed burdens upon themselves, because by increasing the hours of the week they have enlarged the time for talk. Only the week could have been devoted to the bill anyway, for a vote must be had on Saturday whether the hours of the session were changed or

Mr. President, I am opposed to this proposition because I do not think it is necessary. I do not think it is presented in good faith, with an idea of securing more careful and consid-

erate attention of the currency bill.

It has been conceded that, so far as the California bill is concerned, the minds of the majority have not been made up, and that they are of open mind in regard to that measure. think there certainly should be a proper opportunity for those who are opposed to the measure to present their views, and that they should receive consideration for them.

It is claimed that time has been taken up in roll calls in efforts to get and keep a quorum in the Senate. The Senator from Oklahoma [Mr. Owen] has unfairly stated that, but the country will not be deceived. Whenever there has been a roll call it has been known that there was not a quorum, nor half a quorum, in the Senate Chamber, and it has always taken considerable time to bring the Senators here. It is the duty of Senators to be here in the nighttime quite as much as it is to be here in the daytime.

I do not believe it is possible to observe the rules of the Senate and adopt this rule, because Senators will do what the Committee on Rules have been doing. They will meet in committee rooms when it is their business, under the rules of the Senate, to be here unless they are excused. They will not be Senators will not remain here and attend to business. They will go somewhere else in spite of all the demands we may make for a quorum from time to time.

Mr. President, my position is this, and I am somewhat in sympathy with the Senator from Utah: If this resolution is adopted it will be the rule of the Senate that Senators shall be here between the hours mentioned in the resolution. Why should Senators be compelled to attend the meetings of the Senate? For a righteous reason and a good cause, namely, to participate in the work of the Senate. Yet here is a proposition—the currency bill—for which this rule is provided, which has been enacted in caucus. It has been determined that that bill shall pass, and yet you now compel Senators to come here and remain, in order that you may have a quorum—you who are responsible for this rule.

I believe the Senators on this side, knowing in advance and having notice served upon them in advance that they have no part in the consideration of this bill, would be warranted in remaining away from the Senate, obliging the majority to hold a quorum for the transaction of its business. The majority practically announce that they have agreed upon this bill in caucus and that the minority is to have no part in it. We have the small privilege of speaking without hope of changing the measure, and even to do that we must speak to empty seats and at times unreasonable and unjust. For myself, sir, I shall not consent to this plan. Vote, if you wish, at once, but do not attempt to coerce me into assisting you in your scheme.

But why this haste? Why is it important that we should

have legislation immediately on this proposition in this way? I will give you my understanding of your reasons later. the Republicans had wanted to make political capital they would have permitted the Glass bill to be enacted into law, because it would have become a law had it not been for the minority Members and one or two Democrats on the Currency Committee. That bill would have gone through here as smoothly as the tariff bill went through. Under the whip and spur of coercion it would have passed and became a law.

So I submit, Mr. President, that it would have been good political capital, if the Republicans were simply looking for capital, to have had that bill passed as it came from the House. But the result of deliberation has shown, and admittedly it has been shown, that improvements have been made in it. Why not submit it to further investigation and discussion with the hope that possibly further improvement can be made in it?

But, Mr. President, history is repeating itself— The VICE PRESIDENT. The hour of 12 o'clock having arrived, the morning hour has expired, and the Chair lays before the Senate the unfinished business, which will be stated.

The Secretary. A bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

The VICE PRESIDENT. In accordance with the unanimousconsent agreement of the Senate the unfinished business will be

temporarily laid aside.

Mr. KERN. I ask that the resolution which has just been consideration may go over until to-morrow, without

The VICE PRESIDENT. Is there objection? The Chair hears none.

Mr. KERN. While I am on my feet I desire to move that when the hour of 6 o'clock shall have arrived the Senate shall take a recess until 8 o'clock.

Mr. SMOOT. Let me suggest to the Senator that he ask unanimous consent.

Mr. KERN. I did ask unanimous consent.
Mr. SMOOT. No; the Senator said "I move."
Mr. KERN. Very well; let it be put as a request.

The VICE PRESIDENT. Is there objection to the request of the Senator from Indiana? The Chair hears none, and when the hour of 6 o'clock arrives the Senate will take a recess until

Mr. KERN. I should like at this time, if there is no objection, to agree upon the hour of meeting to-morrow—that when the Senate adjourns to-day it be until 10 o'clock to-morrow morning.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is unanimously agreed to.

# MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a joint resolution (H. J. Res. 155) extending time for completion of classification and appraisement of surface of segregated coal and asphalt lands of the Choctaw and Chickasaw Nations and of the improvements thereon, and making appropriation therefor, in which it requested the concurrence of the Senate.

#### CHOCTAW AND CHICKASAW LANDS.

Mr. STONE. I ask that the joint resolution which has just been received from the House be laid before the Senate, and that it may lie on the table, hoping that I will find an opportunity during the day to have it considered.

The VICE PRESIDENT. The Chair lays the joint resolution

before the Senate.

The joint resolution (H. J. Res. 155) extending the time for the completion of the classification and exemption of the surface of segregated coal and asphalt lands of the Choctaw and Chickasaw Nations and of the improvements thereon, and making appropriation therefor, was read twice by its title.

Mr. SMOOT. Would it not be better to have the joint resolu-

tion referred to the Committee on Indian Affairs and then re-

ported from the committee to-day?

Mr. STONE. It is exactly similar to a joint resolution which I introduced, which I have had in charge, and which has been submitted to members of the committee generally as far as I have been able to see them. I would feel authorized to say that it has the approval of the committee.

Mr. SMOOT. I have no objection to it, but I do think it ought to be referred to the committee and then reported from the com-

mittee to the Senate.

Mr. STONE. I have no objection if the Senator prefers that

The VICE PRESIDENT. The joint resolution will be referred to the Committee on Indian Affairs.

Mr. STONE subsequently said: From the Committee on Indian Affairs, I report back favorably without amendment House joint resolution 155, extending the time for the completion of the classification and appraisement of the surface of the segregated coal and asphalt lands of the Choctaw and Chickasaw Nations and of the improvements thereon, and making appropriation therefor. I ask unanimous consent for the present

consideration of the resolution.

The PRESIDING OFFICER. The Senator from Missouri asks unanimous consent for the present consideration of a joint resolution reported by him, which will be read for the informa-

tion of the Senate. The Secretary read the joint resolution; and there being no objection, the Senate, as in Committee of the Whole, proceeded to its consideration.

Mr. CLARK of Wyoming. Mr. President, may I ask the Senator from Missouri what is the method under which these lands are being appraised? Is there a commission?

Mr. STONE. Yes

Mr. CLARK of Wyoming. And how is the commission constituted?

Mr. STONE. It is a commission appointed under the act approved February 19, 1912, during the last Congress.

Mr. CLARK of Wyoming. I mean, what is the personnel of the commission?

Mr. STONE. I am not able to give the Senator the exact personnel of the commission, but it was appointed under the authority of that act.

Mr. CLARK of Wyoming. Has the Senator any information

as to how far they have proceeded with the appraisement?

Mr. STONE. Yes; I have. The Commissioner of Indian

Affairs sent me a letter, which I have here on my desk, to the effect that the surface of the lands had all been appraised, save, I think, about 40,000 acres. Under the act this work of appraisement was to be completed by the 1st of December, but there are something like 40,000 acres not yet appraised. The joint resolution proposes to extend the time of the commission for the period of 60 days.

Mr. CLARK of Wyoming. Is the Senator satisfied that 60

days will be sufficient?

Mr. STONE. The commissioner says that it will be ample, and I have no reason to think it will not be sufficient.

Mr. CLARK of Wyoming. Mr. President, I have had my attention called to the segregated coal lands for many years, and, together with a committee of the Senate, made a visit where they are located a number of years ago-I think as many as six or seven years ago. At that time the recommendation of the committee was that the surface and improvements of these lands should be appraised; that there should be a segregation of the coal deposits from the surface; that they should be appraised; and that the surface especially should be put into useful occupation.

Mr. STONE. That is the very purpose of the appraisement. Mr. CLARK of Wyoming. I was wondering how long this appraisement has been going on. It ought to be completed at once; but, at the same time, I think sufficient time should be allowed in which to complete the appraisement by the commission, rather than throw it upon the Secretary of the Interior.

Mr. STONE. It is practically completed now. If the Senator desires the letter of the commissioner read, I will have it read. Mr. CLARK of Wyoming. Oh, no; I simply asked the ques-

tions for my own information.

Mr. STONE. It is practically completed now, and the commissioner says that the additional time allowed will be ample.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and

SAN FRANCISCO WATER SUPPLY.

The VICE PRESIDENT. The Chair lays before the Senate House bill 7207 under the unanimous-consent agreement.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

Mr. WEEKS. Mr. President, I regret that I seem to have offended the proprieties as entertained by the Senator from Mississippi [Mr. Williams], because on the 26th of November I gave notice that after the morning hour to-day I should address the Senate on the currency question. I gave that notice not that I could not have been prepared to have spoken earlier, but because I entertained at the time the feeling that the Hetch Hetchy bill might have been disposed of so that we could go on with the currency measure. It was for the purpose of expediting public business rather than delaying it that I gave the notice.

Now, I find that the Hetch Hetchy bill is still pending. When the Senate adjourned last night the Senator from North Dakota [Mr. Gronna] was in the midst of a speech. I do not wish to crowd the Hetch Hetchy matter off the legislative stage. I have considered with the Senator from North Dakota the question whether he will go on with his speech or not, and unless there is objection, I should like to have the Senator from North Dakota finish his speech, which will not take long, I understand, and then, unless there is objection, I should like to make the remarks on the currency bill, which I announced on the 26th of November that I would make to-day.

The VICE PRESIDENT. Is there objection? The Chair

hears none. The Senator from North Dakota has the floor and

will proceed.

Mr. SMITH of Arizona. Mr. President—
The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Arizona?

Mr. GRONNA. I yield.
Mr. SMITH of Arizona. I have asked the Senator to yield to
me for a moment, because I wish to present to the Senate from the people of Los Angeles a number of telegrams which I received this morning. Many of the senders of the telegrams are well known to me and are the leading business men of southern California. I do not wish to detain the Senate by reading all the telegrams, but I shall ask to have them printed in the Record. I shall read only two or three as a sample.

Los Angeles, Cal., December 4, 1913.

Hon. MARK SMITH, Senate, Washington, D. C .:

The Hetch Hetchy water project for San Francisco is worthy of serious consideration and deserving of your vote. It is wanted by all California residents to provide and care for the requirements of the present and rapidly increasing population of San Francisco.

Vice President Citizens' National Bank, of Los Angeles.

Another is as follows:

Los Angeles, Cal., December 4, 1913.

Hon. Mark Smith, Care of United States Senate, Washington, D. C.:

Inasmuch as pure water in abundance is the life of a great city, it is the duty of every public-spirited citizen of this and every other State to urge you to do everything possible to secure a water supply for San Francisco. Knowing you to be a friend of California and that there is much in common between California and your State, as a citizen of Los Angeles I earnestly urge you to vote for the Hetch Hetchy bill.

JOHN S. MITCHELL,

Hotel Hollenbeck, Los Angeles.

Another from Los Angeles, addressed to me, is as follows: Los Angeles, Cal., December 4, 1913.

Hon. Marcus A. Smith, Senate, Washington, D. C.:

Respectfully urge your favorable consideration of Hetch Hetchy bill; overwhelming majority of people of California favor measure; is of State-wide importance. Opposition to it is generally regarded as emotional, based on misinformation or inspired by selfish motives. Earnestly ask your help for San Francisco as the paramount interest.

700,000 BOOSTER CLUB OF SOUTHERN CALIFORNIA, ALBERT CHAPELLE, Secretary.

of the telegrams shall be printed in the RECORD.

There being no objection, the remainder of the telegrams were ordered to be printed in the RECORD, as follows:

Los Angeles, Cal., December 4, 1913.

Hon. M. A. SMITH, Washington, D. C.:

Los Angeles, with water from the Sierras now within her gates, earnestly requests you to aid the future greatness of San Francisco. Your vote and help for the Hetch Hetchy bill will do this. May we count on you?

ROBERT MARSH, President Robt, Marsh Co.

SANTA ANA, CAL., December 4, 1913.

MARK SMITH,
Senate, Washington, D. C.:

I believe it would be wise to give San Francisco privileges wanted in Hetch Hetchy Valley, and urgently request you to vote for bill giving San Francisco concessions asked.

W. A. ZIMMERMAN, President Associated Chambers of Commerce of Orange County and President Santa Ana Savings & Trust Co.

Los Angeles, Cal., December 4, 1913.

Hon. Mark Smith, Senate, Washington, D. C .:

California and its citizens urge you to vote for the Hetch Hetchy bill and give San Francisco its much-needed water. As a representative of a sister State, we know you will appreciate the vital necessity of a pure water supply, and we trust you will give us your aid by voting in favor of this bill.

H. S. McCallum,
President of the Federated Improvement
Association of Los Angeles.

Los Angeles, Cal., December 4, 1913.

Hon. MARK SMITH, Senate, Washington, D. C.:

It is the earnest wish of the people of southern California that you, as a representative of a sister State, vote for the Hetch Hetchy bill, which will give San Francisco its essential water supply. I earnestly urge you to do a great public good by voting for the bill.

JAMES R. H. WAGNER,

President of the James R. H. Wagner Co.

Los Angeles, Cal., December 4, 1913.

Hon. Mark Smith, Senate, Washington, D. C.:

Permit me to suggest that Hetch Hetchy bill should receive your serious consideration, the probabilities being that San Francisco is justified in its demands and no doubt in need of a greater water supply.

MAURICE SALZMAN,

Treasurer Arizona State Society.

Los Angeles, Cal., December 4, 1913.

Senator M. A. SMITH, Washington, D. C.:

For the great benefit of more than a million Californians in and about San Francisco, and for the benefit of the State at large, it is imperative that the Hetch Hetchy bill be passed, and Californians urgently request that you, the representative of our sister State, vote in favor of this bill.

COL. E. S. ORMSBY, President of the Federated State Societies of Los Angeles,

LOS ANGELES, CAL., December 4, 1913.

Hon. M. A. SMITH, Washington, D. C .:

California, with whose interests Arizona's are vitally linked, wants immediate passage for the Hetch Hetchy bill. Please give us your active help and vote for the Hetch Hetchy bill.

ROBERT A. ROWAN,
President R. O. Rowan Co., Los Angeles.

Los Angeles, Cal., December 4, 1913.

Hon. Mark Smith,
Senate, Washington, D. C.:

The passage of the Hetch Hetchy bill is of vital importance to all
California, and I earnestly urge you as representative of sister State
to vote in favor of the Hetch Hetchy bill.

MAX SALZMAN, President Salzman Co.

Los Angeles, Cal., December 4, 1913.

Hon. M. A. SMITH, Washington, D. C.: Southern California united with the north in urging the speedy passage of the Hetch Hetchy bill, that San Francisco's immediate wants and future needs may be provided for. Its enactment will tend to greater prosperity for the coast and Southwest. We earnestly urge you as a representative of our sister State to vote for it.

ROGER M. ANDREWS.

Los Angeles, Cal., December 4, 1913.

Hon. M. A. SMITH, Washington, D. C .:

Your earnest support of the Hetch Hetchy bill is besought by southern California in unison with San Francisco as one of the best means of assuring prosperity to California and the Southwest. Please vote and work for its immediate passage.

ARTHUR LETTS,
President Retail Dry Goods Association.

Los Angeles, Cal., December 4, 1913.

Hon. Mark Smith, Senate, Washington, D. C .:

Los Angeles asks you as a true friend of California to vote for the Hetch Hetchy bill, and thus give to the people of San Francisco their

rights to a pure, abundant supply of water free of control by a private monopoly, which is striving to defeat the will and welfare of the citizens of a great city.

H. H. Rose, Mayor of Los Angeles.

Senator M. A. SMITH,

United States Senate, Washington, D. C.:

The crying need of city of San Francisco for an adequate water supply is imperative. I do not consider that the building of a storage reservoir in the Hetch Hetchy will destroy the valley's natural beauty, but several hundred thousand human beings will be cared for.

J. R. Gabbert,

Editor Riverside Enterprise.

RIVERSIDE, CAL., December 4, 1913.

Senator SMITH, Washington, D. C.:

I believe with all lovers of nature that our national parks and beauty spots should receive all reasonable and proper protection from the Nation. I think, however, that municipal water needs are paramount even to beauty, and therefore urge granting Hetch Hetchy reservoir site to San Francisco under all reasonable and proper restrictions.

WM. L. PETERS, Mayor City of Riverside.

PASADENA, CAL., December 4, 1913.

Senator M. A. SMITH, Washington, D. C.:

Feeling it is to the best interests of not only San Francisco and California but to the entire Southwest as well, we urge you to do your utmost to secure the passage of the Hetch Hetchy bill and give to San Francisco the water supply that rightly belongs to the people of that

Manager Maryland and Huntington Hotels, Pasadena, Cal.

ALHAMBRA, CAL., December 4, 1913.

Senator SMITH, Washington, D. C .:

Please lend every assistance consistent with the national policy to secure this Hetch Hetchy for San Francisco.

George W. Cameron,

President Board of Trustees, Alhambra, Cal.

ALHAMBRA, CAL., December 4, 1913.

Senator SMITH, Washington, D. C.:

California looks to you for favorable influence in the Hetch Hetchy project and will certainly appreciate such generous action.

ROBERT JORDAN,

President Chamber of Commerce, Alhambra.

ALHAMBRA, CAL.; December 4, 1913.

Senator SMITH, Washington, D. C.:

San Francisco is entitled to an adequate water supply, and the Government in granting to that city the Hetch Hetchy Basin would be practically following its recent policy toward Los Angeles.

NEWTON W. TOMPSON,

Senator Thirty-fifth District, California.

ALHAMBRA, CAL., December 4, 1913.

Senator SMITH,

Washington, D. C.:

If the Hetch Hetchy Valley is necessary to the welfare and prosperity of San Francisco, I am heartily in favor of its acquisition by that city.

Mrs. Harry E. Rose,

President Women's Club, Aihambra.

PHOENIX, ARIZ., December 4, 1913.

Senator Marcus A. Smith, Washington, D. C.:

Washington, D. C.:

The importance to the city of San Francisco of securing the right to the Hetch Hetchy water supply can not be overstated. It is the only method of relieving the monopolistic control of its water supply. Should the rights to this water be denied them, the opportunity to secure municipal ownership of its water supply will be prevented. Knowing your desire to be of service to the people in every possible manner. I feel your support of San Francisco's right will be forthcoming, and I trust I do not presume too greatly in requesting that you give it your support.

Mr. GRONNA. Mr. President, I had intended to make, I might say, extended remarks on this bill, but since the Senator from Massachusetts [Mr. Weeks], who formerly gave notice that he would speak to-day, is ready to go on with a discussion of the currency question, I shall occupy only a short time this morning in discussing the Hetch Hetchy bill.

I realize, Mr. President, that the discussion of the Hetch Hetchy bill is rather tiresome, on account of the manner we have to proceed to present evidence against this measure, but I will proceed with the best of testimony, the only testimony that I could obtain. I will not burden the RECORD by reading that I could obtain. I will not burden the RECORD by reading a large number of letters from people who are opposed to this bill, although they may be valuable and bear upon the importance of the bill, but I will ask unanimous consent to print in the RECORD certain letters and extracts from certain publications in opposition to this measure.

This morning I shall not trespass upon the time of the Senate to read the testimony which I had intended to read, but I shall

ask unanimous consent to have the report made by the advisory board of Army engineers upon all the projects of possible sources of water supply printed in the Record.

There being no objection, the matter referred to was ordered

to be printed in the RECORD, as follows:

There being no objection, the matter referred to was ordered to be printed in the Record, as follows:

5. Sacramento River: The principal features of a water supply for San Francisco from the Sacramento River are filtration and pumping. At Collinsville, at the mouth of the river, the water becomes slightly brackish late in the season during years of light rainfall. At Rio Vista, 13 miles above Collinsville, it is always fresh. It has been suggested that the increasing demand for water for irrigation may in time draw so heavily on the river and lower it to such an extent that the upper limit, within which there may be brackish water in the late summer and fall, may move up well toward Sacramento.

Current meter observations made in August, 1908, at Courtland, 24 miles below Sacramento, gave a discharge of about 7,000 cubic feet per second. The lowest stage of the river that season occurred about a month later, when the gauge height was the lowest stage reached each year from 1898 to 1902, inclusive. The minimum discharge during this period was about 10 per cent less than in 1908, or probably about 6,000 second-feet. Determinations made from cross sections and slopes gave for the 1909 low-water flow of the Sacramento River, chove the mouth of Feather River, more than 5,000 cubic feet per second. The season of 1911-12 being one of extremely light precipitation, if was thought that the record for small run-off would be broken; but although such is the case for most Sierra streams, the discharge of the Sacramento below the mouth of the American did not fail below about 6,300 second-feet.

Under the present regulations of the War Department governing taking water from the river, diversion is permitted only when the stage of the river is 2 feet or more above low water. On the upper river, above Monroeville, this stage may be reached in June; but at Sacramento, even during the low-water year of 1908, it did not reach this stage until July 18, or well toward the close of the season of heaviest irrigation as now practice

water to get materially farther up the river than at present. In this connection, see extracts from reports of Col. Mendell and of Prof. C. G. Hyde, page 118.

Water taken from the Sacramento to San Francisco would have to be carried under the San Joaquin, nearly a mile wide in its lower reaches, or across Carquinez Straits by submarine pipes.

It seems, at first glance, more economical to take water for a filtered supply from some of the numerous channels of the lower San Joaquin with the waters of which those of the Sacramento mingle. This will be further considered under project No. 13. The relative advantages of filtered water supplies from the Sacramento and San Joaquin Rivers have been quite thoroughly studied by Mr. Allen Hazen, consulting engineer to the city, whose report has been presented to your board.

Mr. Hazen's report shows that, although either the Sacramento or San Joaquin water could be satisfactorily purified by filtration, the Sacramento water is now much softer than the San Joaquin and is not so likely in the future to increase in hardness to so great an extent, owing to its use for irrigation and consequent seepage back to the river. The Sacramento water contains a much larger percentage of total solids and has a much greater degree of permanent hardness than the water from any of the proposed Sierra catchment areas. It is, consequently, even after filtration, a less desirable supply.

Mr. Hazen suggests several possible routes for condults to San Francisco. He recommends one starting from an intake at Rio Vista and running quite directly to filtration works near Antioch, thence to Walnut Check, East Oakland, and Alameda and across the bay to Potrero Point, San Francisco.

For estimate cost of a filtered supply from Sacramento River, see pages 135–137.

6. Feather River: The lowest point on the Feather River at which water could be diverted and delivered by gravity to a pumping station at the base of the Coast Range Mountains, in Contra Costa County, which, in turn, would raise it to such

for transportation now provided by the Western Facinc Ranna, Remainders, increase.

With the large run-off from the Feather River catchment area and with the great reservoir possibilities, there is no doubt as to the possibility of its furnishing a sufficient quantity of water for San Francisco (400 million gallons dally) and supplying the irrigation requirements. (See statement as to low-water discharge and reservoir capacities on p. 86.)

The extent to which the great storage possibilities on North Fork of Feather River (mentioned in connection with discussion on Sacramento River) are likely to be developed is dependent on the demands for power and for irrigation. There has already been a considerable development

of each. The Big Meadows Reservoir is now under construction. The natural sterilization of water by storage in these distant reservoirs would be offset by mixing with the low-water flow of the river before the power plant is reached through which a city supply would pass. For a supply to be filtered the lower Sacramento, except in point of hardness, is much more advantageous than the Feather.

Mr. Grunsky's report on the Feather River, submitted to the board on August I, recognizes that either the water must be filtered or stored below the point of intake in reservoirs for a sufficiently long period (30 days or more) to destroy pathogenic germs, and suggests the possibility of such storage in the hills back of Martinez.

He makes estimates of cost of two alternative schemes—one for delivering filtered water by gravity at an elevation of 20 feet in San Francisco; the other delivering raw water at an elevation of 50 feet at Martinez, then pumping it to a storage reservoir above Martinez, from which it would be delivered by gravity to San Francisco at an elevation of 215 feet.

After adding to the cost of the gravity scheme the value of the 195 feet difference of head in delivery to San Francisco, Mr. Grunsky finds that for a 200 million galions daily supply the pumping proposition is slightly more economical; but he states that for a greater supply than this a filtration plant will be necessary to take care of the additional demand.

The estimated cost of plant and capitalized cost of operation for a

that for a 200 million gallons daily supply the pumping proposition is slightly more economical; but he states that for a greater supply than this a filtration plant will be necessary to take care of the additional demand.

The estimated cost of plant and capitalized cost of operation for a Feather River supply of 60 million gallons daily is about 40 per cent greater than the estimated cost for supplying an equal quantity of filtered water from the Sacramento. For a 200 million gallons daily supply there is a slight advantage only for the Sacramento River.

7. Yuba River: The entire region drained by the Yuba River has a heavy precipitation. It is also one of very rapid run-off, there being little natural storage in lakes or valleys except at the headwaters of the South Yuba.

Quite extensive reservoir systems have been developed here and are capable of considerable extension. The South Yuba Water Co. furnishes water for mining purposes and for irrigation. The Excelsion Mining & Water Co. is the owner of quite extensive water rights. The Pacific Gas & Electric Co. uses water from both the South and North Forks for power development.

A group of lakes and reservoir sites which are drained by Canyon Creek, a tributary of South Yuba, and with which may be connected, by canal and tunnel, others on the upper Middle Fork, are controlled by W. B. Bourne, president of the Spring Valley Water Co. These constitute what is known as the Bowman Lake system. Reports made to Mr. Bourne on supplying water to San Francisco from the Yuba River with the Bowman Lake system as a nucleus by two engineers, Samuel Storrow and W. W. Waggoner, have been made accessible to the board.

These reports contain much valuable, though fragmentary, data as

These reports contain much valuable, though fragmentary, data as to the yield of the catchment areas of the Bowman Lake system, extending back to the year 1872. Substantially the same plan for developing the supply is followed in each case. The quantities of water estimated upon as dependable are doubtless sufficiently so to justify the necessary expenditure for power development, but are much greater than can be regarded as safe for a city water supply through critical periods.

Mr. Storrow goes rather more into detail as to possible yield, and his estimates of a dependable supply are more conservative than those of Mr. Waggoner, and in some instances even more than the results of this investigation show, though the résumé of his report would of itself convey a different impression.

The drainage area of the Bowman Lake system is made up of the following parts:

Bowman Lake drainage area	
Texas Creek drainage areaEnglish Reservoir drainage area	29. 08 3. 99 11. 80 17. 50

The total supply from the Yuba which might thus be available for

95 M. G. D. from South Yuba with 10,996 M. G. storage.
18. 32 M. G. D. from Middle Yuba with 30,408 M. G. storage.

164 M. G. D. total\_ - - with 72,271 M. G. storage.

There are features of the proposed reservoirs at Malakoff, Columbia Hill, Sweetland, and Shady Creek that cause considerable uncertainty as to probable cost of construction and maintenance and as to the quality of the water. At Sweetland a large portion of the reservoir capacity is furnished by old hydraulic mining pits, the high gravet banks of which have stood vertically, or nearly so, for many years. When converted into a reservoir the action of water, especially wave action, would probably cause extensive caving of banks for a long time. The proposed height of this dam is 230 feet.

At Shady Creek the proposed dam is about 3,000 feet long and 180 feet high.

feet high.

The Columbia Hill dam would be 2,000 feet long and about 200 There are numerous mining camps on the Yuba River watershed, but these are situated mostly below the proposed points of diversion, and the drainage from them may be readily excluded from the ditches

or conduits.

Three power plants are proposed: The first, called the Starr power plant, uses the water from Bowman Lake system under a head of about 2,000 feet; the second, called Waggoner, located on the South Yuba, about 22 miles below the Starr plant, will have a head of about 700 feet; the third, called the Bourn plant, uses, under a head of about 1,200 feet, the water that passes through the Starr and Waggoner plants and, in addition, that which is obtained from the Middle Yuba. The power so developed is more than sufficient to do the necessary pumping for delivering the water into Crystal Springs Reservoir.

of about 1,200 feet, the water that passes through the Starr and Waggoner plants and, in addition, that which is obtained from the Middle Yuba. The power so developed is more than sufficient to do the necessary pumping for delivering the water into Crystal Springs Reservoir.

The route proposed by Mr. Storrow, which is also an alternate route proposed by Mr. Waggoner, would deliver the Yuba water to a connection with the Spring Valley's pipes in the Livermore Valley. But for a supply coming from the north, designed to serve the metropolitan district about San Francisco Bay, it would not be economical to carry it all around the cities of Oakland, Berkeley, and Alameda to the San Francisco peninsula.

The safe dependable supply, not requiring filtration, which it has been estimated above could be obtained from the Yuba River, is 164 million gallons daily. For a larger supply, such as 400 million gallons daily, estimated necessary for the metropolitan district of San Francisco by the close of the present century, the run-off from a much larger portion of the Yuba River watershed would have to be used. There is a catchment area of 1,220 square miles above the proposed point of diversion at junction of the North and South Forks.

The supply, which can be controlled by the reservoir system described above, together with the natural discharge from the remainder of the watershed, regulated to a considerable extent now, and to a greater extent in the future by reservoirs of power companies which use the water above the point of diversion, can doubtless be brought up to 400 million gallons daily. Such a supply would need purification.

For a filtered supply or one requiring long-time storage along the line of conduit, the Yuba River has no advantage over the Feather, except possibly a little more favorable crossing of the Sacramento Valley between Rocklin and Woodland, or the route proposed by Mr. Storrow, instead of crossing the Sutrer Basin to Marysville Buttes, thence across the Sacramento River and Colusa Rasin to th

San Francisco. A profile of the Mount Shasta Aqueduct line is shown on Plate III.

This gravity conduit, with intake about 150 feet higher than proposed by Mr. Grunsky, of course requires larger and heavier pipe across Sacramento Valley than would one delivering water at about sea level in the vicinity of Carquinez Straits, where it would have to be pumped to a sufficient elevation for delivery to San Francisco.

S. American River: The American River, above the gauging station at Fair Oaks, drains an area of 1,910 square miles. The average run-off per square mile from the higher portion of this area is about 10 per cent less than that from the Yuba River, but it is considerably greater than that from the mountain areas to the south. As on all the other Slerra streams the claimed appropriations of water greatly exceed the total low-water flow. The question of the validity of many of these claims can be determined only by the courts. The power plant of the Pacific Gas & Electric Co., at Folsom, has a capacity of 1,750 second-feet, which alone exceeds the natural flow of the river for from three to six months each year. On account of its low elevation, and of probable contamination, water passing through this power plant can not be considered as a practicable supply for San Francisco.

There are several actual diversions from the river for Irrigation and mining purposes and rights of others claimed. On some of the latter the necessary legal requirements as to prosecution of development work are being complied with, so that in time they too will become vested rights.

There are also other water-power plants and water-power projects in mubryo, which depend mostly on stored water. These do or will return

vested rights.

There are also other water-power plants and water-power projects in embryo, which depend mostly on stored water. These do, or will, return the water to the river above the points where diversion would need be made to a conduit for delivering water to San Francisco.

With the exception of a few reservoir sites on the Rubicon River, which form part of a power project now being developed, and one on Silver Creek which, on account of apparent desirability as shown on topographic sheet of United States Geological Survey, was examined by me in September, 1911, and found to have just been surveyed by the Western States Power Co. for a reenforcement of its power plant, practically all of the reservoirs or suggested sites on the American River watershed are located at high altitudes and have very limited drainage areas.

areas.

Several different combinations of portions of the American River watershed or combinations with drainage areas of adjacent watersheds, affording greater or better storage, are possible.

Two propositions, neither of them recent, have been made to the city for furnishing water from the American and adjacent watersheds, They will be discussed separately under headings 8a and 8b,

Sa. Giant Gap water supply: This proposition, made in 1901, was for a daily supply of 45 million gallons from 212 square miles drainage area and with 39,000 million gallons storage capacity. One of the proponents has informed me that on account of inaccuracies in estimates of reservoirs (some being too large and some too small) the total capacity of the nine reservoirs would be about 25,000 or 30,000 million gallons. This would be ample for the daily supply named.

This scheme has since been enlarged, though neither has a new proposition been made to San Francisco nor are the necessary properties in the control of the proponents, to embrace diversion from the Yuba (South Yuba and Bowman Lake) and larger portions of the American watershed, making a total drainage area of over 800 square miles.

proposition been made to San Francisco nor are the necessary properties in the control of the proponents, to embrace diversion from the Yuba (South Yuba and Bowman Lake) and larger portions of the Yuba (South Yuba and Bowman Lake) and larger portions of the Yuba (South Yuba and Bowman Lake) and larger portions of the Yuba (South Feed making a total drainage area of over \$500 square miles.

Some of the developments proposed are being made or are under consideration by other parties, but the combinations proposed may be fown of \$35 cubic feed per second (540 million gallons daily), of which 441 second-feet (285 million gallons daily) are for city supplies, the rest for irrigation and power only.

The report on this project by Russel L. Dunn, consulting engineer, gives no estimates of reservoir capacities, but, combining those of the smaller and earlier Giant Gap proposition with those of two others schemes, which this consulting the control of the smaller and earlier Giant Gap proposition with those of two others chemes, which this may be reserved to the control of the smaller and earlier Giant The Soo square miles of drainage area with this storage capacity would yield a continuous flow greater than claimed through the driest period if there were no prior rights to allow for.

As has been stated, the latter are quite extensive. Assuming that they are so great that storage of 400 days supply may be necessary dull, leaving none of the storage available for power or irrigation.

No comparative estimate of cost has been made for a water supply under this scheme on account of lack of data. The pipe line under pressure would start from about the same point as in the Yuba River scheme (Rocklin-Woodland Route) and consequently the cost from that point for an equivalent supply would not exceed one of equal volume from the Yuba, and it might be considerably less. Sb. American-Cosumnes, or bay cities project: Of the several propositions that have been made to the city for the sale of the properties and the reposition was m

Reservoir.	Catch- ment area.	Capacity.			
		Million gallons.	Total.	Per square mile.	
Silver Lake. Twin Lakes. Upper Caples Fork Lower Caples Fork Kirkwood Meadows Audrain Lake Echo Lake Medley Lakes Alder Creek Silppery Ford Siy Park	Square miles. 15.3 13.0 20.2 5.9 1.8 17.6	16,570 7,640 1,650 2,200 800 1,900 7,760 9,390 6,700 9,000 11,000	Acre-feet. 50,800 23,400 5,000 6,750 2,450 5,830 23,800 28,800 20,550 27,600 33,750	Acre-feet. 3,320 1,800 707  5,040 16,000 1,165 1,830	
Total		74, 610	228, 790		

A study of these figures, together with the mass diagram of flow per square mile from high areas of American River (fig. 15), shows that each of the reservoirs excepting those on Caples Fork and Alder Creek and the one at Slippery Ford have greater capacity than needed to equalize the run-off from its drainage area through the period 1907-1909. In the case of the Medley Lakes the excess capacity is so great that it would require the accumulated run-off of several years to fill it, and when filled the loss by evaporation would be greater than the mean run-off for the two seasons 1967-1909.

The excess capacity of Sly Park is needed to aid in conservation of the flow of the South Fork of American.

The three reservoirs on Caples Fork are very uneconomical in regard to amount of material required for dams in proportion to volume of water stored. Eliminating these and reducing the Medley Lakes capacity to 9,000 acre-foot makes the total available storage 194,700 acre-feet.

A period which has been assumed to require the greatest storage capacity is one requiring two and a quarter times (1.50×1.50) that for an equal draft for the period 1907-1909. (See discussion on Yuba River.) Therefore, the portion of the total capacity that could be properly applied to the regulation of the discharge of the latter season is the total capacity divided by 2.25.

A storage capacity of 194,700 acre-feet = 2.25—86,500 acre-feet in connection with the run-off from 256 square miles (238 on American and 18 on Sly Park Creek) would yield, according to the mass diagram (fig. 15), 215 million gallons daily.

Through the assumed worst possible season the total storage capacity (194,700 acre-feet) would permit the same daily draft.

The above figures make no allowance for adverse prior rights, it being understood that the Bay Clites Co. owns all of those on the South Fork of the American; and that those on Siy Park Creek may be reasonably acquired.

The plans of Bay Clites Water Co. so far as outlined in their offer to the city contemplated

the water requirements of adjacent areas in the Sacramento Valley and footbills.

The conclusion of an investigation "based on the broad theory of water conservation" is "that all water rights, commercial industries, and irrigable lands having claim upon the waters of the drainage areas of the American-Cosumnes project can be fully and justly met and still leave available for San Francisco and the bay cities 223.6 million gallons daily."

For a yield of this quantity Mr. Dockweller includes the drainage area tributary to Bucks Bar below Sly Park.

The dependable yield of 215 million gallons daily, estimated by me, was for a catchment area, including only 18 square miles on the Cosumnes River, instead of 158. This yield agrees with Mr. Duryea's for the same catchment area. An estimate of cost of a 215 million gallon daily supply from the American-Cosumnes, combined with one of 128 million gallons daily from the Mokelumne and of 57 million gallons daily from the Stanislaus, making a total of 400 million gallons daily, will be found on pages 133-134.

9. Lake Tahoe: Several schemes have been proposed for extensive utilization of the waters of Lake Tahoe by diverting them by means of tunnels to the west slope of the Sierras and to the east slope of the divide separating the lake from the Carson River in Nevada.

For power production, diversion to the west offers great attraction on account of the much greater possible head under which the water may be used than is possible along the Truckee River or by diversion to Carson Valley.

But there are now several power plants on the Truckee, and the Truckee-Carson irrigation project uses a large volume of water and contemplates greater use, this latter being dependent on large storage capacity.

An englneer's report, dated October, 1908, on the utilization of Lake

capacity.

An engineer's report, dated October, 1908, on the utilization of Lake Tahoe water for a municipal supply was submitted to the board in July, 1911. Two of the features of this report were claims to the flow from Lake Tahoe up to 1,200 second-feet, and estimate of a continuous dependable supply of 561 second-feet, and estimate of a continuous dependable supply of 561 second-feet.

The United States Geological Survey records of the discharge from Lake Tahoe for the nine seasons, 1900–1901 to 1908–9, show a mean daily discharge ranging from 123 second-feet to 870 second-feet, the average for the nine seasons being 426 second-feet (275 million gallous daily). During the years 1908–9 the flow at no time exceeded 900 second-feet.

The United States Geological Survey records of the discharge from Lake Tahoe for the nine seasons, 1900–1901 to 1908–9, show a mean daily discharge ranging from 123 second-feet to 870 second-feet, the average for the nine seasons being 426 second-feet (275 million gallons daily). During the years 1908–9 the flow at no time exceeded 900 second-feet.

On account of the extensive use of this water, present and prospective, in the region through which it has its natural outlet, it has not seemed necessary to inquire into the practicability of sufficient storage to regulate the flow to the mean of the nine-year period. Since the extreme variation in seasonal discharge from the lake during the nine years corresponds to a depth of water over its surface of but little more than 4 feet there should be no difficulty in this, and probably not to equalize the discharge at the same rate through much drier periods than those for which there are records.

The reason for the comparatively small run-off for so large a drainage area is not due so much to the fact that it lies on the east side of the Sierra divide as to the large proportion of the drainage area occupied by the lake itself, with consequent large evaporation loss. The area of the lake is about 193 square miles and of the drainage area (including the lake) 519 square miles.

10. Mokelumme River: Water supply investigations made for the city of San Francisco, 1874–1877, resulted in the recommendation, by Col. G. H. Mendell to the board of water commissioners, of the Mokelumne River for a source of supply.

In Col. Mendell's report occurs the statement that for a conduit of 25,000,000 gallons daily supply there should be 2,000,000,000 gallons (an 80 days' supply). For so small a supply from a stream on which the use of water had not been greatly developed, although rights to large volumes of the flow of the stream were claimed, the necessity for very great storage capacity was not so apparent as at present. For the much larger daily yield now sought from drainage area

made so by diverting canals, 125,000,000 gallons daily is the limiting quantity of water that could be supplied to San Francisco through a year like 1898.

The rights of the Sicrra Nevada Water & Power Co. were based primarily on filings made by W. V. Clark, sr., in 1856 and subsequently. The actual use at present made by the successors of Clark is very little. The Sierra Blue Lakes Water & Power Co. has succeeded to the rights of the Sierra Nevada Water & Power Co. and has filed on others. It has made offers for the acquirement of its rights and properties by San Francisco and claims they will yield 200,000,000 gallons daily. Some of its later publications claim a daily capacity of 500,000,000 gallons. The rights to water now used, which must be allowed for in estimating the yield from the upper Mokelumne River drainage area, are:

"Pacific Gas & Electric Co., 175 second-feet, of which 77 second-feet may be diverted from the drainage area (old Amador Canal).

"Mokelumne River Power & Water Co. (Prindle ditch), 75 second-feet.

"Mokelumne River Power & Water Co. (Prindle ditch), 75 secondfeet.

"Woodbridge Canal, 62.5 second-feet, from April to September." (As
the point of diversion for this canal is below the power plant of the
Pacific Gas & Electric Co. the water from the latter may again be used.)
Other claims which must be considered are those of the Mokelumne
Power & Water Co. to 250 second-feet of flood-water flow of Middle
Fork, for the diversion of which to Calaveras Valley a ditch is now
under construction, and the Mokelumne River Power Co. to 175 secondfeet of flood water of the North Fork, which it proposes to store in a
reservoir located on this fork above the mouth of Moore Creek.

The records of the United States Forestry Service show that filings
for this reservoir site antedate those of Sierra Blue Lakes Water &
Power Co. for the site at mouth of Blue Creek.

No extensive use of Mokelumne River water for irrigation is made at
present, but a study of the location of lands in the Sacramento and
San Joaquin Valleys, which are irrigated, and their relation to the
drainage areas from which the water comes for their irrigation, does
not confirm the statements of advocates of the Sierra Blue Lakes scheme
that the waters of the Mokelumne are not needed for irrigation.

In fact it appears that the ratio of catchment area to the dependent
irrigable area is less in the case of the Mokelumne than in the case of
either the Stanislaus or the Tuolumne. The difference is partly compensated for by somewhat greater precipitation on the Mokelumne
areas.

Mr. Grunsky's report submitted August 1, 1912, takes up the subject

Areas.

Mr. Grunsky's report, submitted August 1, 1912, takes up the subject of irrigation needs of the district that would properly be served by the Mokelumne. He estimates that there are 200,000 acres, requiring 600,000 acre-feet of water annually. (See additional discussion of irrigation needs on p. 101.)

The reservoirs now proposed by the Sierra Blue Lakes Water & Power Co. for the conservation of its Mokelumne River supply, with their capacities, depths of water, and approximate heights of dam, are as follows:

	Depth of water.	Approxi- mate total height of dam.	Capacity.	
Location.			Acre-feet.	Million gallons.
Junction of South and Licking Forks, Mo- kelumne River (Rail Road Flat)	Feet. 300	Feet. 325	66,000	21,503
of Blue Creek	300	325	86,000	28,000
Forest Creek or North Branch of Middle Fork of Mokelumne River	110	125 36	2,800 (¹)	(1) 915

1 See following.

'See following.

The capacities given for the Rail Road Flat and North Fork Reservoirs were determined from surveys made by the city of San Francisco after reconnoissance had been made by me. The dams required are very large in proportion to storage capacity. The capacities of Forest Creek Reservoir were determined from my reconnoissance survey. The capacities claimed by the proponents of the "Blue Lakes" scheme are much in excess of these.

Storage at the Blue Lakes is now used by the Pacific Gas & Electric Co. in connection with its power plant at Electra. The right to raise the Blue Lakes Dams and to use the additional storage, claimed by the Blue Lakes Co. (and backed by legal opinion) is of very little value, as the present capacity conserves practically all of the run-off from the catchment area, 4½ square miles.

The Mokelumne River mass diagrams (fig. 16) show the estimated run-off for several periods from the 642 square miles of drainage area above the gaging station near Clements and for portions of the water-shed tributary to the reservoirs and diverting canals proposed by the Sierra Blue Lakes Water & Power Co. as follows:

Lines marked "A" show total discharge at station near Clements.

Lines marked "B" show total discharge at point of diversion, on North Fork, to Electra power station for three periods—1886-1890, 1897-1899, and 1907-1909.

Lines marked "C" show water available to Sierra Blue Lakes Water & Power Co. at the site of the state of the st

Lines marked "C" show water available to Sierra Blue Lakes Water & Power Co. at the site of its proposed North Fork Reservoir, after allowing 175 second-feet (or total flow when less than this) to Electra power plant and Amador Canal, as long as that flow can be maintained with the aid of 24,800 acre-feet storage. This is the combined storage capacity of three reservoirs of the Pacific Gas & Electric Co., Blue Lakes, Meadow Lake, and Bear River. The claims of the Mokelumne River Power Co. are ignored in this diagram.

Lines marked "D" show water available to Sierra Blue Lakes Water & Power Co. at same point as above, after allowing 350 second-feet (or total flow when less than this) to Electra power plant and Mokelumne River Power Co. as long as that flow can be maintained with the aid of 76,300 acre-feet storage. This is the combined storage capacity of Pacific Gas & Electric Co., as above, and of the proposed reservoir of the Mokelumne River Power Co. on the North Fork, above Moore Creek.

Lines marked "E" show water available to Sierra Blue Lakes Water & Power Co. from Middle, Licking, and South Forks after allowing 75 second-feet (and the entire flow when less) to Mokelumne River Power & Water Co. (Prindle ditch).

Lines marked "F" show water available to Sierra Blue Lakes Water & Power Co. from Middle, Licking, and South Forks after

deducting the flow from 25.2 square miles of Middle Fork (above Prindle's proposed diversion to Calaveras Reservoir) up to 250 second-feet (capacity of Prindle's proposed diverting ditch) at times when flow at Rail Road Flat Reservoir is in excess of 150 second-feet (the approximate combined capacity of the old Prindle and Clark ditches). With the reservoir capacities shown on page 98 the possible draft during critical periods as shown by the lines  $\hat{D}$  and F are:

For period 1887–1889 : From North Fork	Million gal- lons daily.
From South, Middle, and Licking Forks	7ó
Total	184
For period 1897-1899: From North Fork From South, Middle, and Licking Forks	120 65
Total	185
For period 1907-1909; From North Fork	
Total	

In accordance with the deductions from rainfall data as to the possible conservation during the most critical periods that have occurred since 1849 (see p. 78), which have been applied to other catchment areas, the safe dependable continuous yield from these areas with the given reservoir capacity, holding one-third of this capacity in reserve for periods drier than any of those shown by diagram, is 128 million gallons daily.

To increase the dependable yield through the driest periods to that shown possible through several dry periods, viz. 185,000,000 gallons daily, and to allow for the same prior rights, an increase of 30 per cent, or 77,000 acre-feet, in storage capacity is necessary. This additional capacity for use during extremely dry seasons only might be so located as to be filled during extremely wet seasons only. Surveys made by the United States Geological Survey on the Mokelumne River catchment area have covered three sites, all above clevation 7,000 feet, aggregating 2,530 acre-feet capacity, only about 3 per cent of required increase.

feet, aggregating 2,530 acre-feet capacity, only about 3 per cent of required increase.

The draft possibilities from this system could be increased considerably by including in the catchment area contributory to the supply the territory between the reservoirs on the North Fork and at Rail Road Flat and the point of final diversion to conduit below Rich Gulch. But within this territory are several small settlements and a number of ranches. Its exclusion conforms to the manner of treating the other sources of supply. The catchment area from which the proposed supply would be taken has very few permanent inhabitants. For a few months each year it is used for cattle grazing.

By combination of the Sierra Blue Lakes Water & Power Co.'s appropriations of water and reservoir sites with the rights of other appropriations, as, e. g., the Mokelumne River Power Co., or of this company and the Pacific Gas & Electric Co. on the North Fork, and diverting the water below the Electra power plant, or with the Mokelumne River Power & Water Co. (Prindle Ditch) on the South and Middle Forks, the yield may be greatly increased.

The lines B, C, and E of the mass diagram afford the means of determining the possibilities of such combinations.

Claims made by this company to a reservoir site at Case Valley and to water rights on the Cosumnes River can not properly be considered in connection with the Mokelumne River, as such a combination is not feasible.

To determine the storage capacity necessary to meet an annual irri-

to water rights on the Cosumnes River can not properly be considered in connection with the Mokelumne River, as such a combination is not feasible.

To determine the storage capacity necessary to meet an annual irrigation requirement of 500,000 acre-feet (2.5 feet depth over 200,000 acres, instead of 3 feet depth assumed by Mr. Grunsky), together with that needed to insure for San Francisco a dependable supply through all seasons of 128,000,000 gallons daily, as determined above, an application to the mass diagram of discharge at Clements (lines 4 on fig. 16) of draft lines (not shown) for 128,000,000 gallons daily, plus 500,000 acre-feet distributed uniformly through seven months (March to September, inclusive), shows that 250,000 acre-feet storage would be sufficient for any period shown except 1898-99, when about 500,000 acre-feet would have been required.

Mr. Grunsky's deductions are not inconsistent with these. He shows that to have supplied 200,000,000 gallons daily and to have met an annual irrigation requirement of 600,000 acre-feet a storage capacity of 1,000,000 acre-feet would have been required for the period 1898-1900, but he states that "with storage in half this amount there would be a deficiency only in the rare case of such a critical period as that of 1897-1900."

The existing and proposed reservoirs of operating power companies, together with a number of small-capacity reservoirs at sites that have been reported upon by various parties, would give the storage capacity in addition to that required for a 128,000,000 gallons daily supply required for full irrigation on the basis assumed by me above, except through extremely dry periods.

For estimate of cost of a Mokelumne supply in two different combinations to make a total of 400,000,000 gallons daily, see pages 131-133.

11. Stanislaus River: The watershed of the Stanislaus River lies be-

For estimate of cost of a Mokelumne supply in two different combinations to make a total of 400,000,000 gallons daily, see pages 131-133.

11. Stanislaus River: The watershed of the Stanislaus River lies between those of the Mokelumne and Tuolumne.

The situation, so far as a possible city water supply is concerned, is controlled by the Sierra & San Francisco Power Co., which now furnishes power to the United Railroads of San Francisco. This company has a power plant at Stanislaus, at the junction of the North and Middle Forks of the Stanislaus River, which has a capacity of 400 cubic feet per second.

According to the statement of the manager of the company there is now, with one reservoir of 15,800 ecre-feet storage capacity constructed, a dependable low-water flow through its canal to the power house from Sand Bar Flat, on the Middle Fork, of 132 cubic feet per second, or \$5,000,000 gallons daily.

The mass diagrams (fig. 17) show this to be true for all seasons since records of the flow of the river have been kept by the company, or since 1905. Through a year like 1898 there would have been but little shortage. The entire dry-weather flow may be used for generating power, since the water is returned to the river above the points of use by prior appropriators; but for a supply for diversion outside of the watershed only water in excess of prior rights on the stream below can be used.

Two irrigation districts, the Oakdale and the South San Joaquin, claim the natural flow of the river up to 1,700 cubic feet per second. These districts are now constructing works to enable them to use the water to much better advantage than heretofore. Other small appropriations bring the total well up toward the 2,000 second-feet allowed in computing quantities for mass diagrams of water which might be made available for the use of San Francisco.

The necessary allowance for prior rights constitutes so large a portion of the total flow that, for a period like 1897-1899, draft would have to be entirely from storage for 21 months. During 1907-1909 there was a period of 17 months during which the natural flow that could have been diverted amounted to only about 10,000,000,000 gallons, or a 50-days' supply of 200,000,000 gallons daily. Greater storage in proportion to the daily yield is needed than for any of the other sources studied. Additional catchment area, without additional storage, will not increase the yield; compare mass diagram for the 615 square miles above the confluence of North and Middle Forks with that for the 320 square miles above Sand Bar Flat.

The Sierra & San Francisco Power Co, has guarded against other parties using the water stored by its reservoirs after it passes the Stanislaus power plant by itself acquiring a power plant near Knights Ferry, well down in the foothills, and using it again under a head of 14 feet. From surveys made for the Sierra & San Francisco Power Co, and from maps filed with applications for use of reservoir sites on public lands, there has been estimated a storage capacity of 170,000 acre-feet on the Middle Fork of the Stanislaus River. With this storage there could have been supplied through the dry period 1907-1909, 118,000,000 gallons daily; and through the assumed longest possible dry period, as in the case of other sources, 57,000,000 gallons daily. The estimated storage capacity is equivalent to 975 days' supply at this rate.

Mr. Grunsky, in his report of Ju

Mr. Grunsky, in his report of July 31, 1912, after discussing the developments made by the Sierra & San Francisco Power Co. and its predecessors; and the irrigation needs of the lands, rather than the appropriations of the districts, dependent on the Stanislaus River,

appropriations of the districts, dependence of says:

"It does not seem reasonable to hope for an extension of such a project [supply from Stanislaus] to a greater capacity than 60,000,000 gallons per day, and even this amount it may be difficult, if not impossible, to secure continuously."

Compare with this statement, the 57,000,000 gallons daily estimated capacity above.

The acquirement of the reservoirs and water rights of the Sierra & San Francisco Power Co. for a water supply would properly involve also the purchase of the power plants of that company, which have a capacity to use much more water than could be diverted to San Francisco.

cisco.

A proposition made a few years ago by this company to San Francisco for furnishing water explicitly stated that it would grant no power rights. The power developed is now used by the United Raliroads of San Francisco. Presumably there may be considerable extension of its use in this direction.

In the estimates of cost of a supply from the Stanislaus in combination with other supplies to make a total of 400,000,000 gallons daily, the possibility of utilization of power from this river is not taken into account.

tion with other supplies to make a total of 400,000,000 gainors daily, the possibility of utilization of power from this river is not taken into account.

12. Tuoloumne River: Above the United States Geological Survey station at La Grange the Tuolumne River has a drainage area of 1,500 square miles.

At La Grange Dam water is diverted to the canals of the Turlock and Modesto irrigation districts. Much has been said and written about guarding the water rights of these districts and supplying its further needs and those of adjacent lands which must look to the Tuolumne, if at all, for water.

Edwin Duryea, jr., chief engineer, Bay Cities Water Co., several years ago, prepared a voluminous discussion of the subject, tending to show that these land requirements and San Francisco's needs can not be supplied from the Tuolumne. This conclusion was based on the assumption that the capacities of reservoirs at Hetch Hetchy Valley and at Lake Elcanor, as given in the reports of C. E. Grunsky, former city engineer, were the limiting ones, and that those for several other reservoir sites, as published in reports of the United States Geological Survey, made up the total available storage capacity (270,000 acre-feet).

Even had this been the case there would have been no legal rights of the Turlock and Modesto districts interfered with so long as no water was stored by San Francisco except when the flow of the river at La Grange exceeded the amount of those districts' appropriations, viz: 2,350 cubic feet per second. But in the light of the fact that much greater storage is possible, a further investigation as to irrigation needs and their effects, if provided for, on a city water supply from the Tuolumne has been made.

It is now a well-recognized fact that the lands of many districts have been greatly overirrigated, and expensive subdrainage works have in some cases become necessary to restore them to fertility.

Mr. Burton Smith, superintendent of the Turlock irrigation district, says, December 31, 1910, that under present

says, December 31, 1910, that under present conditions, i. e., with no storage, the water supply is exhausted about the middle of July each year.

"This creates a desire among the irrigators to give the land an overdose of water during the irrigation season."

This causes the water table to fluctuate rapidly and creates a condition very damaging to most crops. With a storage reservoir which the district now plans to construct it is not expected that more water will be used, but that it will be more advantageously distributed. Mr. Smith says that at present about 3½ feet depth of water is used on the lands irrigated, and that he thinks 2½ feet will be ample.

In the report filed by the Turlock and Modesto districts on November 1 the need of a depth of 2.75 feet on the land annually is claimed. Among the showings made by them are results of experiments at the California State farm at Davis on growing alfalfa, which requires more water than most crops. These show that a depth of 2½ feet gives more economical results than either a greater or less quantity.

The combined area of the Turlock and Modesto districts is 402 square miles. It has been estimated, according to some of the earlier discussions, that an additional area, amounting to 60 per cent of the above, or a total of 643 square miles (411,520 acres), is dependent upon the Tuolumne for irrigation.

A map issued by the United States Department of Agriculture in cooperation with the conservation commission of California, an advance copy of which has been furnished the board, shows that the total area of irrigable lands east of the San Joaquin River and extending from the Stanislaus River on the north to the Merced River on the south, excepting so much of this area as is included in the Oakdale irrigation

district, which takes its water from the Stanislaus, is approximately

district, which takes its water from the Stanislaus, is approximately 690 square miles.

Six hundred and forty-three square miles is considered a generous estimate of the area dependent on the Tuolumne for water.

The report by J. H. Dockweller, on the needs of Turlock and Modesto irrigation districts, submitted June 30, 1912, not only does not recognize any appreciable area outside the Turlock and Modesto districts dependent upon the Tuolumne for water, but, considering the waterlogged condition of some of the lands within the district, estimates the maximum acreage requiring irrigation in any year at 206,000.

In view of the fact that the water-logged condition is only a temporary one, drainage being readily obtainable by ditching, and the further fact that applications for admission to the districts have been made by the owners of adjacent lands, there seems no necessity for so belittling the irrigation needs.

It may quite possibly be that the area outside of Turlock and Modesto districts estimated above as dependent on the Tuolumne for water is somewhat too large, but if so, there is a thirsty area on west side of San Joaquin to which excess water could be piped and where it could be advantageously used.

It is probable, however, that the present practice of irrigating such of the west side lands as can not be reached by gravity ditches, viz, by pumping from the San Joaquin River, is the more economical.

With increased use and better distribution of water on the east side, made possible by storage, the seepage back into the river will increase the supply available for such pumping.

For this investigation no change has been made in the area, as noted above, which might properly be irrigated from the Tuolumne.

Assuming that 85 per cent of the land will in time be irrigated, allowing for roads, buildings, corrals, etc., and that there may be a 15 per cent loss by seepage and evaporation in ditches, 25 feet depth for the total acreage, measured at head gates, will suffice.

For the purpose of this investiga

Mr. Dockweller estimates an annual requirement of 2.5 feet depth of water on the land, but he assumes a distribution of this water prorata to the actual distribution of 1911, which obtained simply because no better distribution was possible without much greater storage capacity. Such a distribution, with the maximum rate of application of water to the land conforming in time to the maximum rate of discharge of the river, enables Mr. Dockweiler to show necessity for comparatively small reservoir capacity.

The following table shows the distribution of 2½ feet depth of water through the year, proposed by Mr. Grunsky in his reports on the Mokelumne and Stanislaus Rivers, and the same total quantity distributed according to the mouthly percentages stated in the report of the Turlock and Modesto districts to be the probable average use:

	C. E. Grunsky.		Turlock and M desto district	
	Monthly depths.	Cumu- lative sums.	Monthly depths.	Cumu- lative sums.
January February March April May June Juny August September October November.	0.025 .060 .100 .200 .375 .500 .450 .375 .250 .125 .025	0. 025 . 075 . 175 . 375 . 750 1. 250 2. 075 2. 325 2. 450 2. 475 2. 500	0. 059 075 100 200 375 400 400 350 325 150 050	0.050 128 225 425 800 1.200 1.600 1.950 2.273 2.425 2.475 2.500

According to each of these proposed distributions the total to the end of June is practically the same as assumed by me above, and the variations (especially after June) are so slight as not to affect storage necessities.

necessities.

Two and one-half feet depth over 643 square miles amounts to 1,028,800 acre-feet, or, allowing 10 per cent for evaporation from reservoirs and other losses above head gates or elsewhere not covered by 15 per cent allowance previously made, the total annual need will be 1,132,000 acre-feet.

Compare with this estimated need (1,132,000 acre-feet) of the greatest area that can be considered as dependent for irrigation on the Tuolume River for water, the conclusions of the Turlock and Modesto districts (report of Nov. 1, 1912) that "the maximum quantity used from the river in any one year will not be less than 1,042,043 acre-feet."

The former quantity is based on 2.5 feet depth over 85 per cent of 643 square miles area, with total loss by evaporation and seepage of 23 per cent; while the latter quantity is based on 2.75 feet depth over 90 per cent of 402 square miles area, with evaporation and seepage losses of 39 per cent.

On the next page is a mass diagram of the total flow of the Trult page is a mass diagram of the total flow of the Trult page is a large from 1895 to 1912. There is all galachom for the years 1896-1900, the yield of the Turlock and Modesto appropriations, 1. c., 2,350 second-feet, when the flow was so much, or more, and the entire flow when it was less.

1. c., 2,350 second-feet, when the flow was so much, or more, and the entire flow when it was less.

2. do 1900 on the flow of the flow of the trigation requirements as above (1,122,000 acre-feet annually), one for these two combined, and one for the brigation needs of the 402 square miles constituting the Turlock and Modesto districts on the basis of 2.5 acre-feet per year, with 85 met. The combined draft line, applied to the mass diagram, shows that the combined requirements of 400 million gallons daily for the city and 21 acre-feet, excepting only the years 1898, 1908, and 1912.

To have permitted full trigation through 1898 and the two succeeding years a storage capacity of 1,400,000 acre-feet would have been 11 1912 the depletion of storage up to October 31, would have amounted to 900,000 acre-feet, or practically the same amount as on December 31, 1908.

1. 1912 the depletion of storage up to October 31, would have amounted to 900,000 acre-feet, or practically the same amount as on December 31, 1908.

2. do 1912 the depletion of storage up to October 31, would have here, after allowing the full draft of 400 million gallons daily for city supply, in 1898, a shortage of about 40 per cent in water for irrigation, 1, e., a depth of 1.6 feet of 1.6 feet of 400 million gallons daily for city supply, in 1898, a shortage of about 40 per cent in water for irrigation, 1, e., a depth of 1.6 feet of 1.6 feet

dryest years. To summs

gallons daily, including the necessary reserve of 55 per cent for the dryest years.

To summarize: It appears from the foregoing discussion that for periods like 1837–1900:

First. The irrigation requirements of the Turlock and Modesto irrigation districts may be provided by their existing rights if conserved by means of 370,000 acre-feet of storage capacity.

Second. Four hundred million gallons daily may be supplied San Francisco from the high areas without interfering with Turlock and Modesto rights, with 560,000 acre-feet of storage.

Third. The combined requirements of San Francisco, the Turlock, and Modesto districts and 240 square miles additional irrigable area may be supplied from the entire flow of the river with 750,000 acre-feet of storage, excepting only the year 1898, when there would have been a shortage of 28 per cent in the estimated quantity of water which may be desired for irrigation of this greatly increased irrigable area. The occurrence of years with so light rainfall as 1898 is so infrequent that the works necessary to avoid the losses consequent upon such a shortage would not be economically justified. There will, therefore, be no injury to the irrigation interests by taking a city supply from this re-

gion, provided there can be found reservoir sites affording sufficient capacity; and, in any event, there will be no infringement of existing rights of the irrigation interests.

There are greater possibilities for storage on the Tuolumne than on any of the rivers to the north within a reasonable distance of San Francisco. This fact offsets, so far as desirability as a source of water supply goes, the lighter precipitation on its watershed and the large prior appropriation of its stream flow.

Below is a list of reservoir sites which have been surveyed, with heights of dams and corresponding estimated capacities, and showing also the portions of the total capacity that could be utilized for equalization of the run-off in excess of prior rights from tributary drainage areas during a period like that from 1896 to 1904, including the exceptionally dry season of 1897-98. The excess capacity in each case could be filled only by diversion of water from other catchment areas or during seasons (in some cases several) of exceptionally high run-off, after which it would be available and should be held for the very exceptional dry years, such as have been estimated as possibly worse than 1898.

The maximum height of dam shown in the list is 325 feet. In none of the schemes for supply for which estimates of cost have been made has a greater height been used. The Shoshone Dam (in Wyoming) is 326 feet high (depth of impounded water, 243 feet), but the gorge in which it is located is very narrow (175 feet at crest of dam), with a resulting small cubical content of masonry per unit of storage capacity. The 325-foot height of dam at Hetch Hetchy is given for comparison with the reservoirs on the Mokelumne, where scarcity of reservoir sites makes great height necessary, although the sites there are not favorable for economical storage.

The list of reservoirs is separated into two parts:

First, Those which are on drainage areas tributary to Hetch Hetchy and Cherry Valleys and Lake Eleanor, and which might become available for e

Tuolumne River reservoir sites.

The number of reservoirs in the second part can doubtless be increased considerably, since the character of the drainage area is not an important matter in connection with storage for irrigation, and other sites well down in the foothills, if found to exist, could be

an important matter in connection with storage for irrigation, and other sites well down in the foothills, if found to exist, could be utilized.

It is evident, therefore, that after making allowance for such reservoirs as may be too uneconomical to consider seriously, the total utilizable capacity of reservoirs will amount to at least the 750,000 acre-feet found necessary for a city supply of 400 million gallons daily (see p. 107 and fig. 18) and to meet the full needs of the irrigable lands through a period of years like those from 1895 to date, excepting only 1898, 1908, and 1912. Possibly the much greater capacity that would have been needed for full irrigation in 1908 and 1912 could be obtained. In this connection it should be noted that for irrigation purposes a larger proportion of total reservoir capacity than shown could be used, as in computing the utilizable capacity of high reservoirs deductions from run-off were made for the appropriations for the irrigation districts.

Many sites have been suggested for reservoirs on the Tuolumne above Hetch Hetchy, but with very few exceptions these have been practically on the crests of the divides separating the Tuolumne from adjacent streams, and have so little catchment area above them that, even though they might be given a considerable capacity, very little of it could be utilized and their value is negligible.

Before the reconnoissance survey of July, 1911, was made it was thought that the few sites suggested, after a study of the topographical sheets of the United States Geological Survey in my preliminary report of April 8, might possess considerable merit, and that the capacity at Tuolumne Meadows might be greatly increased over that given in United States Geological Survey reports.

As a result of the reconnoissance of these sites, Matterhorn and Virginia Canyons were eliminated from the list, the capacity at Tuolumne Meadows remains as given by United States Geological Survey, and that at Lake Benson is much greater than had been

Thousane Meadows remains as an armond survey, and that at Lake Benson is much greater than had been assumed.

It was found that a dam below the Lower Tuolumne Meadows, which would be founded on solid glaciated granite, would have to be 240 feet high and about 1,800 feet long to flood the upper meadows to the same depth as the four dams aggregating 2,345 feet in length, but with a maximum height of only 75 feet. The additional storage which the lower meadows would afford would not justify such a structure.

but with a maximum height of only 75 feet. The additional storage which the lower meadows would afford would not justify such a structure.

The examination of Matterhorn Canyon, the floor of which is at about elevation 8,500, and above which there is a catchment area of 14 square miles, showed a possible storage of about 80,000 acrefeet with a dam 250 feet high above the creek bed at the only possible dam site. On one side of the canyon at this point there have been great slides or falls of rock from the canyon walls that tower to a height of several hundred or a thousand feet. The width between solid walls of rock at the level of the stream bed may be from 300 to 400 feet instead of only from 25 to 40 feet, as it would at first appear. The examination of Lake Benson, elevation 8,000 feet, catchment area 31 square miles, showed a site suitable for a dam 150 feet high. The corresponding reservoir capacity is about 53,800 acre-feet. There has since been obtained from the engineer of the Turlock irrigation district a map of survey of this lake made by him for a reservoir with a dam 100 feet high and a capacity of 30,600 acre-feet.

The attempted examination in June, 1911, of Poopenaut Valley, immediately below Hetch Hetchy, was very unsatisfactory on acount of the high stage of the river, which made crossing the valley at any point impossible.

A survey of Poopenaut Valley was made by the city engineer in September, 1911, for a reservoir with water surface 150 feet above ground level near dam site (requiring a dam 210 feet high).

Mr. Freeman proposes an ultimate extension in height of this dam, increasing depth of impounded water to 225 feet and making the available storage 17,000 million gallons or 52,100 acre-feet.

Many of the reservoir sites in list on page 111 would be very uneconomical to construct, both on account of their location and of quantity of material required for dams per million gallons of water stored. Some of them, on account of limited drainage areas, would be valuable only to provide storage

large waste.

It is evident that the period from 1896 to 1901 is the most critical one for which there are run-off records. Estimates of yields of catchment areas and of reservoir capacity necessary to conserve them are based on this period.

Then, as in the case of sources of supply from other rivers, an increase of 50 per cent in storage capacity has been assumed necessary for the dryest possible sequence of years that may come. (See discussion, p. 78.) The additional capacity will need be drawn upon at such long intervals only that it may be in reservoirs so located that several seasons' run-off from their catchment areas are necessary to fill them.

In the following estimates of quantities.

that several seasons' run-off from their catchment areas are necessary to fill them.

In the following estimates of quantities of water which may be conserved from several portions of the Tuolumne River catchment area, Eleanor and Cherry Creeks have been taken together, as they are now both in the possession of the city of San Francisco, and, although the six reservoirs on the Cherry Creek catchment area, in the foregoing list, afford insufficient storage for the Cherry Creek waters, the deficiency can be much more than made up at Lake Eleanor by giving the conduit connecting Cherry Valley with Lake Eleanor a capacity about 75 per cent in excess of that needed to convey to the city the Cherry Creek portion of the total yield from the combined area.

From the mass diagrams (fig. 20) it appears that from the 193 square miles comprising the Eleanor and Cherry Creek catchment areas 190 million gallons daily may be obtained. Of this quantity 112 million gallons daily would come from the 114 square miles tributary to Cherry Valley and 78 million gallons daily from the 79 square miles tributary to Lake Eleanor. The reservoir capacity on Cherry Creek utilizable for the 1896–1901 period is 89,000 acre-feet, with dam at Cherry Valley 95 feet instead of 150 feet high. A canal (or other conduit) of 200 million gallons daily (310 second-feet) capacity would be necessary to convey to Lake Eleanor water for which there is not storage capacity on Cherry Creek, as shown by the diagram for Cherry Creek alone.

The total storage capacity needed is 260,000 acre-feet, or, for worst period, 300,000 acre-feet. These capacities could be made up as follows:

	Utilizable 1896–1901.	Needed for worst periods.
Cherry Valley Five other reservoirs on Cherry Creek Kibbic Lake Lake Eleanor	Acre-feet, 39,500 49,500 3,300 167,700	Acre-feet. 39,500 82,000 3,300 265,200
Total	260,000	390,000

It was suggested by Mr. P. E. Harroun at the hearing before the Secretary of the Interior May 25, 1910, and enlarged upon by Mr. E. G. Hopson, of the United States Reclamation Service, in a report to the Secretary, under date of November 23, 1909, that the run-off from other near-by tributaries of the Tuolumne might also be combined with Lake Eleanor, viz, Falls Creek, which flows through Jack Main Canyon, and Rancheria Creek, which receives the water from Stubblefield and Kerrick Canyons.

The mass diagram for discharge from the 40 square miles of Falls Creek drainage area above Lake Vernon shows that 35 million gallons daily may be obtained here. The necessary storage capacity may be secured on the catchment area, thus:

	Utilizable 1896–1901.	For worst years.
Lake Vernon	Acre-feet. 42,700 8,300	Acre-fect. 48,700 27,800
Total	51,000	76,500

corresponding figures for the drainage area tributary to Hetch Hetchy are given.

If water passing through Hetch Hetchy Valley were to be used for a city supply, whether or not that valley were to be used as a reservoir, there would be no object in diverting Falls and Rancheria Creeks to Lake Eleanor except to develop additional power and to take advantage of surplus storage capacity there. We have seen that Falls Creek waters may be conserved in their own drainage basin. Therefore these areas are included, in the deductions which follow, with the Hetch Hetchy watershed, to which they belong.

Using Hetch Hetchy Valley as a reservoir, with a capacity of 344,000 acre-feet, as per table on page 11, subsequent to the maximum development of the Lake Eleanor and Cherry Creek area, a daily draft of 236 million gallons would be possible through a period like 1896–1901. To support this draft through the worst possible period the necessary 50 per cent additional reservoir capacity could be secured at the four sites—Lakes Benson, Vernon, and Tilden, and Poopenaut Valley.

Were this system to be developed before Lake Eleanor the daily supply would be increased from 236 million gallons to 310 million gallons. This is because all of the discharge of Eleanor and Cherry Creeks could be used to supply prior appropriations before any water need be released for that purpose from Hetch Hetchy.

The dependable yield from the watersheds tributary to Lake Eleanor, Cherry Valley, and Hetch Hetchy Valley, without infringing on the rights of the irrigation districts, is seen to be 190 million gallons daily from Hetch Hetchy watershed, or, if Hetch Hetchy supply were developed first, 310 million gallons daily from that source and 116 million gallons daily from Hetch Hetchy watershed, or, if Hetch Hetchy supply were developed first, 310 million gallons daily from that source and 116 million gallons daily from the total depletion of storage would be for the 1896–1901 period 604,000 acre-feet.

Compare with this result Mr. Cyril Williams's

total depletion of storage would be acce-feet.

Compare with this result Mr. Cyril Williams's conclusion, that the same watersheds through the same period would yield a safe supply of 427.7 million gallons daily, with a depletion of storage amounting to 610,000 acre-feet (198,500 million gallons).

Making Hetch Hetchy the only reservoir for a city supply on the catchment area and allowing one-third of the total capacity of 344,000 acre-feet as a surplus for worse periods than 1896-1901, there would then be a daily supply of 175 million gallons, or if this reservoir were given priority over Lake Eleanor in the use of run-off, 248 million gallons.

The combined capacity of all the reservoir supplies the combined capacity of all the capacity of all the

then be a daily supply of 175 million gallons, or if this reservoir were gallons.

The combined capacity of all the reservoirs on the Hetch Hetchy catchment area except Hetch Hetchy itself, together with the discharge in excess of the irrigation rights, would yield 138 million gallons daily through all seasons, assuming as before that the Eleanor-Cherry watershed were first developed to the limit of 190 million gallons daily.

The question as to the necessary restriction in the use of Yosemite National Park by visitors and campers, which has been the cause of much of the opposition to the use of the park as a catchment area for water supply, is discussed by Mr. Allen Hazen, consulting engineer, in a report dated December 4, 1911, to the city engineer of San Francisco, a copy of which has been furnished you.

Mr. Hazen says: "No modification of or addition to the rules—now in effect—need be made." This subject is given much attention in Mr. Freeman's report of July 15, 1912.

At the hearing before the Secretary of the Interior November 25, 1912, it was clearly brought out that the restrictions which would necessarily be imposed upon campers for the protection of other campers within the park would be abundantly sufficient for the protection of users of the water after it has passed through the reservoir and the aqueduct to San Francisco.

13. San Joaquin River.—The elimination from further study of the San Jeaquin River as a source of water supply for San Francisco was requested by the city engineer in a letter to the board under date of August 5, 1910, for reasons, in addition to those advanced at the same time for the elimination of the Sacramento River (viz, that filtration of the water would be necessary, and the city was seeking pure rather than purified water), as follows: "That if drawn upon within the limits of tidal action brackish water will probably be drawn into the intake during low stages, and if drawn from above this limit the supply, by reason of increasing draft for irrigation purposes, will pro

[Extract from the report of Col. Mendell to San Francisco water com-mission Aug. 6, 1877.]

mission Aug. 6, 1877.]

The effect of the abstraction of large volumes of water from the rivers—for the purpose of irrigating adjoining lands—on the flow at points a few miles below the diversion is discussed at some length in the report of the United States Commissioners of Irrigation, published in 1874. The experience in Italy and India, as observed and discussed by their ablest engineers, seems to dispose of this portion of the subject in a thorough manner by proving that the water is returned to the river in so large proportion that the quantity a few miles below seems to be undiminished, either absolutely or only in small degree.

[Extract from report of Prof. Hyde to Spring Valley Water Co. on the San Joaquin River as a source of water supply.]

Studies made by the United States Department of Irrigation investi-

San Joaquin River as a source of water supply.]

Studies made by the United States Department of Irrigation investigations in Colorado indicate that when irrigation in a given district has been sufficiently long established to satisfy the ground storage capacity the total yield by seepage to the streams draining such irrigated areas will amount to perhaps 30 per cent of the total volume of water used for irrigation.

It is understood that water taken from the San Joaquin must be purified.

The Spring Valley Water Co. considers that when all its resources on the peninsula and on the Alameda Creek watershed are exhausted it can greatly increase its supply by pumping from the San Joaquin to its natural filter beds in the Livermore and Sunol Valleys. Through the courtesy of the Spring Valley Water Co. access has been had to a report of 200 pages on such a supplemental supply, by Prof. Charles Gilman Hyde. By utilizing the great storage possibilities of reservoir sites held by the Spring Valley Water Co. on the Alameda Creek watershed it is apparent that pumping from the river could be discontinued during the low-water stage, forced at other times, and a supply of perhaps several hundred million gallons daily maintained from the reservoirs.

The mass diagram (fig. 21) shows discharge of the San Joaquin during the l perhaps seve reservoirs. The mass

The mass diagram (fig. 21) shows discharge of the San Joaquin River at Southern Pacific Railway bridge, near Lathrop, since 1898, as determined by Prof. Charles G. Hyde from record of gauge heights, reduced by the amount of water appropriations of several irrigation districts in excess of the actual quantities diverted and with allowance made for the return of portions of such diverted water by seepage, as per statement under the diagram and on page 121. The resulting diagram is intended to show the discharge as it would be with irrigation in progress as allowed for through a similar series of years. The record of gauge heights runs back several years prior to 1898, but the record for that year, which is known to be the lowest since 1876, is entirely missing.

The record of gauge heights funs back several years prior to 1836, the the record for that year, which is known to be the lowest since 1876, is entirely missing.

Actual flows were measured under the direction of Prof. Hyde at comparatively few stages, the flow at other stages being determined by interpolation and exterpolation. The results, therefore, can not be relied upon as very accurate.

The lowest recorded flow of the San Joaquin River at this point is said to have been 230 second-feet, probably in 1898. In November, 1905, it was 360 second-feet. In 1905 the mean monthly flow after August did not exceed 500 second-feet. The smallest annual discharge since 1898 was in 1908, as shown by the diagram.

A full development of irrigation needs by means of mountain storage to the extent shown by the middle diagram for the year 1908 would result in a large seepage back into the stream, but such a contingency is too remote and uncertain to figure on.

The diagrams show that to maintain a draft of 200 million gallons daily through the year 1908 a storage capacity of 30,000 million gallons would be required. This equals 92,000 acre-feet, or a depth of 7.2 feet over 20 square miles of reservoir surface. It is evident, therefore, that such a draft could not be maintained from any point on the lower San Joaquin or Old River without getting sait water to the intake were it

not that the Sacramento River also contributes water to the lower San Joaquin.

Confining ourselves for the present to San Joaquin water only: The 30,000 million gallons storage required is a 150 days' supply of 200 million gallons daily. It is known that the 1895 flow was less than that of 1908, and other years may have been and may be even worse, so that draft from storage for at least 180 days, and probably for 250 days, should be provided for.

If such storage were to be provided for in the Alameda Creek watershed, it would mean that to supply San Francisco with 200 million gallons daily pumps and conduits from the San Joaquin River to Alameda Creek of 400 million gallons daily capacity would be needed under the assumed necessity of 180 days' storage, or of 635 million gallons daily if draft would have to be from storage only for 250 days.

In fig. 21 the appropriations assumed and allowed for are as follows:

	second- feet.
Turlock irrigation district, total	1,500
Used since 1898, 1,000 second-feet.  Modesto irrigation district, total  Used since late in 1903, 600 second-feet.	850
South San Joaquin district. Other districts, unallowed for above.	1,700 2,236
Total  Deduct 30 per cent returned to stream	6, 286 1, 886

Leaving total deduction from natural flow \_\_\_

United States Geological Survey records of run-off measurements extend back to 1902 only. No record was kept or measurements taken back to 1902 only. No record was kept or measurements taken the property of the property of

If Hetch Hetchy supply were developed before Eleanor-Cherry, 310 million gallons daily might be obtained there, and the total, 426 million gallons daily, subsequently made up by taking 116 million gallons daily from the Eleanor-Cherry watershed.

The map of central and northern California (Pl. I) shows the location of the Tuolumne conduit as proposed by Mr. Freeman, also suggested location of conduits for the sources shown in above table giving

over 400 million gallons daily. Approximate profiles of several of these conduit lines are shown on Plates II and III.

Except for the Hetch Hetchy and McCloud River Aqueducts, the profiles are not of lines which have been proposed by the advocates of the several sources, but are of lines located on topographic maps of the United States Geological Survey, with special reference to combining different sources to produce a total of 400 million gallons daily.

The following table shows, for each of the sources or combination of sources that may be developed to yield 400 million gallons daily, the extent of catchment areas and reservoir capacities required for such development. It is assumed that one-half the total supply is delivered on each side of San Francisco Bay.

Mr. GRONNA. I said last night, Mr. President, that I was prepared to show that San Francisco did not need Hetch Hetchy or the Tuolumne River for a water supply. In order to substantiate that statement I want to read from Document No. 54, the report of the advisory board of Army engineers to the Secretary of the Interior on investigations relative to cources of water supply for San Francisco and bay communities, made February 19, 1913. This, it seems to me, ought to be reliable information so far as it goes:

information so far as it goes:

McCloud River: The remarkably even flow of this river, as compared with those of other California streams which have been reported upon, is well shown on the mass diagram (fig. 22). It is this feature that renders the construction of large and expensive storage reservoirs in connection with a municipal water-supply scheme, depending on the McCloud River, unnecessary.

The snow banks and glaciers of Mount Shasta, together with the porous lava formation, through which the water from the melting snow and ice (as well as the precipitation on other parts of the watershed) percolate before they emerge as springs, serve as most effective reservoirs in regulating the flow of the McCloud.

United States Geological Survey records of run-off measurements extend back to 1902 only. No record was kept or measurements taken between June, 1908, and December, 1910.

I read only a portion of this report, on page 124:

I read only a portion of this report, on page 124:

I read only a portion of this report, on page 124:

The distance to San Francisco from the San Pablo Reservoir is substantially the same as from Crystal Springs Reservoir. The distance to center of Oakland from San Pablo Reservoir is no greater than from Lake Chabot, to which Oakland water would be delivered from the Hetch Hetchy Aqueduct by a branch conduit about 16 miles long.

The route of the proposed Mount Shasta Aqueduct is such that for most of the distance it can be kept very near the hydraulic grade line, thus permitting the use of cut and cover gravity section and reenforced concrete pressure pipe instead of the heavy steel pipe under a head of from 300 to 600 feet for a distance of 40 miles across the San Joaquin Valley, as is the case with supplies from the Sierras east of San Francisco.

This is the summary:

Summary of distant supplies: The following table shows, for each of the sources of supply from which it has been shown that a suitable supply might be made available to San Francisco and the bay cities, the quantity of such supply and the feasible combinations of such supplies to produce a total of 400,000,000 gallons daily or more.

They give a list of the supplies which, with moderate supervision of watershed, need no filtration, and which they say are feasible. The Sacramento River, 400,000,000 gallons plus; the Feather River, 400,000,000; the Yuba River, 400,000,000.

Now, Mr. President, I have no other interest in this matter than that of any other Senator desiring to do justice to the than that of any other Senator desiring to do Justice to the people directly and most vitally interested, and to act for the welfare of the people of that great State. I do not believe that by reading the conclusion made by the Army engineers anyone can say that this is the only available source of supply.

Now, the McCloud River is in the Sacramento Valley; the

Tuolumne River is in the San Joaquin Valley.

The Tuolumne River could if not used for city supply be used to irrigate a large amount of fertile land, as could almost any river in the valley of California if means are found economically to store the water. The board believes that on account of the fertility of the lands under irrigation and their aridness without water the necessity of preserving all available water in the valley of California will sooner or

later make the demand for the use of Hetch Hetchy as a reservoir practically irresistible.

Mr. President, I wish to read briefly from the hearings before the Committee on Public Lands in the House of Representatives. I read from Col. Biddle's testimony.

I read from Col. Biddle's testimony.

Mr. Raker. Coming back to the McCloud River source of supply, I understand from the report that the water would be taken from the McCloud River alone without any estimate or figuring as to the Pitt River?

Col. Biddle Yes, sir.

Mr. Raker. The water would be taken higher up on the McCloud River and above the junction of the McCloud and Pitt Rivers?

Col. Biddle. Yes, sir; the water would be taken from the river higher up, about a mile above, where it joins the Pitt River.

Mr. Raker. And you have not figured on locating it so as to take the water from the McCloud and Pitt Rivers together?

Col. Biddle. No, sir. Our estimate was made on the McCloud River. Mr. Raker. Why was not the estimate made on both rivers?

Col. Biddle. Because there is plenty of water in the McCloud River for all needs. You see, that river comes from Mount Shasta, and the least flow is twice what San Francisco needs.

That is the statement made by Col. Biddle, who is a member

That is the statement made by Col. Biddle, who is a member of the Corps of Army Engineers; and yet the people of San Francisco come here and say that there is no other available source of supply.

Mr. MYERS. I desire to ask the Senator a question.

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Montana?

Mr. GRONNA. Yes, sir. Mr. MYERS. What does the report of the Army board say about the cost of the McCloud River project? Does it not put

the cost far above the Hetch Hetchy project?

Mr. GRONNA. I want to say to the Senator from Montana, and I say it as candidly as can be said, that the report does show that the cost would be a little larger, but the board also admits that they have not made any definite estimate. They admit they have not gone into the question of cost as thoroughly as it could and should be gone into.

Mr. MYERS. I will ask if they have not considered it enough to satisfy themselves that it would be considerably more? Are they not enough satisfied that the cost would be several million

dollars more?

Mr. GRONNA. Yes: but that is largely a guess, I want to say to the Senator. Mr. PITTMAN. Mr. President-

The VICE PRESIDENT. Does the Senator from North Dakota vield to the Senator from Nevada?

Mr. GRONNA. I yield.

Mr. PITTMAN. I realize how serious the Senator is in his support of that river as a source of supply. I should like to know if he has made any investigation as to the difficulties of obtaining that water?

Mr. GRONNA. The only investigation I made was by reading the hearings and reports. I have read all the hearings before the committees, both in the House and in the Senate. read the Army engineers' reports, and I was on the Committee on the Public Lands of the House for nearly six years, and during that time much testimony was offered before that committee.

Mr. PITTMAN. From whom is this water to be purchased? Mr. GRONNA. This water belongs to the State of California. As in the case of all waters in the State of California it belongs to the people of that State the same as the water of the Tuolumne River belongs to the people of that State.

Mr. PITTMAN. We agree on that, I will say to the Senator, but there are some claims by citizens of California, a corpora-

tion, for the use of that water, are there not?

Mr. GRONNA. There is nothing in the testimony anywhere to show there is, I will say. There is testimony to the effect that there is an abundance of water supply for the irrigation district and also to supply the bay cities in the State of California.

Mr. PITTMAN. Is it not the fact that the hearings disclose that there are a number of conflicting claims for the waters of that river that have never been adjudicated or settled?

Mr. GRONNA. I do not believe the records show that. The records that I have examined do not show it.

Mr. PITTMAN. It is my recollection, I will say, and I intend to show that a little later.

Another question: Does not the record also disclose that the

use of that water will lower the Sacramento River and affect it for purposes of navigation?

Mr. GRONNA. I believe that the Senator from Nevada will find in the records statements to the effect that after supplying the irrigation districts, San Francisco, and the bay cities there is still a sufficient amount of water and it will not seriously

affect navigation. That will be found in the hearings.

Mr. PITTMAN. Do not the records state that it might require some dredging and additional work so as to allow navigation if this water were used?

Mr. GRONNA. Mr. President, I do not care to pursue that discussion any further. All I know about it is what I find in the records, and I have made my statement. If it is not correct, it is because I do not understand what I have been reading. But I am honest in my belief and in the statement I have made, that the records do show that in the McCloud River there is an abundance of water for all the bay cities and an abundance of water for the irrigation districts in that valley, and that it will not seriously injure navigation.

Mr. PITTMAN. Mr. President—

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Nevada?

Mr. GRONNA. I yield. Mr. PITTMAN. I do not want to interrupt any further. I will simply state that I asked the question-

Mr. GRONNA. I gladly yield.

Mr. PITTMAN. I asked the question because the Senator was attempting to show that the McCloud River was an available source of water. Now, then, to be available it must either be subject to location by San Francisco under the laws of California or it must be subject to purchase from those who own it. The Senator has not shown who owns it. He has not shown who are entitled to that water or if it is claimed by anybody. The report states that there are many conflicting claims to it. He has not shown that those conflicting claims can be pur-chased, and he has not shown that under those conflicting claims there is sufficient water to appropriate without affecting navigation in the Sacramento River. Until he does show those things, he has failed to show that the McCloud River is available for San Francisco.

Mr. GRONNA. The Senator from Nevada is too good a lawyer to expect the Senator from North Dakota, who is only a farmer, to know everything about the laws of the State of California, but the Senator from North Dakota does know that for whatever purpose the water in the rivers of California can be best used, the waters of the rivers of California must be used for that purpose and nothing else.

Mr. PITTMAN. Mr. President— Mr. MYERS. I should like to ask the Senator-

The PRESIDING OFFICER (Mr. CLAPP in the chair). Does the Senator from North Dakota yield to the Senator from Nevada first?

Mr. GRONNA. I first yield to the Senator from Nevada, then will yield to the Senator from Montana.

Mr. PITTMAN. I want to ask the Senator whether or not he has seen any protest against the use of the McCloud River by people granted rights there as irrigators?

Mr. GRONNA. I will say to the Senator that I have not. Mr. PITTMAN. I want to state to the Senator, then, for his information, that I have here on my desk some 20 or 30 editorials from newspapers throughout the entire Sacramento Valley protesting against the attempted use of the McCloud River by San Francisco, on the ground that it would deprive

irrigators on that river of vested rights and would prevent the placing under irrigation of many thousands of acres of land that have no other available water supply. I am simply calling his attention to this to show that the McCloud is in the same condition, as far as a contest is concerned, as the Tuolumne River.

The PRESIDING OFFICER. Now, does the Senator from North Dakota yield to the Senator from Montana?

Mr. GRONNA. I now yield to the Senator from Montana. Mr. MYERS. I simply want to ask this question of the Senator: Even conceding all that the Senator claims, as shown by the report of the Army board for the McCloud River, does not that same report also show that there is plenty of water in the Tuolumne River if this reservoir be constructed for both San Francisco and these irrigationists, and if it is some million dollars cheaper why not let them have it?

Mr. GRONNA. Mr. President, I shall have to take issue with the Senator from Montana about that. The report does not show that. On the contrary, the way I construe the report, it shows that, if San Francisco is to have the amount of water that she claims she will need, the irrigation districts will not get the amount of water which will be required to irrigate that entire valley.

Mr. MYERS. We read the record differently, then. If the Senator from North Dakota will turn to the conclusions of the Army board, I think he will find a paragraph there bearing to what I have said.

Mr. GRONNA. As to the statement made by the Senator from Nevada [Mr. PITTMAN], I accept it. I know very well when he says he has received those protests that he has received them; but I want to ask the Senator from Nevada this question: Is it not true that, in the testimony given in the hearings before the House Committee on Public Lands, Col. Biddle did testify

that there is plenty of water in the McCloud River for all purposes, both for the irrigable lands in the valley and for a water

supply to the bay cities?

Mr. PITTMAN. Mr. President, my recollection is that Col. Biddle testified that there was ample water flowing in that river to satisfy the needs of San Francisco, but I do not remember that he said that it would supply all purposes. In a few moments, if I can find it without further interrupting the Senator, I will read what Col. Biddle said in regard to that subject,

but meanwhile I will not take up the Senator's time.

Mr. GRONNA. My impression is that Col. Biddle said in his testimony that there was plenty of water for irrigation purposes in the Sacramento Valley and plenty of water for the bay cities in the State of California without any reservoirs being built; and the Senator from Nevada knows there are thousands of acres of watersheds where reservoirs can be built in the so-called McCloud Basin or on the McCloud River.

Mr. MYERS. I do not want to interrupt the Senator, but I will ask him to yield to one more interruption before I leave

the subject.

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Montana?

Mr. GRONNA. Certainly.
Mr. MYERS. In view of the difference between the Senator from North Dakota and myself about what this report shows. I wish merely to read one paragraph from page 50 of the report.

Speaking of the Hetch Hetchy project, it says:

The board further believes that there will be sufficient water, if adequately stored and economically used, to supply both the reasonable demand of the bay communities and the reasonable needs of the Turlock-Modesto irrigation district for the remainder of this century.

Mr. GRONNA. Yes, Mr. President, but it says nothing about the Waterford district; it does not say anything about the 200,000 acres that are deprived of water now. So far as the

statement goes, of course, I accept it.

Mr. PITTMAN. If the Senator from North Dakota will now let me interrupt him, I shall read what Col. Biddle says about

the matter.

Mr. GRONNA.

Mr. GRONNA. I yield. Mr. PITTMAN. He testifies on page 60, and here is what he has to say:

he has to say:

Col. BIDDLE I did not know that they were working especially for the McCloud River. I do know, however, that they are rapidly putting the whole valley under irrigation, and of course the McCloud River is a very important factor in that valley. I will say this: The McCloud River is a river which flows with geat uniformity all the year around. In fact, it is the chief means of supply to the Sacramento River at times of low water. A large part of the irrigation in the Sacramento Valley comes from pumping from the Sacramento River, and, according to an act of Congress, as construed by the Chief of Engineers, they can not take water out of the Sacramento River when it reaches a certain stage; that is, a stage of 2 feet above low water. When it reaches that stage of 2 feet above low water. When it reaches that stage of 2 feet above low water, no authority is given to pump water out of it. Now, the water in the Sacramento River reaches that stage about the time that irrigation is most important, and therefore if you should take away all or a large part of the McCloud River, that stage in the Sacramento River will come that much earlier and to that extent would affect irrigation.

Mr. GRONNA. I will say to the Senator from Nevada that

Mr. GRONNA. I will say to the Senator from Nevada that that can all be overcome at a very small cost by building reservoirs and by building dams at the source of this river.

Mr. President, I shall trespass upon the Senate but a short time further. I wish to have incorporated in my remarks without reading the statement of Mr. L. L. Dennett, representing the proposed Waterford irrigation district and Stanislaus County, Cal., which was made before the Committee on Public Lands of the House of Representatives at this session of Congress. His statement begins on page 252.

The PRESIDING OFFICER. Without objection, permission

to insert the statement will be granted. The statement referred to is as follows:

STATEMENT OF MR. L. L. DENNETT, REPRESENTING PROPOSED WATERFORD IRRIGATION DISTRICT AND STANISLAUS COUNTY, CAL.

BRATEMENT OF MR. L. L. DENNETT, REPRESENTING PROPOSED WATERFORD IRRIGATION DISTRICT AND STANISLAUS COUNTY, CAL.

Mr. DENNETT. The telegrams just introduced into the record by the chairman, addressed to Congressman Curry, are in regard to the irrigation district on the west side and the other regarding the trade irrigation district. This matter was not called to my attention until Mr. Curry received these telegrams, and I will discuss it later.

There are two phases of this question I wish to discuss.

The Chairman. What is the first one?

Mr. Dennett. The first proposition, I think, I would like to discuss would be the general policy of this bill very briefly. I would like to state this, that I very much regret to appear in any way to oppose the desire of San Francisco to obtain a municipal water supply. So far as the obtaining of such a supply is concerned, I am greatly in sympathy with San Francisco, but I do not believe that such a supply should be obtained either at the expense of the people of the State of California as a whole, and I certainly do not believe that such a supply should be obtained at the expense of the people of my own county, whom I particularly represent.

The facts are largely before the committee, and therefore I do not wish to go into the details of the discussion. I would like to state, broadly, however, this proposition: That the principle of the general conservation of the resources of the State of California have been considered for years—long before this Hetch Hetchy proposition came up.

It was realized that if the highest development of California was to be obtained, every drop of water in the State should be applied to the most beneficial use, and that it would become necessary in the development of the State to divert from the Sacramento Valley the waters which are there in excess either for domestic purposes or for irrigation in the San Joaquin Valley, and I honestly and conscientiously believe that the proposition of San Francisco is contrary to the broadest principle of conservation of resources of the States, and will result in a greater economical loss ultimately to San Francisco than the mere question of cost, and that this matter may be before the committee, I would like to refer for one moment to the record compiled by the Conservation Commission of the State of California for the year 1912, showing the peculiar water conditions in the State of California.

It shows, broadly, this, that if every acre of land in the Sacramento Valley were irrigated and the flow of the Sacramento River was maintained so that navigability would not be impaired there would still be an abundance of water which could be diverted from the Sacramento Valley to be used elsewhere. In a broad policy of conservation it is desirable, with this as one of the units in the conservation of the resources of the State of California, that that excess of water be impounded and diverted from the Sacramento Valley, so as to relieve the people from flood loss.

Just a few moments ago there was handed to me a report of the Rivers and Floods of the Sacramento and San Joaquin watersheds, compiled by the authority of the Federal Government, which showed a loss of \$10,000,000 in the last two or three floods in the Sacramento Valley. So we can readily see that it would not take a great many floods by this excess of water to compensate for any greater expense from proper impounding and diverting of that water.

In this report of the conservation commission we find on page 170 this statement:

"The rainfall of the Sacramento Valley

valley. So we can readily see that it would not take a great many valley in So we can readily see that it would not take a great response from proper impounding and cit consequences for any greater expense from proper impounding and cit consequences from proper impounding and cit consequences. In this report of the conservation commission we find on page 170 this statement:

"The realistall of the Sacramento Valley and acreage already appears in the record, and the committee are familiar with that "—and I will make the figures, I presume, are not necessary to be retained in mind.

I would like to call also attention to the fact that while for years we have been considering the ultimate highest conservation of the resources of the State of California, which is a matter of tremendous determined. This report shows approximate have not all yet been determined. This report shows approximate have not an analysis of the search of the Sacramento River at Collinsville during the months of Annually available. Then, further on it states that the total mean florif the Sacramento River at Collinsville during the months of available data, 16,000,000 acre-feet winter, according to the best available data, 16,000,000 acre-feet as an approximation of the supply available in the mean property of the search of the supply available in the mean property of the search of the supply available in the mean property of the sacramento Valley is accomplished—and that it can be accomplished it think no competent engineers guestion—there will be adverted, and water which for the protection of that valley should be diverted, and water which for the protection of that valley should be diverted, and water which for the protection of that valley should be diverted, and water which for the protection of that valley should be diverted, and which we have the sacramento Valley, where it is needed, when the state should be conservation, and that therefore it is an economic blunder to diverse the sacrament of the sacramento Valley. Where it is needed

ment, although I believe in it profoundly. There is no conviction I have which is deeper than this, that if our friends of San Francisco appreciated the seriousness of the situation they would be the very last people to ask for this water, that a new the light be inaugurated which will condemn utterly the that a new that a new that a new that is land, and I can only, recognizing the intelligence for fact that they have not yet fully appreciated the situation. Mr. Dennett. Of San Francisco.

Mr. Dennett. Of San Francisco.

Mr. Graham. What do you say as to the practicability of your thought; that is, as to whether the irrigable land below Hetch Hetchy could ever afford to make a dam that would conserve all of that water?

Mr. Dennett. I am glad you referred to that. Mr. Chairman, I think I have said all that I care to say on that general question. While I am opposed to the bill utterly and completely in principle, still I believe it is possible for it to be passed in such a form that there will be in it much less measure of damage to this district, and possibly an equal degree of protection to San Francisco. Following the line of thought of Director Smith, who stated in substance that he assumed San Francisco. Following the line of thought of Director Smith, who stated in substance that he assumed San Francisco, the proposed Waterford irrigation district and Stanislaus County by appointment of the board of supervisors. This district representation of Mr. Graham, possibly, gentlemen of the committee are not familiar with the irrigation district law of the States from which these gentlemen core the question of Mr. Graham, possibly, gentlemen of the Carloria, as it has been worked out into successful operation. A number of the States from which these gentlemen core than the same of the states from which these gentlemen core and the state of california, as it has been worked out into successful operation. A number of the States from which these gentlemen core and the state of the state of the state of the state of t

and not unduly expensive, and unquestionably unless this bill passes in such a form as to absolutely deprive this region of water such a district will be formed.

That you may understand the difficulties, you should note that the districts after they are organized, in order to obtain money to complete their system, may issue and sell bonds. I presume most of you gentlemen from the West are sufficiently familiar with the general irrigation question to realize that the sale of irrigation bonds is not easy. The Legislature of California passed a law in order to assist our irrigation bonds, providing for a State commission consisting of the attorney general, the State engineer, and, I believe, now the dean of the department of agriculture, who must pass, first, upon the organization, second, the engineering feasibility, and, third, the security for the bonds. Now, before an irrigation district can place its bonds, they must have some sort of title to the water, and that is why, gentlemen, I am interested here to-day. If this bill passes, no matter how much water may be left to be utilized upon this land, we will not have legal title to one drop of water. That State commission would not think of approving our bonds, under no circumstances could they approve the bonds, no gentleman of this committee who is a lawyer would think of approving the bonds of an irrigation district based upon the conditions which exist here. We want, and I believe it is possible, with due protection to San Francisco, to have such a law as will enable these districts to have some clear right to the use of this water, at least while it is not diverted to San Francisco.

My remarks are rather disconnected, but I wish to say this, that while the taking of this water to San Francisco means the ultimate destruction of 200,000 acres of land, that I believe is more academic than practicable at the present time, because that condition will take place a great many years from now and this condition will take place a great many years from now and this

have no legal right to any water for this land, although it may be going to waste.

The CHAIRMAN, Does it not appear here in the records somewhere that some concession was made to your people in the agreement that was made with the Secretary of the Interior as to the distribution of this water?

Mr. Dennett. That was a gracious concession, something like that in the story of the buzzard and the turkey—a concession on its face, but there was no concession. The Modesto and Turlock irrigation district have perfected, as is recognized in the Garfield grant, a legal right to divert 2,350 second-feet of water.

Now, the city of San Francisco has graciously consented that the districts might do that which the law under proper circumstances would permit them to do, increase their area to 300,000 acres, but increase in the acreage without increase of water is of no value.

There is this further question—and I wish to be perfectly candid with the committee—that you may understand the dilemma in which I am placed—
The CHAIRMAN. Is that what was done here, would you say?
Mr. DENNETT. Yes, sir. And I do not impute any question of good faith. I have the utmost respect for both Mr. Long and Mr. O'Shaughnessy in this matter, and I recognize the untiring ability and energy and their unfalling courtesy in this discussion, and the clause was inserted in perfect good faith, but, as a matter of fact, it don't relieve us from the situation with which we are confronted.

Mr. Taylor of Colorado, Does not the bill increase the water allowance?

Mr. DENNETT. They did not increase the water allowance at all. Mr. TAYLOR of Colorado. Not at all? Mr. DENNETT. Not at all. The CHAIRMAN. Is that amount of water only enough to irrigate

Mr. Dennett. They did not increase the water allowance at all, Mr. Taylor of Colorado, Not at all?

Mr. Dennett. Not at all.

The CHAIRMAN, Is that amount of water only enough to irrigate 250,000 acres?

Mr. Dennett. My opinion is that it is only sufficient.

The CHAIRMAN. What do you say about that, Mr. Long?

Mr. LONG, I can not agree with Mr. Dennett. At the suggestion of the Dill from the limitation to the districts we changed the form of the bill from the limitation to the districts we changed the form of the bill from the limitation to the districts we changed the form of the bill from the limitation to the districts as now constituted—that was the original form of the bill—in permit that watering 300,000 acres. We increased the district from 250,000 to 300,000 acres at the squest of the representatives from the Turlock of the representatives from the Turlock of the representatives from the Turlock of the representative for this area which Mr. Dennett mentions. Then the Turlock provide for this area which Mr. Dennett mentions, or 23,000 acres, to provide for this area which Mr. Dennett adjacent, or 23,000 acres, to make a district which are such that the transparent of the district which are such an asked as the transparent of the district which are such as a sum and asked as the transparent of the such as a sum and asked as the case of argument let us assume he has no rights. Even then, if a concession was made, presumably to take care of his 20,000 and another 30,000 acres, what good does it do, or is it at all a concession, to increase it to 300,000 acres unless you give him the water?

Mr. LONG. Representations were made to us by representatives of the two districts that the water they had would be ample.

Mr. TALOR of Colorado, Are they going to prorate with him?

Mr. PULKERTH. If we have any water over, we will be perfectly willing for him to have it; but, of course, we expect to use that water up to the extent of beneficial use.

The CHAIRMAN Mr. Dennett, just what are your legal rights?

Mr. DENNE

The CHAIRMAN. Filed with your board of supervisors?
Mr. DENNETT. Yes. sir.
The CHAIRMAN. That corresponds to our board of county commissioners?

Sloners?

Mr. Dennett. Yes, sir.
The Chairman. That has not as yet been acted on?
Mr. Dennett. That has not as yet been acted on.
The Chairman. When they do act on that favorably then it is submitted to a vote?
Mr. Dennett. It then is submitted to a vote.
The Chairman. And neither of those things have been done.
Mr. Long. Then you must issue bonds?
Mr. Dennett. No; it may be accomplished by direct assessment if we can raise the money in that way.
The Chairman. It has not come to the point of putting water to beneficial use?
Mr. Dennett. No; but I can state this: A year ago—I do not pro-

The CHAIRMAN. It has not come to the point of putting water to beneficial use?

Mr. Dennett. No; but I can state this: A year ago—I do not profess to be exact—various landowners in the district, in order as far as possible to protect their rights, made a filing for the benefit of the proposed district. What the legal effect of those filings may be I am not prepared to say.

The CHAIRMAN. The committee knows nothing about what are the legal rights. You tell us as a lawyer that the law of California says this. We do not understand the local statute.

Mr. Dennett. As I understand the local statute.

Mr. Dennett. As I understand the law to be, when the filing is made for irrigation, work must be commenced within 60 days, and prosecuted to a completion with due diligence, considering the magnitude of the undertaking. The irrigation law also specifically dedicates and sets apart to irrigation districts the unappropriated waters of the State of California within the district.

The CHAIRMAN. After those preliminary filings were made, did your people or did they not do the things under the statute that would preserve your rights and keep it alive up to the filing of this last act?

Mr. Dennett. We commenced and continued our surveys, and the work of development which has been done is sufficient to keep alive our filings.

The CHAIRMAN. Had that application ever been approved?

work of development water our filings.

The CHAIRMAN, Had that application ever been approved?

Mr. Dennert. The application is not required to be approved. It merely requires it to be filed, and it is a question of fact as to whether or not due and diligent work has been done to keep it alive.

Mr. Taylor of Colorado. We want to know, and most of the committee do not know, or at least a large part of them do not know, anything about those irrigation matters. We have irrigation laws in Colorado, but they want to know whether you are simply an interloper, with a paper proposition or promotion, or whether you come with some genuine and vested rights here that this committee would be doing violence to if we should ignore it.

Mr. Dennert. It was my endeavor to make it as clear as I could. My own conviction as a lawyer is that we have a good and a valid right to 200 second-feet of water. The date of the filing by San Francisco I do not know; whether ours was subsequent to the filing of San Francisco I am not aware.

Mr. Kent. Where are we going to get that 200 second-feet of water? Do not the other filings that are already perfected take up all the water?

right to 200 second-feet of water. The date of the filing by San Francisco I do not know; whether ours was subsequent to the filing of San Francisco I do not know; whether ours was subsequent to the filing of San Francisco I do not have the subsequent to the filing of San Francisco I do not have the water?

Mr. Dennert, If we are prior to San Francisco—and I may say that the question of due diligence applies to San Francisco as well as to these interests of the diligence applies to San Francisco proposes to spend skriy or Seventy million dollars?

Mr. Dennert, The secause San Francisco proposes to spend skriy or seventy million dollars?

Mr. LONG, But this functure would come. Where do you propose to go Mr. Donnert, The situation is this: The Tuolumne River, as has been testified to, is what you might call a torrential stream; during many months in the year the flow is very large. The Modesto and the subsequent of th

to that point,
Mr. KENT. What is your opinion?
Mr. DENNETT, I hardly think so. The city of San Francisco can condemn irrigation waters for domestic purposes on the ground that domes-

tic use is the highest use, but I can hardly conceive the circumstances under which an irrigation district would be permitted to condemn water used for domestic purposes for irrigation purposes.

Mr. Kent. I can not see that at all. I do not follow that. I think if there is a bad distribution, an inequitable distribution of the State's water assets, the one would be as much subject to condemnation as the other.

Mr. Taylor of Colorado There are not the condemnation of the state's water assets, the one would be as much subject to condemnation as

Mr. TAYLOR of Colorado. There can not be any such law as that, Mr.

Mr. TAYLOR of Colorato. The Colorato. Mr. Kent. I am not a lawyer, but I had an idea that such ought to be the law of condemnation.

Mr. DENNETT. That is my understanding and I think it ought to be the law.

Mr. Kent. I am not a lawyer, but I had an idea that such ought to be the law of condemnation.

Mr. Dennett. That is my understanding and I think it ought to be the law.

Now, the situation, if I may come down to the concrete discussion of my own particular troubles with water for irrigation purposes, is this: Under this agreement San Francisco is permitted to divert 400,000,000 gallons daily. She will not be called upon to divert more than 200,000,000 gallons daily for 50 years. There are, then, 200,000,000 gallons daily which will not be used for many years to come, the status of San Francisco being that of the dog in the manger. She does not want to use it and can not use it, and the irrigation districts can not use it because it can not be bonded.

I have drafted an amendment to the pending bill which seems to me might meet the conditions without injuring San Francisco unduly, and is in accordance with the suggestion made by Director Smith, of the Geological Survey. It has been very hurriedly drafted and may be subject to correction, but it embodies substantially the idea I have in mind, and as a representative of the Waterford district I would like to offer it to the committee. It reads as follows:

"Provided, however, That whenever any land adjacent to the Tuolumne River requires it and has no other adequate source from which to obtain water for the beneficial irrigation thereof, the Secretary of the Interior shall require of the grantee that sufficient water be released for the beneficial irrigation of such land upon the prepayment by the owners thereof to the grantee of a proportionate amount of the consideration in determining such water, always, however, taking into consideration in determining such wost the profits to the grantee from the generation of electrical energy. And provided, also, That the word 'owners' as above used shall be held to include irrigation districts, other than the Modesto and Turlock irrigation districts, now or hereafter organized upon the Tuolumne River; and that the Secretar

the time when and the terms and conditions upon which such water shall be released."

Now, gentlemen, God Almighty has placed a limitation upon the use which can be made of the waters of the Tuolumne River. This report of the conservation commission goes into detail as to the lands which are supplied by the various rivers. While of course it would undeubtedly be reflectly feasible to pipe this water to the various irrigation districts, I am inclined to the opinion that it would undeubtedly be rather difficult to stand the expense. We have a maxim down in our country that "water is worth whatever it costs te secure it." I think that is practically true. I am the attorney for a project down there adjoining the Turlock-Modesto district known as the South San Joaquin irrigation district which has bonded itself for \$56 an acre to construct an irrigation district. When the Modesto district was organized the people were afraid of a bond issue of \$10 an acre. That shows the progress of public opinion. I am inclined to think that if those 150,000 acres were organized bonds could unquestionably be issued and sold for an amount large enough to censtract the necessary works.

those 150,600 ncres were organized bonds could unquestionably be issued and sold for an amount large enough to construct the necessary works.

Coming down to the Waterford district, the Waterford district proposes to divert the normal flow of the river and the Turlock district contemplates the construction of a dam above the point of diversion to conserve an amount of water agreed upon by both districts, thereby supplying us with the amount of water we need.

The Chairman. Let me ask you about this amendment. If San Francisco is going to spend fifty or sixty or perhaps seventy or eighty million dollars on this proposition, do you not think that before such an amendment as this is agreed to there eaght to be some sort of proviso in that amendment which would make your rights subject to San Francisco? In other words, we ought not to force San Francisco in ringate your land for you to the exclusion of the necessary beneficial use of that water for the city of San Francisco.

Mr. Dennett. Well, Mr. Chairman, the people I represent are the sons of people who settled upon that land years ago; they have farmed that land for years, until it has become impoverished. Much of it is moist and under irrigation it becomes fertile.

Mr. TALIOR of Colorado. Has that land ever been irrigated before?

Mr. DENNETT. No, sir; and without irrigation it is becoming less valuable. What we want is that some sort of provision be made by the city of San Francisco which will show that we have a substantial water right, sufficient for the authorization of a bond issue, because, as I stated before, I believe that in the future, with the pumping of the subsurface water in the Turlock and Modesto irrigation districts, the water supply will be increased to such an extent that San Francisco can well afford to release the amount of water she is asked for. But practically, as the demands of the district now stand, this land is left without any water at all, and being left without any legal claim to water, it is placed in an unfortunate situation.

go elsewhere.

The CHAIBMAN. Let me understand you now. I want to get your position clearly. San Francisco anticipates, and all these engineers' reports anticipate, that at some time in the future she will need 400,000,000 gallons daily?

Mr. DENNETT. In the very distant future; yes, sir, The CHAIBMAN. I think it is the opinion of all of us that in no immediate future will she need 400,000,000 gallons daily.

Mr. DENNETT. Yes, sir.

The CHAIRMAN. Now, suppose, however, that San Francisco get this 400,000,000 gallons daily from the two sources. Wood over think, after she had made thy to bring this about, that even if she needed the full amount, she ought to be forced to give you a part of it?

Mr. Denyerr. In my capacity as a believer in the principle of conservation of the resources of California, I do:

Br. Denyerr. It would.

The CHAIRMAN. Even though she expended all that money?

Mr. DENNETT. It would.

The CHAIRMAN. Even though she built this reservoir?

The CHAIRMAN. Even though she built this reservoir?

The CHAIRMAN. The people of Stanislaus County and the irrigation districts could step in and take the water away from the people of san Francisco and appropriate it to their own use?

Mr. DENNETT. Wow, Mr. Chiirman, I do not care to urge that. I would be satisfied with the same and the

Mr. O'Shadchnessy (interposing). They offered you the water?
Mr. Dennett (continuing). And I think they made a very good settlement.
Mr. O'Shadchnessy. And they were such good lawyers they did not want to have anything to do with you? [Laughter.]
Mr. Dennett. They were not concerned in my particular project. They did not want to have anything to do with it.
The Chairman. Mr. Dennett, it is 6.10 now. How long will it take you to conclude?
Mr. Dennett. I think I am through, with the exception of one other matter I would like to refer to—the Tracy project.
Mr. Curr. There is a tract of 60,000 acres reaching from near Tracy to the Alameda line, known as the Tracy project. They do not want water, but power. Mr. Dennett is the attorney for that district. I have been requested by telegram to refer the matter to him, and I would like to have him explain the legal rights and equities of the Tracy district. I think the 60,000 acres can be made very productive with the water they can pump from the San Joaquin Valley. The only objection I have to this bill is that they have 120 horsepower in the mountains, and they are not required to develop it, which I think they ought to do. I would like to have Mr. Dennett speak on this matter.

The Chairman. How long will it take to dispose of it?
Mr. Dennett. Fifteen minutes. I have nothing further to state on the original proposition.

The Chairman. We want to close the hearings as soon as we can,

Mr. Dennett. Mr. Chairman, there is one thing I would like to ask. My amendment does not appear to have met with a very gracious reception, and I would like the committee to consider the practical claims, at least, to that 20,000 acres. I would like to submit to the committee in writing some modified statement. I believe what we ask is not unreasonable, but I would like to file a modified statement. The CHAIRMAN. I will put your original amendment in the files of the committee, and if there is anything else you want to file you may do so.

Mr. Raker. Now, suppose the committee receives a telegram from Mr. Sullivan to-night, you do not want to hold this over seven or eight

Mr. Raker. Now, suppose the committee receives a telegram from Mr. Sullivan to-night, you do not want to hold this over seven or eight days, do you?

Mr. Thomson. When would the committee take up the bill, then? What is your idea?

Mr. Raker. Not until the evidence is all in.

The Chairman. If this man comes we must hear him. If he does not—well, we are called together for the 7th, anyhow.

Mr. Raker. Suppose he telegraphs to-night that he will not come that relieves these gentlemen from staying here and they can go home. The Chairman. That is the idea.

Mr. Dennett. Now, in regard to this Tracy matter. The Tracy irrigation district is in process of construction in the San Joaquin Valley near Tracy, and I am the attorney for those people. At first blush it appeared to me that they were not interested in this question, but in the light of the testimony given by Mr. O'Shaughnessy I am inclined to think that they are. His testimony was to the effect that the diversion of the 400,000,000 gallons daily to San Francisco might interfere with the natural flow of the lower Sacramento, and that is time they might have to move their pumping plant farther up.

This is on a river that is tributary to the Tuolumne River, and they propose to pump their water by a series of four lifts, running it to the contour. Of course, the main cost in this connection is the cost of power. Let me say this: The Tuolumne River is the only river in California on which power has not been developed, and San Francisco is obtaining what is probably of more value than water—power. These people have felt that all the public corporations in the immediate vicinity of San Francisco might justly ask for some sort of recognition in this request, which is not unreasonable. I presume that San Francisco should be willing to sell its power at a reasonable cost. When a small water district if formed at San Francisco and an area in the Stanislaus region asks to share in all that tremendous amount of the necessities of the people to whom this is a commodity.

San Francisco.

The CHAIRMAN, Inasmuch as we are hearing the whole matter through, what would be the objection to having you prepare an amendment that you would be willing to stand on and a short statement or brief in support of it, submit it to Mr. Long, and he, after conference with his people, can submit a brief in reply; then the committee can consider them when it comes to take up the bill section by section—on this Tracy proposition and also on the other proposition?

Mr. DENNETT. That will be all right.

Mr. O'SHAUGHNESSY, Mr. Chairman, may I ask Mr. Dennett a question?

Mr. O'SHAUGHNESSY. Mr. Chairman, may I ask Mr. Dennett a question?
The CHAIRMAN. Certainly.
Mr. O'SHAUGHNESSY. Mr. Dennett, do you know that there is a similar pumping proposition at the Patterson ranch?
Mr. DENNETT. Yes, sir.
Mr. O'SHAUGHNESSY. And that they are selling power at three-fourths of a cent per kilowatt-hour?
Mr. DENNETT. Yes, sir.
Mr. O'SHAUGHNESSY. There is an abundance of such power in California?
Mr. DENNETT. Yes, sir.

Mr. O'SHAUGHNESSY. There is an additional of strong of the fornia?

Mr. Dennett. Yes, sir.

Mr. O'Shaughnessy. And that no irrigation district that is intended to be formed is suffering under any hardship for lack of power?

Mr. Dennett. Yes, sir. Mr. Patterson purchased a large amount of power at a very reduced rate—I think it was 32,000, though I am not sure—and he is now selling the power at a very low rate.

Mr. Raker. You are not of the opinion that water power to-day is in the hands of a monopoly?

Mr. Dennett. There is no monopoly there.

Mr. Raker. It is not a fact, then, that the water-power companies of California are an absolute monopoly?

Mr. Dennett. They are competitors at the present time, and power is sold at 1 cent per kilowatt-hour.

Mr. Raker. Any statement that electric power in California is under one great monopoly and absolutely controlled by a monopoly in the State is not a fact?

Mr. Dennett. I do not think it is true,

Mr. Raker. Yes. That is all.

Mr. GRONNA. I will also ask to have printed one or two

Mr. GRONNA. I will also ask to have printed one or two letters and statements made by Mr. Frank Adams, irrigation manager of the Modesto and Turlock irrigation districts, also extracts and clippings from the New York Times, under date of July 12, 1913, and also other papers and documents relating to the subject.

The PRESIDING OFFICER. In the absence of objection, permission to do so is granted.

The matter referred to is as follows:

# HETCH HETCHY VALLEY.

The water users of the Modesto irrigation district and the owners of other lands which are not now receiving any water from the Tuolumne River ask Congress to postpone action on the Raker bill (H. R. 7207) until it has given consideration to the rights of the water users.

No emergency exists that calls for immediate action by Congress. It will take at least five years to bore the tunnels. (See Freeman's report, p. 74.) The San Francisco Chronicle of September 26, 1913, says: "It will be years before we get the water to the city."

The Chronicle of September 3, or thereabouts, says: "Contractors for the exposition company have completed one well from which water is being pumped at the rate of 400 gallons a minute, which is over 500,000 gallons per day. Three more wells are to be sunk, and if they yield as abundantly the aggregate yield will be 2,000,000 gallons

per day, which is one-twentieth of the average demand on the Spring Valley system. The water is claimed to be excellent. An official of the contractors says they will develop water 'which will supply 1,000,000 people during the exposition year.' If it will do that for the exposition year, it will do it for succeeding years, and we can tell both Spring Valley and Congress to go hang until our population exceeds a million."

San Francisco, by agreement with the Spring Valley Co., is now

San Francisco, by agreement with the Spring Valley Co., is now engaged in condemning the local water system owned by the Spring Valley Water Co., and for which they will pay from \$35,000,000 to \$40,000,000, and the water which they will need for many years to come is being provided for by said company at the present time by the construction of the Calaveras Dam.

At present San Francisco has no legal claim to the waters in the Hetch Hetchy Valley. The Modesto irrigation district has a legal right to the waters of the Tuolumne River to the extent of its filing. This filing of 5,000 second-feet was made long prior to any filing made by San Francisco on the river.

The Modesto irrigation district can beneficially use from 1,200 to 1,400 second-feet of water. At present her ditches are developed only to the extent of 716 second-feet, but for several years her main ditch has been under process of enlargement, and a considerable portion of it has already been built with cement construction to carry 1,400 second-feet.

has already been built with cement construction to carry 1,400 second-feet.

Under the allowance provided for in the Raker bill the water users of the Modesto irrigation district will receive but 740 second-feet of water. The 716 second-feet which they now have barely enables them to cover the land once a month, and does not give the best of service. They have 48,000 acres in cultivation (almost entirely in alfalfa) and they have 33,000 acres of unimproved land, which, under the terms of the Raker bill, will be left unprovided for, unless after long and expensive litigation with San Francisco the Modesto irrigation district can beat her in the courts.

If San Francisco is not given the Hetch Hetchy Valley immediately, the Modesto irrigation district can complete its ditches, apply the water to the unimproved land and protect itself as far as the natural flow of the river is concerned. The Modesto irrigation district is absolutely unable to protect itself unless Congress protects it. Before Congress can decide what protection the water users of the Modesto irrigation district and adjoining landowners should have, it must ascertain the facts as to their needs. It should have full and complete evidence before it. There is no such evidence before Congress at the present time as would justify it in acting in this matter to the detriment of hundreds of water users. As a matter of fact, there has been no evidence submitted to Congress showing the water users' side of this question.

The Modesto Irrigation district has no storage facilities except a reservoir built at the edge of the foothills. It cost \$8.50 per acre-foot for 30,000 acre-feet. So far it has not been a success, because of large evaporation and large seepage. It is a large shallow reservoir. Excepting the large reservoirs, storage facilities on the upper Tuolumne are rather poor, and so far the Modesto irrigation district has not been able to obtain good reservoir sites in the high Sierras, as San Francisco has the best ones—Eleanor and Cherry Creek.

The Hetch Hetchy Valley is a deep gorge narrowing down to a point where a dam can be built very cheaply in a granite formation. (See hearing before Committee on Public Lands, H. R. 6281, pp. 133-134.) This dam can be built for \$3,156,000, according to the estimates made by Engineer Wadsworth (report of Army engineers, pp. 130-131). Pages 288 and 300 of Freeman's report give the items of cost on part of this dam and shows the estimated cost too great. Notice the items of \$166,000 for land and \$83,100 for interest on the first portion built, costing \$1,315,500.

Luther Wagoner, consulting engineer for the Modesto irrigation district and the Turlock irrigation district, in their hearing before Secretary Fisher, says the dam can be built for less money than any other dam on the Tuolumne watershed. (For low cost, see Freeman's report, p. 154.)

The irrigation districts and the other land tributary to the Tuolumne River can bear the expense of building it without any hardships whatsoever. It will store 340,000 acre-feet of water. There are 300,000 acres of land to share in the cost, which would be from \$7 to \$12 per acre.

The Modesto irrigation district has a bond issue of less than \$20 per

River can bear the expense of building it without any nardships whatsoever. It will store 340,000 acre-feet of water. There are 300,000
acres of land to share in the cost, which would be from \$7 to \$12 per
acre.

The Modesto irrigation district less than \$15 per acre. The south
San Joaquin Valley irrigation district, adjoining this land, has a bonded
indebtedness of \$56 per acre, which it is amply able to pay, and which
the Modesto irrigation district and other districts would be willing to
pay for a complete water supply. The cost of developing the Hetch
Hetchy is trifling, considering the benefits the land will receive.

Without storage water the Modesto irrigation district and other districts will be without water. About the early part of July the water
quits coming, and after that, for the balance of the season (about onehalf of the season), the land will be dried up and growing no alfalfa if
the Raker bill passes. The only exception to the foregoing is a small
subirrigated area.

If we had the Hetch Hetchy water, in addition to furnishing water
for the 257,000 acres in the Modesto and Turlock irrigation districts
and 45,000 acres of land adjoining, it would furnish us power with
which to pump water on 100,000 acres of land lying directly across the
San Joaquin River from the Turlock and Modesto irrigation districts,
This district can pump water from the San Joaquin River where it joins
the Sacramento River. Its success or failure depends entirely upon how
cheap it obtains power. It is without doubt the finest body of undeveloped land in the State of California.

No proper or sufficient information is before Congress upon which to
settle the question as to exactly how much of the water of the Tuolumne River should be taken out of the valley by San Francisco. They
have filings on Lake Eleanor and Cherry Creek, which will enable them
to store and take away from the valley something like 300,000 acre-feet,
and before Congress permits them to take any more water from the
valley it should investigate t

the tender mercies of the San Francisco politicians on one hand and the power trust on the other. We will get the worst of it on both sides.

OTHER SOURCES OF SUPPLY FOR SAN FRANCISCO.

the tender mercles of the San Francisco politicians on one hand and the power trust on the other. We will get the worst of it on both sides.

OTHER SOURCES OF SUPPLY FOR SAN FRANCISCO.

San Francisco has many other sources of water supply; but having determined to get the Hetch Hetchy, she refuses to look in any other and the supply of the trust of the supply the supply there is a huge supply of the supply there is a huge supply the supply supply the supply su

FRANK ADAMS, Irrigation Manager.

The undersigned represents the water users, copies of whose telegrams to Senator Myers are attached hereto; also the Waterford irrigation district; also the West Side people who are trying to organize and pump from the San Joaquin River. W. C. LEHANE.

Modesto, Cal., September 23, 1913.

HENRY L. MYERS, Chairman Senate Public Lands Committee:

Chairman Senate Public Lands Committee:

We, the undersigned committee, representing the water users of the Modesta irrigation district, 475 of whom have signed a petition to the effect that the lands tributary to the Tuolumne River are able and willing to store the Hetch Hetchy waters, and asking and urging that the Senate postpone action on the Raker bill and appoint a commission to investigate and report on our claims. Said petition was signed by 99 per cent of the water users to whom presented. W. C. Lehane, of this committee, will represent us in person before your committee.

Levi Winklebleck, Acting Chairman.

Modesto, Cal., September 23, 1913.

HENRY L. MYERS, Chairman Senate Public Lands Committee:

The undersigned, representing the water users of the Turlock irrigation district, 100 of whom have this day signed a petition setting forth that lands contiguous to the Tuolumne River are ready and able to store the waters of the Hetch Hetchy, and request that the Senate postpone action on the Raker bill and appoint a committee to investigate and report on our claims. Said petition was signed by 98 per cent of the water users to whom it was presented.

THOMAS CASWELL.

# HETCH HETCHY VALLEY.

In the debate on the Raker bill last Saturday Senator Newlands said, in effect, that in a struggle for water the "thirst of the people" must prevail over the "thirst of the land," even though 200,000 acres of land must remain forever without water.

In California, with its long seasons and high-priced products, the yearly crop on 200,000 acres of land is worth from \$10,000,000 to \$20,000,000 yearly. This is too valuable to be lost forever.

The only reason San Francisco is going to the Tuolumne instead of the McCloud River or other sources is because of cheapness. She does not need to take a drop of water out of the dry San Joaquin Valley in order to have an ample supply of mountain water.

The Army engineer's report, page 19, says:

"McCloud River rises on the south side of Mount Shasta and, uniting with the Pitt River, forms the principal tributary of the upper Sacramento. Its least flow is about 1,200 cubic feet per second, or about 770,000,000 gallons daily, amply sufficient for all possible needs. The water appears to be good and pure. No reservoir would be necessary, as far as quantity is concerned. If desired to hold in reservoirs for sanitary reasons, suitable sites could doubtless be found in Contra Costa County, if not in the McCloud River basin. This source is considered a feasible one, and it will be discussed in greater detail later in this report."

Further on they say:

"The McCloud River is a branch of the Pitt River, which itself is a tributary of the Sacramento. McCloud River rises on the southern and southeastern slopes of Mount Shasta. It flows in part from glaciers and in part from large springs. The water is clear, cold, and palatable." (P. 22.)

"The city of San Francisco presented unfavorable reports on this source, and it is further unfavorably commented on by Mr. John R. Freeman. The reports are not, however, either comprehensive or complete.

Mr. Freeman dwells upon the possibility of infection of the water.

Freeman. The reports are not, however, either comprehensive or complete.

Mr. Freeman dwells upon the possibility of infection of the water. With a large part of the watershed owned in fee by the city and another part within the national forest, proper policing should present no great difficulties, and additional protection will be given by the proposed storage reservoir north of Berkeley (p. 23).

The estimates prepared for the board by Mr. Wadsworth are as follows (p. 25):

For 260,000,000 gallons daily\_\_\_\_\_ For 140,000,000 gallons daily\_\_\_\_\_ \_ \$59, 550, 300 5, 400, 800

Total 64, 951, 100

The board adds 10 per cent to the above estimate as a matter of safety, because the surveys are incomplete. That does not mean, however, that it is necessary. It covers possibilities only.

They also show, on page 24, that on July 12, 1912, the board of engineers in charge of the Sacramento River recommended the taking of 800 second-feet of water out of the Sacramento River for an irrigation project, and on December 18, 1912, the Interior Department formally granted the right.

The above statements dispose of the "navigation" question, which worries San Francisco. It is a bugaboo of her own creation.

The cost of the Hetch Hetchy supply is \$77,367,400 (p. 30). Is it good conservation or good common sense to leave 200,000 acres of land permanently arid when such a fine source of supply as the McCloud River is available to San Francisco? What about the needs of hundreds of small farmers in the irrigation districts who are clamoring to be heard and who will be damaged beyond repair if the Raker bill passes?

W. C. Lehans,

Chairman Water Users' Committee.

Modesto, Cal., September 23, 1913.

HENRY L. MYERS, Chairman Senate Public Lands Committee:

Chairman Senate Public Lands Committee:

We, the undersigned committee, representing the water users of the Modesto irrigation district, 475 of whom have signed a petition to the effect that the lands tributary to the Tuolumne River are able and willing to store the Hetch Hetchy waters and asking and urging that the Senate postpone action on the Raker bill and appoint a commission to investigate and report on our claims. Said petition was signed by 99 per cent of the water users to whom presented. W. C. Le Hane, of this committee, will represent us in person before your committee.

LEVI WINKLEBLECK, Acting Chairman.

# HETCH HETCHY FACTS.

HETCH HETCHY FACTS.

The Turlock-Modesto irrigation districts cover 276,000 acres. This land has had water for 10 years, and is about two-thirds developed. The undeveloped land pays the same yearly tax as the developed land and can share equally in the water.

The Waterford irrigation district, lying between the La Grange Dam and the Modesto district, covers 20,000 acres.

The cost of the Hetch Hetchy Dam is figured by Mr. Wadsworth at \$3,155,000. This includes \$166,000 for the land San Francisco has purchased inside and outside Hetch Hetchy and is a high estimate. Luther Wagoner says it can be built for \$2,000,000.

If you add the cost of roads and any other costs that Congress may attach to the bill the total cost will not exceed \$4,000,000 to \$5,000,000.

ACREAGE.

In round numbers 300,000 acres of organized land can issue bonds and pay \$15 to \$20 per acre for this water and never feel it.

Hundreds of farmers in these districts lose \$20 per acre on their hay crop each year because of lack of storage water. The Tuolumne River usually fails early in July.

W. C. LEHANE, Chairman Committee Water Users.

## [From New York Times, July 12, 1913.] A NATIONAL PARK THREATENED.

Why the city of San Francisco, with plenty of collateral sources of water supply, should present an emergency measure to the special session of Congress whereby it may invade the Yosemite National Park is one of those Dundrearian things that no fellow can find out. The Hetch Hetchy Valley is described by John Muir as a "wonderfully exact counterpart of the great Yosemite." Why should its inspiring cliffs and waterfalls, its groves and flowery, park-like floor, be spoiled by the grabbers of water and power? The public officials of San Francisco are not even the best sort of politicians, as appraisers and appreciators of natural beauties their taste may be called in question. It is the aggregation of its natural scenic features, the Secretary of the Interior declared to the would-be invaders of the park when a decade ago they presented their first petition, that "makes the Yosemite Park a wonderland, which the Congress of the United States sought by law to preserve for all coming time." Their application was rejected. Now they have obtained from the board of Army engineers a report approving their project as an emergency measure which is based on incomplete, erroneous, and false evidence. The engineers

say in their report that they have merely passed on such data as were presented by the officials of San Francisco, since they had neither time nor money to investigate independently the various projects presented. But San Francisco's officials have withheld from these data the report upon the Mokelumne River and watershed submitted April 24, 1912, in which Engineers Bartel and Manson declare that this system is capable of supplying to the city of San Francisco between 280,000,000 and 480,000,000 gailons daily, the larger amount if certain extinguishable rights are disposed of. Even on their insufficient data the Army engineers report that San Francisco's present water supply can be more than doubled by adding to present near-by sources, and more economically than by going to the Sierras.

The suppressed report, showing that the Mokelumne River is a better and cheaper source than the Hetch Hetchy, says that between 600,000,000 and 700,000,000 gallons of water outside the park may be delivered daily into San Francisco and the adjacent bay region, supplying their growing needs for perhaps a century to come. Representative SCOTT FERRIS, chairman of the Public Lands Committee, has been apprised of the existence of this report. A receipt of the copy is worth waiting for. If the water-power grabbers are put off this session, or two, or three, or many more sessions, before gaining an entrance to the Hetch Hetchy Valley, the dwellers of San Francisce will not go thirsty.

# THE HETCH HETCHY STEAM ROLLER.

THE Senate of the United States, designed by "the Fathers" to afford a wise check upon presumably impulsive action by the lower House and called "the most august deliberative body in the world," now has a chance to put a spoke in the wheel of the steam roller by which San Francisco's official lobby has heretofore crushed opposition to the Hetch Hetchy Bill. An inkling of the tactics of the city's officials is given in the San Francisco Chronicle of September 12, which says: editorially:

"While we all desire and expect to get the Tuolumne water, it is

Sin Francisco's official lobby has hereto'rore crushed epposition to the great reterby bill. An inkiling of the tactics of the city's officials is gleat retering the San Francisco Chronicle of September 12, which says:

"While we all desire and expect to get the Tuelumne water, it is not desirable that ache bill shall be rushed through without and free discussion of the rights of the States. The water is a full and free discussion of the rights of the States. The water is a full and free discussion of the rights of the States. The water is shall need for the next few years will have to be got by the development of the Spring Valley property (the present chief supply), and we shall need for the next few years will have to be got by the development of the Spring Valley property (the present chief supply), and we should make a very poor trade to surrender the rights of the State within its own boundaries in order to get glory for our municipal officials just as an election is coming on."

A prominent advocate of the project has confessed privately that there are bad things in the bill, but they were put there to get votes."

Limit House debate gives reason for thinking that the measure is a clume of the confessed privately that there are bad things in the bill, but they were put there to get votes."

The local strength behind the city's rush line the opposition of the project has been presented to the project has providing to \$120,000,000, with endless opportunities of "houset graft." For months the project has been presented to Congress with persistence and specious misrepresentation. Urged first as a measure of humanity, it has been shown to be a sordid scheme to chain electric power. Urged as providing the only available source, it is confronted by the conclusive statement of the Board of Army Engineers that "there are several sources of water supply" and that "the determining factor is one of the forest reserved worders of the world." Its altogether reputable official sponsors are Secretary Lane, who is years

Resolution 2, adopted at the annual meeting of the San Joaquin Valley Water Problem Association, representing the eight counties of the San Joaquin Valley, at Merced, Cal., November 17, 1913.

Joaquin Valley, at Merced, Cal., November 17, 1913.

Whereas the control of floods and the irrigation of arid lands in the San Joaquin and Sacramento Valleys constitute in reality but two phases of one problem; and
Whereas in the San Joaquin Valley there is a deficiency in the water supply and, even with the complete conservation of all the waters of the valley, there will be an insufficient supply of water with which to irrigate efficiently all the irrigable lands in said valley; and Whereas in the Sacramento Valley there is an excess of water and with its proper conservation all of the land in the valley can be irrigated, the navigability of the Sacramento River remain unimpaired and a supply of water be left for diversion to other localities; and

Whereas the city of San Francisco is attempting to divert water from the San Joaquin Valley and take it to San Francisco for municipal purposes; and
Whereas we believe that every unit in the development of water control in the Sacramento and San Joaquin Valleys should be constructed as a part of a comprehensive whole, designed ultimately to accomplish the full development of both valleys and the conservation to the utmost of their resources: Therefore be it

utmost of their resources: Therefore be it

Resolved, That we deprecate this attempt of San Francisco to violate what we believe to be one of the fundamental principles of the conservation of the resources of the interior valleys of California, because it is entirely unnecessary and because great injury will result to water users if water is so diverted from the San Joaquin Valley, and, further, because the Sacramento Valley offers an ample source of water supply for San Francisco's need without injury to anyone.

Resolved further, That we hereby declare it to be the sentiment of this association that no water should be diverted from the San Joaquin Valley for any purpose, but that all its waters should be retained in the valley for the irrigation of the arid lands therein, and that in every attempt at water control the two valleys should be considered as a whole, so that the development of one may be supplemental to the development of the other.

We therefore instruct our secretary to forward a copy of these resolutions to each Member of Congress.

A PRIMER OF FACTS-THE MODESTO AND TURLOCK IRRIGATION DISTRICTS.

First. Organized under the Wright law. 1887; the first in California. Second. Area, 258,000 acres. Now irrigated, about 150,000 acres. Third. Source of water, Tuolumne River, diverted at the La Grange

Second. Area, 258,000 acres. Now Irrigated, about 150,000 acres. Third. Source of water, Tuoiumne River, diverted at the La Grange Dam.

Fourth. Amount of water filed on, 9,500 second-feet. San Francisco generously proposes to allow the districts 2,350 second-feet. Fifth. Total cost of irrigation works and upkeep to date, \$4,500,000. Sixth. Estimated area outside the districts which could be irrigated from the Tuolumne River, about 200,000 acres.

Seventh. Development resulting from Irrigation:
Increase of population in Stanislaus County in the last decade, 135.8 per cent, which is only second to Los Angeles County.

Shipments of agricultural products, \$3,000,000; dairy products, \$3,000,000; butter, 1912, 6,894,225 pounds, leading all the California counties. For the past year the butter product was \$,292,100 pounds, 58 per cent more than was ever produced in any other California County. This development is attributable to irrigation alone.

Flighth. Our present prosperity would be threatened and all further development of the districts and adjoining lands would be prevented by taking the so-called "flood waters" to San Francisco.

Ninth. The proposed measure does not protect the districts because:

(a) It cuts down our water to one-fourth of our legal appropriation, while San Francisco adds 50,000 acres to our area without providing any additional water therefor, and prohibits the development of any lands outside the districts (of which we have some 200,000 acres) contiguous to the Tuolumne River.

(b) It allows the districts to buy stored water only under onerous conditions.

(d) It may establish, if the "restrictions" are removed (as now threatened by San Francisco), another power monopoly in the valley, by which the people would be not served but exploited.

Tenth. The undisputed fact that the Sacramento Valley has six times the water that the San Joaquin Valley has, and equally as good, is sufficient to show that San Francisco should go to the northern valley for her supply.

Eleventh. Finally, we ask that

# "BEWARE OF THE MAN WHO SNEERS AT SENTIMENT."

"The board of Army engineers is of the opinion that there are several sources of water supply that could be obtained and used by the city of San Francisco and adjacent communities to supplement the near-by supplies as the necessity develops. From any one of these sources the water is sufficient in quantity and is, or can be made, suitable in quality. While the engineering difficulties are not insurmountable, the determining factor is one of cost."

THE HETCH HETCHY "GRAB"—THE PRESS OVERWHELMINGLY AGAINST IT—AN INCOMPLETE LIST.

Outside of San Francisco, these newspapers and other organs of public opinion are on record against the plan to destroy the great Hetch Hetchy Valley by flooding it and to deny the public the free access it now has to the northern half of the wonderful Yosemite National Park, it being confessed that the city can get its supply elsewhere "by paying for it?"

now has to the northern nair of the wonderful Yosemite National Fark, it being confessed that the city can get its supply elsewhere "by paying for it":

Sierra Club, of San Francisco; Society for the Preservation of National Parks; American Civic Association; American Scenic and Historic Preservation Society; American Alpine Club; Mazamas, of Port-

land, Oreg.; Mountaineers of Seattle; Chicago Geographical Society; New York Zoological Society; and others.

Former United States Senator George F. Edmunds writes from Pasadena of "the despoilment of the Hetch Hetchy Valley in the interest of the commercialism of San Francisco water men, etc., without any at all adequate reason of real public interest and necessity. I do hope that the sober sense of Congress will refuse to authorize the accomplishment of this scheme."

N. B.—Editors are respectfully requested to send the names of other papers opposed to the scheme (with articles) to R. U. Johnson, 327 Lexington Avenue, New York.

BEFORE THE UNITED STATES SENATE—IN RE HETCH HETCHY GRANT—SHOULD THE CITY OF SAN FRANCISCO BE GIVEN THIS GRANT, NOT-WITHSTANDING THE FACT THAT IT HAS AN ADEQUATE SUPPLY? [Excerpts from a report to the honorable the Secretary of the Interior and the Advisory Board of Engineers of the United States Army by the Spring Valley Water Co., San Francisco, Cal., Oct. 31, 1912.] (By F. C. Herrmann, chief engineer Spring Valley Water Co., Oct. 1, 1912.)

THERE WILL BE ENOUGH WATER FOR SAN FRANCISCO UNTIL BEGINNING OF NEXT CENTURY.

The purpose of this report is to present an estimate of the safe dependable amount of water that may be delivered daily to the people of San Francisco by the complete and intelligent development of the present resources of the Spring Valley Water Co., and to determine at what time in the remote future additional water supply must be obtained

time in the remote future auditional water supply must be obtained elsewhere.

These resources extend over large areas adjacent to the region of San Francisco Bay, and although the most important of these will be operated in harmony, each assisting the other to the best advantage, they are divided into the following component parts for the purpose of analysis in this report:

ı	Peninsula system:	Square miles.
ı	Bay slope, nearly complete	35
ı	Coast stream, reserved for future supply	65
ı	Alameda system, partially developed	620
ı	Coyote system, reserved for future supply	115
	Alviso-Ravenswood:	
	Walls nartially daysland	Subtamanaan

Lake Merced, nearly complete Subterranean 

Peninsula system:
Crystal Springs, San Andreas, and Pilarcitos Reservoirs, as at present developed...
Additions from coast streams and West Union 19.5 Creek \_\_\_\_\_ Lake Merced\_\_\_\_

Total \_\_\_\_\_
Alameda system:
Calaveras \_\_\_\_\_
San Antonio \_\_\_\_\_
Sunol gravels \_\_\_\_\_\_
Arroyo Valle and Livermore gravels \_\_\_\_\_\_ 74, 20 60, 14 8, 92 11, 36 55, 38 135, 80 Total \_\_\_\_\_Additional for metropolitan district: 210.00 Coyote system \_\_\_\_\_\_Alviso and Ravenswood\_\_\_\_\_

42,00 Grand total\_.

Total surface storage.

If no rain whatever fell for over 14 years, this storage would be sufficient to care for the present needs of the city during that time.

Extensive underground storage, which is the source of subterranean waters at Pleasanton, Sunoi, Alviso, and Ravenswood, is not included in the above, and in the aggregate furnishes storage in excess of the enormous storage of the surface reservoirs.

MR. MULHOLLAND'S ESTIMATE OF THE WORK OF F. C. HERRMANN. [P. 232b—Same report.]

[By Wm. Mulholland, chief engineer Los Angeles Aqueduct, and J. B. Lippincott, assistant chief engineer of the Los Angeles Aqueduct.]

There has been presented to the Board of Army Engineers, as requested by the Secretary of the Interior, a number of reports dealing with the resources of the Spring Valley Water Co., of which one report by Mr. F. C. Herrmann, chief engineer of the Spring Valley Water Co., fully discusses the available water supply owned and controlled by the company.

THOROUGH STUDIES MADE OF ALAMEDA SYSTEM,

Mr. Herrmann was born and raised at San Jose and received his engineering training at Berkeley, all practically in the district under discussion. His professional work has included official water-supply

investigations for the Federal Government, and responsible charge of extensive hydraulic works. He is surrounded by a corps of engineers, some of whom have spent years of study and observation of the Spring Valley system. To assist this regular engineering organization, he has called in consultation Dr. J. C. Banner, vice president of Stanford University, and Dr. A. C. Lawson, professor of geology of the University of California, both eminent geologists, especially familiar with the bey regions through years of geological study thereof. He also has had in consultation the engineering staff of J. G. White & Co., Mr. George G. Anderson, an eminent engineer of Denver; Capt. A. O. Powell, chief engineer of Seattle; and Gen. Hiram M. Chittenden, retired, of the Corps of Engineers of the United States Army. Gen. Chittenden has specialized for years on the hydrography of arid America. All of these gentlemen, together with ourselves, have gone over the districts under discussion in the reports in detail with Mr. Herrmann, and have conferred with him both in the field and in the office. The deliberations have been extensive, and a mass of data has been compiled by Mr. Herrmann and his assistants, which is presented in their reports. It therefore follows that the conclusions reached by Mr. Herrmann are worthy of respectful consideration, and should be given weight in reaching final judgment.

Mr. Herrman has presented a report which is a clear and concise review of much detailed matter contained in several appendices and many maps and diagrams, which are referred to therein. It is not in the nature of a report produced under high pressure in the short period of two or three months' time by one who is a nonresident and but briefly familiar with Pacific-coast conditions and the ordinary sources of our domestic water supplies, covering one-third of the second largest State in the Union, involving estimates of construction cost running into staggering figures and unprecedented plans, but is rather the finding of men who have

SAN JOAQUIN RIVER.

The San Joaquin River is one of the largest rivers in California. It serves a catchment area of 6,000 square miles, carrying to the San Francisco Bay all the waste waters from that portion of the Sierra Nevada Meuntains lying south of the Calaveras River.

Nevada Mountains lying south of the Calaveras River.

ALWAYS AVAILABLE FOR DISTANT FUTURE.

It lies about 20 miles east of the Livermore Valley, and at such time in the remote future, when the needs of San Francisco shall have become equal to the safe dependable yield of the resources of the Spring Valley Water Co., an almost unlimited supply of water may be readily obtained from this source.

By pumping and conveying only 20 miles, this water may be delivered into the Livermore Valley, whence it may be filtered by the unlimited natural filtration gravels and conveyed to the city of San Francisco.

CONSUMPTION OF WATER.

Consumption of Water.

The average daily consumption of water in San Francisco for the year 1911, as indicated by the records of the Spring Valley Water Co., was 37.7 million gallons daily.

During the last few years the consumption has increased at the average rate of about 1,500,000 gallons daily per annum. For many years the future requirements for San Francisco have been the subject of careful analysis and thought by all investigators of the water supply of this city, and many elaborate compilations and deductions have been made. These results are based upon estimates of increased population and of industrial activity, and at best can be only approximations.

In estimates of the future consumption of water, it has been customary to allow 100 gallons per capita per day, though in his report on "New York's water supply" Mr. Freeman estimated that with proper inspection and meters on all taps, from 42 to 67 gallons per capita per day would be ample. Similarly, in 1904, Mr. Dexter Brackett, chief engineer of the metropolitan water district of Boston, in his report on "Measurement, consumption, and waste of water," said that the quantity actually required for all uses in the Boston district was 55½ gallons per inhabitant per day, and that all use above that amount was waste.

We believe that an allowance of 100 gallons per capita per day is a liberal one. At this rate of consumption the 210 million gallons daily of the Spring Valley Water Co. available for the city under complete development will serve a population of 2,100,000 people.

PLENTY OF WATER FOR METROPOLITAN DISTRICT.

If we take in addition to this amount that additional quantity available for the metropolitan district from Spring Valley Water Co. sources of 42 million gallons daily, making a total of 252 million gallons daily, and apply it at the rate of 100 gallons per capita per day to Mr. Freeman's estimate of the future population of the metropolitan district, as given on page 76 of his report above referred to, we find that water available from the Spring Valley Water Co. resources alone will serve this metropolitan district until the year 1975.

Further, if to the ultimate development of the Spring Valley Water Co. we add that amount of water available from other sources, serving, or available to serve, other communities within this metropolitan district, as indicated by reports for the city of San Francisco, it will make a grand total of about 350 million gallons daily, which, when applied to Mr. J. R. Freeman's population curve at the rate of 100 gallons per capita per day, will supply this metropolitan area until about the year 2000.

year 2000,

[Excerpts from a report by Hermann Schussler, consulting engineer Spring Valley Water Co.]

Spring Valley Water Co.]

THE SAN JOAQUIN RIVER AS A PUTURE ADDITION.

This latter source which I investigated from time to time since 1877 and early came to the conclusion that by using the Alameda system with its unparalleled gravel deposits acting as natural filter systems, and with its compact artesian and reservoir system lying just to the west of the San Joaquin Valley, through which latter from four to six months in spring and summer of each year a vast amount of water passes on its way from the melting snows of the Sierras to the sea, the natural next step of a successful water supply having the present Spring Valley system as a basis would be to make the flood waters of the San Joaquin River tributary to the filter and reservoir systems of the Alameda Creek region, and to the Crystal Springs and San Andreas reservoirs, on the peninsula.

Owing to the subterranean natural filtering system of the company in both Livermore and Sunol Valleys, and owing to the facility with which the waters from the San Joaquin could either be passed through the natural filtering process in Livermore and Sunol Valleys direct, or passed partly through the filtration and artesian process of the Livermore Valley and partly (with or without the waters from Arroyo Valle Reservoir) into the San Antonio Reservoir, and from there to and through the company's natural filtering process in operation in

Sunol Valley, this proposed addition of the San Joaquin during its freshet stage offered to the owners of the Spring Valley Water Co.'s properties on the Alameda system and on the peninsula a most effective, rapid, and economical addition to its work with a supply capacity of almost unlimited extent.

Before proceeding with a description of the proposed method of developing the San Joaquin branch of the system, and also before touching on the proposed preliminary development of the Alameda system and its ultimate development in connection with the San Joaquin River as a feeder, I shall quote from the records of the United States Senate Land Committee, before which, on February 12, 1909, I briefly referred to the San Joaquin River as the nearest additional large source of water supply to be connected with the present and proposed works of the Spring Valley Water Co.

I shall here quote from page 70 et seq. of the official record of this meeting in Washington in 1909:

"Hetch Hetchy reservoir site. Hearing before the Committee on Public Lands, United States Senate, on the joint resolution (S. J. Res. 123) to allow the city and county of San Francisco to exchange lands for reservoir sites in Lake Eleanor and Hetch Hetchy Valley, in Yosemite National Park, and for other purposes.

"Question by Senator Smoot, is the Sacramente River feasible?

"Answer by Mr. Schussler, Yes; but it would be very expensive, You would have to go a long way. But there is one source probably as good as any, except that the quality has been doubted, and that is the San Joaquin River. Now, the San Joaquin River lies right to the east of part of our headwaters on the Alameda Creek system. I discouraged our directors years ago not to make any investment whatsoever in the Sierra Nevada, because it was too expensive, and because we could get all the water for many decades nearer home; but I have even the Sierra Nevada, because it was too expensive, and because we could get all the water for many decades nearer home; but I have const streams on

"Mr. SCHUSSLER. One hundred and fifty million to two hundred million gallons a day.

"Senator Newlands. Would that be less expensive?

"Mr. SCHUSSLER. Very much less: but nobody could handle that comfortably unless they had the big filtration works that we have.

"Senator Newlands. Are those filtration works antoral or artificial?

"Mr. SCHUSSLER. Natural filtration works. We simply ran a tunnel underneath this prehistoric lake bottom, which is filled with gravel, and which tunnel we have lined with concrete, and put in a good many thousand 15-inch galvanized pipes, and through this tunnel we draw now (early in 1909) 14,000,000 gallons a day, which we can increase easily to 80,000,000 or 90,000,000 gallons a day.

"Senator Newlands. And the filter bed would be adequate to all requirements for the future?

"Mr. SCHUSSLER. We can filter 150,000,000 to 200,000,000 gallons daily."

daily."

As will be seen from the above quotations, when on the subject of filtering the San Joaquin water I alluded solely to the proposed enlargement of the filtering capacity of the present Sunel filter beds, in order not to draw undue attention to the proposed extensive additional use of the San Joaquin water in the gravel beds and sinks of the Arroyo Mocho and Arroyo Valle, in Livermore Valley, which sinks are tributary to the company's artesian belt near Pleasanton, in the westerly portion of Livermore Valley, and especially to the landholdings on and over this artesian belt, to which the Spring Valley Water Co., since the above-mentioned meeting of the Senate Land Committee, on February 12, 1909, has added many thousands of acres of artesian and other water-bearing land.

[Excerpts from a report on the water-supply system of the Spring Val-ley Water Co., San Francisco, Cal.]

[Excerpts from a report on the water-supply system of the Spring Valley Water Co., San Francisco, Cal.]

(By H. M. Chittenden, brigadier general, U. S. A., retired, member American Society of Civil Engineers, and A. O. Powell, member American Society of Civil Engineers, and A. O. Powell, member American Society of Civil Engineers, and A. O. Powell, member American Society of Civil Engineers, and A. O. Powell, member American Society of Civil Engineers, and A. O. Powell, member American Society of Civil Engineers, and A. O. Powell, member American Society of Civil Engineers, and A. O. Powell, member American Society of the Start Science and a large part is densely timbered. Considerable tracts still belong to the Government. A vast majority of the citizens of San Francisco undoubtedly have no conception of the extremely rugged character of most of these watersheds nor of their adaptability to the purposes of gatnering water.

In the matter of scenic attraction, let those who are entranced by the beautiful pictures of the future Hetch Hetchy as drawn in Mr. Freeman's report—and they are not overdone—make an excursion through the Spring Valley properties, particularly in the Pilarcitos Valley, and they will find an exquisite beauty of scenery such as very few localities enjoy. The future development of the system is full of magnificent possibilities in this respect—possibilities that would be enjoyed by a thousand to every one who might visit the Sierra.

Because of the general roughness of the country, and particularly of the ground on which the city of San Francisco is located, the cost of delivering water under proper pressure to all portions is necessarily much greater than where the water can be pumped from an inexhaustible near-by source under practically uniform heads for the whole city, as in Chicago and Buffalo. The serious feature of this Sierra proposition is the large addition which it will make to a cost of service already unavoidably high.

The Spring Valley development involves no such increase. It

#### SUMMARY OF CONCLUSIONS.

There is no substantial reason to believe that the consumption of water in San Francisco County will exceed 92,000,000 gallons daily by 1950, or 235,000,000 gallons daily for the five bay counties, apart from

There is no substantial reason to believe that the consumption of water in San Francisco County will exceed \$2,000,000 gallons daily by 1950, or 235,000,000 gallons daily for the five bay counties, apart from the supply from private wells.

The three main divisions of the Spring Valley system—the peninsula, the Alameda, and the coast streams—by careful development into a single unified system, are capable of a dependable supply of over 200,000,000 gallons daily.

By resort to the company's other sources and to the San Joaquin River the supply may be indefinitely increased.

So far as quantity is concerned there is no present necessity for a resort to the Sierra, and will not be for an indefinite period to come. If there were no Sierra, San Francisco could still face the problem of a future water supply with perfect equanimity.

As to quality, the Sierra supply is softer, but hygienically no purer and is less palatable as drinking water than the Spring Valley supply. The extra cost of the Hetch Hetchy system will virtually be the price paid for a gain in the quality of softness.

Whatever source is ultimately adopted, the great reservoir group proposed by the Spring Valley Water Co. should be made the mainstay of the system as a certain insurance against disaster.

The question discussed in the foregoing report is not that of the sufficiency or desirability of the Hetch Hetchy supply in itself, but that of the present necessity of such an outside vicinity. The result of the investigation has been to show that such a necessity does not now, and possibly may never, exist; that the supply would be in the nature of a luxury rather than a necessity, and a very costiy luxury at that.

If this finding is correct it involves a question of public policy of fundamental importance. The backbone of California's greatness is the agricultural development of her great central basin—a development impossible without water. Its claim upon the mountain supply is a preeminent one. Metropolitan needs are perhaps supreme, and if San

[Excerpt from the report of the president of the Spring Valley Water Co., San Francisco, Cal., for the year ending Dec. 31, 1908.]

Since October, 1865, Mr. Hermann Schussler has devoted his able brain and his untiring energy to the creation of a water supply for San Francisco. Over 40 years he has spent in economically securing the best reservoir sites, the best sources of supply, riparian rights, watersheds, rights of way, and everything that could suggest itself to a most able engineer. It does not require an expert on value to realize that property thus acquired must have enormously increased in value. The actual expenditures for holdings and plant during the past 40 years amount to over \$28,000,000. Jannary 30, 1903. City Engineer Grunsky estimated its value at \$28,024,389; since then capital expenditures amounting to \$2,589,167 have been made. Large elements of value were eliminated by Mr. Grunsky, and since his original estimate of value was made in 1901, there has been a very great increase in basic and other values. The value of the property is estimated at from \$48,000,000 to \$52,000,000.

The policy of the management that prevailed some years ago of keeping the resources of the company from public knowledge is in some degree responsible for existing conditions. That policy exists no longer. Representatives of civic associations, representatives of the public, and all those who desire will be afforded opportunity to learn for themselves all matters pertaining to the water supply of San Francisco. When knowledge takes the place of prejudice and misrepresentation, we have full confidence that the existing water supply of San Francisco will become a source of pride to the community, which will then pay the tribute to Mr. Schussler that his work deserves.

The plant is now developed to supply San Francisco with 35,000,000.

deserves.

The plant is now developed to supply San Francisco with 35,000,000 gallons per day, and this delivery can be quickly increased to more than 40,000,000 gallons per day. The water division can now supply more than 50,000,000 gallons per day, and the resources now owned by the company can supply a demand of a daily delivery of more than 125,000,000 gallons. On March 1 of this year a supply of water sufficient to last the city for four years was available without another drop of rain during that period.

AVAILABLE SOURCES OF WATER SUPPLY FOR SAN FRANCISCO AND THE BAY CITIES OTHER THAN THE TUOLUMNE RIVER AND THE HETCH BAY CITIES OTH HETCHY VALLEY.

HETCHY VALLEY.

A statement of facts, supported by official records published by the United States Government, the State of California, and engineers of prominence, against the granting of a permit to the city of San Francisco to carry away the flood waters of the Tuolumne River and the use of the Hetch Hetchy Valley.

It is the purpose of the Water Users' Association of the Modesto and Turlock Irrigation Districts to show in this paper that there are sources of water supply for the city of San Francisco and the bay cities other than the Tuolumne River and the proposed storage in the Hetch Hetchy Valley; that one at least of these sources, namely, the McCloud River, offers all of the advantages which it is claimed are possible by the Hetch Hetchy supply, not excepting the cost of development; that there can be no valid objection from any source to the use of this alternative supply; that the lands adjacent to the Tuolumne River, which must receive water from that river and from no other source to enable the development of the highest economic duty of the land in accordance with the theory of true conservation held by the United States Government, can be so developed, rather than being condemned to hopeless aridity by the proposed depletion of the water supply by the city of San Francisco.

It is, in other words, vital to the natural resources which depends

It is, in other words, vital to the natural resources which depend upon the Tuolumne River for their irrigation water that the Raker bill, now before the Senate of the United States for passage, granting to the city of San Francisco the right to store the flood waters in the Hetch Hetchy Valley and maintaining a draft of 400,000,000 gallons daily, be defeated. No adequate investigation has been made by the Govern-

ment of these lands, and it would be the desire of this association that such investigation be systematically and thoroughly made before definite action be taken in the Senate, in order to ascertain the total economic waste which must result by permitting the city of San Francisco to obtain its water supply from the Hetch Hetchy Valley.

The Newlands bill calls for an annual appropriation for 10 years of \$5,000,000 for the purpose of lessening the flood damage to lands, which, if protected from flood, would become highly productive. In other words, it is for the purpose of reclaiming land and adding to the available arable land, developing natural resources.

While the Government is, on the one hand, conserving and adding to land for cultivation, increasing the productive wealth and presperity of the country by reclaiming desert lands at immense cost, a bill is proposed, and has already passed the House of Representatives, which shall deprive hundreds of thousands of acres of high-grade but semi-arid land of the water which would come to it by virtue of its situation, thereby maintaining its condition of uselessness by giving the water away.

A large part of these lands, which can not be watered if the water is

water away.

A large part of these lands, which can not be watered if the water is given to San Francisco, are suitable for high-grade orange culture. (Report of Symes, Means & Chandler, agricultural engineers, San Francisco, Cal.) The importance of this industry may be appreciated when it is known that 40 per cent of all of the oranges raised for commercial consumption in the world are grown in California. The entire acreage in oranges in California is about 200,000 acres. Here, then, it is proposed in the Raker bill to discard orange-growing land in area almost equal to the entire cultivated acreage in California.

#### HIGHEST USE OF WATER,

Whether the city of San Francisco shall have better right than the lands which must in the future use this water or go without is beside the question. The terms of the Raker bill admit that the present irrigation districts have a prior claim to that of any city. This should apply equally well to all lands depending upon the Tuolumne, when it is an unquestionably proven fact that the McCloud River, a tributary to the Pit and eventually the Sacramento River, offers an abundant supply without the necessity of storage, a quality equal or better than that from the upper reaches of the Tuolumne, at a less cost for installation and maintenance, and with no possibility of robbing any section of the Sacramento Valley of water which may now or at any time be needed for irrigation.

The real objection of giving away the flood water of the Tuolumne and the Hetch Hetchy storage to San Francisco is the broad principle of true conservation.

and the Hetch Hetchy storage to San Francisco is the broad principle of true conservation.

A comparative description of the various water sources is given in an independent review of the San Francisco water situation by Rudolph W. Van Norden, a consulting engineer of San Francisco, who is thoroughly familiar with water-supply conditions in California. This article was published in the Journal of Electricity, Power, and Gas, December 28, 1912. In it are described the various plans for the Hetch Hetchy development as outlined by Grunsky, Manson, and Freeman, together with description and costs of the various alternative sources which have been proposed. An except from this article, which follows, states clearly the availability of the McCloud River, with costs of development arrived at by the writer himself:

# THE M'CLOUD RIVER SOURCE.

response to the writer himself:

THE M'CLOUD RIVER SOURCE.

The McCloud has its source largely in the snowy slopes on the eastern and southeastern side of Mount Shasta. The watershed covers an area of about 675 square miles and is included in the Shasta National Forest Reserve. About 70 per cent of this area is patented land, and much of the territory is heavily timbered.

The nature of the ground surface is porous, due to volcanic formations, and the run-off passes into the ground, only to emerge in many beautiful springs to form by their cascades the McCloud River. The purity and quality of this water are described by Mr. Freeman in his notes in appendix 13 of his report. Probably in no source in California could the water be purer or less liable to contamination.

In the presentation of this project (by the San Francisco engineers) another "straw man"—this time wet straw—seems to have been set up. But the weakness of the presentation seems to have drawn the attention of the honorable Secretary to its coyly hidden possibilities. The objections which have been offered were the great distance, the possibility of contamination from lumber camps, the greater cost, the taking of water necessary for irrigation, and the lack of power-development possibility on the line of conduit.

The proponents of this project made a survey during 1911 from the point of diversion to Suisun, or practically the point where the conduit would follow the Hazen plan of filtration of Sacramento River water to San Francisco. This survey contemplated a pressure pipe line and gravity conduit down the Sacramento Valley and the development of enough power on the line of aqueduct to pump the water into Oakland and San Francisco. This survey was probably as accurate and thorough as any survey made by the city. When the Freeman plan for bringing Hetch Hetchy water was developed, doing away with the need of pumping, a similar plan was conceived by the McCloud proponents, and it was discovered that by constructing a high-line canal water could be

new plan from Hetch Hetchy, which does not follow the original surveys.

This line, after crossing the Pit River, passes through a tunnel and crosses the Sacramento River above Redding. It then follows the contour of the west slope of the Sacramento Valley, mostly in gravity concrete lined and covered conduit, to a point west of Williams. From here a tunnel carries it to the Capay Valley, and after following this valley for several miles another tunnel takes the conduit to the Berryessa Valley, thence by another tunnel to the eastern slope of the Napa Valley, thence to Carquinez Straits. Crossing the straits in a pressure tunnel, the hydraulic grade is again assumed, and the conduit terminates in the proposed Pinole and San Pablo reservoirs. From these a pressure tunnel and pipes carry the water to Oakland and San Francisco. The low cost of this project in comparison with all of the others, including the Hetch Hetchy, is due to the large amount of gravity-flow canal and the relatively smaller amount of tunnel and pressure pipe.

The length of this aqueduct from the diversion to San Francisco, including the supply for the east bay cities, is about 216 miles, or 16 miles longer than the Hetch Hetchy aqueduct for the same purpose. In

casual reference to this project people have figured the railroad distance from San Francisco to Pit, which figures to 280 miles, which has probably given rise to the idea of great distance. The proponents of the project either own or have options on 98 per cent of the patented lands, which include the lumber camps. The acquisition of this area by the city gives immediate control to habitation and sanitation. The remaining 2 per cent consists of a game preserve and the summer homes of a few persons, two of whom at least are most respected citizens of the metropolitan water district.

The cost of this project, including all rights and lands, has been estimated by the writer on the unit cost basis adopted in the Freeman report, and is, for a full development of 400,000,000 gallons delivered to San Francisco and east bay cittes, \$54,624,550, which is \$20,000,000 less than the summary of costs given in the Freeman report for the Hetch Hetchy system fully developed. A preliminary development for one-half of the water delivery, or 200,000,000 gallons, would cost about \$45,000,000, or very nearly the figure recently given out by Mr. Freeman sor a like amount from Hetch Hetchy.

This project has the disadvantage of a bay crossing, but a service line down the east side could readily be made to connect with the Spring Valley's lines. This would, of course, apply to all of the more northerly group of projects.

The United States Reclamation Service has calculated that the entire available supply from rivers emptying into the San Joaquin Valley would be sufficient to cover all of the irrigable land of that valley about 20 inches in depth, while the same calculation concerning the Sacramento Valley would cover the irrigable land of that valley would probably decrease the volume of the Sacramento River. Those of the west side will partially irrigate the irrigable lands of the west side. The use of 400,000,000 gallons by the city would probably decrease the volume of the Sacramento River at the head of Irrigation not more tha

#### SACRAMENTO RIVER FILTRATION PROJECT

This project, which has been ably reported by Mr. Allan Hazen and forms Appendix 12 in the Freeman report, contemplates pumping from the Sacramento River near Rio Vista with an auxiliary pumping station at Antioch, carrying the conduit through the Contra Costa Hills, through Oakland, thence across the bay to San Francisco. An alternative line passes southward and around the head of the bay to avoid the crossing. The project includes a very complete modern filtering relant.

tive line passes southward and around the head of the bay to avoid the crossing. The project includes a very complete modern filtering plant.

The necessity of going so far for the water is to insure the procuring of fresh water, the fresh-water zone having a variation of about 35 miles. This conduit from the pumps to San Francisco would have a length of 51 miles. It is proposed to develop at first with a nominal capacity of 75,000,000 gallons daily. The cost of this installation is summed up for 75,000,000 gallons, \$24,000,000; for 120,000,000 gallons \$42,000,000; and for 180,000,000 gallons, \$60,000,000. These figures are not made on the basis of the Hetch Hetchy figures and may be higher in comparison. From them is, however, seen that for the full supply necessary any of the gravity systems would be cheaper. Further than this it is doubtful, as a whole, if the people would ever accept a filtered supply if a mountain source could be had. It is interesting to note in this connection that many experts favor this plan and claim that the water will be most satisfactory. In the recent hearing Dr. Rupert Blue, than whom no higher sanitary authority probably lives, is reported to have made the statement that he would rather have Sacramento River water filtered than Hetch Hetchy unfiltered. By adopting the alternative plan of a lower gravity line, skirting the western edge of the Sacramento Valley, and pumping water into San Francisco by power generated along the line of canal, the costs given in the above article, on the McCloud supply, would be very materially lowered, due to the elimination of many tunnels necessary in the high line.

There have been many misleading and elusive statements on these.

San Francisco by power generated along the line of canal, the costs given in the above article, on the McCloud supply, would be very materially lowered, due to the elimination of many tunnels necessary in the high line.

There have been many misleading and elusive statements on these costs by the San Francisco-Hetch Hetchy interests, for the purpose of making the Hetch Hetchy costs appear smaller than they really are, to those who are not familiar with the subject. To illustrate just where those most active in the San Francisco fight stand on this cost matter the city engineer of San Francisco, Mr. M. O'Shaughnessy, recently made this statement, that he had raised the figure of \$38, recently made this statement, that he had raised the figure of \$38, recently made this statement, that he had raised the figure of \$38, recently made this statement, that he had raised the figure of \$38, recently made this return in his report of 1912 for the initial delivery of 50,000,000 gallons daily into San Francisco, to \$65,000,000 gallons daily, he had raised from \$77,000,000 to \$103,000,000. Mr. Marsden Manson, former city engineer for San Francisco, stated, in an address before the Commonwealth Club of that city, that under the terms of the Raker bill "the city of San Francisco could not obtain a continuous flow of 400,000,000 gallons daily, and in any event the project could not be carried out as cheaply as other sources.

The Army Board's estimates of cost were made by Mr. H. H. Wadsworth, assistant engineer in the San Francisco office of the United States Army Engineers, rivers and harbors branch. Mr. Wadsworth's estimate of the McCloud Aqueduct, which was 25 per cent lower than Mr. Freeman's estimates for the development of the Hetch Hetchy, was arbitrarily raised 10 per cent by the Army Board of Engineers without giving any reason for so doing and without any similar raise in his Hetch Hetchy estimates.

At the recent convention of the counties development board, beld on November 7, 1913. at Hanford, a paper was submit

THE MERITS OF THE M'CLOUD RIVER AS A SOURCE OF SUPPLY FOR SAN FRANCISCO AND THE BAY CITIES.

At the hearing before the congressional committee on the Raker bill, now before Congress, to grant the city of San Francisco the right to use the Hetch Hetchy Valley as a reservoir site, according to press reports, statements were made by the representatives of the city that the Army board's report shows the cost of construction of the Hetch Hetchy project to be \$20,000,000 less than the McCloud River or other sources. This is not correct and is not borne out by the report. On pages 22, 23, 24, 25, and 26 of the Army board's report they say:

## M'CLOUD RIVER.

"The McCloud River is a branch of the Pit River, which itself is a tributary of the Sacramento. McCloud River rises on the southern and southeastern slopes of Mount Shasta. It flows in part from glacters and in part from large springs. The water is clear, cold, and palatable. The inhabitants of the valley drink it at any point and consider it of first-class quality. At some times of the year, said to be for only short intervals, it assumes a milky appearance. This seems to be due to a small tributary, Mud Creek, which at times carries considerable lava sand. On the day of the inspection by a member of the board Mud Creek was carrying a large amount of this sand and the river was quite milky in appearance. It is not thought that this affects the hygienic qualities. It seems probable that by damming Mud Creek and forcing the water to percolate through the soil this sand could be held back, or the water could be confined in a reservoir and allowed to settle. The minimum discharge of the McCloud River being about 1,200 cubic feet per second, or 770 million gallons daily, the flow is ample without storage.

"The rights to the flow of the McCloud River are claimed by the Mount Shasta Aqueduct Corporation, represented by Mr. D. P. Doak, Mr. Doak has offered to build the aqueduct or to sell the rights claimed by the corporation he represents to the city, though the offer is indefinite, being based on the estimated saving in cost over the Tuolumne project. The latest offer of the corporation proposes only selling its rights. The corporation further proposes to deed to the city so much of the land it owns within the watershed above the dam as might be the source of future contamination. This is understood to be the cut-over forest lands, which can be secured at a relatively small cost. The owners of the large individual holdings (summer residences and clubs) would doubtless readily subscribe to any regulations which might be adopted to prevent contamination of the water supply. A considerable portion of the watershed lie

"The city of San Francisco presented unfavorable reports on this source, and it is further unfavorably commented on by Mr. John R. Freeman. The reports are not, however, either comprehensive or complete.

"Mr. Freeman dwells upon the possibility of infection of the water. With a large part of the watershed owned in fee by the city and another part within the national forest proper policing should present no great difficulties, and additional protection. While be given by the proposed storage reservoir north of Berkeley. These would be no power development under the plan submitted, though possibly some could be obtained investigated.

"The withdrawal of so much water from Sacramento River might at at times affect navigation and irrigation, as the total low-water discharge at the city of Sacramento is only about 6,000 cubic feet per second. Navigation could be provided for notwithstanding the withdrawal of the water, but at considerable expense. While it is thought that in time most of the waters of the valley of California will be needed for irrigation, the Sacramento Valley is better provided with water than is the San Joaquin Valley, and has a somewhat higher rainfall. As far as known there are no irrigation rights which would seriously interfere with the use of the water by the city for domestic purposes.

"Furthermore, it is stated by the Mount Shasta Aqueduct Corporation that storage-reservoir sites can be found on the lower McCloud River by the use of which the low-water flow can be augmented, though the corporation has made no definite surveys. The city of San Francisco, since the hearing of November 25, has made further examination of the McCloud River and a reconnoissance survey of reservoir sites, and reports a possible site on the McCloud River with an available capacity of 53,100 million gallons.

"It was claimed by the city at the hearing before the Secretary of the Interior that an act of Congress approved May 9, 1906 (see Stat. L., 185), giving the Central Canal & Irrigation Co. it which company t

ditions attached to this grant or privilege, primarily designed to protect and conserve the interests of navigation.
"The estimates prepared for the board by Mr. Wadsworth are as

For 260,000,000 gallons daily\_\_\_\_\_\_ For 140,000,000 gallons daily\_\_\_\_\_

64, 951, 100 52, 500, 000 400,000,000 By discounting to 1914 the total is\_\_\_\_

"If the Dumbarton Crossing is used the costs are estimated at:

For 260,000,000 gallons daily... For 400,000,000 gallons daily, a total of...... By discounting to 1914 the total is..... \$65, 520, 700 76, 891, 900 58, 100, 000

For 400,000,000 gallons daily, a total of 76,891,900,000

"The difference between the estimates of Mr. Wadsworth and those submitted by the city lies almost entirely in the construction of storage dams on the McCloud River, which have not been considered by the board, and in assumed length of conduit. As previously stated, a storage dam on the McCloud River or adjacent streams is not necessary, either for the purpose of supplying sufficient water for the city or of purifying by storage. The flow in low water is sufficient, and purification if needed can take place in the reservoirs provided for in Contra Costa County. The only object of the reservoirs provided for in Contra Costa County. The only object of the reservoirs on the McCloud River would be to furnish water during low stages of the Sacramento for irrigation and other rights. As to length of conduit, the surveys are not sufficiently complete for accurate measurements. It is a question of how straight the line may be, or how necessary it will be to follow in and out on contours crossing the many streams and valleys. It is thought that the estimate of Mr. Wadsworth may be too small in that particular, and an increase of 10 per cent is adopted. This would make the total cost about \$71,000,000 for the bay crossing and \$84,000,000 for the crossing at Dumbarton Point.

"The city claims to foresee two great risks in the McCloud proposition, namely, the crossing at Carquinez Straits and at San Francisco Bay directly to San Francisco. While it is admitted that these crossings are difficult and that this project is in that respect inferior to those projects taking water from the tributaries of the San Joaquin and the Mokelumne, the crossings are not considered as impracticable. The crossing of the bay can be obviated, as above stated, by carrying the aqueduct across at Dumbarton Point, though with considerably increased cost.

"The first and main conclusion reached by the advisory board of Army engineers is as follows:

the Mokelumin, the crossings are not considered as impracticable. The crossing of the bay can be obviated, as above stated, by carrying the aqueduct across at Dumbarton Point, though with considerably increased cost.

"The first and main conclusion reached by the advisory board of Army engineers is as follows:

"The board is of the opinion that there are several sources of water supply that could be obtained and used by the city of San Francisco and adjacent communities to supplement the near-by supplies as the necessity develops. From any one of these sources the water is sufficient in quantity and is, or can be made, suitable in quality, while the engineering difficulties are not insurmountable. The determining factor is principally one of cost." cost of the Hetch Hetchy project, rully developed for a supply of 400,000,000 gallons per day, as set forth in their report, is \$77,367,400. Their estimate of the cost of the McCloud project, fully developed for a supply of 400,000,000 gallons per day, with bay crossing, is \$71,446,200, showing a saving in favor of the McCloud in actual cost of construction of \$5,921,200.

The figures of Mr. H. H. Wadsworth, assistant engineer of the board, show a saving of \$12,416,300, and those of Mr. R. W. Van Norden, a prominent and well-known engineer of San Francisco, who made an independent estimate of cost, finds a saving of \$22,743,000.

It should be understood that the plans submitted by the proponents of the McCloud project call for the construction of a reenforced concrete aqueduct of the highest type and class of permanent construction, developed at the beginning to its full capacity of 400,000,000 gallons per day, with a view of utilizing the surplus water for irrigation until the same is needed for domestic purposes, whereas the plans submitted by the city for the Hetch Hetchy project call for an entirely different class of construction, a large part of which is steel pressure pipe which will deteriorate and will have to be replaced at the end of 20 or 25 years. The St

maintenance.

If there was any merit in constructing the project in units, the plans for the McCloud project could be redesigned for the same class of construction proposed for the Hetch Hetchy project, which would admit of the proper comparison of the amount of money necessary to finance each project; but when the exceptional advantages which the McCloud project offers for the class of permanent construction as proposed (not possible under the Hetch Hetchy project) are considered, and the saving in operation and maintenance by such class of permanent construction, such a change in plans could not be considered.

Secretary Fisher, in passing on the application of the city of San Francisco, says, on page 6 of his review of the case:

"The plans and data submitted at the hearing before the Secretary of the Interior thoroughly demonstrate that the McCloud River is just as practicable and more economical a source of supply for the city of San Francisco than the Hetch Hetchy source, and can be utilized without interfering with any existing rights."

The report of the advisory board of Army engineers shows that the minimum flow of the McCloud River is over 1,200 second-feet, or equal to about 800,000,000 gallons daily.

That the quality of the water is good and pure and that it can be easily and economically maintained in its present good condition.

That it is not needed for irrigation, and that reservoirs are available which could be used, if necessary to overcome any interference with navigation.

easily and economically maintained in its present good condition.

That it is not needed for irrigation, and that reservoirs are available which could be used, if necessary to overcome any interference with navigation.

In fact, the report of the board of Army engineers absolutely sustains every claim made by the proponents of the McCloud River project.

A further exhaustive delineation of the injustice and failacy of giving the Tuolumne storage waters to San Francisco, in the face of the possibility of using the McCloud, is given by Mr. Clement H. Miller in an address before the San Francisco Center of the California Civic League, Excepts are taken from this address as follows:

"It is vitally important to the bay cities that this question be definitely settled in so far as the use of this vailey for their benefit is concerned and their public officials given a positive problem to settle instead of wasting time, instigated by misguided officials, on a foriorn hope, that the attorneys for the city admit would only invite years of litigation in case the grant to the city should be confirmed.

"Mr. M. O'Shaughnessy, city engineer of San Francisco, stated to his friends just about one year ago when appointed to the position of city engineer, that the Hetch Hetchy project was a hideous blunder, but that the city had gone so far that they could not back out and would have to go through, regardless of cost.

"The attitude of the city officials, for some unexplained reason, is one ottaily disregarding the possible benefit or detriment to any other locality in obtaining a water supply for their own use.

"In addition to this concession there are landowners to many thousand acres of land having riparian rights on the river below the limit of these two districts, whose, rights are in no wise protected or provided for except as they defend their rights by proceedings in the courts of the State.

"The data from which the assumed estimate of available water supply was calculated were records of stream gauging for a 17-year

"The Army board states that the supply 'if economically used will be ample for 473,000 acres of land, and the reasonable needs of the bay cities."

"That this statement is a positive error has been proven by the past two years' records.

"They have not even considered in their report the cost of maintenance, operating expenses, depreciation, or the capitalized value of possible losses of crops on lands deprived of water.

"Evidence was presented in the hearing before the Public Lands Committee of the House by Mr. Dennett, of Modesto, that food products to the value of \$100 per acre would be annually produced on the 200,000 acres of land that is admitted by Mr. PITTMAN, Mr. NEWLANDS, and Mr. PERKINS would be deprived of water. This represents an annual loss of \$20,000,000 in crop values or every year a loss equal to what is erroneously stated would be San Francisco's loss to get her water supply from other sources.

"The real issue to be considered in this matter is not whether 750,000 people or 200,000 acres of land shall be deprived of water, but whether 200,000 acres of land—that can not be farmed without water—should be deprived of water when an abundant supply can be obtained for the bay cities without it depriving one human being, one acre of land, or one river steamer of water necessary for their purposes.

"From the report of California's conservation commission for 1912 the following facts appear:

"Of the agricultural areas (San Joaquin Valley) which must remain without a water supply, roughly 1,400,000 acres can be considered as being west-side and south-side lands and the remaining 1,750,000 acres of San Joaquin Valley for which no possible water supply is at the present time known, even if complete storage of normal run-off were possible. (Page 229.)

"Tuolumne River is slightly larger than the San Joaquin. It is the only stream in the valley whose discharge is capable of irrigating its adjacent valley and plains land when fully utilized. (Page 227.)

"The mean annual run-off can supply the 473,000

EFFECT UPON NAVIGATION IN SACRAMENTO BIVER

It has been noisily proclaimed through inspired editorials in illadvised newspapers that the proposed draft from the McCloud River will lower the Sacramento at stages of low water to a degree which will interfere with navigation.

In the fifth annual report of the United States Reclamation Service (p. 94) a summary of the capacity of the available storage sites in the Sacramento watershed gives a total of 7,000,000 acre-feet, with a minimum available run-off which could be caught in these sites, but which is now wasted, of about one-half the storage capacity named. The Big Valley and Iron Canyon reservoir sites, at the head of the Sacramento Valley, are alone capable of storing 1,226,900 acre-feet, or five times the amount necessary to maintain the navigability of the Sacramento River under present conditions.

Storage on the McCloud is possible (report of Army board of engineers) to maintain the full flow to be diverted without Sacramento River storage and without altering present navigation conditions. Navigation can be easily and doubly protected and still supply San Francisco and the bay cities and all the possible irrigation requirement of the entire Sacramento Valley for all time and allow enough water to go to waste to irrigate 4,000,000 acres of land.

THE SPRING VALLEY WATER CO.

THE SPRING VALLEY WATER CO.

The Spring Valley Water Co., which has supplied San Francisco with water for the past 55 years, has carried on an extensive campaign to show and prove that it possesses resources which it can develop and add to its system to give an ample water supply to take care of the needs of San Francisco until the end of this century.

Full reports on the resources and possibilities of this system are on file with the Secretary of the Interior.

IRRIGATION REQUIREMENT IN THE MODESTO AND TURLOCK DISTRICTS.

IRRIGATION REQUIREMENT IN THE MODESTO AND TURLOCK DISTRICTS.
Statements of the economic requirement of water for the Modesto and Turlock districts and contiguous lands dependent upon the Tuolumne River for irrigation are often misleading and ambiguous. For instance, the amount of alfalfa which can be produced increases up to a certain limit by increasing the quantity of water applied to the land. (Bulletin No. 10, Department of Agriculture.) An extra foot of water, at a cost of \$4, may mean an additional ton of alfalfa per acre, almost a clear profit, as the equipment cost increases very slightly. Or, on the other hand, it would not pay to cultivate land for diversified farming at a cost of \$5 per acre in order to save 6 inches, or one-half acre-foot of water.

water.

Heroic measures would be required to cut down the supply of water far beyond the best economic results in lands subservient to the Tuolumne River, as advised in the report of the board of Army engineers, to 3½ and finally to 3 acre-feet per acre per year. This is readily shown in an article, from which excepts are here given, published in Engineering News, September 11, 1913, entitled "A study of irrigation heads in the Modesto and Turlock irrigation districts, California."

HEADS, CHECK SYSTEMS, AND OTHER PRACTICES IN THE MODESTO IRRIGATION DISTRICT.

Engineering News, September 11, 1913, entitled "A study of Irrigation heads in the Modesto and Turlock irrigation districts, California."

HEADS, CHECK SYSTEMS, AND OTHER PRACTICES IN THE MODESTO IRRIGATION INCOMES. TO SERVICE.

"The size of 'head' (volume of water in cubic feet per second delivered to each individual irrigator) and the length of time the head is to be used per acre of lard largator) and the length of time the head is to be used per acre of lard largator. The largator is the largator of the irrigation works. To secure definite information, the second of crual practice, Edwin Duryea, ir., of Duryea, Haehl & Gilman, civil and mining engineer, Humboldt Bank Building, San Francisco, Cal., sent an assistant engineer to make a study of actual practice in the Modesto and Turlock irrigation districts. This study was made near the close of the irrigation season of 1912 (observations in late July; report dated Aug, S, 1912) by P. C. Berkefeldt, assistant engineer, south San Joaquin irrigation district. The report was made for the benefit of the district its in amed, Mr. Duryea being chief engineer of that district. "Mr. Duryea has kindly sent us a copy of Mr. Berkefeldt's report, from which we have taken the following statements."

"The Modesto irrigation district is located in Stanisius County, is bounded by the Stanislaus, San Joaquin, and Tuolumne Rivers, and has an area of 176,210 acres, of which about 80,000 are under irrigation. Each district takes its water supply from the Tuolumne Rivers, and has an area of 176,210 acres, of which about 80,000 are under irrigation. Each district takes its water supply from the Tuolumne River through joint headworks near the boundary of Stanislaus and Tuolumne Counties. The soil in ench district is for the most part sandy, that in the Modesto district ranging from "almost pure sand to a fairly stiff clayey, sandy soil," and that in the Turlock district being even more sandy, but with spots of "almost pure sand" alongside of comparatively "stiff clayey, sandy soil,

was supplied to the check.

"With an actual head of 12.7 second-feet irrigating sandy soil, crop alfalfa, the time averaged about 76 minutes to the acre. This means an irrigation of about 15 inches depth. The irrigator estimated this as

from 4 to 6 inches depth. In this particular instance the irrigator will only be able to irrigate part of his land.

"With an actual head of 7.1 second-feet irrigating 1 acre, fairly sandy soil, crop alfalfa, the time for a fair irrigation—depth estimated by irrigator from 4 to 6 inches—averaged about 50 minutes. This means an irrigation of 5.8 inches.

"For fairly sandy soil and sandy soil, crop alfalfa, it is considered best by both irrigators and ditch tenders to use a larger head for a short length of time; the general opinion is about from 15 to 20 second-feet, but preferably between 18 to 20 second-feet, and a time limit of 20 minutes to a half hour per acre, covering the ground to a depth—estimated by them—about 4 to 6 inches. This is an actual irrigation of from 6 to 10 inches.

"With a smaller head than about 15 second-feet if the check is large or if the soil is very sandy, or if the ground is not checked up well—namely, the grade too flat and ground uneven, or if it happens to be a high check with respect to the ditch it is to be irrigated from—it takes too much water and too much time to cover the land.

"'It is considered best to flood the check quickly, and not allow the water to stand on it for any length of time. Wherever possible the best way is to shut the water off before it has quite reached the lower end of the check, gauging the water so that it will just cover the lower end of the check, gauging the water so that it will just cover the lower end to the proper depth with the excess water at the upper end of the check. This, of course, can only be determined by repeated trials, but the general practice is to give the land all the water they can with the head and time limit they have."

Stanislaus County needs all of the water supplied and which can be conserved in the Tuolumne River watershed.

To deprive the lands dependent upon this water is to violate the main principle of true conservation upheld by our Government and to eventually create an appalling economic waste.

That this is true,

Mr. GRONNA. Mr. President, as I said at the outset last night, no one is more willing to help San Francisco get a water supply than am I. In the arid regions of the West water is more valuable than any mineral; it is more valuable than gold or silver. Everyone who lives in the West recognizes that fact. or siver. Everyone who lives in the west recognizes that fact. There is no disposition on my part to in any way obstruct or deny San Francisco getting a water supply. There can be no possible reason why I should be opposed to any city in the State of California getting a water supply; but I have for six years been convinced that there are other available sources of water that will give San Francisco and all the bay cities years been convinced that there are other available sources of supply that will give San Francisco and all the bay cities abundant water, and that it will do no injustice to the people who live nearby. All the interest I have in this matter is to see that justice is done to the people of the State generally. It is true that the people of the United States have a claim upon the Hetch Hetchy Valley; it is public land; it is a public park; but if San Francisco or the State of California needs these waters if there is no other place to secure an abundant

those waters, if there is no other place to secure an abundant water supply, I for one am not willing to deny the people of that State the right to destroy the scenic beauty of the Hetch Hetchy Valley, valuable as I deem it to be to the people of the United

Mr. NORRIS. Mr. President—
The PRESIDING OFFICER. Does the Senator from North

Dakota yield to the Senator from Nebraska?

Mr. GRONNA. I have yielded the floor, Mr. President.

Mr. NORRIS. I simply want to ask the Senator a question, if he will hold the floor long enough to answer it. I know, of course, that the Senator is perfectly conscientious—that goes without saying—but I am impressed with his statement that he wants to do absolute instice to San Francisco. Now assuming wants to do absolute justice to San Francisco. Now, assuming that the Senator is right, that there are other places where San Francisco can get water, that she ought not to be allowed to dam the Hetch Hetchy, I want to ask the Senator, in all fairness and in his view that we ought to do justice, whether or not we ought not, either from the Government of the United States or from some other source, to pay back to San Francisco, if we do not permit her to use this water by building the dam, the money that she has expended in purchasing the land within that valley and the water rights that she was compelled to purchase under the orders of the officials of the United States?

Mr. GRONNA. I believe it would be only justice to do that. I do not know whether or not we could do it, but if we have the right I for one should be very glad to join the Senator in

doing so.

Mr. NORRIS. That is a point that has not been dwelt on by those who are opposed to the bill so far as I have heard.

Mr. GRONNA. If the Senator will permit me, of course I

would not be willing to pay the expenses the city of San Fran-cisco has incurred, because I imagine that the expenses of the city of San Francisco have been very large if we take into consideration the delegations that have been here for the past six or eight years. I am not saying this now with the idea of casting any reflection upon those people; I do not say that it

was from any sinister motive that they have been here.

Mr. NORRIS. I am glad to hear the Senator say that; and
I was satisfied that he would do so, because I think he will agree with me that, so far at least as anything I have seen or

heard is concerned, the persons who have been here represent-

ing San Francisco have taken a perfectly honorable course.

Mr. GRONNA. I believe so. They have so far as I know.

Mr. NORRIS. Nobody, of course, would expect the Government to pay those expenses; but what I am referring to is that San Francisco had to pay something over \$100,000 for land that was in private ownership in this park.

Mr. GRONNA. She had to pay \$150,000. Mr. NORRIS. She was compelled to pay a large sum of money to buy the water rights in adjacent lakes by order of the Secretary of the Interior. That money has been actually expended, amounting all together, I believe, to between

\$1,000,000 and \$2,000,000.

Mr. CLARK of Wyoming. Mr. President, I think the Senator from Nebraska has an erroneous impression as to some of this The city of San Francisco purchased lands within this park not at the suggestion of the Secretary of the Interior, but the city of San Francisco purchased those lands at its own suggestion, and she had lands both within this proposed reservoir site and outside of this reservoir site. The Senator will recollect, if he has followed the Hetch Hetchy proposition from the The first start, that the first proposal was nothing of this sort. proposal was simply a proposal from those desiring this reservoir site that San Francisco might exchange lands which she had outside for lands which the Government owned inside; and, of course, whatever expense she incurred was either incurred in that way or was incurred under the revocable permit which was granted by the Secretary of the Interior thereafter.

Mr. NORRIS. The Senator from Wyoming will certainly not deny that under the so-called Garfield permit San Francisco was required to purchase privately owned lands.

Mr. CLARK of Wyoming. Certainly.

Mr. NORRIS. I am not complaining of that. She ought to have been required to do so; but, of course, she could not take that land without compensation. She did purchase it; and nobody questioned her good faith in doing so.

Mr. CLARK of Wyoming. No.
Mr. NORRIS. Nor the order under which she did so. Now, if we refuse to permit her to build a dam, ought we not to re-

turn that money which she has expended?

Mr. CLARK of Wyoming. The Senator states the facts a little too boldly. The Garfield permit granted a revocable permit to make use of the Hetch Hetchy site under certain conditions. The one prime condition was that she should first improve another site.

Mr. NORRIS. She did that. Mr. CLARK of Wyoming. Oh, no.

Mr. NORRIS. Oh, yes.

Mr. CLARK of Wyoming. And if that site should prove insufficient for the needs of San Francisco, she should be allowed to take the other site. That is the Garfield permit. She has never yet determined whether or not that first site was sufficient.

But I want to say to the Senator in giving my answer, if it is of value to him, that if the refusal of the Senate to pass this bill should deny to San Francisco the right to use this site under the same terms that the Government has granted other sites and under the terms which were proposed by the parties in the first instance, I should say "yes" to the Senator, that San Francisco ought to be reimbursed; but this bill can be put in such shape now as to meet legitimate objections and still pass, giving San Francisco the full water supply she requires for her When we refuse to give San Francisco something more than she asked for or was contemplating in the original contract-I consider it a contract that ought to be carried out on both sides, although it was a revocable permit—if she now asks something more, or if she should want something more—and I do not think she will, because the legislation will go through in some form-she could hardly get it back on the claim of an excess beyond the original understanding of the parties.

Mr. SMITH of Arizona. Mr. President, this being the only opportunity I shall have without unduly delaying the needed legislation here pending I avail myself of it to briefly give the main reasons impelling me to support this bill. I would not now say a word, but content myself with a vote in its favor except for the reason that some of my western colleagues think, or seem to think, that my present attitude is inconsistent with the views I expressed on this floor when the Connecticut dam proposal was before us for determination. I voted and spoke against that bill for reasons then expressed. I shall vote for this bill for the reasons I shall set forth now, and those according me their attention will, I am sure, find no inconsistency

in my attitude.

Mr. NELSON. I want to suggest to my good friend from Arizona that the Senator from Massachusetts [Mr. Weeks]

had given notice of his intention to make a speech on the currency bill at this time.

Mr. SMITH of Arizona. I was aware of that fact and would not have intruded on his time without first having obtained his willing consent. He very graciously yielded to me, and I shall not abuse his courtesy by any undue consumption of time.

Mr. NELSON. Very well; I was not aware of that arrangement. Mr. SMITH of Arizona. Mr. President, I want to assure my colleagues from the Western States, and I want all other Members of this Senate to know, that I am in hearty and intense sympathy with the Western States in their just opposition to any intrusion of the Federal Government on their rights to use and make such other disposition of the nonnavigable waters as to the several States may seem meet or proper. The Federal Government has no ownership of these waters, and should have no control of them. In plain language it is none of its business what we do with our own property. The waters of a State belong to the State. The Government holds the lands through which the streams may chance to flow simply as pro-prietor and not as a sovereign. The Government holds no title to its lands which is in any way superior to a good fee-simple title held by the humblest citizen in the State.

The State laws governing the control and use of the nonnavigable streams in any State are equally binding on the Government and the smallest fee simple title in the hands of any citizen of the State. I shall never cast a vote here for any measure that in my judgment gives to the United States any measure of control or power over the nonnavigable waters of any State in this Union, or that will attempt to use or control or tax or burden any waters in any river, however large it may be, in excess of the Federal right to preserve the navigability of the stream. This was my contention in the Connecticut Dam bill, and to it I still adhere. I shall not detain you by an attempt at an analysis of the very plain distinction between the facts of the Connecticut case and the one now before us. It is enough to say that in the one case the Government claimed the right to collect a tax on the power generated by the waters of the State produced by private capital which confessedly improved the navigation of the stream. In this case it does no such thing nor does it attempt under the provision to do any such thing. That strikes me as difference enough. This bill does not contravene any right of the State, however hard and unconscionable a bargain it forces on the people of San Francisco. /Instead of injuring any valid right of any farmer or prospective farmer on any valley below the proposed dam, the city and its people are subjected to exactions extremely burdensome if not outrageously unjust. Like the victim on the road, these people have been held up, but like that victim they submit or endure still greater disaster. I shall vote for the Hetch Hetchy bill because I find nothing in it contravening any right of the State to the waters of the State. The State has already given its sanction to this use of the surplus waters of the river and San Francisco asks nothing more than the surplus. I shall vote for the bill because I personally know the necessities of the vast multitude of people around the bay for an abundant and pure supply of water for domestic use. I shall vote for it to relieve the people of that suffering and stricken city from the throat clutch of the Spring Valley Water Co., which has too long preyed on the prosperity of the city and which was unable in time of its dire disaster to afford it any protection from the destroying conflagration.

From the desolation of ashes, despair would have unnerved other hands and other hearts, but the invincible spirit of the West, undaunted and unafraid, reared a new and a greater city; but it has not, because it can not, by opposition here, protected

itself against a repetition of a like disaster.

Think of this, and pause before you further burden them with opposition born of a propaganda financed by venal, selfish interests which have persuaded so many good people, ignorant of every essential fact in this controversy, to petition you and me to preserve the beauty of the national park, forgetting or ignoring the wants and necessities of living men and women,

Mr. President, around the Bay of San Francisco are 800,000 people to be benefited by this bill. I can not listen with any degree of patience to the assertion that their absolute necessities must be subrogated to the desires of a few hundred families that might probably make homes in the valley below the proposed dam if somebody would build a dam whereby they could get the flood flow of the river. The full flow of the river under normal conditions is granted in this bill to the claimants of water for irrigation. The full flow of the river and all waters caught from floods and held in reservoir would not irrigate one in one hundred acres of the desert lands below this proposed dam. Yet you opponents propose that the crying wants

of 800,000 people shall be ignored in order that a hundred thousand acres might possibly be watered if somebody from somewhere would build this proposed dam for some settler from somewhere if he could be induced to come. Think a minute, Senators. If every drop of obtainable water should be saved by reservoir in this river and applied to the valley below, the farms created would be as a flyspeck on the face of the land-scape, equally entitled, acre for acre, with the others to every impounded drop of surplus water. And if on every farm of 40 acres thus created you should put some poor family from San Francisco who needs drinking and cooking water, you would not miss them in any subsequent census of the city.

not miss them in any subsequent census of the city.

Mr. President, it has been my good fortune to spend all my possible leisure hours amid the mountains and along the streams of our gloriously picturesque landscapes. Those who love its beauties more only have more capacity for enjoyment than I possess. This affection of mine for the beauty of nature leads me as nothing else could to sympathize with those thousands of people who have sent their protests against the destruction of the beauties of the Yosemite National Park. The only trouble is they do not know what they are talking about. Not ten of the thousands of protestants ever saw Hetch Hetchy. Not one in one hundred of them know where Hetch Hetchy is. Not one in fifty thousand of their descendants would ever see Hetch Hetchy if left in its present condition. The deluded, well-meaning souls, from their hasty petitions, seem to think that Hetch Hetchy is a part of the Yosemite Valley. None of them seem to know that it was five years after San Francisco secured its rights before Hetch Hetchy was added, by Executive order, to the Yosemite National Park. Hetch Hetchy has no more connection with the Yosemite Valley than the Yellowstone Park has with the Grand Canyon of the Colorado.

A clear lake covering the mosquito-haunted, sunburnt bottom of Hetch Hetchy, covering only a mere speck of 1,300 acres of land, would largely add to the beauty of the surroundings. But whether it did or not, that question becomes insignificant in the face of man's necessities. We all love the sound of whispering winds amid the trees, but the wail of a hungry baby will make us forget it for the while as we try to minister to its wants.

You lovers of nature from scenes so remote from this Hetch Hetchy Canyon will do well to give less attention to nature's beauties and more sympathy to the wants of men. Love nature all you please, but do not forget its crowning glory—man. If you lovers of God's handiwork, whose glories have been revealed to you in the chasms which the streets cut through sky scraping business blocks, will go a street or two away and feed a hungry family you will be engaged in a more humane and far more ennobling and God-serving business than in talking about and spending money to protect the beauties of landscapes 3,000 miles away, of which you have seen nothing, of which you have known nothing, and of which you have heard nothing, except through a propaganda forwarded and supported by selfish, designing people, who are using you for profits to themselves.

I am not charging that these protestants or any Senator on

this floor has been moved in this opposition except through the highest motives, but nevertheless I am fully persuaded that selfish interests have put up the money necessary for this wide advertisement of opposition. Who else would do it? The protesting farmers, through their representatives, agreed to the terms of this bill, and very wisely agreed to it, for in all the land there is not one irrigating farming community as fully protected as those who will enjoy the beneficence of this bill. Who is behind this opposition? In my deliberate judgment, after having for years had this matter before committees of which I was a member, the Spring Valley Water Co., a private monopoly, has been the mainspring turning every wheel of the machinery; the land speculator below the dam, who expects to reap great profits from now worthless land if this scheme shall fail; the owners and promoters of the other impractical schemes for supplying water to San Francisco in case this bill can be defeated in this body; the electric plants; the gas plants owned, maybe, by private monopolies who will be injured in the liberation of the people from their exactions—all this horde of selfishness and greed and avarice have combined against this beneficent measure. Who else had an interest in the defeat of this bill? Every vested right of every farmer is abundantly protected. Every one of them agreed, as I said before, to its provisions until they were stirred by influences the object of which they did not understand to this new-born opposition. What state-ments were made to them we do not know, but we find no difficulty in conjecturing.

And all this opposition in the face of the fact that the whole flow of the river is secured to them and no possible injury under this bill can be done them.

San Francisco must spend an enormous amount of money to carry out the purpose of this measure, and you know as well as I know that these people would not spend this money unless they needed the water and needed it very bad indeed. They have not only amply safeguarded the vested right of every water claimant on the river, but have gone still further in that it is provided that power shall be furnished at prime cost to those farmers in the valley below for pumping water to the surface for irrigation. There is no other earthly possible chance to irrigate these unreclaimed lands at a reasonable price than that offered to the very farmers actively but unwittingly opposing this measure. The lovers of nature opposing this bill know nothing about the facts, and seem to care as little about the human issue in the case. We can respect their purpose by excusing their ignorance and then proceed to do justice to human necessities regardless of their love of unseen land-scapes.

Mr. President, I have said this much in hasty explanation of my proposed vote. It rests on my desire to serve humanity, to do right to my fellow man. I love trees, but I love men more. I love beautiful landscapes, but I love relief from human want far more. To give to a million people a necessary of life and in so doing violate no right of any other person is a duty so evident, an action so imperative, that my earnest support is gladly given to this bill. I must not close without assuring my colleagues who oppose this measure that I am not insensible to an opposition based on the ground that this measure recognizes, in their opinion, the right of the Government to interfere with the State in a matter within pure exclusive State control. I agree fully with them if the case presented that aspect; but it does not.

I thank the Senator from Massachusetts for his courtesy in permitting me to trespass on his time, and apologize for consuming as much as I have.

## BANKING AND CURRENCY.

Mr. NELSON. Mr. President, I ask that the Hetch Hetchy bill may be temporarily laid aside, and the banking and currency bill laid before the Senate, to which the Senator from Massachusetts [Mr. Weeks] desires to address himself.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. WEEKS. Mr. President, before I take up the particular phases of the pending bill which I have selected for discussion this afternoon I wish to refer briefly to the resolution which the Senate has been discussing two hours a day during the past five days, because I have some evidence which, if I had had the time, I should have submitted during the consideration of that resolution,

resolution.

One of the points which has been made by Senators has been that there was urgent need that the currency bill be passed, because the banks of the country were not responding to business needs, and therefore there was a falling off in general business. The inference to be drawn from this statement is that the falling off in business was due entirely to delay in passing the currency bill and to the action of the banks throughout the country.

It has not seemed to me that that was a sufficient reason for the falling off in business. It is true that there has been a decline in general business. The returns of our clearing houses throughout the United States for the week ending November 29 showed a falling off from the corresponding week last year of 6.9 per cent in the total volume of clearings.

The difference between good business and indifferent if not bad business is measured by not more than 5 per cent change in the volume of clearings of the banks. Here is a decline of 6.9 per cent without any other reason than the probability that business has been affected by various matters which are now pending.

I believe Senators on the other side who have been advancing this as a reason for early consideration of the currency bill will find, when the currency bill is passed—and I hope it may be passed soon—that it does not and will not affect the general business of the country as they anticipate, because the currency bill is not going into effect for months. We are not going to feel any effects from it for at least six months, even if that were the sole reason for the decline in business. My judgment is, however, that the decline in business is due to a variety of causes—to the tariff bill which has been passed, to the prospect of corporation legislation, to the delicate foreign situation in which we are involved, and many other matters which have

quite as much bearing on the volume of business to-day as has

the consideration of the currency bill.

To bear out this statement I wish to call attention to a statement made by the junior Senator from Ohio [Mr. Pome-RENE] on the floor of the Senate the other day, which brought this matter directly before the Senate and the country. Senator from Ohio said:

A prominent note broker advised an Ohio manufacturer as follows:

"The large banks in the large cities have not been buying any paper since March and have advised country correspondents to make themselves just as liquid as possible, and stay so, in order to meet provisions of the bill. In consequence we are absolutely at a standstill."

I take it that the inference the average man would draw from that statement is that the banks of the country are not loaning generally. There are two ways in which banks provide for their loanable funds—one, loaning directly to their customers; the other, loaning to outside borrowers when they have surplus moneys which their ways outside the polynomials. have surplus moneys which their own customers do not require. It is the second manner of loaning to which the Senator from Ohio particularly refers, but even in that case I submit to the Senate that there is probably very little, if any, justification for the statement.

About a week ago I communicated on this subject with bankers in various sections of the country. Of course I could not do it in a great many cases, but I did in six or eight cases, and think their replies will be sufficient to convince the Senate that there is substantially nothing in that general proposition. For instance, here is a telegram from one of the leading

bankers in Kansas City, Mo., a man respected and followed by bankers and business men in that section of the country. He

Deposits here great amount less than one year ago; loans very much higher; in comparison, same date, deposits of this bank are two and a half millions less and loans seven hundred thousand more than one year ago. Our legal reserve one year ago, 38 per cent; to-day, 29. This will refute any such statements as are being made as to this part of the country, anyway.

Here is an extract from a banker in New Orleans—one of the best-posted men, I think, in the banking business in the United States. He says:

I am in receipt of your letter of the 27th instant, and, in reply, I beg to say that the banks throughout this section of country are not restricting credits on account of pending currency legislation, nor are credits, in fact, restricted at all, except in the sugar section, which has to face a reduction of 25 per cent in the tariff for the coming two years, with free sugar thereafter, and which naturally seriously affects the basis of credit on loans of that character. Every other class of business is receiving its usual and customary accommodation and the decilning tendency of business is, in my opinion, due more to tariff changes, affecting as it does, in addition to sugar, both rice and lumber, than to any other cause.

That letter is written by a good Democrat.

Mr. THOMPSON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Kansas?

Mr. WEEKS. I do. Mr. THOMPSON. I was interested in the telegram from Kansas City. Does the Senator feel at liberty to give the name of the sender?

Mr. WEEKS. Oh, yes. I have not authority to do it, but I have no doubt the sender of the message will be quite willing to have it included in the RECORD. It was Mr. Swinney, the president of the First National Bank.

Here is a letter from Mr. George M. Reynolds, the president of the Continental-Commercial National Bank, of Chicago. It is much too long to read in its entirety, but I wish to read an extract from it. He says:

The truth is there is an overexpansion of credit throughout the West, and this applies particularly to country banks.

We have to-day outstanding in loans to country banks and bankers which are our correspondents about \$26,000,000, all of which has been scattered amongst nearly 1,000 banks.

I will say that Mr. Reynolds testified before the Committee on Banking and Currency that his bank was the correspondent of 5,000 banks scattered throughout the country. seems that he is loaning to 1,000 banks, and loaning \$26,000,000 to them.

He goes on to say:

The liquidation which took place in New York and earlier in the year has not been followed to the extent that it should have been by the smaller institutions throughout the country, as is evidenced by the fact that our loans to our corresponding banks—which have averaged around \$25,000,000 since about the middle of May—are about \$10,000,000 higher than the average for the same period last year.

That does not look as if country banks were failing to respond to the demands of their customers; apparently not only are they responding up to their limit, but they are borrowing of this one bank in Chicago \$26,000,000, or \$10,000,000 more than they were borrowing last year.

Here is a letter from Mr. James B. Forgan, the president of

the First National Bank of Chicago, who testified before the

Committee on Banking and Currency that his bank had, as I recall, 2,000 corresponding banks. I shall not take the time to read the letter in full; but Mr. Forgan says, as a postscript to his letter:

Our loans to country banks are \$2,500,000 more than they were at the corresponding date of last year.

In other words, in both cases of those great Chicago banks they are assisting country banks to take care of their customer banks in the country to a greater extent than they were at the corresponding period last year.

Here is a letter from the president of a New York bank, whom I am not at liberty to name. Although it is not the largest bank in New York, it is a very good one. In this letter he says:

Taking, for instance, our own condition. Our discount line to-day is one million and a half dollars above that of the same date last year, while our deposits on the other side are about two and one-half millions less, showing that we are granting considerably more commercial credit on a smaller business than at the same time last year. Our discount line went to higher figures this fall than it has ever been. During the past two or three weeks we have purchased a large quantity of outside commercial paper, preparing for the period which is year by year somewhat dull with us—from the 1st of January to the 1st of April.

The National City Bank of New York issues a weekly circular which gives various data relating to financial conditions. its circular of this week it states that on December 6, 1912, the amount loaned by that bank to merchants and manufacturers not secured by collateral was \$39,140,000. On the 25th of November of this year, as nearly as possible the corresponding date, similar loans to merchants and manufacturers were \$59,-000,000, or \$20,000,000 more than they were last year.

I shall not take the time to go into an analysis of this statement, but I will say that it shows that a large percentage of this money is loaned to banks in the country which presumably are not able, from their own resources, to take care of their customers, and therefore are drawing on the city banks or their

reserve banks for help.

There is a falling off in business; but I doubt if there is any evidence which will substantiate the claim that it is due to any unreasonable hesitation on the part of the banks. Naturally a good and conservative banker, seeing these unusual conditions, believing there is a falling off in business, and learning from reports that the customer's business has been a poor one during the year and that his quick assets are less than they were a year ago, does advise caution. If he did not advise caution he would be a poor banker, and his stockholders would suffer as a result. But I think there is absolutely no evidence before the Senate that there is any concerted or other effort by the banks to prevent taking care of the business of the country in the best possible manner.

Mr. NELSON. Mr. President—
The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Minnesota?

Mr. WEEKS. I do.
Mr. NELSON. I have not so far this week called for a quorum or suggested the absence of a quorum, and I do not do it now for the purpose of delay. Inasmuch, however, as the Senator from Massachusetts is about to discuss the merits of the pending banking and currency legislation, I feel that it is important that as many Senators as possible should be present to hear his statement. Thinking, perhaps, that some Senators may be absent because of the fact that they think the Hetch Hetchy bill or some other matter is under discussion, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Minnesota suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst Bacon Brady Brandegee Bristow Norris O'Gorman Overman Owen Page Perkins Gore Smoot Stephenson Sterling Gronna Gronna Hollis Hughes James Johnson Jones Kenyon Kern La Follette Sutherland Bristow
Bryan
Burton
Chamberlain
Chilton
Clapp
Clark, Wyo.

Cummins
Dillingham
du Port Swanson Thomas Thompson Thornton Pittman Pomerene Reed Robinson Townsend Vardaman Walsh Warren Weeks La Follette
Lane
Lewis
Lippitt
McCumber
McLean
Martin, Va.
Martine, N. J.
Nelson Saulsbury Shafroth Sheppard Shively du Pont Fletcher Gallinger Goff Simmons Smith, Ariz, Smith, Ga. Smith, Md. Williams Works

Mr. SHEPPARD. I wish to announce the unavoidable absence of my colleague [Mr. Culberson]. He is paired with the senior Senator from Delaware [Mr. Du Pont].

Mr. KERN. I desire to announce that the senior Senator from South Carolina [Mr. Tillman] is detained from the Senate

by reason of illness. I will let this announcement stand for the

The PRESIDING OFFICER. Seventy Senators having answered to their names on the call of the roll, a quorum is present. The Senator from Massachusetts will proceed.

Mr. WEEKS. Mr. President, I am well aware that reducing a speech to typewriting does not bring, in its immediate effect, the best results, but the subject I am going to discuss is an extremely comprehensive one. If one attempted to discuss it without very careful preparation, he might ramble over much ground and take much time that would not be justified. Therefore it seemed to me wise and proper on my part to reduce to writing what I propose to say in a general way about some of the features of this particular bill. Later I shall hope to have an opportunity to discuss in some detail some phases which I shall not refer to here.

We are apt to feel that we are the most progressive country in the world and the readiest to adopt new and approved ideas. Yet in our banking legislation and practices and in our currency system we have lagged far behind all first-class nations. Within the last century, and in many cases in the immediate past, European nations and Japan have given their banking and currency systems a thorough overhauling. Some of them have changed two or three times within a com-paratively recent period, but they have all reached substantially the same conclusion-in providing a central bank in some form which issues all, or substantially all, the circulating medium of the country in which it is located; which rediscounts commercial paper under suitable conditions; finances the Government which gives it corporate existence; and in many other ways the plans are so similar that we may conclude that the technical and banking experience of the world has now reached the best obtainable methods. Our course has been Since the second United States Bank went out of existence, 80 years ago, the only changes we have made in either banking or currency legislation have been the result of some unusual pressure. The national-bank act was a war measure, resulting from conditions which existed at that time. The resumption of specie payment necessitated a long struggle and was an inheritance from the Civil War. The gold act of 1900 resulted from the campaign of 1896, which followed the panic and troubles of that period. The emergency act of 1908, known as the Aldrich-Vreeland Act, was forced by the panic of 1907. So that it may be truly said we have taken no advanced step relating to either our banking or currency systems which has not been forced by some unusual condition existing at the That does not mean that what has been done has not responded reasonably well to conditions as they then existed. In fact, in normal times our currency system has been efficient and our banking methods have in many respects responded to the needs of the country, and we have been especially wise in maintaining our independent banking system. But we have been sadly lacking in some essentials, and especially in having a system which would respond effectively in times cf stress. Briefly, the weaknesses in our system have been lack of coordination, inelasticity of our currency, and improper methods of treating our reserves. If we did not have a banking system, or could clear the slate and start anew, knowing the results which have been obtained elsewhere and taking advantage of the experience of those who have been experimenting in other countries, we could undoubtedly inaugurate a more perfect system than we have or are likely to get under present conditions. In making changes we must remember that the customs and practices of people must be respected and given consideration; that those parts of our system that have given good results should be preserved. It is not a question which should be taken up hastily or inadvisedly, but it should have the best thought of the best minds in our country.

We are in the position of the owner of an archaic building which when constructed amply satisfied all requirements, but changes in conditions necessitated its being pulled down and a modern construction erected in its place. This is not ordinarily a difficult operation. The owner employs a qualified architect; responsible constructors are engaged and the work goes on satisfactorily because there is sufficient data on which to base such an operation. But we have even a more difficult problem than that, because it is necessary for us to partially pull down the old structure and erect a new one without in any way stopping the operations which are being carried on within the structure. One of the greatest engineering feats, in my opinion, of our time has been the demolishing of the Grand Central Station in New York and erecting in its place the splendid structure which is now nearing completion. In that case if the engineer's could have pulled down, cleared the ground, and commenced to build

difficult. But it has been necessary to do this work without disturbing the operations of a great railway system, including the bringing in and sending out of almost hundreds of trains To do this without complicating or interfering with the scheduled operations of the road is, it seems to me, a wonderful accomplishment. I am informed that not a single person has been killed during this operation. We must pull down some parts of our present banking and currency system in erecting the new, and it is essential that this be done without interfering with business or causing any jar in the delicate functions with which we are dealing. It seems to me that the Hitchcock committee has come as near to accomplishing this, or in arranging a plau which will accomplish it, as is possible; and that a careful scrutiny of the bill will demonstrate the care which has been taken in this respect.

There has been no reason for haste in passing this legislation. For many years almost everybody has recognized that there were ample reasons why changes should be made. It has been frequently discussed in and out of Congress. The agitation in connection with the passage of the Aldrich-Vreeland legislation in 1908 and the work of the Monetary Commission have added to the interest and knowledge in this subject. I am not going to take the time of the Senate to discuss the report of the Monetary Commission except to say that, whether one agrees with the conclusions of the commission or not, it must be admitted that the agitation and education and information which went with its report and consideration, including the public discussions which took place at that time, have had a marked influence in fecusing public attention on this important question.

Last spring financial conditions in the United States looked troublesome. There was not an abnormal business or an abnormal demand for money, and yet the bank loans were well up to a point where it was a certainty that any further demand for accommodation would precipitate pretty uncomfortable times, if not a panic, and several times during the summer there were evidences of possible trouble, but these evidences were sufficient to insure a cautious policy on the part of banks, and this, with the gradual slackening of business which has been going on during the fall months, has left the banks of the country in much better condition. It has been perfectly apparent to anyone familiar with the course of business and banking arrangements that, notwithstanding the unusual demands for currency and credit which come in the fall months, there is not likely to be any difficulty and that we will go over the cropmoving period without any serious trouble.

I am not disposed to take from the House Committee on Banking and Currency, or from the House itself, or others who had to do with the banking and currency bill as it came to the Senate, such credit as is due them for having gotten together a measure which contains many sound and wise provisions, and yet the bill at that time was far from what it should be, and a majority at least of the Senate committee believed that this was the time when we should get the best legislation possible. It is an intricate and to many an uninteresting study, and it can not be expected that when men who have devoted their lives to it are uncertain about the course which should be followed in some particulars that men who have given the subject no study should hesitate about taking the time to inform themselves. Therefore it is not any reflection on the House to say that in the time that that body had the Glass bill before it, considering the amount of discussion which took place, it was simply impossible for Members to have understood the merits of many of the provisions of the bill or that it should have passed under a species of pressure a bill many features of which should be wisely studied and properly amended.

That is exactly what the Senate Committee on Banking and Currency has been doing, has insisted on doing, in fact, notwithstanding the unwise pressure and insistence which has been brought from time to time to urge early legislation. No member of the Senate Banking and Currency Committee would vote for the House bill as it came to the Senate without material amendment, and I believe there is not a Member of the Senate who will not admit that much benefit and knowledge has been obtained by that committee, which is reflected in the two propositions offered for consideration. Either one of them, in my judgment, is materially better than the bill as it came from the House. I think the one to which my name is attached has many features which ar superior to those in the other, and yet I can frankly and honestly say to Senators that, in my judg-ment, there is enough good in this legislation, however much one may dissent from some of its provisions to warrant its being supported. If this conclusion is sound, the insistence of the Senate Committee on Banking and Currency has not only been justified in getting wiser and better legislation, but there has been no without other complications it would not have been unusual or public condition which would have warranted or which necessi-

tated earlier action; indeed, in my judgment, this bill should now be thoroughly and carefully scrutinized, every phase of it should be debated, every doubt in the minds of Senators should be removed, every Senator should listen to the discussion, should ask questions, and should come to a conclusion on the merits of the many propositions involved independent of any fealty for any particular party or loyalty to any provision pre-sented by either of the two factions of the Senate committee, for this legislation may be the basis of our banking and cur-

rency systems for hundreds of years. You will hear complaints that business is falling off, that banks are husbanding their resources, that there is a demand for early legislation; and yet I can say to you that I have not had during the past three months a single communication of any kind, from any source, urging hasty action or criticizing me because I have been one of those who has insisted on the fullest deliberation and consideration. On the other hand I have received or have seen a large number of indications in the press and in personal letters commending the action which the Senate committee was taking. Business is falling off. It is natural that it should. We have been putting into operation a tariff law which, whatever may be its final effect, is sure to be disturbing to some degree. We have an unusually complicated and delicate foreign question in which the country is vitally interested. We have before us prospective corporation legislation which must necessarily be a disturbing feature in our business Any of these would be sufficient, operating singly, to affect business; operating together, they have been enough to bring about a marked diminution in the volume of trade, and it should not be charged that any delay in passing this bill has been the cause of its falling off, because there is little or no connection between the two.

It is not necessary to attack what has been proposed in the past in the way of banking and currency legislation in order to bring to bear sufficient arguments to warrant action at this time. Everybody whose opinion is of much value admits that we could have a better system than we have at present, and our energies should be used to get the best system obtainable; not to decry any other. I refer to this, because in his open-ing statement the chairman of the Committee on Banking and Currency took occasion to refer to the plan proposed by the Monetary Commission for the readjustment of our banking and currency system, at which time he repeated a statement which he has frequently made, that the bill was reported to Congress but no attempt was made to get action, although Congress was controlled by the political party which had had a majority of the commission. It is true that the measure was reported in January, 1912, but the Senator from Oklahoma knows perfectly well that it could not have been passed by the Senate at that time, even though there was a nominal Republican majority in this body, and he knows equally well that even if it could have been passed by the Senate that the House was controlled by the Democratic Party and that no bill of that character, which was based on a report made by a commission controlled by the opposite party, could have been gotten through the House of Representatives. Therefore it is idle to talk about no effort having been made to adopt this legislation. made because it would have been futile to have undertaken it.

Even now it will be difficult to find a thoroughly posted financial expert in the United States, and certainly not many in Europe, who will not agree that the plan proposed by the Monetary Commission was, in most respects, much superior to any legislation that we are likely to get at this time. I for one believe that to be the case, and yet I have not attempted to inject that particular plan into this consideration, have scrupulously avoided doing so, because I knew it would be without avail; that it would add another complication to a sufficiently trying situation. I am so strongly in favor of doing some of the things which are going to be done by the pending legislation that I do not want to inject any element which is likely to retard

or prevent early action.

It should not be forgotten, however, that 6 of the 16 members of the National Monetary Commission were among the leading Democrats in Congress at the time its report was made, including Senator Teller, of Colorado, who was then closing an unusually long and distinguished public career, and who stated in signing this report that he considered it one of the most, if not the most, important acts he had performed. The conclusions reached were the result of four years' study, and one of the greatest compliments to their soundness is the action of the House Banking and Currency Committee in taking bodily many sections and ideas from this report and incorporating them in the bill which we are considering. Too much reliance should not be placed on its having been condemned by the Baltimore convention of last year, for probably not one in a hundred of those who voted

to sustain the resolutions adopted there had ever read the report of the Monetary Commission, and it is well known that all Democratic platforms in recent years have been dominated by one whose financial theories have been unqualifiedly condemned whenever the people have had a chance to pass on them at the polls. Neither was it necessary to inject into this debate any charges against the action of the New York banks in 1907. There is sufficient reason for this legislation without drifting into the realms of fancy for others. In all probability the slurs against the big banks of New York are without a scintilla of reason, for men do not attempt to deliberately injure themselves or their finances unless they are fit subjects for an insane asylum, and they would have been such if they had been responsible for bringing on the conditions that existed in 1907.

Senators are sufficiently familiar with what transpired at that time to know that the panic of that year came about very largely from natural causes which had been accumulating for years and certainly had been apparent to most careful critics for months before the collapse took place. To attack bankers. and especially large bankers, and attempt to create prejudice against them and against their methods by such statements as the chairman of the committee has made is, in my judgment, both unwise and unfair. He will admit, as will every member of the Banking and Currency Committee, that those bankers who appeared before the committee at the hearings which have just terminated presented their evidence with all of the fairness and frankness that characterized other witnesses; that in a sense their testimony was invaluable to the committee, and there was not a syllable of evidence that they were trying to protect themselves or to protect the banking community against the best interests of the country at large.

Let us be fair and sane about these things. Stop this talk tending to prejudice class against class. There are probably just as many patriotic men in one class in proportion to their numbers as in another. When men are wrong or do wrong as individuals they should be punished without regard to their place in society, but to condemn a class or try to create prejudice against a class by making statements which can not be substantiated is fundamentally wrong and does not add anything

to the cause which he who makes them is advocating.

It is impossible to consider all of the important provisions in a bill of this character within the time limitations imposed by an address of this kind, or even a considerable part of them, in great detail, so I shall confine myself to a discussion of a few sections. If I have the opportunity, I shall discuss two or three paragraphs more fully when the bill is read for amendments.

At this time I shall confine my comments to the following

subjects:

reserve bank or banks and reserves. Federal reserve board. Application of earnings. Domestic exchange. Rediscounts and circulating notes. Bank-accepted bills. Who shall subscribe. Rate of discount and controlling the gold supply. Refunding provisions. Foreign branches.

BANK RESERVES. RESERVE BANK OR BANKS.

One of our great difficulties in the past has been lack of coordination among the banks. It is charged that there is such a condition of interlocking directorships and community of interests in banks that it is impossible under some conditions to obtain the credit which is necessary to carry out legitimate business arrangements. There may be instances in which credit has been denied to people for other than sound business reasons, but they are, in my judgment, so few, if they exist at all, that they are negligible. In fact, all testimony available goes to demonstrate the truth not only of this statement but, in additional truth and the statement of the stat tion, that banks are in active, vigorous competition not only in different parts of the country but in nearly every town in all sections where there is more than one bank. It is only when conditions get so strained that there is likely to be a general collapse that banks cooperate through the clearing-house associations. To overcome this condition the reserves of all banks should be made available to help out banks and sections which need assistance at any definite time. It can not be a difficult matter to understand why this is necessary.

Let me illustrate: We have in this country ten millions of men of a military age, who might be considered a military reserve. Without training or cooperation, however, they would be of little value, but if these ten millions were brought together and trained they would become the largest and most effective army the world has ever seen. Take another instance:

Suppose all the reserve water supply of this city, which is now collected in one reservoir so that it is available for fire purposes, should be distributed among the different houses of the city, each house having its proportion of the supply in a cistern attached to it; anyone can see how ineffective such a water supply would be in case of a great fire, while in its present form it answers every purpose of a perfect reserve. There is almost no difference between these two illustrations and the money reserves of the country; and it is the present imperfect disposition of reserves which this bill attempts to correct. Whenever we have gotten into financial troubles in the past, our remedy has been, and it has been the only remedy possible, to curtail credit. Each bank has tried to strengthen itself to enable it to take care of its local demands or the requirements of its customers; therefore it has refused to loan where loans were not absolutely necessary, and has especially urged its customers to restrict their business as far as possible, that it would not be necessary for them to borrow. is it necessary to do to correct this condition, so that the surplus resources of all banks shall be available to help out the individual bank or bankers in a particular section whenever they meet unusual strain? In order to determine this it may be necessary to consider in a little more detail what we have done in the past and in what way this policy has failed. Under our present law national banks in sections other than reserve and central reserve cities keep in reserve 15 per cent of their deposits, of which they are required to keep two-fifths in their own vaults; the balance may be deposited in the banks of reserve or central reserve cities. Reserve city banks are required to keep 25 per cent of their deposits in reserve, onehalf of which must be cash in their own vaults and the balance may be kept in central reserve city banks. Central reserve city banks are required to keep 25 per cent of their deposits in cash in their own vaults. There are substantial reasons for this arrangement and they all indicate in a way the desirability of a central reserve. As the law was originally passed, there was but one central reserve city—New York. Twenty-five years elapsed before provision was made for additional central reserve cities by allowing cities having more than 200,000 population to become such. Under this proposition Chicago and St. Louis became central reserve cities. It has been the policy of banks in all reserve centers to pay 2 per cent interest on the reserve deposits of other banks. This has led country banks and city reserve banks which have had an option as to whether they would keep in one case three-fifths of their reserves and in the other case one-half of their reserves in other banks, to send them to central reserve cities; and in the final analysis a large percentage of these reserves have found their way into New York banks.

Very largely the reason for these reserves going to New York has been that there is in that city a broad public market in all classes of securities, and it has been possible for the banks to readily obtain demand loans on these securities at a rate which in many cases—in fact, a majority of the time—has enabled them to pay 2 per cent interest on bank deposits and make a profit. When their correspondents have called on them for these deposits the process has been for the New York bank to call demand-collateral loans, and under the methods followed such a loan would be paid the same day. It is well known that this policy has created speculative activities, for when business It is well known that has been relatively quiet throughout the country, so that banks have not a demand from their own customers for all of their loanable funds, they have not only sent their reserve money to New York, but have loaned other moneys there through the banks or otherwise. In other words, easy money conditions have invariably led to larger deposits in New York, which have tended to increase speculation, and when the retrograde movement has taken place speculative activity has been crippled, frequently bringing about large sales of securities which have attracted the attention of the country, creating uneasiness in the minds of bankers and others, leading to an unusual and unnecessary withdrawal of deposits and reserves from the New York banks, sometimes causing a violent panic, as was the case in 1907. All of this trouble can be avoided or greatly modified as a result of this legislation. What we should aim to do is to get all of the reserves of the country where they will be available in protecting business interests without causing serious trouble in reserve centers. To do this I believe that it would be best to have one reserve bank, into which all reserves other than those held in a bank's own vaults should be deposited, and from which supply assistance could be diverted wherever needed. The Democratic Party has, however, resolved against a single reserve bank, so it may not be possible to limit the number to one; while I believe that any number over one will weaken the authorizing one bank this question would not trouble us, for system, I am well aware that if the banks to be established are

connected so that the reserves of one may be readily transferred to another, one of the objections to a number will be greatly lessened. There are, however, other objections, which at some other time I shall discuss; but at this time I want to simply emphasize my contention that if a number are to be organized, that number should be as few as possible.

The Hitchcock committee have decided on four, very largely because there are three central reserve cities, and if a reserve bank is established in each one of these, the ordinary course of banking communications will not in any way be disturbed; and it seemed to the committee that one should be established on the Pacific coast to care for the needs of that great and developing section.

In establishing this system we have provided that the reserves to be kept by member banks may be greatly reduced because of the discounting features of the bill, to which I shall refer a little later. Instead of banks in reserve and central reserve cities keeping 25 per cent of their deposits in reserve, we have provided that they may reduce this amount to 15 per cent. This we believe will be amply sufficient. Instead of country banks keeping 15 per cent of their deposits in reserve, we have provided that they shall keep 12 per cent; a part in each case must be kept in the bank's own vaults, a part in the reserve banks, and a third part is left optional with the banker; that the transferral shall be made at the rate of 1 per cent every six months, carrying out our general policy of very gradual changes in establishing the new system. The option as to location of a portion of the reserves is undoubtedly wise, because conditions surrounding member banks are quite different. If a member bank is located in a city where there is a Federal bank or a branch of a Federal bank there is no practical reason why it should keep any considerable part of its reserve in its own vaults. In fact, in my own judgment that element of the question could be left to the judgment of the bankers themselves, because they know how much reserve money they should have on hand to meet their own requirements. In the case of a country bank remote from a reserve center it would be necessary to keep a very much larger part than the amount which we have provided for in the bill. The deposit of the proportion required to be kept in the Federal reserve banks will mean the turning over to these banks in the course of three years of between \$350,000,000 and \$400,000,000, provided all national banks come into the system, and an amount nearly twice that if all State banks and trust companies come into the system. In addition to this fund the reserve banks will have a capital ranging from \$100,000,000 to \$200,000,000, dependent on the number of banks coming in, and the Government will have deposits aggregating about \$200,000,000. So that we shall have a bank with gold resources aggregating somewhere between \$700,000,000 and \$1,500,000,000, being the largest aggregation of gold in the world. Through this enormous reserve supply of gold we should be able to provide for the business needs of every section of the country

I have suggested that there was only one investment which could be made by reserve banks under present conditions for which there is a possibility of obtaining an immediate pay-ment. Under the new system we have provided that reserve banks shall rediscount for member banks commercial paper of a qualified character up to a limit dependent on the capital of the bank, and in that way at any time a bank may build up its reserves. By this transaction the reserve bank will obtain a short-time investment which will assist in enabling it to earn a reasonable return on its capital. In this respect the Hitchcock plan differs from the House bill or the Owen plan in that it compels reserve banks to rediscount for other banks having a suitable reserve and qualified paper up to the limit imposed in the law. In my judgment this is as it should be. Otherwise there is going to be constant friction and charges of favoritism in the relations between the reserve banks and member banks.

I think there is no danger in adopting this policy. more, I believe that the same rate of discount should be made by all of the reserve banks, for it will be remembered that only paper of a restricted class can be rediscounted, and I feel that it is unwise to allow a Government bank to rediscount for a borrower in New York, for instance, at a lower rate than another Government bank will rediscount for a borrower in It must be remembered that the only borrowers are the member banks, that the reserve board and the reserve banks have full knowledge of the financial condition of the member banks, and that any other policy than making the same rate of interest by the reserve banks means that we are not establishing a national system but a local system, and that borrowers in one locality are being given an advantage over borrowers in another locality. It goes without saying that if we were authorizing one bank this question would not trouble us, for at the same time. It must not be forgotten that in this class of borrowing-I am referring to the borrowing of member banks, not the borrowing of individuals-it will be claimed that individuals can borrow cheaper in the older sections of the country than in the developing sections. At this time that statement is correct, and undoubtedly to some degree it will continue to be true.

But making the same rate of interest for first-class paper at Federal banks will unquestionably reduce the rate which the borrower will have to pay to member banks in the newer sections of the country, bringing the rate down to substantially the level paid in other sections. This process will encourage borrowers to make a class of paper which can be rediscounted and will be of material assistance in making available the

resources of developing sections.

The question has frequently been asked why banks, especially reserve city banks, are willing to accept this change, for presumably they will lose a large percentage of their total de-posits. The answer is not a difficult one. In the first place, they will only keep 15 per cent of their deposits in reserve instead of 25 per cent as at present; the 10 per cent will be available to loan on commercial paper which commands a higher average rate than could be obtained on notes with collateral security. A record kept by one of the large New York banks for five years developed the fact that its stock-exchange loans had averaged 2.98 per cent interest. On these deposits it was paying 2 per cent. It was necessary to keep 25 per cent in reserve, so that the actual cost of the loanable money was 2.66 per cent, or a net return on these loans of thirty-two onehundredths of 1 per cent, out of which it must take the cost of conducting the business, including the proportional part of overhead expenses. When the reserve banks are relieved from the necessity of caring for the interests of their bank depositors it will be possible for them to go into local communities and take part in the banking requirements of those communities, as far as deposits and borrowings are concerned, in the same manner in which they would do such business in the locality where they are located. This will bring additional commercial deposits to the large city banks, which will loan direct to such depositors where in the past they have been forced to buy the paper of such borrowers or loan to the local bank, insuring a somewhat higher rate of interest and the benefits of an active deposit account.

The joint-stock banks of Europe average to make larger net returns than our banks doing a similar business of equal capital and resources, although the average rate for commercial paper in Europe is frequently 1 per cent lower than in this country. I believe that the general system which this bill provides will reduce interest rates throughout the country those in the newer sections to a greater extent than the older sections—and that this reduction will not only be made with-out impairing the prosperity of the banks but will, on the whole, increase the net returns on banking capital.

CHARACTER AND EXPERIENCE OF THE RESERVE BOARD.

One of the most urgent criticisms made by bankers to the bill as it came to the Senate was against the political character of the reserve board, and it is now urged by those who have not followed the discussions that this is a vital objection to the The personality of this board as the bill came to the Senate was distinctly political. It provided for seven members, three of whom should be the Secretary of the Treasury, the Secretary of Agriculture, and the Comptroller of the Cur-In other words, three-sevenths of the members were to be a part of the prevailing administration without any certainty that they would continue in office any definite time. Even assuming that all of these officers served a full term of four years they would hardly have the time to devote to this service and become familiar with the important questions which must necessarily come before such a board. As a matter of fact, however, they are or should be busy in administering the affairs of their departments or bureaus and the committee has acted wisely in eliminating the Secretary of Agriculture and the Comptroller of the Currency from the board.

I ought to say here and now. as to many of the features which I am discussing ir reports which have been made there is substantially no (rence, the members of the committee being in entire agreement; but I am giving the reasons why I think these propositions should be adopted and why they should have been made different from the provisions of the

The Secretary of the Treasury might also have been eliminated without, in my judgment, lessening the board's efficiency, but there are reasons applying to his retention which do not in the same degree apply to the other two. His duties have largely been along the lines of the work of the proposed reserve banks and of the

reserve board. Some of his duties may be materially lessened because of this change in system; and as he is the direct representative of the Government in connection with fiscal affairs, there is, I believe, sufficient reason why he should be included in the board's membership. Therefore now, instead of having three out of seven Government officials, we have by increasing the board to nine, one out of nine a Government official. The other eight have been provided for with the injunction that they shall be, as far as possible, selected from those experienced in commerce and banking. They should not be selected because they are Democrats or Republicans or belong to any other political party, but because they are the most experienced men

who can be found to fill these positions.

No one has contended in any bill under any conditions that bankers actively connected with the management of joint stock banks which are to be member banks should at the same time become directors or managers of a central bank or any reserve board. The difference of opinion between those who demand Government control rather than private control is more technical than real. No one has ever questioned the right or the duty of the Government to supervise the issuing of circulation; to provide against the possibility of counterfeiting; to see that paper of proper quality is provided; that circulation is issued in denominations suitable for the business community; that it should provide and control the mint, and should supervise the organization and methods of banks chartered under the Federal law and which are fiscal agents of the Government itself. It has been doing these things for many years and without complaint or criticism, and there is no desire on the part of anyone to materially or even relatively change such conditions; but what the public desires in the appointment of the reserve board and directors of reserve banks is technical knowledge, business experience, and personal character and integrity. been, and the fear will be until these positions have been filled, that there will be a great pressure for the places and that at best the appointing and confirming power may accept men of high character, but inexperienced in the technicalities and practices with which they have to deal. My own judgment is that there is much more danger to be apprehended resulting from the ignorance and inexperience of the appointees than from any other cause, and it is the purpose of the framers of the Hitchcock bill that only those who are experienced in commercial and banking affairs shall be given places on these They should be men who have shown their worth in boards. other fields and yet young and vigorous enough to take up the active work connected with this great undertaking. They should know general business methods, be familiar with broader questions relating to international trade, have had experience wherever possible in actual banking, and should be men as representative and of general recognized capacity in the business world as are appointees to the Supreme Court in the legal world. Only such men should be appointed to the reserve board, and if others are appointed the Senate should refuse to confirm them.

It almost goes without saying that these appointees should be absolutely free from private business and banking connections. What we want to prevent is the possibility of conflicting private with public interests, hence the provision that no man owning stock or holding a position as an officer in any banking institution shall be appointed to the reserve board; that provision might well have been extended to active connection with any business, because all of the time of the members of the board should be devoted to their public duties. Generally speaking, it is as essential to have banking experience on the reserve board as it is to have medical experience on a board of health or legal knowledge in an appointee to a judgeship.

If we have members of the reserve board suitably qualified, as I

have indicated, it will not make any difference whether they are appointed by the President or elected by the banks; they are not in those positions to represent the banks or any other than

the public interest.

# APPLICATION OF EARNINGS.

It is difficult to estimate the earnings of the reserve banks when in full operation, for they will depend largely on the number of banks. If we are to provide for 8, 10, 12 or more and the banks are to be limited in their investments to the terms provided in the pending bills, there is almost a certainty, in my judgment, that some of them will not be profitable. If, on the other hand, the number of banks is limited to four, they will represent such a large constituency, such diverse interests, and will be able to protect themselves from time to time so that they can provide for these interests and at the same time make

considerable surplus earnings.

The Hitchcock bill provides that 5 per cent shall be paid on the capital stock. This, I think, is amply sufficient considering

the fact that the dividend is cumulative and that the stock is not subject to taxation, either National, State, or municipal. It provides for the building up of a surplus of 20 per cent, which is wise, because if the bank makes a loss, which it should not do in many cases at least, there will be a fund against which the loss can be charged provided the earnings for that year are not sufficient to cover it.

The Hitchcock bill provides that excess earnings over and above its dividend, the operating expenses of the banks, and the proportion which will be set aside each year for the surplus fund, shall be divided between an insurance fund and the payment of the national debt; in other words, to the payment of the 2 per cent bonds. I am personally opposed to that provision which applies to the providing of an insurance fund. time I want to say that it is as legitimate a commercial function to insure a deposit in a bank as to issue any other form of insurance, but the rate of such insurance should be based on the character of the risk, as is all other insurance. The fund which will be provided in this case, whatever may be the regulations or arrangements made by the reserve board, is to apply to insuring the deposits in all member banks. Fundamentally that is wrong, and can not be made right by any course of reasoning. To take from a fund provided in this way moneys which really should go to the Government and insure all classes of deposits in all kinds of banks is simply saying to the average depositor; "Place your money where you can get the largest return on it and we will see that you make no loss."

It is legislating and providing against the folly of the unwise. It is placing a premium on careless and unskillful banking. It encourages the withdrawal of funds from conservatively managed banks where unreasonable rates of interest will not be paid and transferring them to banks which will pay higher rates of interest than conservative management warrants. It makes the same provision for the savings depositors that it does for the protection of the extremely prosperous who do not need protection. It does not in other ways differentiate between the character of deposits or the responsibility of depositors.

Later, when the bill is read, if I have the opportunity, I shall make further protest against undertaking such a policy. The balance of the net earnings of the reserve banks are to be applied to the payment of the Government's debt. I am entirely in sympathy with this proposition. For many years the sinking-fund provisions required by law have not been in operation, largely, I presume, because of the necessity of keeping outstanding the present national debt to furnish a basis for our circulating medium. In the future there is going to be no such necessity, and the wisest business policy which this country can adopt is to proceed to pay its national debt. Those of us who live in metropolitan districts are familiar with the fact that municipal indebtedness is increasing at leaps and bounds, and States are commencing to increase their indebtedness for various popular and some wise reasons. Nothing would make this Government as strong at home or abroad as to have it entirely without indebtedness and then institute and stick to a policy of paying as we go. Not only is this morally and financially right, but it is right from a military standpoint. Whether nations go to war in future is going to depend very largely on their financial resources. The fear of war is necessitating the maintenance of enormous and expensive military establishments, and yet no nation can undertake a war of considerable without being able to finance itself; and we would be in a doubly strong position if we were not only able to provide for our own needs but in many cases were able to prevent other nations engaging in warfare from the moral influence which would come from our great financial strength. It would be worth, in my judgment, many battleships to be sure that when the time of strain came we could provide unlimited funds for carrying on any necessary war.

Therefore, not only should this fund be set aside for the

Therefore, not only should this fund be set aside for the purpose provided in this bill, but other means should be found, such as using the entire surplus at the end of any fiscal year to gradually and rapidly reduce our debt. I wish it were possible to lay a special tax for such a purpose, and I am sure that it would be a popular and wise tax if the people of the country were assured that it meant the end of national indebtedness, except what may be incurred as a result of some most unusual trouble.

# COLLECTIONS AND DOMESTIC EXCHANGE.

As I have indicated, when banks are driven to cooperate on account of panicky conditions they do so through clearing-house associations, which provide a means for paying balances at clearing by using clearing-house certificates instead of gold or lawful money. These clearing-house certificates are based on collateral, ordinarily 75 per cent of the value of the security

being issued in a certificate, and they carry with them a guaranty of all the banks belonging to the association issuing them. Generally speaking, they have only been used to pay balances at clearing—that is, between banks—although in the panic of 1907 this course was materially deviated from in some sections. While the issuing of these certificates relieves the local situation, it has the effect of breaking down domestic exchange, which practically strangles business throughout the country.

For instance, during 1907, when the situation in the large centers had commenced to feel relief, the distress in many respects was added to by the inability of country banks to furnish their customers with New York or other reserve city exchange; so that if a purchaser in Texas had a bill to pay in Pennsylvania, instead of sending Philadelphia or Pittsburgh exchange he would forward his own check, which in the ordinary course would be returned to the bank on which it was drawn for collection. That bank would notify its Pennsylvania correspondent that it could not furnish exchange but would give the Pennsylvania bank credit for the amount of the check, to be remitted for later. The Pennsylvania seller of the goods may have needed that money in his business, but as his bank had not really received a return for the check, the bank in many cases was forced to make loans which further crippled its resources, and this condition throughout the country paralyzed trade so that we had long months of stagnation and extremely slow recuperation. This is the experience we have always had in the past under similar conditions.

Undoubtedly this particular phase of domestic exchange will be entirely remedied by the provisions of this bill, but I wish particularly to speak of the paragraph in the House bill which provides that checks and drafts on reserve banks and member banks shall be collected at par by reserve banks. This provision would in effect have taken from the banks of the country the collection and exchange business and would have imposed a burden on the reserve banks sufficiently large so that it would not have been necessary to have discussed the manner of disposing of surplus earnings.

The collection and exchange business of the country is enormous, its volume being little appreciated by those who have not had occasion to look into it. In reserve banks frequently 40 per cent of the force is employed in connection with this service. In many sections of the country—in fact, in all sections of the country—it is so conducted that it brings a profit to the bank. There was testimony submitted to our committee which indicated that in some sections a large percentage of the net earnings of the bank resulted from this branch of the business, in one case as much as 40 per cent of the net earnings being obtained from this source.

Furthermore, business has been conducted through the present channels so that the proposed change would have been extremely disrupting and might have brought about a serious stagnation. There is no reason to doubt that improvements can be made in the collection business. Frequently checks are not sent through the most direct channels, but are sent to the point where they are made by indirect ways on account of the desire of the sending bank to favor those banks which have good accounts with it. For this reason it often happens that collections take a day or more longer than they should.

Furthermore, I believe the evidence before the committee indicated that larger charges were being made in some sections of the country for this service than its character warranted; in other words, banks were imposing excessive charges on the local community. We have provided in the Hitchcock bill that under conditions which the reserve board may impose, which means rates, and so forth, that collection and exchange business may be conducted through the reserve banks, but it is intended that We have provided in the Hitchcock bill that under these charges shall be such that it will not destroy the business of independent banks; that in a way it will be a check on their manner of conducting the business and the charges which they will impose. My own judgment is that if all collections were made through reserve banks, making them substantially clearing houses, that it would eventually mean a saving to the commercial community; but to institute that policy at this time would be dangerous in its abruptness and would take from organized banks a business to which they are properly entitled if they conduct it expeditiously and impose reasonable charges. Further, by adopting the House provision we would very likely have driven from the national banking system a large percentage of the country national banks, and it should be the policy of this legislation, within reason, to impose such conditions that other banks will come into the system rather than to drive national banks out of it. CIRCULATION.

lawful money. These clearing-house certificates are based on collateral, ordinarily 75 per cent of the value of the security ple as to the difference between money and a circulating medium.

Even those in high official position and in many cases those who have been considering the general question of banking and currency for years fall to differentiate between the two. For example, the Secretary of State is quoted as having said: "The plan which the President now urges confers great advantages upon banks, while it preserves to the people, acting through the Government, all that is essential for the protection of the public. The notes are to be Treasury notes issued by the Government and loaned to the regional reserve banks. This is in harmony with the Democratic contention. There is no surrender of the Government's right to issue money." Money is a measure of value and a medium of exchange, and nothing which is not a measure of value can be money. No one now or at any other time has denied the Government's right to issue or rather to coin money. This function is provided for in the Constitution in the following terms:

To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

Congress has exercised this authorization by making our standard gold, a unit of which, the dollar, shall contain 25.8 grains, and we coin under this standard gold into coins having a value of \$2.50, \$5, \$10, and \$20. This is all the money we have in the United States. Our other forms of circulating medium are not money, because they are not self-redemptive. Gold certificates are issued simply for convenience. They are a warehouse receipt in effect, representing an equal amount of gold coin or gold bullion held by the Government. They would never be used if it were not more convenient to carry a piece of paper than a piece of metal, and they are not money, because they must be redeemed by the gold against which they are issued. Neither are greenbacks money; they are given a legaltender value by an act of Congress, but they simply represent the Government's promise to pay, and they would not be of any value if it were not for the solvency of this promise, which solvency is measured by the certainty of redemption in the only standard we have; that is, in gold. And in order to insure this certainty, in passing the gold act of 1900 \$150,000,000 of gold was segregated, forming a redemption fund against the \$346,000,000 of outstanding greenbacks. Neither are silver and silver certifi-cates money. They are in effect the "till money," or the loose change of the American people. Silver certificates are issued for exactly the same purpose as gold certificates, because it is more convenient to carry paper than metal, but their value depends upon the fact that they can be taken to the Treasury for redemption, where for each certificate an equivalent in silver dollars will be found in storage. But silver is not a standard of value, and its coinage has been stopped by law; moreover, the silver in a silver dollar is not worth a dollar, as fixed by our national standard; therefore if it did not have the stamp of the Government, which in effect provides that a silver dollar can be redeemed in gold notwithstanding the intrinsic value of the metal in it, it would not pass as a dollar. Neither are bank notes money; they are the notes of national banks issued against a like amount of the indebtedness of the United States held as security by the Government. None of these forms of circulation are their own redeemer, and most of their value is derived from the fact that they may be redeemed in gold on presentation. Gold itself is its own redeemer, because it does not make any difference whether the gold is in the shape of a coin carrying the Government's stamp or in bullion form. It is worth as much in one shape as the other.

One of the most difficult propositions with which we have had to deal has been the refunding of the 2 per cent bonds. These bonds have been sold to the national banks and used as a basis for circulation, the selling price being maintained at above par until very recently because they carried with them the circulation privilege. We have a conglomerate currency system consisting of about \$1,700,000,000 of gold and gold certificates; about \$550,000,000 of silver and silver certificates; \$346,000,000 of greenbacks; and about \$740,000,000 of national-bank notes, a total of something less than \$3,500,000,000, and it is the character of this circulation which has produced one of our greatest troubles in that it did not have elastic properties and that it did not respond promptly to the needs of trade. A correct monetary system would provide a circulation absolutely responsive to trade demands, which could be readily redeemed when the necessity for its use had expired. This would mean a banknote circulation based on the individual requirements of the banks' customers, with such provision made for redemption as would insure its certain withdrawal when the transaction for which it was issued had been closed. I shall discuss later this question more in detail, but it will be sufficient for me to say at this time that I am for many reasons opposed to the Government issuing the notes which this bill provides for, the most practical ones being that it is entirely unnecessary and that it

is technically incorrect. I ought to say, however, that, in my judgment, the security of note issues has never been more carefully provided for than in these bills, and whether issued as a Treasury note or a bank note is immaterial as far as the quality of the circulation is concerned.

To go back, however, to our currency needs. There is no elasticity in metallic money. We coin gold which is brought in for that purpose, so there is a gradual increase in our gold circulation. Silver coinage has been stopped by law and the issue of greenbacks is limited to \$346,000,000. Therefore the only circulation which we have which has any element of elasticity—that is, which may be retired in case it is not needed—is our national bank note circulation. But the low rate of interest carried by the bonds securing this circulation has prevented their finding a market except for circulation purposes, so that if banks found more circulation outstanding than necessary they have been unable to retire it because they could not find a market for their bonds. Therefore, as far as technically correct circulation is concerned, we have been unprovided, and this bill, in whatever form it is passed, will be an improvement in that respect.

The Hitchcock committee has provided that there shall be a reserve of 45 per cent in gold, held by the reserve bank, against this circulation, while the other plans provide 10 and 113 per cent less gold reserve. The Hitchcock plan provides that in addition to the gold reserve either commercial paper or refunding notes, or both, equal to the face of the circulation emitted shall be segregated to secure it. The provision as to reserves in the Hitchcock plan is made sufficiently elastic to meet unusual conditions. To establish a reserve with a fixed limit is simply going to perpetuate one of the worst elements in our present system. To change this we have provided that a tax shall be imposed against the issue of notes when the reserve is below the legal limit; that is, if it decreases to 42½ per cent, a tax of 1 per cent on circulation shall be imposed; if the reserve decreases to 40 per cent, a tax of 2 per cent shall be imposed; and that a similar tax shall be imposed down to a reserve of 30 So that, if the reserves reach that limit, in addition to the original rate of discount which will be charged by the bank, a tax of 6 per cent would be added. This tax is to be paid by the member banks in proportion to their rediscounts during that fiscal year. This is not strictly equitable, and yet it is the best adjustment that can be provided, as it compels the banks which are the beneficiaries of the system to pay the tax which unusual business conditions may necessitate.

As provided in the House bill, the elasticity of the currency would amount to an emergency currency not greatly differing from that provided in the Aldrich-Vreeland bill. My own judgment is that there is a redundancy of currency three-fourths of the year, and I base this conclusion on the fact that there is a constant stream of bond-secured circulation coming into the reserve centers and then being sent to the department for redemption. It is not retired, because the banks do not want to take chances in selling their bonds, even if they can find a market for them. Therefore it is sent out again to the banks originally issuing it, thus completing an endless chain. The 5 per cent fund which the law requires for redemption is frequently overdrawn. At the present time it is in that condition, and there are numerous cases of bundles of new bills which have been sent to banks in the country not requiring them, sent by those banks to their reserve agents to increase their reserves, the reserve agent, having no use for them, sending them in for redemption, and they come back to the Treasury in exactly the same condition they left it, the bundle never having been opened.

Of course it is not undesirable that there should be frequent redemption; that is what makes an elastic currency. In Canada, where the banks issue the circulation, it stays out, on an average, 29 days, and it must be remembered that Canada is a very large country territorially, so that if it were more compact quite likely the time which the circulation would remain outstanding would be even less. Their banks, receiving on deposit circulation issued by other banks, turn it in for redemption if it is profitable to issue circulation, emitting their own in its place. If, however, issuing circulation is not profitable, they pay out the notes of other banks. We are providing in our bill that these notes can not be used as reserves and that a bank receiving notes emitted by another bank shall send them in for redemption, under a severe penalty for not doing so. In my judgment, this will produce frequent redemptions and will make the circulation truly responsive to business demands. If. however, we were to continue the bond-secured circulation as at present and provide for the issuing of additional circulation of a different kind, it may be that the additional circulation would be put out as a result of an emergency and we would not, under ordinary conditions, have any of it in circulation.

bank issuing circulation against a 2 per cent bond makes a net profit of 3.18 per cent if it can loan its funds at 5 per cent. So it would be more profitable in ordinary times to hold 2 per cent bonds and issue circulation against them than it would be to change these 2 per cent bonds into threes not having the circulation privilege. Therefore we may presume that the banks, if they were assured that their twos could be sold at par, would not retire their circulation, so that the refunding of the 2 per cent bonds, as proposed in the House bill, into threes would cost the Government directly \$7,500,000 a year and indirectly 40 per cent of that, as 60 per cent of the profits of the banks is to go to the Government under the House bill. Under our plan of refunding fifty millions annually the process is so gradual that there can not be a jar; and as all the excess profits over 5 per cent are to go to the Government for some purpose it does not lose anything to refund the present twos into threes. Then, again, the House bill and the bill signed by Senator Owen and his colleagues provide that these notes may be used for reserves under certain conditions. Nothing, in my judgment, could be a more unwise policy, for if they could be used as a reserve they would not come in promptly for redemption, so they would lose their elastic quality. Gold certificates, how-ever, should be used as reserve, because they are really a representative of an equivalent amount of gold in the Treasury. Furthermore, if this were done, it would prevent the otherwise necessary shipment of gold back and forth between reserve banks, with the losses incurred in so doing, for the gold certificates could be shipped more economically and safely.

If we were to have a real elastic currency we would permit the banks to issue the circulation without the Government's guaranty. In my judgment, the Government guaranty is not needed to make the proposed currency perfectly safe. I do not recall any circulation which has as many safeguards. Moreover, there is no difference between a bank deposit and a bank note, except in form. Let us assume that a borrower makes a loan of \$10,000. He may take the proceeds of this loan in different forms, and it is immaterial to the bank in what form he takes it, except that if he leaves it on deposit, or any part of it, the bank adds to its deposits by that amount. In any case, whether the bank credits his account with the \$10,000 or gives him a draft on some other point for the same amount, or gives him its own notes for the same amount, it is in every instance an obligation of the bank. If it remains on deposit and is drawn out gradually by checking against it, all the balance that stands as a deposit is an obligation of the bank. Of course, that is the best condition from the bank's standpoint, because it has the use of such balance as has not been checked out. On the other hand, the bank may give the borrower a New York draft for the whole \$10,000; that check is the obligation of the bank, which, after going through one or more hands, finally reaches the New York bank, which is its correspondent, when it is charged against the issuing bank. On the other hand, the bank might pay the borrower in its own notes. These would go from hand to hand, but finally they would come back to the bank, its branch, or to the Treasury for redemption.

# BANK ACCEPTED BILLS.

I wish to call particular attention to one of the provisions in this bill which will change our banking policy greatly to the advantage of the average business man. At present the ordinary method of borrowing money is on a note made for different periods, from 30 days to 6 months, by the corporation or concern which needs temporary accommodation. This note generally is discounted in the bank with which the borrower does business. If, however, his credit is sufficient and the necessities for accommodation are greater than his own bank can supply, he borrows from other banks, very frequently through brokers, who carry on a special business for that purpose, and it is this class of borrowing which extends the credit of the borrower beyond his own bank. There is, however, a limit to the amount which can be borrowed in this way, and the method is limited to this country. Generally speaking, when such a note is dis-counted it becomes a dead asset, unavailable for any credit or other purpose until it has matured. The result is that all commercial banks have great quantities of this paper which can not be used even in case of necessity, because offering it for rediscount would immediately place the bank itself under suspicion, and because it would place the borrower under suspicion. In other words, doing this is contrary to our established

his bank has not available funds to loan; yet he needs additional accommodation, and his bank is willing to assist him to obtain it. In such a case he draws on his own bank for 30 or 60 days, or some other short time, and the bank accepts the draft. In doing this the bank might require security in some form, this being dependent on the credit of the borrower, charg-In doing this the bank might require security in some ing for its service such commission as conditions warrant; but it does not put out any of its own money in so doing; it simply loans its name to add to the borrowing capacity of its customers. Such a bill, having a well-known name attached as drawer and accepted by a well-known bank, becomes immediately a bill of exchange, which is readily salable anywhere in the neighborhood where both borrower and bank are known; and if they are sufficiently well known it would sell anywhere in the country where the transaction is consummated; or they might be sufficiently well known so that it would sell in other countries. In fact, large quantities of such paper made in European countries are sold in other European countries, thereby extending the credit of the borrower, enabling him to meet all of his business requirements readily, and almost necessarily enabling him to borrow at a lower rate of interest than he otherwise could do. The banks of one country owning paper of this class made in another country enables them to pay their debts by shipping the paper home instead of shipping gold, as they might, under other circumstances, find it necessary to do. The central banks in European countries buy freely paper of this kind made in other countries, frequently, however, requiring the indorsement of an additional bank or banks from whom the purchase is made. That should be the policy of our reserve banks. When conditions and money are easy in this country, instead of trying to compete in the local money market to add somewhat to the bank's profits they should invest their money in foreign bills and in short-time bonds, as provided in the law, so that when conditions change, as they are sure to do sooner or later, it will not only have short-time public funds which can be disposed of. but it will have foreign bills which can be sent back to the country making them in lieu of paying our debts in gold. It will be in this way, quite as much as raising the discount rate, that banks will be able to control our gold supply. To-day there is no means of doing this except by the spasmodic action of individual banks, and there are now no bills in this country except exchange drawn against shipments of products and finance bills, which can be used for such a purpose. When we have a balance of trade against us, we must sooner or later pay our debt, but we can put off the evil day until the balance of trade can be paid not in gold but in our having something which we can sell which will give us a credit abroad. The bills and securities provided for in this bill will be a new and reliable means to be used for that purpose.

# SUBSCRIBERS TO THE STOCK.

There is a radical difference in the propositions presented by the House bill, the Owen bill, and the Hitchcock bill as to who shall subscribe for and own the stock of the reserve banks. It is agreed that this stock shall be issued under such conditions that it can not be owned or controlled by any man or set of men, and therefore in the first two plans it is stipulated that the holdings shall be limited to a percentage of the capital or capital and surplus of the member banks, while in the Hitchcock plan it is proposed that no individual shall subscribe or own more than 100 shares. The radical difference is that the first two plans provide that the banks shall subscribe for and shall hold this stock as permanent assets conditioned on their continuing as members of the reserve association, while the Hitchcock plan proposes to sell to the public, through the national banks as fiscal agents, these shares, each bank making itself responsible for an amount equal to 6 per cent of its capital and surplus.

One of the most insistent criticisms which the banks have made to this legislation has been that it was unreasonable to require them to subscribe and tie up 20 per cent of their capital in this way. To be sure, the House bill only required that one-half of this should be paid in, the balance to be callable on demand; but in many sections, especially where deposits are not large, the bank's capital is an important element in providing for the requirements of the community; taking 10 per cent of this capital out of local business really meant a material hard-Those with whom I have been associated on the Banking and Currency Committee see no reason why this stock should not be held by the public instead of imposing it on the banks, Europe long ago adopted a different policy. It is a common practice in all first-class countries to not only indorse short-time paper under certain conditions, but to accept from borrowers short-time bills. The method followed in this latter process is substantially this: Assume that a borrower has used all the credit which his own bank can give him under the law or that banking capital added to the present bank capital of the country instead of diverting \$100,000,000 of the present capital of the

banks into a fixed and immovable investment,

This will not only relieve the member banks, but it does not change their relation with the reserve banks, because they are to deposit their reserves with reserve banks in a manner similar to that provided for in the House bill, and as the reserves will equal about four times the proposed capital, it only reduces by one-fifth the interest which the banks will have in the reserve banks, but the reserves which will be transferred to the reserve banks are now kept in other banks, so that it does not change the capacity that banks will have to care for local requirements.

Furthermore, we believe that it is wise to financially interest as many citizens as possible in governmental affairs. principle was followed in framing the postal savings bank law, by providing that bonds of a \$20 denomination and multiples thereof should be issued to the depositors in postal savings banks, and gradually bonds of this character are being sub-

scribed for by such depositors.

The French debt is very largely held by small investors in France, and the more generally we can distribute our Government indebtedness or such semi-Government securities as are provided in the stock of the reserve banks the stronger and

safer, in my judgment, will be the Government itself.

The Owen plan proposes a payment of 6 per cent dividend on this stock, which under that plan is to be held by the banks. That in itself would require \$1,000,000 a year dividend payment in addition to what the Hitchcock bill provides for. This \$1,000,000 in our plan would revert to the Government, so that the Government would be that much better off under the Hitchcock than under the Owen plan, even if there were not other substantial reasons for making the change. We must not lose sight of the fact that in order to make this plan successful it will be necessary to have the cooperation of the banks, and by removing such objections as the banks have offered, and especially when the objection can be removed by providing a better method of procedure, we should certainly not fail to make the change.

Mr. REED. Mr. President, I think the Senator, in the interest of accuracy, will want to change his figures as to the amount of difference in dividends to be paid under the 6 per cent plan of the Owen bill and the 5 per cent plan of the Hitchcock bill. He has overlooked the fact that the Hitchcock bill requires a capital of \$106,000,000, or approximately that, while the Owen bill requires a capital of \$53,000,000, or approximately So the real difference in the dividends, instead of being a million dollars, as stated, would be approximately \$500,000.

I think the Senator simply overlooked that fact.

Mr. WEEKS. That results from a change that was made in

the bill at some time, and I had overlooked it.

Mr. REED. I thought I would call the Senator's attention

Mr. WEEKS. I am greatly obliged to the Senator for doing so. CONTROLLING THE GOLD SUPPLY.

In this legislation we rely in regulating our gold supply on the raising or lowering of the discount rate and on the supply of foreign bills or short-time Government bonds or other public securities which the banks may hold. Whenever the rates of money are low in this country, the reserve banks should supply themselves with quantities of foreign-made prime bills, which they could send back to the country where made in case the balance of trade was against us and it was inconvenient to export gold, and the one-year refunding notes which are provided for in the Hitchcock plan will be extremely useful for this as well as other purposes. These notes will sell readily to foreign banks of all countries and to local lenders who have money which must be available at a specific time, and in all cases they will be sold for gold, so that even if the Government is not prepared to redeem them when they mature the banks would not lose anything by disposing of them temporarily, in case it is desirable to do so to protect the banks' gold reserves or to prevent the exportation of gold.

I do not think that raising the discount rate as provided for

in the bill will immediately answer all the purposes which similar action by the Bank of England has had, because that has been a result obtained after being employed many decades, until now it has become a signal to the whole world to take notice whenever the Bank of England increases its discount rate. It is a danger signal which is respected by banks the world over, and yet the only way to prevent the outgoing of gold or to bring gold into the country by automatic process is to raise the discount rate. Money finds its level as naturally as water, and if we owe a foreign country and had no other means of paying our debt than shipping gold, if the discount rate were high enough the shipment of gold might be prevented by raising

the rate sufficiently to warrant the owners of the money leaving it in this country to be loaned. Of course that is a temporary expedient, but it may last long enough to enable us to sell something abroad which will offset the balance of trade against us and finally prevent the necessity of our shipping gold to pay it.

It seems to me that the redemption plan proposed in the Hitchcock bill is safe and sound and wise from every standpoint, One of the most trying questions connected with this whole subject has been making suitable provision for the outstanding 2 per cent bonds. These have been issued to the banks at a considerable premium simply because they carried the circulation privilege. Intrinsically they are not worth over seventy-five cents on a dollar, and if the circulation privilege were taken away, they would quickly decline to about that price. I think there is universal agreement that the Government is in duty bound to refund these bonds at par, but refunding them at a rate which will maintain them at that level in the market without the circulation privilege would cost the Government in interest at least 1 per cent more than it does now and, furthermore, it would upset such elastic feature as there is in our circulation by retiring the national bond-secured circulation, and would necessitate the putting out of the circulation provided for under this bill in considerable quantities before banks and others had become used to the process which will be involved; in other words, there would be uncertainty and quite likely a serious effect on business.

Therefore, to adjust this whole question, we provide for the purchase by the reserve banks of \$50,000,000 of these bonds at par and interest, and also provide that one-year refunding notes shall be issued for these bonds. This will give the reserve banks an investment at once. It will enable the retirement of onefifteenth of the national bond-secured circulation. It will be a notice to banks that these bonds are to be taken care of at par and interest, and the very gradual method proposed to refund them and retire the circulation enables the getting out of the new circulation without any strain or probably undesirable

results

Several witnesses who appeared before the committee have believed that this action could be taken more abruptly without any danger, but it has seemed to our committee that in every respect caution and deliberation should mark the changes which we propose.

# FOREIGN BANKS.

All of the pending propositions provide for the establishment of banks in foreign countries, the difference in them being that the House bill and the Owen proposition provide that banks having a capital of not less than \$1,000,000 may establish The Hitchcock proposition provides that banks havbranches. ing a capital of not less than \$5,000,000 may establish branches in foreign countries, the difference being due to our belief that any part of a capital of \$1,000,000 or \$2,000,000, or even \$3,000,000, which could be set aside for such purposes would be entirely inadequate; that it would make any branch established in other countries so small compared with the established banks that it would be insignificant and ineffective. It is not going to be easy to establish banks in foreign countries, first, because they are generally well provided with capital for their needs, and, secondly, because the course of business and trade is already established, and the business our banks get must be diverted from the present course, which will result in pretty severe competition and probably small profits for some time to come. But believe it absolutely essential that we adopt such a system if we are going to maintain our proper place in the foreign trade of the world. Take the condition in South American countries. Every European country engaged in foreign trade to any extent not only has direct lines of steamers to South America but banks capable of financing the trade which has been developed, while we have inefficient steamship connections and not a dollar of American capital invested in banks south of the Isthmus of Panama. The result is that we are tre-mendously handicapped in our South American operations and will continue to be until we have established suitable lines of communication and authorized and established suitable banking facilities. If an American business man is going to Brazil or the Argentine at this time, he takes a steamer for England and sails from there to his destination. If the Government of the United States wishes to communicate with one of its South American representatives, the communication will follow the same course, and our banking arrangements with South America are entirely carried on through European exchanges, largely through London, thereby enhancing the financial importance of European capitals at the expense of our financial centers. If a tanner in the United States imports a bill of hides from the Argentine, he pays for them through a process similar to the following: He arranges with his banker to arrange a credit in London sufficient to pay the bill; the seller of the hides in

Argentina draws on the London bank, depositing the draft in his local bank, which in turn sends it to its London correspondent, which turns it over to the bank with which the credit has been arranged. This bank accepts the draft, making it a prime bill which will sell anywhere in England or, in fact, anywhere in Europe; but the purchaser of the hides or the payer of the bill has found it necessary to pay commissions to at least three banks in completing this transaction. Incidentally a large amount of money is paid European banks to finance our trade, which should either be paid to American banks or bankers or inure to the benefit of the purchaser of the goods-quite likely The president of a western bank publicly stated that his bank has paid as much as \$75,000 a year to London in com-missions for conducting trade of this character, which should have been done direct with the banks of this country. The fact is there is no American exchange in South America, and therefore it has been necessary to continue the present, from our standpoint, ill-advised arrangements. Going into this matter in greater detail would, I am sure, be of much interest to Senators, but it is universally conceded that we should take some advanced step, and I believe there will be no considerable opposition to the very moderate one which this bill presents.

I hope Senators will not minimize the importance of this legislation, but will consider it, as I believe it to be, as important, if not the most important, legislation with which any Congress has had to deal in the present generation. Currency is the lifeblood of our business organization, and banks are almost as important to business as the heart is to the physical system. If they are working properly, they are systematically pumping currency through the system, returning it to its source in the regular course provided by legislation. Any derangement of either the banks or currency must necessarily impair all of our business arrangements. In ordinary times in the past these facilities have generally answered our purposes, but during an exciting strain they have broken down and by so doing have deranged all of our commercial affairs. If we are legislating wisely, we will furnish a system which will work as well under pressure as it does in normal times, and Senators should not lose sight of the fact that we are not legislating for banks or great business or for one section of the country or another, but we are legislating for the whole country, and the legislation we adopt will affect every part of it to the remotest corner. It is as vital to the laborer, to the farmer, as it is to the manufacturer, the merchant, or the banker, that we have sound and useful banking and currency systems. I can not better close than by quoting Sir Robert Peel when he presented the bank act in 1844:

There is no contract, public or private, no engagement, national or individual, which is unaffected by it. The enterprises of commerce, the profits of trade, the arrangements made in all the domestic relations of society, the wages of labor, pecuniary transactions of the highest amount and of the lowest, the payment of the national debt, the provision for the national expenditure, the command which the coin of the smallest denomination has over the necessaries of life, are all affected by the decision to which we may come on this great question which I am about to submit to the consideration of the committee.

# SAN FRANCISCO WATER SUPPLY.

Mr. NELSON. Mr. President, I ask that the banking and currency bill be temporarily laid aside, and that the Hetch Hetchy bill be laid before the Senate.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

Mr. BORAH. Mr. President, not hearing any motion to adjourn, I presume it is incumbent upon this body to take up for consideration the bill which comes up under the unanimous-consent agreement—a measure much less interesting apparently than the one which has just been discussed by the Senator from Massachusetts [Mr. Weeks].

If anyone were ready to proceed with the discussion of the currency bill, or if we were in a position to vote on this particular measure, I think I should not assume to trespass upon the time of the Senate. The measure is before the Senate, however, and, as I say, under the agreement we are not in a position to vote upon it. Therefore I do not feel that I am trespassing particularly upon the time of the Senate, although perhaps upon its patience, by offering my views upon the

The Public Lands Committee is one of the most careful, conscientious, and painstaking committees of this body. I have no doubt the committee gave to this bill most earnest and unbiased consideration. I am very much of the opinion that had the

measure been permitted to proceed to a hearing before the committee without certain outside arrangements and agreements, which had the effect of preventing an investigation except really as to one side, there would not have been such a wide divergence of opinion growing out of the report of the committee.

So far as I am concerned, my first disposition was to vote for the measure if it were stripped of the things which I think we ought not to undertake to do. In other words, I felt that in all probability San Francisco was in a position where she ought to have the privilege of developing this water at some time, although I never was impressed with its immediate necessity. After undertaking, however, to investigate the terms of the grant itself, I received communications from the farmers of the San Joaquin Valley which led me to make other investigations; and in the opening of my remarks I am frank to say that as the bill now stands I am opposed to its passage.

During the last 50 or 60 years we have been very liberal with the public domain. Without let or hindrance we have granted to whomsoever would come and ask. The patrimony which the Government has given to private corporations in the last 50 years is far in excess of all the patrimony granted by the different kings and rulers of the earth to their favorite satellites and retainers. It has been based upon no legitimate consideration, and in many instances upon corrupt motives. There have been many grants made, based upon what was believed at the time to be a real consideration and a legitimate reason, but which afterwards turned out to be otherwise.

I have before me the report of the Commissioner of the General Land Office for the year 1912. From this report I see that we have granted to the different States of the Union, in order that those States in turn might grant them to the different corporations in their States for the purpose of railroad building, the enormous sum of 37,864,726 acres. Those are the grants which have been made to the different States with a view that the States in return would grant or donate them to different corporations for the purpose of railroad building.

In addition to that, however, the Government has transferred to corporations directly, during the last 40 or 50 years, the enormous amount of 77,609,259 acres. We gave the Union Pacific Railroad Co. 11,930,000 acres, the Northern Pacific 33,294,000 acres, the Union Pacific, Kansas Division, 6,175,000 acres, the Burlington & Missouri 2,374,000 acres, and so on. Thus we have depleted, as it were, this vast public domain of which we now stand so much in need, which it would be well to have that the countless thousands might make thereon homes.

Each year there is moving across the border into the Dominion of Canada 100,000 of our citizens seeking homes under another flag, because so much of the domain which belonged to the people of this country has been transferred and given to private corporations.

We have now reached another phase of the situation, the strategic places in our natural resources. Those places which command in a large measure a vast amount of country and control the destiny of a community have come to be of importance in this matter of grant and disposition. We have already reached the disposition, apparently, or the dismemberment of our public parks, which were set aside only a few years ago under the express stipulation and the solemn declaration of Congress that they should remain for all time in the possession of all the people for certain limited, designated purposes.

A few years ago, and only a few, the Government set apart a part of the Stanislaus Forest Reserve to become a part of the Yosemite National Park. Shortly thereafter the State of California receded to the Government other ground, which was to form the Yosemite National Park in conjunction with that which had been set apart by the National Government, and in this dedication made by the State of California it is made clear what are the purposes and objects of the recession and grant. I venture to call attention to the terms of that grant:

This act shall take effect from and after acceptance by the United States of America of the recession and regrants herein made, thereby forever releasing the State of California from further cost of maintaining the said premises, the same to be held for all time by the United States of America for public use, resort, and recreation, and imposing on the United States of America the cost of maintaining the same as a national park.

"Shall be set aside and held for all time by the United States of America for public use, resort, and recreation." My investigation leads me to believe that that express provision is not in that particular portion of the grant of the park which is covered by this bill, but no one would contend for a moment that the spirit, the purpose, the object of creating the entire park was other than that which is designated so plainly by the State of California. Therefore, while I do not rest the objection

upon the technical proposition that the recession itself protects by its terms this particular portion, I place it upon broader and higher ground, and that is the spirit and purpose which actuated and dominated the people in setting aside this park.

I call attention to that, not because it is controlling as a legal proposition, not prohibitive of our further proceeding from a legal standpoint, but to admonish us that within a very few years after we have solemnly declared to the American people that this great nature garden, one of the most remarkable scenic displays in the world, should be set aside for all time for all the people of the United States as a place of resort, we are now preparing to dismember and destroy it, at least to a marked extent.

It at least ought to have this effect, Mr. President, in presenting this matter, to impress upon us the necessity, the absolute, imperative necessity, of considering what we are doing. It ought to impress upon us the proposition that only human wants and human life-absolute necessity-should guide us to the enactment of this law. I say, in the beginning, if that necessity could be proven or based upon the showing in this affair, there would be no alternative, of course, much as we would dislike to dismember the park. But the necessity ought

to be clearly established and imperative.

I want those who are not already entirely familiar with the proposition to bear in mind another proposition, and that is what I consider the strategic position of this grant. In other words, if there were a gorge in the mountains through which alone one railroad could pass, we would be doing in that instance something like what we are doing here if we should grant to one corporation alone the right to use that gorge or puss, because, if my information is correct-and I have sought information from every source available to a man in Washington and not on the ground-if my information is correct, the great and almost immeasurable value of this grant consists in the fact that it is a natural monopoly upon the use, that the grant becomes effective by reason of physical conditions and by reason of the fact that this reservoir commands that whole country in its supply of water and power.

This is not like granting a right of way over a piece of waste land or even a piece of beautiful land, but it is like granting that which will enable the grantee to step in and become a dictator as to the commercial destiny of a very large portion

of that country.

That is the feature, Mr. President, which halted me in my investigation as to the granting of any right of way at all. As I said, in the first instance I was perfectly willing, if this grant should be stripped of the things which we ought not to try to do, to grant a right of way, naked and alone, and then permit the people of California, under the laws of California, to settle their rights and enjoy the privileges which they might enjoy under the general laws of that State after having the right of way. But when I ascertained to my satisfaction that a physical condition interposed, being appurtenant, as it were, to this grant, giving the grantee a practical monopoly, enabling it to control the destiny and measure the prosperity not only of the people of that community but to accentuate and enlarge its own at their expense, a different proposition was presented.

I believe, Mr. President, it can be safely said that tedious and uninteresting as this bill has come to be, we are now about to grant, if the bill should succeed, a franchise which is worth from fifty to one hundred million dollars the moment that the grant becomes available. Yet we are doing it as if there were an untold number of similar grants to be enjoyed by all the different people of the United States. It is practically ex-It is in its practical workings a monopoly. It is of vast value. It is not only dismembering the park, but it is giving a monopolistic advantage which Congress at this time

ought not to consider

If this grant could be made so that every one in that vicinity or in that general community could enjoy that which nature and nature's God seemed to intend that they should enjoy by coming in proximity to it, if the naked grant could be granted, for instance, to the State of California, and let the State of California dispose of it under her law, so that the farmer and the bay cities and San Francisco and all the other people of that community could enjoy equally and with the same advantage all the vast rights and privileges of this grant, I would not feel so opposed to the bill. There would be left, of course, the question of dismembering the park, which is a strong proposition with many people, but I am not sure that it would be con-

There has been a great deal of discussion of late years upon the part of many good, earnest people to the effect that all

hands of the Federal Government, because, said they, the Federal Government will take far better care of these natural resources than the States. Some of us who have thought that possibly some virtue still remained in the old doctrine that there was some sovereign power still left in the States and that there were some virtues left in the people who live in the States never could understand how a man was any wiser or more virtuous after he got to Washington than he was before he started. In other words, if the people at home are not capable of taking care of these things, it did not seem to me that there had been such a complete transformation after a party reached Washington as to enable him to do it.

If our theory of Government is correct, if we have built upon correct principles at all, then the basis of power, the basis for action, rests with the people at home, and those things which are of local concern and private concern should always be left

to them.

I should think that that doctrine would appeal still to those who believe, indeed, as the Senator from Georgia [Mr. BACON] said the other morning in discussing the question of precedence in Washington, that the States are sovereign communities.

But, said the conservationists, you people who are opposed to the National Government taking control of these things are advocating that which the power companies and the monopolies want you to advocate; you are the representative of corpora-I have upon my desk here a speech delivered some two years ago, in which a number of us were attacked because we were in favor of retaining some rights in the State government.

Now, Mr. President, I warn the people of the United States that that which is happening here now will be precisely what will continue to happen, and if the people do not arouse themselves the 77,000,000 acres granted to private corporations in the past will be followed from time to time, so long as sufficient influence and power can be brought to bear upon the Congress of the United States, until the last item of natural resources is gone and the last natural park that is available has

been dismembered and broken up.

There is no government in the world so easily moved to grant privileges and special favors as the Federal Government at Washington. There is no government where such insidious influence upon false and specious pleas is so effective as in this Washington before Congress and in the departments here, where arrangements are made which the people know nothing about until they have gone into effect. I know that is a strong statement to make, but I shall not cut it out of the When we know that our public domains have practi-RECORD. cally been disposed of out of mere favor there is no need to talk to me about the protecting power of the Federal Government with reference to our natural resources.

Mr. President, so far as I am concerned, I think we are approaching the time when, still recognizing the powers of the State and National Governments, these resources must pass more and more under public ownership and be operated by pub-

lic ownership.

Whenever we find a natural monopoly or where it has become apparent that as to a particular business competition has ceased to exist, and it has been disclosed that substantial competition can not be restored, I am in favor of absolute public ownership. The leasing system is a delusion, so far as our natural resources are concerned—the lurking rendezvous of incompetent service to the public and corruption. The idea that is now gaining ground in some quarters that we can regulate and control combinations and monopolies left in private hands will bring no relief to the people. The Republic may in some instances be strong enough to destroy monopoly, but it will never be strong enough to regulate and control it. The persistent, sleepless vigilance and the insatiable appetite of private gain will in the long run prove too powerful for spasmodic and intermittent public virtue. Wherever private gain has ceased to be under the law of competition the business must then come under public ownership, where private gain can be eliminated, whether it is a railroad or a coal mine. Some will call this state socialism, and so far as it is and to the extent that it is I am for state socialism. Names have no terror for me. I am for results. It is claimed by some that this is public control. In no proper sense is it such.

Let us now, Mr. President, examine the terms of this grant. It is an interesting proposition. Even if we were going to grant San Francisco this right of way, it would still be an interesting proposition to know whether we want to grant it in terms in which we have undertaken to grant it in this bill.

First I call your attention to the fact that this is a grant in præsenti. It is not a grant to take effect upon the performance these natural resources ought to be gathered up and put in the of certain conditions; it is not a grant to take effect if certain conditions are not performed; but the grant is a grant outright, and vests in the city of San Francisco, by the terms of the grant itself, the title to this property. It says that—

There is hereby granted to the city and county of San Francisco, a municipal corporation.

Giving a grant in præsenti and all the conditions which follow it are conditions subsequent. I think I shall be able to show in a few moments that there is no forfeiture clause in this grant at all with reference to anything except the failure to build and the attempt to sell it to some one.

All these other matters about which we have been talking, where the farmers' interests would become involved and where it is said forfeiture would result if they did not perform, are not forfeiture clauses or forfeiture conditions to the grant at all. They are conditions of the grant, but there is no forfeiture condition in regard to them.

I shall not undertake just at this moment to go into the particular clauses relating to the farmers' interests, because I am coming to that later. I want to call the attention of the Senate to this clause upon page 2 of the bill:

For conveying water for domestic purposes and uses to the city and county of San Francisco and such other municipalities and water districts as, with the consent of the city and county of San Francisco, or in accordance with the laws of the State of California in force at the time application is made.

And so forth,

When you come to construe this grant as a whole you will find that this clause here, "with the consent of the city and county of San Francisco," practically places the city and county of San Francisco in exclusive control of this great grant and all its privileges, and those who are to enjoy it hereafter must enjoy it by her consent or her privilege.

Now, Senators, there is in San Joaquin Valley at the present time a large number of people, but it is conceded that San Joaquin Valley, if permitted to develop, will in a few years be vastly more populous. It is a great valley, with a great future.

There are the bay cities surrounding the city of San Francisco, neighbors to it, and so forth, and this grant says:

With the consent of the city and county of San Francisco, or in ac-ordance with the laws of the State of California in force at the time cordance with the la application is made.

I am aware of the stress which will be laid upon the terms "in accordance with the laws of the State of California in

Mr. WORKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from California?

Mr. BORAH. I do.

Mr. WORKS. I hope the Senator from Idaho will not overlook the fact that that refers to the law at the time the application was made. The law of California has been materially changed since that time.

Mr. BORAH. I thank the Senator. I was going to call attention to that fact. If San Francisco is placed in a position by reason of the physical condition of the country where she has the only reservoir site, where she will be the only one who can practically appropriate or acquire title to water by reason of the fact that she has the physical advantage in the reservoir proposition, what benefit or virtue will the clause have "or according to the laws of the State of California"? The other people can not ripen their water rights; they can not bring them to a conclusive title, and the laws of California will not operate to any advantage either to the cities around the bay or to the vast number of people who live in the San Joaquin Valley. There are other clauses in this grant which support and accentuate that contention.

I do not assert, Mr. President-for a man would not want to say, unless he had the final guess upon the proposition-as a matter of law what the construction of a court would be; but I invite the attention of the lawyers of the Senate to the proposition that a fair construction of this grant as a whole grants an absolute monopoly to the city of San Francisco in this water and this power, and enables her to sell and dispose of it to all her neighbors and the surrounding country as the sole owner and dictator of the situation. I do not now forget the terms of the grant with reference to fixing rates, to which I shall come later. Why is this clause requiring consent there? What is its virtue? What advantage does it give? That is an interesting and important question.

Mr. KENYON. Mr. President-

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Iowa?

Mr. BORAH. I do. Mr. KENYON. It seems to me, Mr. President, that an argument of this character is entitled to a larger hearing, and I therefore suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Goff	Overman	Sterling
Bacon	Gore	Owen	Stone
Borah	Gronna	Page	Sutherland
Bradley	Hollis	Perkins	Swanson
Brady	Hughes	Pittman	Thomas
Bristow	James	Reed	Thompson

Colt	Martin, Va.	Simmons	Williams
Cummins	Martine, N. J.	Smith, Ariz.	Works
Dillingham	Nelson	Smith, Ga.	11 OL MA
Fletcher	Norris	Smith, Md.	
Gallinger	O'Gorman	Smoot	

Mr. SMITH of Maryland. I wish to again state that my colleague [Mr. Jackson] is absent on account of illness.

Mr. THORNTON. I desire to announce the absence of my colleague [Mr. Ransdell] on important public business. I ask that the announcement stand for the day

Mr. KERN. Both Senators from South Carolina [Mr. TILL-MAN and Mr. SMITH] are detained from the Senate on account

of illness, one in his family and the other personal.

The VICE PRESIDENT. Sixty-five Senators have answered to the roll call. There is a quorum present. The Senator from

Mr. BORAH. Mr. President, I was calling attention to the terms of this grant with reference to the features of it which give San Francisco the exclusive control of the situation. I will not repeat what I said, but I will invite especially the lawyers of the Senate to examine the grant from that standpoint, and see if they deem it a wise thing to grant the privilege in this form even if they should not agree with some of us that it ought not to be granted in any form. The provision to which I was calling attention is found on page 2, where it says:

For domestic purposes and uses to the city and county of San Francisco and such other municipalities and water districts as, with the consent of the city and county of San Francisco, or in accordance with the laws of the State of California in force at the time application is made.

That should be taken in connection with the grant upon page 1, which says:

That there is hereby granted to the city and county of San Francisco

The grant runs directly to the city and county of San Francisco; and then it says that it is for the benefit of the city and county of San Francisco and such other municipalities and districts as may, with the consent of San Francisco or in accordance with the laws of the State of California, and so forth.

Here, Mr. President, perhaps I might as well say as at any other time that I have no doubt of the power of the National Government to attach such conditions to this grant as any other proprietor may attach to a grant of land, and I have no doubt of the proposition that the Government can attach no other conditions than an individual proprietor of land could attach to a grant of land; in other words, the National Government can not, in making a grant of this kind, combine its proprietary rights with its sovereign power and do things as a proprietor because it is a Government that it could not do as a

proprietor if it were not a Government.

In discussing these matters which have reference to the disposition of public lands, and especially of power sites, and so forth, we sometimes fail to keep in mind the fact that the Government of the United States simply owns this land as a proprietor, as John Smith or Sam Jones owns his land, and that the Government of the United States in making a grant can no more interfere with the rights and privileges and powers of the State or embarrass or impede the State in the discharge of its duty toward its citizens, such as fixing the rates that public utilities shall charge, and so forth, than two individuals can enter into an agreement and impede or embarrass the operation of that State in regard to those things. In other words, if an individual owned this particular land and should undertake to grant it to San Francisco, that particular individual could not put into the grant such provisions as would allow the agent of the individual to go in and fix the rates which San Francisco should charge the bay cities or some other district. That individual could not put into the grant such provisions as would enable some other person than the person designated by the State to fix the charges which a public-utilities corporation might charge the parties using the water or the light. So we may, I think, readily come to the conclusion that if there are any provisions in this grant which will interfere with the ordinary functions of the State in fixing rates and charges for its citizens, they will be wholly inoperative; and being inoperative,

being void, they would at no time estop the grantee, the city of San Francisco, from saying that they were void and that she was not bound by them.

The Supreme Court of Wisconsin in a case has said:

The rule of law is well settled and, in fact, elementary that if a condition subsequent be possible at the time of making it and becomes afterwards impossible to be complied with, either by act of God or of the law or of the grantor; or if it be impossible at the time of making it or against the law, the estate of the grantee being ence vested is not divested, but becomes absolute. (Burman v. Burman, 79 Wis., 566.)

So the discussion which has proceeded upon the theory that if the city of San Francisco did not do thus and so by the farmers with reference to the distribution of this water, they could enforce their claim and that San Francisco would be estopped from denying it is, in my judgment, not well founded as a proposition of law.

The United States Court of Appeals said in a case:

As a condition subsequent may be excused when its performance becomes impossible by the act of God or by the act of the party for whose benefit it is created, or is prohibited or prevented by the act of the law, so it may be waived by the one who has the right to enforce it. (Mahoning Co. v. Young, 16 U. S. Ap., 277.)

The Supreme Court of the United States has said:

No one can take advantage of the nonperformance of a condition subsequent annexed to an estate but the grantor or his heirs or successors; and if they do not assert their right to enforce a forfeiture on that ground the title remains unimpaired in the grantee. The rule equally obtains where the grant upon condition proceeds from the Government. (Schubenberg v. Harriman, 21 Wall., 44.)

In the first place, all presumptions are in favor of the grant standing and against forfeiture; in the second place, all the conditions which are illegal or unconstitutional would be utterly without force and effect in a court on the question of estoppel; and in the third place, no one could raise the question of forfeiture or seek to enforce it, except the Government of the United States.

The farmers of the irrigation districts would be perfectly powerless to undertake to do anything to enforce any forfeiture or enforce any conditions in the way of breaking the grant. That could be done only by the Government of the United States. So in this instance the farmers or irrigationists and the bay cities would not be in a position to claim the benefit or privilege of these conditions if the city of San Francisco should see fit to refuse them.

I do not believe any of the conditions which have been imposed in this grant are enforcible except the two with reference to a resale and a failure to build. In those two instances, of failure to build and of resale, there is an express provision for forfeiture, and an express provision that the Attorney General The Govof the United States shall proceed to enforce them. ernment of the United States could proceed to enforce those conditions, but all the others are simply conditions of the grant, and if the parties should receive injury their remedy would be that in damages, if they had any at all.

Again, I call attention to the fact that this grant is not expected to become operative so as to confer its benefits upon the people of San Francisco for a number of years. In the first place they are not required to file their map and right-ofway plat for three years. After that it is estimated by the city engineers that in all probability the effective work will not be begun, or at least that they will not be in a position to realize the benefits of the grant, for all the way from 8 to 15 years. The argument that the passage of this bill is a matter of immediate necessity, that the people are suffering, that the conditions require quick action, and the portrayal of such scenes as that painted and undoubtedly believed by the Senator from Arizona, are aside from any proposition which is really before the Senate upon this subject.

Of course that is not an important matter in one sense, although there has been much stress put upon it at different times in the debate. I call attention to one feature of the grant which shows, in my judgment, perhaps I should not say the looseness with which this grant was drawn, because it was not drawn with looseness. The man who drew this grant is a very able and adroit lawyer, and had a very deep and profound and moving affection for his client.

The bill says, in section 3:

That the rights of way hereby granted shall not be effective over any lands upon which homestead, mining, or other existing valid claim or claims shall have been filed or made and which now in law constitute prior rights to any claim of the grantee.

What prior right would a homesteader have as against the grant in præsenti, under the terms of this bill, unless the homesteader's grant had ripened into a patent or, at least, a final receiver's receipt? He might have been upon his homestead for months, or even for two or three or five years, under the old law, and yet under this bill his right would not be protected, because his right is not one which in law constitutes a prior right to this grant.

The homesteader has no right which is recognized or protected in law as a prior right to an absolute grant unless his patent precedes the grant, or possibly I might modify that by saying, under the old practice, his final receiver's receipt, which is in effect a patent—his final proof.

Now we come to the real and only forfeiture here. It is

That the construction of the aforesaid works shall be prosecuted diligently, and no cessation of such construction shall continue for a period of three consecutive years, and in the event that the Secretary of the Interior shall find and determine that there has not been diligent prosecution of the work or of some integral and essential part thereof, or that there has been a cessation of such construction for a period of three consecutive years, then he may declare forfeited all rights of the grantee herein, as to that part of the works not constructed, and request the Attorney General, on behalf of the United States, to commence suit in the United States District Court for the Northern District of California for the purpose of procuring a judgment declaring all such rights to that part of the works not constructed to be forfeited to the United States, and upon such request it shall be the duty of the said Attorney General to cause to be commenced and prosecuted to a final judgment such suit.

Those are the two forfeiture clauses and the only ones which

Those are the two forfeiture clauses, and the only ones which are provided for in this bill, in my judgment. These other matters, which are of primary concern to the surrounding communities, are not based upon forfeiture clauses

In connection with the other proposition which I was discussing a few moments ago, with reference to consent, and the monopolistic features of this grant, so far as San Francisco is concerned, I call attention to part of section 6:

That the grantee is prohibited from ever selling or letting to any corporation or individual, except a municipality or a municipal water district or irrigation district, the right to sell or sublet the water or the electric energy sold or given to it or him by the said grantee.

This grant contemplates all the way through that San Francisco is to be placed in a position where, as a proprietor and owner, she can sell and dispose of this water and light to the other bay cities or to the people of the San Joaquin Valley.

I have no doubt that San Francisco under this language could enter into the business of supplying water to the farmers of the San Joaquin Valley. I do not think it is wise for us to grant that kind of a privilege, even to a municipal corporation, which, of course, I concede, would be much better than granting it to a private corporation. So far as these farmers are concerned, however, or so far as the other cities are concerned, it would be individual or private ownership. It is not public ownership unless it is confined to a city whose officers are elected by those who are affected. So far as all the other cities are concerned, and so far as the farmers of the San Joaquin Valley are concerned, it would be private ownership. San Francisco would be private as to them, because they have no voice in the election of the officers or in the selection of those who are to pass upon their rights. We are, in fact, placing in the control of the city of San Francisco-taking into consideration the terms of the bill and the physical situation of the surrounding country—not the power to supply water to her people alone, mind you, but the power to deal and traffic with the surrounding communities in regard to the water and light.

Mr. LIPPITT. Mr. President—

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Rhode Island?

Mr. BORAH. I yield to the Senator from Rhode Island. Mr. LIPPITT. While the statement the Senator makes is perhaps correct, he also undoubtedly knows that it is with the consent of the surrounding cities. Oakland and Berkeley and a number of the other cities have expressed their willingness and their approval of this proposition.

Mr. BORAH. I was not aware of that. Mr. WORKS. That is a mistake. There never has been any action by any of these cities.

Mr. LIPPITT. I think the Senator will admit that action

has been taken by the authorities of those cities.

Mr. WORKS. No.

Mr. LIPPITT. I do not know that action has been taken by a public vote.

Mr. WORKS. There has been no action taken by the authorities of these cities. I will say to the Senator that they have talked about it and have expressed their desire to have it done, but there never has been any official action taken.

Mr. LIPPITT. Was there not a meeting and a hearing here in Washington to which delegates were appointed by Berkeley and by Oakland, and were they not authorized to agree to and approve of the plans of San Francisco?

Mr. WORKS. Not that I know anything about.
Mr. LIPPITT. I have a very strong impression to that effect.
Mr. WORKS. I think the Senator is mistaken. I think the hearings will show that.

Mr. BORAH. Mr. President, I think the Senator from Rhode Island is in error in regard to that; but it would not make a

particle of difference to me in voting on this bill if the people of Berkeley and Oakland and the other cities had consented to it. People can not enter a committee room, amid the surroundings of neighborly courtesy, and traffic with the interests belonging to the entire people of the United States. Congress ought not to be controlled by private contract. I do not think they entered into such an agreement. I know the farmers started to enter into it, and I know they have changed their

I desire now to call attention to the fact that when we come to the question of fixing the rates in this grant we enter upon a very interesting proposition. The bill says:

The said grantee shall develop and use hydroelectric power for the use of its people, and shall, at prices to be fixed under the laws of California, or in the absence of such laws at prices approved by the Secretary of the Interior, sell or supply such power for irrigation, pumping, or other beneficial use, said prices not to be less than will return to said grantee the actual total costs of providing and supplying said power.

And so forth.

Mr. President, there are other clauses in this grant, which I shall not take the time to read, carrying out that proposition. We are about to establish the precedent that a proprietor of public lands can make a grant, and in the execution of that grant send a Federal officer into a sovereign State to fix the prices which a public-utility corporation or a municipal corporation shall charge to its citizens or the amount of toll which they shall pay. Mr. LIPPITT.

Mr. LIPPITT. Mr. President—
The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Rhode Island?

Mr. BORAH. I do. Mr. LIPPITT. If the Senator will allow me for just a minute, I do not want to put too much emphasis on the point I made a moment ago, but I thought I could not be entirely mistaken. I find here in the report of the engineer of the San Francisco waterworks, Mr. Freeman, a resolution dated June 26, 1911, of the city council of the city of Oakland, which, after several "whereases" describing the occasion for passing the resolution, says:

Further resolved, That the city of Oakland formally joins with the city of San Francisco for the purpose of securing said water supply.

There are other resolutions, by the city of Berkeley, and so forth. I thought there was certainly ample ground for my statement.

Mr. BORAH. I was not aware of that; but, as I said after the Senator left the Chamber, a mere private contract would have very little influence with me. What right has the city council, the mere creature of a day, to contract away the rights of future generations with reference to the use of this water?

Mr. LIPPITT. Mr. President, the Senator was calling attention to the position of San Francisco in regard to supplying these other cities. I only wanted to call attention to the fact that the protest which was being made was not being made by the cities themselves, but was made by the Senator from Idaho. Instead of these cities having themselves protested against putting this grant into operation, they are apparently in favor of it, so far as a preference can be expressed by the vote of their accredited representatives. I suppose their accredited representatives are in a position at this time to take such steps as they think wise to take care of the future water supply of the cities, and that they are not bartering away the privileges or liberties of unborn generations, as the Senator seems to think

Mr. BORAH. There seems to be a divergence of opinion be-

tween the Senator and myself.

Going back to the proposition to which I was calling attention,

on page 22, it is further stated:

on page 22, it is further stated:

That the rates or charges to be made by the grantee or by any lessee under the last preceding paragraph for the use of power for commercial purposes shall at all times conform to the laws of the State of California or, in the absence of any such statutory law, be subject to the approval of the Secretary of the Interior, and in the absence of such law no rates or charges shall be made, fixed, or collected without such approval, and the grantee shall at any time, upon the demand of the Secretary of the Interior, allow the latter or such person or persons as he may designate full and free access, right, and opportunity to examine and inspect all of the grantee's books, records, and accounts, and all the works constructed and property occupied hereunder by the grantee.

You will see that by virtue of this grant they undertake to transfer this sovereign power just where they will.

Mr. NORRIS. Mr. President—

The VICE PRESIDENT. Does the Senator from Idaho yield

to the Senator from Nebraska?

Mr. BORAH. Just a moment and then I will yield. They first say that the rates may be fixed under the laws of the State of California, recognizing the fact that that is undoubtedly where the power to fix rates belongs. If it does belong there, can a grantee and a grantor of a right of way over the public

lands transfer it from one to the other? Can sovereignty be changed by the mere contractual relations of two parties?

We are nevertheless proposing to pass this bill knowing that that provision is in the bill and asserting solemnly as a Congress that we have the power to make such a law, adding to it our judgment and our approval and whatever of verity we can give to it.

I now yield to the Senator from Nebraska.

Mr. NORRIS. Mr. President, assuming that we desire to pass the bill and grant to San Francisco the right to develop this power, what objection has the Senator to the provision in the bill that the price paid for power sold shall be fixed according to the laws of California? Is there any objection to that?

Mr. BORAH. No; I have no objection to that. Mr. NORRIS. That was the part the Senator read, or at

least part of the part he read.

Mr. BORAH. I was referring to the part which authorized the Secretary of the Interior to participate in fixing the rate. In regard to the other provision, while, as I say, I have no objection to it, it is just like writing into this grant the Ten Commandments

Mr. NORRIS. It would not hurt it any if you put them in. Mr. BORAH. No; but perhaps it would not add any strength to it here

Mr. NORRIS. It would be a good lesson even here. Of

course it would not add any strength to it.

Mr. BORAH. But there is no need of putting into a grant a stipulation that the rates charged by a local municipal corpora-tion shall be fixed by the laws of California, for the reason that without any assertion in the grant that stands as the rule under which we would have to proceed, anyway.

Mr. NORRIS. The Senator, then, contends that with it in or with it out there would be no difference so far as the law is

concerned?

Mr. BORAH. I think that is so.
Mr. NORRIS. Then, assuming further that there is no law or that there might come a time when there would be no law in California fixing the rates, does not the Senator think in an emergency of that kind there ought to be some provision by which the rates could not be exorbitant or unreasonable?

Mr. BORAH. Yes. Mr. NORRIS. Then, under a condition of that kind, assuming that it should arise, what objection has the Senator to the balance of the provision which gives the right to the Secretary of the Interior?

Mr. BORAH. My objection is that in the first place we have no power or authority to send a Federal officer into a State to perform one of the sovereign functions of a State-that is, to fix rates

Mr. NORRIS. I have assumed that the State has no law. Mr. CLARK of Wyoming. That it has the right, but not the

Mr. NORRIS. The State has the right it is true, and this law recognizes it, and if you want to give any effect to it there That undoubtedly will never arise, but for is a condition. the sake of considering the particular provision, I think it is fair to assume that that condition has arisen. I assume it only for the purpose of considering that proposition.

Mr. BORAH. It seems to me I quite disagree in the suggestion or logic of the Senator for this reason, that upon that theory he was assuming that the State has not performed its function and exercised the sovereign power which belongs to it, and upon that theory the Federal Government assumes to do the thing which is asked. Upon that theory there would not be any limit to our power. We could assume, for instance, that the courts would not do their duty; we could assume that the governor of a State would not do his duty; we could assume that the legislature of a State would not do its duty; and we could provide machinery and pass any laws we saw fit.

Mr. NORRIS. The Senator believes that condition could not possibly arise. As I understand, however, that provision of the law the Senator thinks is absolutely useless. It could not have

any effect, as I understand the Senator's position.

Mr. SUTHERLAND. Mr. President-

Mr. BORAH. I yield to the Senator from Utah.
Mr. SUTHERLAND. I wish to suggest to the Senator from Idaho, in addition to what he has said—and I entirely agree with him-that this provision goes still further. The power to regulate the prices charged by a public-utility corporation and for furnishing water or power or transportation within a State is a power which belongs to the State alone, and does not in any way belong to the Federal Government. When the Federal Government undertakes to enter that field, it is a trespasser pure and simple.

The suggestion I want to make to the Senator is that that being a power of the State government, the failure upon the part of the legislature to make any regulations with reference to it is equivalent to a declaration of policy upon the part of the State to leave it unregulated and to leave it to the corporation, whether that is a wise thing to do or not, to fix their own prices, unaffected by any statutory law and unaffected in any way except by the action of courts of equity. This attempt to take out of the hands of the State the policy of inaction, which may be the policy which the State itself is determined upon, and commit it to the hands of the Federal Government is, I think, clearly something that Congress ought not to undertake.

Mr. BORAH. Mr. President, I agree with the Senator from

Utah.

Now, I wish to discuss that feature of the grant which rehas been said about it here, but perhaps a few connected remarks will not be out of place in the course of this general discussion. On page 13, subdivision (b), it is said:

(b) That the said grantee shall recognize the prior rights of the Modesto irrigation district and the Turlock irrigation district as now constituted under the laws of the State of California—

Of course, it is utterly without force or effect to provide that a municipal corporation shall recognize the laws of a State and the rights which have grown up under the laws of the State. It can do nothing else. I agree that it is purely superfluous, but it had for its object when it went in there of satisfying certain people who were greatly interested. It added nothing to the right, settled nothing, determined nothing, adjusted

or as said districts may be hereafter enlarged to contain in the aggregate not to exceed 300,000 acres of land, to receive 2,350 second-feet of the natural daily flow of the Tuolumne River, measured at the La Grange Dam, whenever the same can be beneficially used by said irrigation districts, and that the grantee shall never interfere with said

I do not believe that the Senators who are supporting this bill will urge that there is a single syllable in this entire paragraph that has any more force or effect in determining the right of the farmers of the San Joaquin Valley than if it were white blank paper.

Mr. NORRIS. Mr. President—
The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Nebraska?

Mr. BORAH. I do. Mr. NORRIS. I do not want that statement to go altogether unchallenged. I concede that we could not take away by this legislation nor any other the farmers' rights that have accrued to them under the California law. I will concede that; but if they had no right whatever, if they were not entitled to a gallon of that water, San Francisco, if this bill were passed, would be estopped to deny that they were entitled to the amount that is named there. As between San Francisco and those irrigationists it recognizes that they are entitled to that much and San Francisco could not deny it to them. They might be entitled to 2,000 more feet and be able to get it, but if they are not entitled to 2,000 additional feet, as far as San Francisco is concerned she would not dare deny that they were entitled to the amount named.

When the Senator says "dare" does he mean

that it is illegal and they could not?

Mr. NORRIS. I mean to say San Francisco would be

Mr. BORAH. No.
Mr. NORRIS. It takes this grant on that condition.
Mr. BORAH. I do not think the Senator was present awhile ago when I called attention to the fact that if this is an illegal proposition, if it is seeking to do that which we have no power to do, the mere fact that she takes a grant would not estop her from denying it.

Mr. NORRIS. I think it would. My contention applies to a broader power. If the Senator will permit me, if this were a dam on public land, a right of way or any condition could at-

Mr. BORAH. But you are attaching a condition here that does not belong to the proprietor at all. You are not attaching a condition which an individual could attach. Let me ask the Senator, suppose, instead of the United States, an individual should undertake to grant this to San Francisco, and that individual and San Francisco should enter into an agreement thus disposing of water rights contrary to the laws of the State of California

Mr. NORRIS. If an individual owned it he could sell it on

any conditions he saw fit.

Mr. BORAH. He could attach any condition to the grant Idaho that, as the proprietor, he was entitled to attach to a grant make?

ordinarily, but he could not go outside the terms of the grant and affect the rights of other parties or affect the rights of the State, or embarrass or impede the rights of the State. The State now has the right to say how its water may be acquired and distributed, to regulate and fix the rates for which it may be sold or distributed. The National Government can not affect that power of the State either by a general statute or under the guise of a grant of public lands.

Mr. NORRIS. If I were selling the Senator a farm I could

attach as a condition that he would permit the Senator from North Dakota to live on it for a year. I do not see any reason why we, representing the Government in this legislation, can not attach any provision that we see fit as a condition to the grant in regard to the price which San Francisco shall charge.

Mr. BORAH. Let me take the Senator's own illustration with reference to living upon a farm. The State of California did not undertake to say where a man shall live. It is not one of the functions of the State to determine the point where a man shall live. That is a matter of contract and private convenience. But the State of California says, We own every foot of this water, and it shall be distributed and charged up and apportioned according to the way we say in our law:

Mr. NORRIS. Let us take the same illustration. It is not my right to say where the Senator from North Dakota shall live. I have a right to put that in my deed as a condition. He does not need to live there if he does not want to, but he will have the

right to do it.

Mr. SUTHERLAND. Mr. President-

Mr. BORAH. I yield to the Senator from Utah. Mr. CLARK of Wyoming. With the permission of the Senator from Idaho, I was going to ask a question of the Senator from Nebraska.

Mr. BORAH. Very well.
Mr. CLARK of Wyoming. Does the Senator from Nebraska think that an enforceable condition could be attached to the grant of an illegal act?

Mr. NORRIS. No; but even that illegal act might be a part of a condition upon which the grant was given, and it could

not be taken back if properly drawn.

Mr. CLARK of Wyoming. Does the Senator believe that the grantee could compel the performance of the illegal act?

Mr. NORRIS. No.

Mr. CLARK of Wyoming. And if the illegal act is not performed, does the Senator believe that the grant would thereby be forfeited?

Mr. NORRIS. Not necessarily, and I have not claimed anything of the kind. I recognize that Senators have this view. I can not help but recognize the peculiar smile that runs over their countenances when I assert that I believe that in granting San Francisco the right to build a dam on the public lands of the United States and a right of way across the public lands of the United States we can attach any condition we see fit as to the power or development of the water. In this case we do not say that these irrigation districts are entitled to that much water. There is not anything in the proposed law that can be construed into meaning that, but we say that San Francisco shall recognize the right to that much water. They may never claim it. They may abandon it altogether. Under a State law they might lose all their right. Under the State law, I will say right now, I do not believe they have that much right, and they could not prove it in a California court to-day. It is put in there only for a benefit that San Francisco must recognize. If that is wrong, if that is unconstitutional, then the attempt to benefit the irrigationists who are now trying to defeat the bill is, of course, useless. I believe it is right, and the men who drew the bill thought it was right or it would not have been put in.

Mr. WALSH. Mr. President-

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Montana?

Mr. BORAH. I will yield first to the Senator from Utah [Mr. SUTHERLAND], and then I will yield to the Senator from Mon-

Mr. SUTHERLAND. We have gotten some little distance away from the point I want to suggest. The Senator from Nebraska a minute ago asked the Senator from Idaho whether or not if the Senator from Idaho owned a farm he could not grant it upon condition that the Senator from North Dakota should be permitted to live upon it. There can not be any doubt about that. But does the Senator from Nebraska think that the Senator from Idaho could grant a right of way to a railroad company across his farm upon the condition that, if the laws of the State did not regulate prices, the Senator from Idaho should regulate the charge which the railroad should

Mr. NORRIS. No, sir; I do not contend anything of the kind.

Mr. SUTHERLAND. What is the difference between the Senator and the Secretary of the Interior in that respect?

Mr. NORRIS. There is a great deal of difference. There was a case recently decided by one of the supreme courts on the very proposition the Senator puts to me, that I presume he is familiar with, of course, where that was done on condition that a man could have a pass. He was given a pass for life, but when the antipass law went into effect the court held that the pass was void; that it was contrary to law. I have not given a proposition that was contrary to law. There is not anything criminal in my position. There is not anything criminal in saying to the Senator from North Dakota, you have a right to live on the farm. There is nothing illegal about that. But if the legislature should pass a law and the Supreme Court should hold it to be unconstitutional, that the Senator from North Dakota had no legal right to live on the farm, I presume he would be taken off before the year expired.

Mr. BORAH. I yield to the Senator from Montana. Mr. WALSH. I observe that these colloquies grow rather more extensive and protracted than is intended, the interrupter at the time. Accordingly, I refrain now from asking some questions that I desire the Senator's views upon. I will probably reach them later.

I give notice that at the conclusion of the address of the Senator from Nebraska [Mr. Norris] to-morrow morning I shall, with the permission of the Senate, submit some remarks in connection with the legal proposition now being handled

by the Senator from Idaho.

Mr. PITTMAN. Mr. President—
The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Nevada?

Mr. BORAH. I yield.
Mr. PITTMAN. For the same purpose stated by the Senator from Montana, with the consent of the Senate, I give notice that, following the Senator from Montana to-morrow, I will discuss this hill.

Mr. McCUMBER. Mr. President—
The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from North Dakota?

Mr. BORAH. I yield to the Senator from North Dakota.

Mr. McCUMBER. Before the Senator from Nebraska [Mr. Normis] leaves I would like to have a little further elucidation of the proposition that he makes. The bill provides that the city of San Francisco shall grant to a certain district at least

a given amount of water.

Mr. NORRIS. No. I beg the Senator's pardon. The bill

does not provide anything of the kind.

Mr. McCUMBER. Will the Senator give me a statement of what the bill does provide in that respect?

Mr. NORRIS. The bill provides that San Francisco shall recognize the right of a certain district to so much water.

Mr. McCUMBER. That is, to a given quantity of water?

Mr. NORRIS. Yes; a given quantity.
Mr. McCUMBER. There is not much difference in the two

Mr. NORRIS. I think there is a difference.

Mr. McCUMBER. It recognizes a water right now as between San Francisco and that district. Suppose that the district should afterwards insist that she would have a right for a greater amount of water, does the Senator then contend that the contract between the city of San Francisco and the Federal Government should control the policy of the State of California?

Mr. NORRIS. Oh, no; it would not even estop her; it could never be offered in evidence. If the district is entitled under the laws of California to more water, there is not a thing in the bill that will interfere with her getting it. That is the object, at least, as I understand it. There is no other excuse, as I see it, for putting that provision in the bill. It is that as a matter of fact these irrigationists are told, whether they would be able to prove it under the law, that they are entitled to this

Mr. McCUMBER. Then does the Senator concede the exclusive jurisdiction of the State of California over the flow and distribution of the water notwithstanding any contract between the city of San Francisco and the Government based upon his construction?

Mr. NORRIS. I do not believe I would want to answer that

question right offband.

Mr. McCUMBER. Then I would like to know where the Senator draws the line, because it does become important in the construction of the bill.

Mr. NORRIS. It becomes important, I think, only to the extent that San Francisco would be estopped from denying the

right of these districts to use the amount of water that is mentioned in the bill. If there were a lawsuit—

Mr. McCUMBER. I can not imagine—

Mr. NORRIS. I am going to illustrate it. I will not do it without the consent of the Senator from Idaho [Mr. Borah].

Mr. BORAH. I yield.

Mr. NORRIS. I am not going to discuss it and I am not going to take up the time of the Senate in that way.

Mr. BORAH. I would be glad to have the Senator do so. Suppose San Francisco would refuse to recognize this. What would be the remedy of the farmer?

Mr. NORRIS. I think the farmer could get it in two ways think if he applied to the proper officials of the United States, they would commence an action against San Francisco. They could take away their right entirely. They would be entitled to it under the State courts, however. Without reference to the act at all they could go into the court, without regard to this provision, under their State regulations, whatever the law, and set up a claim, and if they could prove that if they were entitled to more water than the quantity that is named they would be entitled to get it. San Francisco in that kind of a lawsuit would be estopped from denying that they were entitled to at least this much.

Now, what else is the objection to this particular provision in the bill, if that is not it? Suppose two Senators were in litigation about the amount of water that the Senator from North Dakota had acquired in a certain stream. Suppose he claimed that he was entitled to 1,000 feet, and that was denied by the Senator from Idaho in the litigation. When they came to trial it might be well understood by the Senator from Idaho that he was getting 500 feet, and one of them would say in open court—the stenographer would take it down-it is conceded that the Senator is entitled to 500 feet, so as to shorten

the proceeding.

If it were not for the provision of the bill, let us see what would happen if these irrigationists were not entitled to the amount of water named in the bill. Suppose they were only entitled to 1,800 feet. I believe if they came to a test of that, that would be about all they would have a right to claim that they were entitled to. Let us assume that is true, whether it is or not, just for the sake of illustration. If that provision was not in the bill, that would be all they could get under the California law. With this provision in the bill, San Francisco says we recognize her right to so much more.

Mr. McCUMBER. Suppose San Francisco should say a year hence, or 10 years hence, that we have acknowledged that she has a right to so much, but the conditions are such that San Francisco needs a greater amount, does the Senator mean to say that San Francisco would be estopped from denying the right of any other section to any given amount of water simply

because she has contracted for doing so in the bill?

Mr. NORRIS. She has not contracted; she has simply recognized a right. That is bringing about a condition, however, that is not involved in the proposition I was discussing. Senator has now submitted a proposition that is entirely different, and, as I understand the facts, an impossible proposition. I understand that there is no such condition existing.

Mr. McCUMBER. It is not a question of whether that exists

to-day.

Mr. NORRIS. I will admit that it is not.

Mr. McCUMBER. If the Senator from Idaho will permit me, I will say nor is it an impossible condition. Mr. NORRIS. It is impossible to state a condition that could not possibly arise.

Mr. McCUMBER. Just a moment. I can not understand how the law of estoppel can affect the right of any citizen in the State of California when that right is based upon a contention that is inimical to the laws of the State of California. If you can not obtain by a direct contract a right to control the waters in any way, shape, or manner, it certainly can not be obtained under an indirect method of estoppel. If you can not contract away the sovereignty of your State over its waters directly you can not contract it away by any system of estoppel that would affect San Francisco or would affect the other sections

Mr. NORRIS. There is not-

Mr. McCUMBER. Just a moment. And if you can not estop San Francisco, you can not estop the other parties from making any kind of a claim they see fit to their own State for any added relief in the shape of water. So I can not see where the theory of estoppel can possibly be used on the one side or on the other side of this controversy.

Mr. NORRIS. The Senator has made his question or propo-

sition so long that I may not have gotten it correctly.

Mr. McCUMBER. That is possibly true.

Mr. NORRIS. But, as I understand, he makes this proposition: Suppose in this case that a third party comes in, that there is a shortage of water, and the third party says to San Francisco: "You are giving to this irrigation district 2,350 feet of water, when they are entitled to only 1,800 feet under the laws of California. I am short of water. I am entitled under the laws of California to some water, and I ought to have the surplus water." As I understand, that is the proposition which the Senator has raised, and it is one which I said was not involved in the original proposition found in the bill.

Mr. McCUMBER. No.

Mr. NORRIS. That brings a third party into it, and it is a question of law that it seems to me would be determined under the laws of California. If it could be established under the law that they were giving too much water, and there was litigation over it, the complete answer of San Francisco would be to come in and say: "Under our charter we must recognize this right. If the court takes it away, however, it is immaterial to us to which one of these people the water goes." I think that would be very easy for San Francisco, and the only proper course for her to recognize the court of t course for her to pursue if such a condition arose.

I have said to the Senator, and I believe it, that all the water of this stream is filed on, and a great deal more than there is in the stream is filed on. As between these irrigation districts and San Francisco there is not any question but that all the water has been legally taken. There is not any third

party. So that contingency would not arise.

Mr. CLARK of Wyoming. Mr. President—

The PRESIDING OFFICER (Mr. Martine of New Jersey in the chair). Does the Senator from Idaho yield to the Senator from Wyoming?

Mr. BORAH. I yield to the Senator from Wyoming. Mr. CLARK of Wyoming. That was just the subject of an inquiry which I made two or three weeks ago of the Senator from Colorado [Mr. Thomas] to ascertain the amount of water that there was tributary to this stream and how much had been I said then that I thought I could probably discover it somewhere in the reports, but I have been unable to discover it accurately. The Senator says that there is no question but that all the water has more than been legally appropriated. should like to find that information which the Senator has, and ascertain it definitely.

Mr. NORRIS. I understand that the irrigation district filed on 9,000 feet, and something more, did it not? There is not

that much water in the stream.

Mr. CLARK of Wyoming. That is what I want to ascertain. How much is there in the stream and how much is there tributary to the stream?

Mr. NORRIS. The flow of the stream is given in several of

Mr. CLARK of Wyoming. Oh!

Mr. NORRIS. But as to the exact amount of acre-feet I can

not tell the Senator.

Mr. CLARK of Wyoming. The Senator must understand that the natural flow of a stream cuts very little figure on the amount of irrigating water that can be drawn from the stream. The reservoiring of the stream so as to maintain the flood waters and surplus waters of the watershed, more than anything else, is what determines the value of the stream for irrigation, and

not the natural flow of the stream at all.

Mr. POINDEXTER. Mr. President—

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Washington?

Mr. BORAH. I yield to the Senator from Washington. Mr. POINDEXTER. I should like to give notice in the ordinary form that at the conclusion of the remarks of the Senator from Nevada [Mr. PITTMAN] upon the pending bill I shall ask leave to address the Senate upon the subject.

I should like to lay upon the Secretary's desk a number of

photographs of the Hetch Hetchy Park, which it is proposed to flood under the San Francisco project, showing in a better way than any descriptive words could do the natural features and beauties of that piece of the Yosemite Park.

Mr. CLARK of Wyoming. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Wyoming?

Mr. BORAH. I yield to the Senator from Wyoming.
Mr. CLARK of Wyoming. Mr. President, following the apparent habit of the Senate this afternoon, I desire to give notice that immediately after the conclusion of the remarks by the Senator from Washington [Mr. Poindexter] upon the pending bill I shall ask to address the Senate.

Mr. BORAH. I know how very earnest the Senator from Nebraska [Mr. Norris] is about his views in regard to this matter, and I know that he would not have consented to the report

of the bill in its present form if he had not believed that some of the things could be done which they are attempting to do; but now I invite the Senator's attention and the attention of the Senate again to the situation which will arise in case the city of San Francisco should refuse to recognize the conditions in this grant with reference to the water rights of the farmers of the San Joaquin Valley. In the first place, if San Francisco should refuse to recognize those rights, the question would arise whether or not she was estopped from denying the rights, they being set forth in her grant. I have not any doubt but that she would be permitted to deny them for the reason that the provision is one the grantor has no power to make; and, being illegal and without authority of law, it can never work as an estoppel. I think that matter is pretty well settled by law, and I read some authorities upon it. I do not know whether or not the Senator from Nebraska was present at the time I did so, but, if he will take the time to examine the authorities, he will find that, although at the time it was made it was illegal, or afterwards became illegal, it works not as an estoppel upon anyone. If we are correct, therefore, in our position that it is illegal, of course it would not be an estoppel upon San Francisco. As I said last night, the only possible effect of it would be to embarrass the farmers. It might be an estoppel as to them, for the reason that when they appeared here by their agents they appeared here in their individual capacity, a right that they might waive and dispose of as individuals; and, therefore, it might be embarrassing to them to go into court and, after San Francisco has expended hundreds of thousands of dollars, say that they would not be permitted to say contrary to what they had said before she spent the money. That is a principle of estoppel which might work against an individual, but here

Mr. NORRIS. Mr. President-

The PRESIDING OFFICER. Does the Senator from Idaho yield further to the Senator from Nebraska?

Mr. BORAH. In just a moment, when I get through with

my statement.

But here is the city of San Francisco taking a grant which does not provide for any forfeiture. I call the Senator's attention to the fact that there is no forfeiture provided for by reason of San Francisco's failure to comply with that provision. The only remedy which the farmer would have would be one of damages; and the Senator from Nebraska knows what a consolation it is to a farmer whose crops are burning up and whose land is becoming utterly useless to him by reason of the lack of water to have the right to bring a lawsuit against a city which may, with its salaried attorney, litigate him through the

The Senator contends-

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Nebraska?

Mr. BORAH. I yield. Mr. NORRIS. The Senator contends that that particular provision of the bill is absolutely unconstitutional, as I understand?

Mr. BORAH. Yes. Mr. NORRIS. So that the condition on account of which, at least, the evils that he has pointed out might flow could not arise. He is spending his time and we are having a discussion over a provision which, if the Senator's theory is true, could have no legal effect anyway; and it will be just the same whether you leave it in or strike it out.

Mr. BORAH. That is true; but I want the Senator not to

forget-

Mr. NORRIS. I do not agree with that contention, I will say to the Senator; I am not consenting to that; but that is the Senator's view.

Mr. BORAH. But, Mr. President, that was put in there in the belief that it was binding and that it would be effectual for the farmers, and upon that they based their consent.

Mr. NORRIS. It does not pretend to be binding upon the farmer. From its very terms it does not bind the farmer.

Mr. BORAH. I will show you in a few moments. Now, we will read on. First, perhaps, in order to refresh the Senator's memory, I had better read that provision again, although we are pressed for time:

(b) That the said grantee shall recognize the prior rights of the Modesto irrigation district and the Turlock irrigation district as now constituted under the laws of the State of California.

Would not San Francisco have to do that without that provision being there?

Mr. NORRIS. I think so, if they had a right.
Mr. BORAH. If they did not have a right, of course she would not recognize that which they did not have.

Mr. NORRIS. If they did not have any right, she would

certainly recognize what is put in there.

Mr. BORAH. In other words, the Senator thinks that it is within the power of Congress to compel San Francisco to recognize something that the farmers have not got-that is, to distribute the waters of the State by act of Congress,

Mr. NORRIS. I think so. Mr. BORAH. The bill provides:

(b) That the said grantee shail recognize the prior rights of the Modesto irrigation district and the Turlock irrigation district as now constituted under the laws of the State of California, or as said districts may be hereafter enlarged to contain in the aggregate not to exceed 300,000 acres of land, to receive 2,350 second-feet of the natural daily flow of the Tuolumne River, measured at the La Grange Dam, whenever the same can be beneficially used by said irrigation districts, and that the grantee shall never interfere with said rights.

Who is to determine when "the same can be beneficially used

by said irrigation districts"?

Mr. NORRIS. I presume it would be determined just as though that particular provision were not in there. The same difficulty might arise over that very thing if the provision

Mr. BORAH. But this says that San Francisco shall recognize the right whenever the water may be applied to a beneficial

Mr. NORRIS. Yes. Mr. BORAH. Well, does that give San Francisco the power to say in the act of recognition that it is or is not being applied to a beneficial use?

Mr. NORRIS. No; I do not think San Francisco would have a right to say that any more than she would have a right to that the irrigation districts were not entitled, as a matter of fact, to anything. I do not claim that.

Mr. BORAH. Somebody must determine "when the same can

be beneficially used."

Mr. NORRIS. Exactly; but suppose we struck that out. Senator can not make anything that is automatic that will not involve a possibility of litigation. If he can, I should like to have him do so.

Mr. BORAH. Wait a moment until I get through. The ex-

pression used is:

Whenever the same can be beneficially used by said irrigation districts.

Now, somebody must determine the question of beneficial use. If they are going to recognize-I am proceeding upon the Senator's theory that it is binding; I am accepting his theory now-if they are going to recognize this 2,350 feet "whenever the same can be beneficially used by said irrigation districts, who is going to determine it? It is legal; it is binding we will say; but who is going to determine when "the same can be beneficially used"?

Mr. NORRIS. Whatever machinery is provided for by the

laws of California for that purpose.

Mr. BORAH. Then, in the first place, if there is a dispute they must go into court and establish their beneficial use, and after that is established San Francisco will recognize it.

Mr. NORRIS. If we struck out that provision and put nothing there except what is in section 11, or words to the same effect as those in section 11 of the bill, suppose, then, that San Francisco said "there is not an irrigation district; there never was one;" or suppose she said "you are not entitled to more than 300 feet," or suppose she said "you are not using this for beneficial purposes." All those questions might arise. As I understand, the courts of California are the proper machinery for determining those difficulties.

Then, the Senator from Nebraska realizes the Mr. BORAH. point at which he has arrived, and that is that this contract settles nothing; that you have got to go to the courts to settle

Mr. NORRIS. No. In the first place, it is not a contract; it is simply a statement of one of the conditions that San Francisco must adhere to, that she will recognize the right of these irrigation districts to use so much water, and that that right to that extent shall be superior to her own. But if the irrigation districts were using the water for some purpose which under the laws of California was not a beneficial purpose, even with that provision in the bill, would she not have a right, and ought she not to have a right, to say, "They are not using it for that purpose; instead of using it, they are running it down into the ocean and not using it at all?" Does the Senator

think that could occur?

Mr. BORAH. The Senator has now returned to the proposition that San Francisco is going to determine whether or not the water is devoted to a beneficial use,

Mr. NORRIS. The Senator has not. The Senator has said that San Francisco must recognize as a prior right the right of the irrigation districts to take so much water.

Mr. BORAH. Provided it can be beneficially used.

Mr. NORRIS. The Senator ought to be fair, and I do not think he is quite fair, because he is setting forth difficulties with the provision to which he objects in the bill that he must know would arise if that provision were out or difficulties which

could come up just the same.

Mr. BORAH. I am going to be fair; I am going to argue it upon the Senator's contention. You say that the law is binding; you say that it is valid; that it is such a provision as we have a right to make Now Towns in the law is binding. have a right to make. Now, I am going to argue it upon that basis. I do not think it is tenable, but I am going to accept that proposition. Now, let us see where you arrive and what consolation the farmer gets out of this situation:

(b) That the said grantee shall recognize the prior rights of the Modesto irrigation district and the Turlock irrigation district as now constituted under the laws of the State of California, or as said districts may be hereafter enlarged to contain in the aggregate not to exceed 300,000 acres of land, to receive 2,350 second-feet of the natural daily flow of the Tuolumne River, measured at the La Grange Dam, whenever the same can be beneficially used by said irrigation districts, and that the grantee shall never interfere with said rights.

I know of no one who can determine the question of beneficial use except the courts under the laws of the State of California. Then, if no one can determine it except the courts under the laws of the State of California, you have not arrived anywhere or settled anything, for the reason that if they had to go to the courts of California and settle it under the laws of California they would go just the same, whether this provision was in here

or out of here; so this does not help any.

Mr. NORRIS. Not necessarily. If you would assume that, as a matter of fact, the irrigation districts were not entitled under the laws of California to that much water, there would be where the difference would come in. If it is correctly stated, then they would get the same amount of water whether the provision is in or out. I should like to have the Senator at least get the theory as I understand it. I did not draft the bill; I did not draw the provision; but I understand from those who did that the theory of it was-and that was the reason why the irrigationists, represented, as they were, at the time by able men, were anxious to have the provision in the bill—that there was at least a great deal of doubt of their ability to prove that they were entitled as a matter of law to the amount of water stated in this bill, and so they demanded that it should recognize their right to the amount set forth. The provision was put in on that account.

Mr. BORAH. Yes; I understood the theory upon which it was put in, but I have never believed it was a thing which could be accomplished in this way; and that is what I am trying to

show.

Having discussed subdivision (b), we will pass to subdivi-

sion (c):

(c) That whenever said irrigation districts receive at the La Grange Dam less than 2,350 second-feet of water, and when it is necessary for their beneficial use to receive more water, the said grantee shall release free of charge, out of the natural daily flow of the streams which it has intercepted, so much water as may be necessary for the beneficial use of said irrigation districts not exceeding an amount which, with the waters of the Tuolumne and its tributaries, will cause a flow at La Grange Dam of 2,350 second-feet.

There we have a provision that whenever the irrigation districts receive at the La Grange Dam less than that amount, the city of San Francisco shall turn out, free of charge, a certain

amount of water.

Does the Senator think the farmers down there could compel the city of San Francisco to turn it out under this provision? I have no doubt he does think so. There is where we differ. think San Francisco could snap her fingers at the farmers of the San Joaquin Valley, and the farmers would have to depend entirely upon the doctrine of priority and settle their rights under the laws of California, and this provision would avail them nothing. This is a grant in præsenti. The grant takes effect the minute the grant is delivered. There is no forfeiture clause in it with regard to this. The farmers of the San Joaquin Valley could not bring an action of forfeiture. No one could bring an action of forfeiture except the Government itself, and that only upon two grounds. If they did not turn it out, if they refused to have brought an action of mandamus, the city of San Francisco could say: "That is a provision which was contrary to the laws of the United States, and we are not bound by it.'

Mr. NORRIS. But that is not a provision that is contrary to the laws of the United States.

Mr. BORAH. There is where we differ.
Mr. NORRIS. Yes; I know we do. It seems to me that is one of the conditions that we can very properly put in this grant.

Mr. BORAH. Let us see about that. [Reading:]

(c) That whenever said irrigation districts receive at the La Grange Dam less than 2.350 second-feet of water, and when it is necessary for their beneficial use to receive more water, the said grantee shall release free of charge—

Who owns this water that the city of San Francisco is re-leasing? It belongs to the State of California. You are now disposing of that which belongs to the State, and you say that San Francisco shall turn over to a particular individual what the State of California says may be turned over to somebody else. You say here that San Francisco shall turn it over to The State of California may say it shall be turned Mr. A. over to Mr. B.

But the particular water with which the Sen-Mr. NORRIS.

ator is now dealing belongs to the irrigation districts.

Mr. BORAH. Oh, no.
Mr. NORRIS. Yes, indeed.
Mr. BORAH. No; you have already fixed that in subdivision B.

Mr. NORRIS. Yes; but the Senator now has a case where there is not that much, and they are required to turn out enough of the water they have impounded to make that much.

Mr. BORAH. I will say to the Senator that the bill does not

provide that at all. It says:

Whenever said irrigation districts receive at the La Grange Dam less than 2,350 second-feet of water, and when it is necessary for their beneficial use to receive more.

Mr. NORRIS. Yes. Mr. BORAH. It might be necessary for me to have a thousand inches of water upon my farm, to which I might never have acquired title.

Mr. NORRIS. But the city of San Francisco, under the grant, recognizing the right to have 2,350 feet. The Senator is stating now a case where at the dam there is not that much, so the grantee must release enough to make that much.

Mr. BORAH. Yes; but she is releasing water that does not belong to her, unless the laws of California and the courts ad-

judge it to belong to her.

Mr. NORRIS. No; if the irrigation people are entitled to that water, then it is their water. They have a property right in it. Mr. BORAH. Then, if it belongs to the irrigation districts,

and is their water, San Francisco has nothing to do with either releasing it or holding it.

Mr. NORRIS. She would be in a pretty bad fix if the dam were built there and you should say she must not hold the water and she must not release it. That would be a pretty serious proposition. She would have to do one or the other.

Mr. BORAH. According to what the State of California has

said; not what we say.
Mr. BRANDEGEE. Mr. President-

Mr. BORAH. I yield to the Senator from Connecticut. Mr. BRANDEGEE. Mr. President, if the bill provides that

the grantee shall furnish these irrigation districts 2,350 secondfeet of water, and if section 11 of the bill provides in substance that nothing in the bill shall be construed to authorize anything contrary to or different from what the laws of the State of California prescribe, and if the laws of the State of California should be contrary to this condition, does not the Senator think the condition of which he complains would fall and be of no offect?

Mr. BORAH. Precisely so.

Mr. BRANDEGEE. I have heard Senators state that the provision in the bill to which the Senator is now alluding in some way encroaches upon State rights. Will the Senator point out in what respect it does, if he thinks it does? I am asking

solely for information.

Mr. BORAH. I have not stated that the bill actually encroaches upon State rights, but I state that we assert the power to do things which would be an encroachment upon State rights. We can not encroach upon State rights by an act of Congress, as a matter of fact, for somewhere along the line will be found a tribunal with the knowledge and the courage to declare our efforts futile. I believe we should not seek to do it.

Mr. BRANDEGEE. No; not constitutionally, of course.
Mr. BORAH. We can not do it in contemplation of law. Of

course we may do it, and the States may accede to it, and it may work out. That is the vice of this proposed legislation, if all parties will consent.

Mr. BRANDEGEE. How could compliance by some city with an unconstitutional provision of an act of Congress, as the Senator says, work out anything in derogation of the Constitu-

tion of the United States?

Mr. BORAH. Suppose this grant were carried out here as between the parties and the city of San Francisco and the irrigation districts should undertake to distribute the water to which they were entitled, respectively, by reason of their prior appropriations, contrary to the provisions which the laws of California make with regard to it. The actual operation of the thing would be contrary to the laws of the State of California, but it could be stopped at any time anybody had a mind to stop it.

Mr. BRANDEGEE. That is the way it seems to me. course, the fact that somebody was complying with a condition that Congress had no right to impose would not, I assume, in the Senator's opinion, have the slightest effect upon any court in its determination of a constitutional question that might be

Mr. BORAH. Oh, no. There is the very vice of this legislation. We say it would not have the slightest effect upon any court, and yet when the attorney came into court with this grant he would say, "Here is a grant which the Congress of the United States, after most earnest debate and consideration, asserted the right to make, and here are the terms which it asserted the power to make. It was the solemn declaration of the Congress of the United States as to its constitutional power to do this thing." Is it not a well-established rule that the courts in construing a statute which a Congress has solemnly passed will resolve all doubts in favor of it simply and solely by reason of the fact that it has received the affirmation of Congress?

Mr. BRANDEGEE. I think no doubt the courts in every case, both State and Federal, will attempt to sustain the constitutionality of statutes; and the presumption is that they are consti-

tutional until their constitutionality is disproven. Mr. BORAH. Yes

Mr. BRANDEGEE. I do not, however, wish to interrupt the

Senator now if he objects to it.

Mr. BORAH. No; I would just as soon be interrupted as not.

Mr. BRANDEGEE. It seemed to me that the imposition or attempted imposition of a condition in this bill, assuming that we had no authority to make it or to reserve it, was utterly void. I am as much opposed as the Senator is to the use of language that is not necessary or to the interpolation in statutes of things that I do not believe we have authority to put in. But let me ask this question of the Senator, and then I will subside:

If the Government owns this land in fee and is giving to somebody a right of way over it, why has it not a right to impose . as a matter between grantor and grantee any condition that it chooses to impose, irrespective of the powers conferred upon the Congress of the United States by the Constitution? I mean, why can not that be done by the Government acting as a proprietor of land and making a deed or a grant to this grantee? Why could it not put in here, if it wanted to, a condition-and if it did wherein would it differ in principle from the present onethat this grant should operate only in case California continued to have woman suffrage or in case it should agree to plant one-quarter of the State in wheat instead of in grapes? What has a condition reserved in a grant to do with the question of who owns the water within a State?

Mr. BORAH. Mr. President, suppose we should put in a bill such asinine provisions as the Senator suggests; would the Senator, under his oath as a Senator to support the Constitution of the United States have a support the Constitution of the United States, be willing to add his solemn sanction to a law which carried such impossible, illegal, and unconstitutional

provisions?

Mr. BRANDEGEE. Mr. President, I am talking about whether it is illegal or not. Of course, the Senator must not beg the question. I am assuming that the owner of a piece of land has a right to grant an easement to somebody seeking it upon any conditions that he has a mind to contract with the grantee to impose. If the grantee thinks they are absurd or fantastic, he need not accept the grant. But why can not the grantor, if he can deed the whole of it absolutely in fee simple, deed a right of way over it subject to any condition, no matter how fantastic?

Mr. BORAH. Of course he can do that. I have no doubt he can do it.

Mr. BRANDEGEE. Then this would not be void.

Mr. BORAH. If we are discussing this bill upon the theory suggested by the Senator from Connecticut; if we are willing to put into a bill anything that may secure its passage through the Congress, any provision which may seem palatable to any-body who is interested, merely on the theory that it is a proprietary grant, of course there is nothing to prohibit us from doing it. In that event the courts will afterwards say: "The Congress of the United States has done all these ridiculous things and has sacrificed and compromised its position as a legislative body. We will hold this law utterly and absolutely void, because the things which were put in are not proprietary powers at all, but they are attempts to control sovereign powers of the State or of the National Government."

Undoubtedly we can do that; but the Senator from Connecticut is just as far from legislating upon that theory as is the Senator from Idaho. He would strip a bill of the things which are unreasonable or impossible or unconstitutional or illegal, if he thought them to be so, just as quickly as would

anyone else in the Chamber,

My contention is that they are not putting in here things which appertain to the power of a proprietor in deeding land, but that they are asserting here certain governmental functions in connection with it, and that we as a Congress are lending our sanction to the assertion that they have the right to put them in.

Mr. BRANDEGEE. Mr. President—
The PRESIDING OFFICER (Mr. Robinson in the chair) Does the Senator from Idaho yield to the Senator from Con-

necticut?

Mr. BORAH. Yes; I yield. Mr. BRANDEGEE. Of course I can not control nor even hope to change the Senator's view, if that is the view he takes about it; but I simply say that if in the end I should vote for this bill it would not be with any idea that I acceded to the claim, or wanted to establish a precedent or do anything in the nature of making it easy for the National Government to claim, that it owned within the borders of a State the waters of a nonnavigable river or had a right to sell them. It is because I take the view that the Government is acting merely as a proprietor of land, and has a right to attach any conditions to it, that I think, on my theory of the matter, I should not be inconsistent if in the end I should vote for the bill, although I do not know whether I shall or not.

Mr. BORAH. But permit me to say to the Senator from Connecticut that we do put into this bill provisions which distribute, redistribute, and apportion the waters of the State of

California.

Mr. BRANDEGEE. The question is, Are we doing it as a government, under a claim of right to do it if we did not own the land, or are we doing it just as any other proprietor of land

Mr. BORAH. The proprietor of land does not own any water in California.

Mr. BRANDEGEE. I have heard it asserted again and again that the State of California owns this running water. Now,

perhaps it does

I am not quite clear who does own the water that runs down from the peaks of the mountains to the sea, and is evaporated and brought back to the peaks of the mountains again. owns it I do not know, but I am quite sure the National Government does not own it in the midst of a State; and I am quite sure the only function the National Government has in connection with it is to regulate commerce.

Mr. BORAH. We agree upon that.

Now, Mr. President, proceeding a little further with the bill, as the hour for adjournment has not yet arrived, subdivision (d)

That the said grantee, whenever the said irrigation districts desire water in excess of that to which they are entitled under the foregoing, shall, on the written demand of the said irrigation districts, sell to the said irrigation districts from the reservoir or reservoirs of the said grantee such amounts of stored water as may be needed for the beneficial use of the said irrigation districts at such a price as will return to the grantee the actual total costs of providing such stored water.

There it will be observed that the bill provides for the sale of certain water, although it is contended constantly here that we are not undertaking to dispose of the water of this stream. I want to read another section of it:

as will return to the grantee the actual total costs of providing such stored water, such costs to be computed in accordance with the currently accepted practice of public cost accounting as may be determined by the Secretary of the Interior, including, however, a fair proportion of the cost to said grantee of the conduit, lands, dams, and water-supply system included in the Hetch Hetchy and Lake Eleanor sites.

There is a provision which, while not very interesting to the Senate of the United States, would be a very interesting proposition if a farmer were called upon to pay under that provision. It says that he shall "return to the grantee the actual total costs of providing such stored water," if they sell to these parties, the "costs to be computed in accordance with the currently accepted practice of public cost accounting, as may be determined by the Secretary of the Interior, including, however, fair proportion of the cost to said grantee of conduits, lands, dams, and water-supply systems included in the Hetch Hetchy and Lake Eleanor sites."

So when the farmer in the San Joaquin Valley comes to have the price fixed which he is to pay for the water, he is not in the position of the farmer who can go direct to the stream and divert it, but he must apply to San Francisco, and San Francisco can charge up as a part of the price a portion of the cost for the construction of this vast system of reservoirs; of course, I assume, a fair proportion. I am assuming that, but nevertheless the farmer must, under those circumstances, have an accounting between himself and San Francisco, which will practically ad-judge and determine what portion of the cost of the construction of this reservoir system shall be charged up to the price of the water which he uses upon his farm.

Mr. President, having had some experience in irrigation districts, and having observed the condition of affairs in the midst of a summer where water is scarce; having passed through a section of the country where farms were burning and where the farmer was witnessing the destruction of his year's labor, the entire expenditure of the year going in 30 days, I look upon some of the provisions in this grant, so far as the lands of San Joaquin are concerned, as nothing less than cruel. To say to them that you shall travel to the city, or if not to the city to the Secretary of the Interior at Washington, who may be upon his summer vacation, hidden away in the recesses of the mountains, in order to get water upon your farm before the crop shall be destroyed. If a man were a bonanza farmer, with his millions, and his salaried lawyer standing guard for his interests, he might possibly keep track of the situation; but what of the numberless farmers who are unable to employ counsel for such tremendous enterprises? What of those who are simply, in the first instance, going into the community and trying to build up their farms, those who must struggle with might and main to make both ends meet at the end of the year, then to say to them, "Yes; you shall have water." When? Whenever the city of San Francisco says you are using it for a beneficial purpose; or, if there is a disagreement between San Francisco and yourself, when the Secretary of the Interior shall determine it; or, if the Secretary of the Interior can not be found, then when the courts of California shall determine it. A farmer came to my office some time ago from this region of the country.

Mr. WALSH. Mr. President-

Mr. BORAH. I will yield in just a minute. I said to him, "What is the objection of the farmers of the San Joaquin Valley to this enterprise? I want to know from you." He said, "The objection we have is in placing that tremendous power at the source of our water supply, a power with which we can not cope, which practically controls the situation, owns the reservoir, the conduit, the ditches. They may turn water on or turn water off, and we would be powerless, except after endless litigation, year after year, to get our rights, until finally we would give up and move out."

I yield to the Senator from Montana.

Mr. WALSH. Mr. President, most of us over here had a kind of an idea that San Francisco would be dealing with these two irrigation districts. Will the Senator kindly call our attention to those provisions by which the individual farmers will be called upon to deal with San Francisco, and likewise why these irrigation districts would not be able to employ counsel?

Mr. BORAH. Mr. President, I am not familiar with the ideas which prevail over there or how they arise.

Mr. KENYON. Mr. President-

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Iowa?

Mr. BORAH. Certainly.

Mr. KENYON. Was not that farmer willing to give up the rights he thought he might have to this water in order that there might be some cheaper electric power generated for that

Mr. BORAH. I do not know.

Mr. KENYON. He did not express himself?

Mr. BORAH. No.

In answer to the suggestion of the Senator from Montana, but there are over 200,000 acres of land in that valley which need water, and I claim the right, and it is just as much my duty here to speak for the farmer who is coming in, for the settler, and for the home builder, for the man who is to arrive and take charge of those farms and build them up and make homes out of them, as to speak for those who happen to have been there and to have established their rights.

Mr. WALSH. Just because it may help us somewhat I will state that this is for the purpose of storing surplus water. understand that the natural flow of the river except at flood time is now all appropriated and all used. It would be helpful to the Senate if the Senator would go on now and explain how a new settler, a farmer, an individual settler, who comes into that country after this time, will be able to get any water out of that stream except some dam is put up above, such as the bill contemplates, for the purpose of storing the water.

Mr. SMOOT. Mr. President—

Mr. BORAH. I ask the Senator to wait just a moment. If understand the Senator from Montana correctly, he assumes that farmers who would go in there would be in no better po-sition if they should organize and build and own and control their own dam with the water rights than if the reservoir were granted to the city of San Francisco, under which San Francisco would control the whole situation. Of course, the farmers might combine and organize districts and act col-

lectively, but the expense would still have to be met in the first instance by the individual farmer.

Mr. WALSH. That is the real crux of the situation. It is simply a question now, as I understand it, whether we shall authorize San Francisco to construct this dam and store these waters or whether we will allow them to run away to the ocean for 10 years more, until an irrigation district is created which will come down here to Congress to ask exactly the same privileges-to construct a dam in the Hetch Hetchy Valley for the purpose of storing these waters and irrigating these 200,000 acres of land.

Mr. BORAH. That is one of the propositions here.

Mr. WALSH. That is the proposition.

Mr. BORAH. I am glad to have it so.

I am very glad to hear the Senator's answer. Mr. BORAH. I am going to discuss that later, and I shall be pleased by his presence when I come to discuss it.

The PRESIDING OFFICER. Does the Senator from Idaho

yield to the Senator from Utah?

Mr. BORAH. I yield. Mr. SMOOT. Mr. Pr Mr. President, I think these questions are worthy of most serious consideration. There are very few Senators in the Chamber, and I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Utah suggests the absence of a quorum. The Secretary will call the roll. The Secretary called the roll, and the following Senators

answered to their names:

Ashurst Bacon Gore Hollis Stone Sutherland Owen Sutherland Swanson Thomas Thompson Thornton Townsend Vardaman Walsh Warren Hughes James Jones Page Perkins Pittman Pomerene Borah Brady Brandegee Bristow Kenyon Kerno
Lane
Lewis
McCumber
McLean
Martin, Va.
Martine, N. J. Bryan Burton Chamberlain Reed Robinson Saulsbury Shafroth Chilton Clapp Clark, Wyo. Clarke, Ark. Sheppard Shields Shively Williams Works Smith, Ga. Smith, Md. Smoot Nelson Norris O'Gorman Colt Dillingham Gallinger

The VICE PRESIDENT. Sixty-one Senators have answered to their names. There is a quorum present. The Senator from

Idaho will proceed.

Mr. BORAH. Mr. President, it has been often asserted in this debate that the bill does not attempt to dispose of the waters of California. I concede that it does not attempt to determine the original title to the waters of the State of California, but I do assert that it undertakes to dispose and distribute and redistribute the waters of the State as between the residents of the State of California. That is dealt with all through the bill. I will read a few passages in order that it may be seen to what extent they undertake to dispose of this

water:

(d) That the said grantee, whenever the said irrigation districts desire water in excess of that to which they are entitled under the foregoing, shall on the written demand of the said irrigation districts sell to the said irrigation districts from the reservoir or reservoirs of the said grantee such amounts of stored water as may be needed for the beneficial use of the said irrigation districts at such a price as will return to the grantee the actual total costs of providing such stored water, such costs to be computed in accordance with the currently accepted practice of public cost accounting as may be determined by the Secretary of the Interior, including, however, a fair proportion of the cost to said grantee of the conduit, lands, dams, and water-supply system included in the Hetch Hetchy and Lake Eleanor sites.

Now, will anyone contend that that is not an effort to enforce

Now, will anyone contend that that is not an effort to enforce the sale and disposition of the waters of California? Does it not prove that whenever the irrigation districts make a written demand there shall be a sale and transfer of title, an exchange of property for price? Is it not a disposition of the waters? Is it not a distribution of them? What is it? One of those idle things, I presume, put in to palliate. Further it says-

upon the express condition, however, that the said grantee may require the said irrigation districts to purchase and pay for a minimum quantity of such stored water, and that the said grantee shall be entitled to receive compensation for a minimum quantity of stored water and shall not be required to sell and deliver to the said irrigation districts more than a maximum quantity of such stored water to be released during any calendar year.

There is another clause providing for another matter of distributing between these parties, disregarding all other people's rights of these waters, I grant you, upon the assumption that they have acquired the original title from the State of California, but having acquired the title and put it into the reservoir and other parties desiring it, the bill undertakes to provide how it shall be sold and what price shall be paid and who shall fix the price. I think I am correct in that conclusion.

Provided, however, That if the said irrigation districts shall develop sufficient water to meet their own needs for beneficial use and shall

so notify in writing the Secretary of the Interior, the said grantee shall not be required to sell or deliver to said irrigation districts the maximum or minimum amount of stored waters hereinbefore provided for.

What are they doing there? The Government of the United States is constituting the city and county of San Francisco its agent to dispose of the waters of California in a certain way. It assumes, I will say, that its agent has acquired original title from the State, but as soon as it has done so the Government says that the disposition of it, the use of it, the price which shall be charged, and who shall use it shall be as follows. The sovereignty or the National Government says—and it selects the city of San Francisco for the purpose of performing that which should be performed by the water commission of the State of California-

(e) That such minimum and maximum amounts of such stored water to be so released during any calendar year as hereinbefore pro-vided and the price to be paid therefor by the said irrigation districts are to be determined and fixed by the Secretary of the Interior in accordance with the provisions of the preceding paragraph.

They have provided for the sale and distribution, but then they say that the amount to be released and the price to be paid shall be fixed by whom? By the water commissioners of California, by a tribunal selected by the State of California to distribute the water, fix the price, and determine what shall be paid? Certainly not. But they say to whom it shall be sold, how the price shall be determined, and who shall fix the price. That is stated here in an act of Congress, and Congress selects the Secretary of the Interior to do the work.

I ask my friends what is there left to the sovereign authority of the State to fix the price of power, to fix the price of water, to fix the rates which railroads within a State may charge, if the Congress of the United States, under the guise of making a grant, can draw to itself the power to fix the rates through an instrumentality which it chooses, to wit, the Secretary of the Interior?

As was said by the Senator from Connecticut [Mr. BRANDE-GEE], you can put all these things in, and they may be avoided; but we are inserting them, and inserting them as an authority which we have and as a power which we possess, and which we may legitimately under our oaths exercise.

I would not care so much about this proposition, and would take my chances upon the courts holding it unconstitutional, if they had not all gone into the bill by reason of an understanding with those who are vitally interested that they would be binding, and by reason of that fact they were led into a cul-desac, which, in my judgment, they are very anxious to get out of-

Again, notice what they are doing with reference to water on page 17, subdivision (h):

(h) That the said grantee shall not divert beyond the limits of the San Joaquin Valley any more of the waters from the Tuolumne watershed than, together with the waters which it now has or may hereafter acquire, shall be necessary for its beneficial use for domestic and other municipal purposes.

How does the city of San Francisco get its water, and how does it get its right to divert and the amount which it shall divert? It goes to the stream the same as John Doe or Richard Roe, and it posts its notice under the laws of the State of California. If it posts its notice for a certain amount and uses due diligence in the diversion of the water and the application of it to a beneficial use, it ripens into a title to that much water. If it does that, it is entitled to divert all that it has posted notice for and applies to a beneficial use. It is entitled to divert no more than it requires, under the laws of the State of California. But this says:

(h) That the said grantee shall not divert beyond the limits of the San Joaquin Valley any more of the waters from the Tuolumne watershed than, together with the waters which it now has or may hereafter

Suppose it desired to do otherwise; suppose it desired to divert water for the purpose of sale to other individuals than those named here and it should go upon the stream or should go to the source of supply, post its notice for that extra amount, and should put it into this reservoir which we are granting, and should begin to sell it to fhe other people at a price fixed by the laws of California or otherwise, would this provision of this grant restrain them in any way from doing that? They would simply say, "We have complied with the laws of the State of California. The Congress of the United States could not limit us in our right as a municipal corporation or as individuals from availing ourselves of all the virtues of the laws of California and acquiring all the property rights that we could acquire legitimately under those laws." Would that not be a complete and efficient answer just the same as it would be an answer to the several preceding paragraphs in which they undertake to limit, to dispose of, to distribute, to redistribute, and to fix the price of the waters in this State?

But, Mr. President, this all comes back to the proposition that this grant would be a very ineffective proposition in many ways for San Francisco if it were not for the fact that this reservoir site is the key to the situation, and we grant the reservoir site in unconditional terms; we place the title in a grant in præsenti to the reservoir site, the only means practically for this entire community by which this water can be stored. That belongs to San Francisco; it is real property; and the moment it becomes real property the Congress of the United States can impose no terms or conditions. It is controlled from that hour by the laws of California; and San Francisco is in the same position, as I said a moment ago, as a railroad having the prior and exclusive right granted to it to pass through a gorge, and she may dictate terms. If that be not true, would they accept an amendment by which this grant should run equally and be to the benefit of all, without the consent of San Francisco being required, who might avail themselves, under the law of the State of California, of this water or of the reservoir in which it is stored?

Mr. CLAPP. Mr. President-

The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Minnesota?

Mr. BORAH. I yield. Mr. CLAPP. I desire to ask a question for information, and not in a spirit of criticism, and I am asking as to a matter upon which I have heard diverse statements. For the purpose of the inquiry we will assume that San Francisco has made filings that entitle her to a given quantity of water out of this river. I think it is 161,000,000 gallons. I should like to know from the Senator's study of the situation, in view of the physical conditions there, whether there is any way in which San Francisco can avail herself of that filing and get that amount of water except by a dam-I am not saying now the dam proposed by the bill-except by a dam at the place where the bill contemplates the erection of the dam?

Mr. BORAH. My information is that there is not any other way by which she can avail herself of this particular water

supply.

Mr. CLAPP. That is what I wanted the Senator's opinion on.

Mr. BORAH. That is my understanding.

Mr. CLAPP. I understand at the same time, from a suggestion of the Senator from Utah—if the Senator from Idaho Mr. CLAPP. will pardon me—that it is claimed that the settlers below there could build reservoirs and impound the excess of water in high water, so that they could use water covered by their subsequent filings without any dam being placed at this point.

Mr. BORAH. That is my understanding.
Mr. SMOOT. I will say, Mr. President, that Mr. Newell so testified, and others testified to the same effect.
Mr. CLAPP. I wanted to get the view of the Senator from Idaho. I was very much interested, I may add, in the suggestion the Senator was just making. If there was some way by which a dam could be built there and utilized, and there could be withdrawn from the bill anything like a recognition of the authority of either party to construct that dam—and San Francisco alone is mentioned in the bill in connection with the dam—and if there could be withdrawn anything like an assumption of authority to distribute the water to those who are entitled to it, it seems to me that might be a desirable solution of the difficulty; but I do not know how that could possibly be accomplished. I should, however, be very much interested in such an amendment.

Mr. WORKS. Mr. President—
The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from California?

Mr. BORAH. I yield, Mr. WORKS. That can be accomplished under the laws of California. The water commissioners have complete control over that matter. They could allow the city of San Francisco to construct a dam at such height as would store the water which that city needs, and they could allow somebody else to add to the dam such an addition as would store the quantity of water they could use, and so on. Therefore, the laws of California would control the water and send it where it justly and properly belongs, if not interfered with by Congress.

Mr. CLAPP. I do not see that there would be any legal objection. The objection that occurred to me was the practical objection of inducing the building of a dam under those circumstances, one party contributing the funds for the construction of the dam to a certain extent and the other party securing the cooperation of the other builders and providing funds for

the extension of the dam.

Mr. WORKS. That is specifically provided for by the law that I read to the Senate—the manner in which it shall be done,

how the operating expenses shall be borne, and all that, Mr. CLARK of Wyoming. Mr. President, as a practical mat-ter, it is done now by the Government itself.

Mr. CLAPP. I know the Government could finance it very readily.

Mr. CLARK of Wyoming. It is not a question of financing, . it is a question of proportionate contributions.

Mr. CLAPP. That is simple, but the question of constructing a dam there that would meet, first, the requirements of San Francisco and then impound an excess—a dam that would impound, say, 400,000,000 gallons, of which San Francisco could only take 161,000,000 gallons and the settlers the balance, or vice versa, would be a financial problem in that one phase of it.

Mr. CLARK of Wyoming. That is true; but there are few of these districts, and the evidence shows that at this particular point the parties interested are willing to and able to undertake

proposition of that sort.

Mr. CLAPP. I trust the Senator from Idaho will pardon me for the interruption, but it was on a practical phase of the question.

Mr. WALSH. Mr. President—
The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Montana?

Mr. BORAH. I yield to the Senator. Mr. WALSH. The Senator from California suggests a very interesting inquiry. He informs us that the laws of the State of California will allow one dam to be superimposed upon another, the original owner to have the water stored below and the subsequent builder the water stored above. Can the Senator inform us whether anybody has ever availed himself of that privilege?

Mr. WORKS. No; because the law has only within the last few months gone into force and has not been availed of at all. I think the water commission has only very lately been appointed. It is a new law in California, but it is a very specific

Mr. WALSH. Is the Senator able to tell us about the engineering difficulties attendant upon the construction of a series of dams superimposed one upon another?

Mr. WORKS. It depends altogether upon the action of the water commissioners. They would determine that question.

Mr. BORAH. I suppose that the water behind the dam would be something like money in a bank—no particular water would be something like money in a bank would belong to anybody in a bank, but they would be entitled to go there and get so much of it as they had remaining there. The engineering trouble, therefore, would be likely to be about the same that you have in getting money into a bank; there is not much trouble about getting it out.

Subdivision (1) provides:

Subdivision (1) provides:

(1) That the said grantee shall, upon request, sell or supply to said irrigation districts, and also to the municipalities within either or both said irrigation districts, for the use of any land owner or owners therein for pumping subsurface water for drainage or irrigation, or for the actual municipal public purposes of said municipalities (which purposes shall not include sale to private persons or corporations) any excess of electrical energy which may be generated, and which may be so beneficially used by said irrigation districts or municipalities, when any such excess of electric energy may not be required for pumping the water supply for said grantee and for the actual municipal public purposes of the said grantee (which purposes shall not include sale to private persons or corporations) at such price as will actually reimburse the said grantee for developing and maintaining and transmitting the surplus electrical energy thus sold—

That will be a more difficult proposition in finance than the other would be of engineering-

And no power plant-

Listen to this clause-

and no power plant shall be interposed on the line of the conduit except by the said grantee, or the lessee, as hereinafter provided, and for the purposes and within the limitations in the conditions set forth

So that dedicates the entire power to the city with some degree of completeness, if it can be done at all.

The said grantee shall develop and use hydroelectric power for the use of its people and shall, at prices to be fixed under the laws of California or, in the absence of such laws, at prices approved by the Secretary of the Interior.

That I referred to, Mr. President, a few moments ago, and I will not refer to it again. There is one provision here, however, to which I shall call attention before I close upon this part of the discussion:

Provided, however, That the grantee shall at all times comply with and observe on its part all the conditions specified in this act, and in the event that the same are not reasonably complied with and carried out by the grantee, upon written request of the Secretary of the Interior, it is made the duty of the Attorney General in the name of the United States to commence all necessary suits or proceedings in the proper court having jurisdiction thereof, for the purpose of enforcing and carrying out the provisions of this act.

It will be observed that that is entirely different from the provision with reference to forfeiture, with reference to the failure to complete and an attempt to sell. In the provisions of the grant which have reference to the question of sale or reference to the question of failure to complete, it is expressly provided that such failure shall constitute a forfeiture upon the part of the grantee, and that the Attorney General shall bring action for the purpose of bringing that forfeiture to a final conclusion.

But this is an entirely different proposition. It does not provide for any forfeiture, but simply provides that the grantee shall comply, and that upon its failure to do so the Attorney General shall bring such action as may be necessary for the enforcement and carrying out of the provisions of the act. No forfeiture being provided for, no forfeiture can follow from that fact, for the reason that forfeitures are not favored and must be specifically provided for before they can be enforced. The Attorney General could bring whatever action was necessary, perhaps an action of mandamus or something of that kind, to compel compliance with the law.

I ask, in connection with that, What would be the remedy of the irrigation districts if they should get into a conflict with San Francisco in regard to the rights under this grant? What remedy would they have? They could not bring any action such as is provided for in the bill. They would simply be relegated to common-law actions, or actions under the laws of the State of California, whatever they might be.

There is one provision here, however, which seems to be exclusive:

That this grant, so far as it relates to the said irrigation districts, shall be deemed and held to constitute a binding obligation upon said grantee in favor of the said irrigation districts, which said districts, or either of them, may judicially enforce in any court of competent jurisdiction.

Of course if these provisions were legal, if they were binding, they would go into court to enforce them the same as they would enforce any other contractual relation, or any other right based upon a contract in a grant; but they would have no power to enforce a forfeiture. They would not be permitted to proceed upon their own initiative in regard to such a thing, and they would simply be relegated to their common-law rights of action, whatever they were, or to actions as provided by the statutes of California. Very likely the only real remedy would be an action for damages, which, of course, would be a very difficult one to enforce against the city.

There has been a great deal of discussion in regard to the question of the supply of San Francisco at the present time of wholesome water. Something was said about it this morning by the Senator from Arizona [Mr. Smith], and it has been discussed more or less during the entire debate. If we will take the reports of the engineers, both the Army engineers, the engineers for the Spring Valley Water Co., and the engineer of the city, and read those reports, we will come to the conclusion that at the present time there is no want or insufficiency of supply. It is very clearly stated by the reports that the water they now have, with the development which is now provided for and in process of completion, and which will go forward regardless of any act of this Congress, is not only sufficient for the present, but sufficient for years to come. I have not been able to find anything to controvert that proposition.

When I first took hold of this matter I was under the impression that San Francisco was at the mercy of the Spring Valley Water Co. In fact I read that in something written by one of the persons advocating the bill on the outside. But I find that the Spring Valley Water Co. and San Francisco have entered into an agreement; that their contract has been closed; and that it is going to finality, regardless of anything we do here. The reports disclose that not only will that source give them an ample amount of wholesome water for the present, but it will give them an ample amount of water for 15 or 20 years. It is not contemplated that the water from the Hetch Hetchy Valley will be used for 15 or 20 years, according to these reports. There is no contemplation that the city can possibly be in a position to use it inside of seven or eight years, as I understand; but certainly there is no contemplation that the city will use it within any reasonable period of time.

I read from a newspaper article published in a San Francisco paper only a short time ago, in which it is said:

paper only a short time ago, in which it is said:

Contractors for the Exposition Co, have completed one well, from which water is being pumped at the rate of 400 gallons a minute, which is over 500,000 gallons per day. Three more wells are to be sunk, and if they yield as abundantly the aggregate yield will be 2,000,000 gallons per day, which is one-twentieth of the average demand on the Spring Valley system. The water is claimed to be excellent. An official of the contractors says they will develop water "which will supply 1,000,000 people during the exposition year," If it will do that for the exposition year, it will do it for succeeding years, and we can tell both Spring Valley and Congress to go hang until our population exceeds a million.

Mr. Freeman says it will take five years to bore the tunnels for this supply, so that it will be years before any water is gotten into the city out of the proposition we are now discussing. I do not think there is anything to be gained by insisting that the necessities are imminent and imperative. The Senator from Montana said awhile ago that this was simply a question of whether we would grant this right to San Francisco or wait 10 years and grant it to the irrigation districts. San Francisco will not be using this water inside of 10 years. But, aside from that, I will now answer the Senator's suggestion, as I told him I would awhile ago.

There is this question in the controversy, and it is the crux of the whole contention: Whether San Francisco should go to the Hetch Hetchy Valley and to this source of supply or whether San Francisco should go to the Sacramento Valley or other sources for her water. I do not contend that San Francisco should not have an opportunity to secure an additional supply of water at some time in the future, although I think it will be a long time before she needs it. She will be using the power a long time before she uses the water. I do not, however, object to San Francisco having that water if it can be supplied without doing an injury to other people; or, if there is no other source of supply, the injury, of course, must follow, anyway.

Mr. President, anyone who will take these reports and read them and study them will come to the conclusion that San Francisco can go to the Sacramento Valley, or to the McCloud River, or to the Eel River, or to the American River and get just as wholesome and just as efficient a quality of water as that which she is now seeking to get from the Hetch Hetchy source. There is a difference in cost—some say of \$10,000,000, some say of \$20,000,000, and I think some of the figures go above that, although I think the figures above that have been reduced until it is fair to argue it upon the basis of the two figures I have given—ten or twenty or twenty-five million dollars.

have given—ten or twenty or twenty-five million dollars.

Mr. President, against that what are we to weigh? Not the question of the scenery, which they say is a sentimental question. It is one which is most earnestly advocated by a great many earnest people who are entitled to respect and consideration, but it is one which does not at all control me. Against that, however, let us place the disadvantages which will inure to the farmers of the San Jonquin Valley and to those who are to settle that country in the future.

to settle that country in the future.

The Sacramento Valley has more than an abundant supply. She is anxious to get rid of some of the water she has. has floods, and the Government is taking steps to be rid of too much water in the Sacramento region. Shall we, for the purpose of avoiding the expenditure of a few million dollars at present, enter upon a proposition which means the ultimate injury to many millions more of property in the San Joaquin Valley? I think the reports show just as conclusively that this great region of country never can be reclaimed unless it is reclaimed from this source. When I say "reclaimed" I do not mean that perhaps in the technical sense, because in a technical way it has been already reclaimed; but they have not sufficient water with which to raise crops so that they can make it profitable. In one sense that entire walley, as I understand, has been covered by settlement; but it is a question of getting enough water to supply it so that the people can really raise crops upon the land they have; otherwise they must in time give it up, of course.

Therefore you not only have the irrigation districts which are there which may be provided for sufficiently under this bill—we will admit that for the sake of the argument—but you have these great tracts of land which are to be made valuable or valueless in the future, depending on whether you turn away this source of supply or keep it there—valuable if it stays, valueless if it is turned away.

As I understand—and if I am in error about this I should like to be corrected—the only difference between the propositions of the Sacramento and the San Joaquin is purely a question of dollars and cents. We have reached the point where it is only a question of dollars, or a few million dollars. Upon one side is the great San Joaquin Valley, one of the richest and most fertile valleys in the world, depending upon this water, with no other source of supply. Upon the other is the Sacramento Valley, able to supply the water, and ought to be rid of it. It is not the question of cost of to-day alone, but what will it amount to in the sweep of years, when you have assessed up against the \$20,000,000 which may have to be expended the loss which will arise by reason of the failure to reclaim or to dedicate those lands to homes and farms in the San Joaquin Valley?

I wish in this connection to read from an article in the Irrigation Age, written by a man by the name of John J. Bramhall. I do not know Mr. Bramhall, but he writes what seems to me a pretty fair article in regard to this matter. He says:

San Francisco needs more water. So does the San Joaquin Valley. The water sources in the Sierra Nevada are being rapidly appropriated, but there are still some unused sources on the watersheds of both the

document.

Sacramento and the San Joaquin Valleys, and the question might be put in this form: To which valley should San Francisco go for her water? San Francisco claims by appropriation certain water rights in the uper Tuolumne River, in the Hetch Hetchy Valley, in the northern part of the Yosemite Valley, and also in Cherry Creek and Lake Eleanor, north of Hetch Hetchy, and has acquired title to certain lands in those locations, and now asks Congress for a dam site and right of way which shall be free from revocation by the Secretary of the Interior, as in the Garfield permit. The question at issue is whether San Francisco should be granted these privileges or shall be compelled to go elsewhere for her supply.

There are two factors in the controversy, as opposed to the contentions of San Francisco: First, the interests of the irrigation farmers and those who might become such by the extension of the irrigated area, and, second, the advocates of the preservation of the national parks from all encroachment by corporate or municipal interests—commonly called the "nature lovers." These latter have been given rough usage by the advocates of the San Francisco scheme, but have been very useful to them, nevertheless, in clouding the main issue, which is the defense of the irrigation districts in the San Joaquin Valley. As the question will probably be decided on consideration of "highest use," I will disregard the plea of sentiment, but without prejudice.

Nor is it necessary to go into the history of San Francisco's efforts to get the grant of the Hetch-Hetchy reservoir or to discuss the question of whether the location is properly within the boundaries of the Yosemite National Park, or debate the powers of Congress in the matter. We may take these for granted until disproven.

In his communication to the mayor of San Francisco on the application for Lake Eleanor and Hetch Hetchy reservoir sites, under act of February 15, 1901, Secretary Fisher said:

"I have reached the conclusion that a permit for this purpose should not b

That, it occurs to me, is a pretty fair statement. The writer does not seem to be prejudiced, and this is a quotation which he makes literally from the Army engineers' report.

He then quotes further, which I will not now take the time to read, the difference in cost, which is about, as I said a moment ago, \$20,000,000, with some estimates as high as \$30,000,000, greater than the Hetch Hetchy project; but he says that by discounting to 1914 it becomes only \$13,000,000.

Secretary Fisher says:

I do not believe that the Secretary of the Interior should grant under the act of February 15, 1901, a permit in this case based upon the principal determining factor of the difference in cost between available alternative sources of water supply, whether that difference be \$13,000,000 or \$20,000,000, or even more than \$20,000,000. If the Secretary were to do this, he would in a certain important sense be placing a monetary value upon the preservation of the Hetch Hetchy Valley in its present natural conditions.

And, he might have said, he would be placing a monetary value upon the San Joaquin Valley and its possible agricultural future under its present development and condition. So the Secretary refused to grant permission.

I will discuss this matter later during the evening.

## ENROLLED JOINT RESOLUTION SIGNED.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the Speaker of the House had signed the enrolled joint resolution (H. J. Res. 155) extending time for completion of classification and appraisement of surface of segregated coal and asphalt lands of the Choctaw and Chickasaw Nations and of the improvements thereon, and making appropriation therefor, and it was thereupon signed by the Vice President.

## BANKING AND CURRENCY.

Mr. BRISTOW. Mr. President—
The VICE PRESIDENT. Does the Senator from Idaho yield to the Senator from Kansas?

Mr. BORAH. I do.

Mr. BRISTOW. I desire to announce that on Tuesday next, immediately after the routine morning business, I shall address the Senate on the banking and currency bill, unless it will interfere with other business of the Senate.

Mr. CLARK of Wyoming. Mr. President, will the Senator vield to me?

Mr. BORAH. I yield to the Senator from Wyoming. Mr. CLARK of Wyoming. I ask the Senator to yield to me in order that I may submit a somewhat lengthy amendment to this bill so that it may be printed. I ask that it lie upon the

The PRESIDING OFFICER (Mr. Robinson in the chair). The amendment will lie on the table and be printed.

### RECESS.

The VICE PRESIDENT. The hour of 6 o'clock having arrived, in accordance with the order previously made, the Senate of the United States will take a recess until the hour of 8 o'clock p. m.

Thereupon (at 6 o'clock p. m.) the Senate took a recess until 8 o'clock p. m.

## EVENING SESSION.

The Senate reassembled at 8 o'clock p. m.

AGRICULTURAL COOPERATION IN EUROPE (S. DOC. NO. 214).

Mr. FLETCHER. Mr. President, I ask unanimous consent that an order be made that the manuscript of the report of the American Commission on Agricultural Cooperation in Europe be printed as a Senate document. There has been an order already made for the printing of this material, but the printing clerk desires this additional order made, it having reference more particularly to the arrangement of the document.

The VICE PRESIDENT. Is there objection to the request of the Senator from Florida? The Chair hears none.

The order as agreed to was reduced to writing, as follows: Ordered, That the manuscript of the report of the American Com-mission on Agricultural Cooperation in Europe be printed as a Senate

### CALLING OF THE BOLL.

Mr. SMOOT. Mr. President, I suggest the absence of a

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

STARTO II CALCOL CO.	ARREST ATTENDED OF T		
Ashurst Bacon	Gronna Hollis	Norris O'Gorman	Smith, Md. Smoot
Bankhead	Hughes	Overman	Stone
Borah	James	Owen	Swanson
Brady	Johnson	Page	Thomas
Bryan	Jones	Pomerene	Thompson
Burton	Kern	Reed	Thornton
Chamberlain	Lewis	Robinson	Vardaman
Clarke, Ark.	McCumber	Saulsbury	Walsh
Colt	McLean	Shafroth	Warren
Fletcher	Martin, Va.	Sheppard	Williams
Gallinger	Martine, N. J.	Shively	
Goff	Myers	Simmons	
Gore	Nelson	Smith, Ga.	

The VICE PRESIDENT. Fifty-three Senators have answered to the roll call. There is a quorum present.

## SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest and certain lands in the Yosemite Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

The VICE PRESIDENT. The Senator from Idaho [Mr.

The VICE PRESIDENT. 'BORAH] is entitled to the floor.

Mr. BORAH. Mr. President, at the recess hour I was calling attention to an article from the Irrigation Age written by Mr. John J. Bramhall, which, as I said, seemed to me to be a very earnest effort to be fair and impartial in the presentation of the situation, and doubtless it was written by one who has studied the situation on the ground. Quoting from the article, it says:

situation, and doubtless it was written by one who has studied the situation on the ground. Quoting from the article, it says:

It would perhaps be going beyond the province of an impartial statement, such as I am trying to make, to allege that the hearing on the Hetch Hetchy bill (H. R. 7207) before the House Committee on the Public Lands was a one-sided affair, notwithstanding the efforts of the chairman, Mr. Scott Ferris, to bring out all the facts. Nevertheless, a perusal of the hearing reveals the fact that the irrigation interests made no defense and did not even question statements that were manifestly to their disadvantage. This was brought about by certain concessions, or agreements, on the part of the San Francisco managers, in the shape of amendments to the bill, calculated to protect the rights of the districts and accepted by their representatives as a compromise. The appearance of the Secretary of the Interior, Mr. Lane, as an advocate for the bill was not without its influence.

The irrigation farmers of the region affected have been placed in a false position by the pledges of the advocates of the bill and are now apparently changing front in renewing their opposition. The San Jonquin Valley people have always opposed the diversion of their water, and they now more than ever dispute the efforts of San Francisco to establish herseif in the Hetch Hetchy, since it is her avowed intention to obtain an unconditional grant of the reservoir site and right of way and to deny the authority of the Federal Government to impose conditions upon the use of the waters of the national park. Remonstrances against the bill are now being circulated among the water users and are being signed almost unanimously.

It begins to be apparent, too, that the electric power which would be generated from the Hetch Hetchy dam is the real "nigger in the woodpile," and it is even asserted that San Francisco is not likely to utilize the water for any other purpose. This phase of the subject was briefly touched upon in the inqui

A warning, Mr. President, which should not go without some heed.

heed.

To understand the peculiar situation of these districts and the reason for the strenuous opposition to the claims of San Francisco on the part of the irrigation farmers, we should examine the topography of the San Joaquin Valley; and to understand also the position of San Francisco as regards water supply, we should look into the topography and climatic conditions of the Sacramento Valley. The Great Valley of California, about 500 miles in length and 75 or 100 miles in breadth, is inclosed by the lofty Sierra Nevada on the east and the Coast Range on the west, and Shasta and Tehachapi at either end. It is practically one valley, with the Sacramento flowing down from the north and the San Joaquin joining it from the south and emptying their waters into San Francisco Bay. In temperature the two ends of the valley are very similar, but in precipitation there is a wide difference. For the northern valley we find an average of 20 inches at Sacramento, 23 inches at Chico, 36 inches at Redding, and still higher readings in the mountains. In the southern valley we find the precipitation decreasing from 16 inches at Stockton to 5 inches at Bakersfield, with a higher range, of course, in the mountains. Quoting the California Conservation Commission, the mean annual run-off of the Sacramento River at Collinsville (including tributaries) is 26,000,000 acre-feet, and of the San Joaquin Naley has a scarcity of water and the Sacramento Valley a surplus, in a ratio of 6 to 1 per acre.

One of the valleys, Mr. President, in need of all the water that

One of the valleys, Mr. President, in need of all the water that can be possibly supplied for the purpose of reclaiming these lands or holding them for cultivation, and the other having a

very large surplus of water.

very large surplus of water.

In fact, the general problem in the Sacramento Valley is one of flood prevention. (See Rivers and Floods of the Sacramento and San Joaquin Watersheds, and also report of California Conservation Commission.) The rivers and floods report shows that within a radius of 20 to 40 miles from Kennett, in the lower Pit and upper Sacramento watersheds (including the proposed McCloud River water source for San Francisco) the annual precipitation sometimes exceeds 100 inches, and in 1909 was 115.9 inches. The same report gives details of flood losses since 1909 of \$10,325,000, mainly in the Sacramento Basin, and all attributable to the Sacramento, as it is the great flood tide of that river that backs up the San Joaquin. The United States Government is now prosecuting a great flood-protection work on the lower Sacramento River, which will cost \$30,000,000, divided between the Federal, State, and county Governments, and it is estimated that private capital is engaged in reclamation work to an equal or greater amount, in which lands to the extent of over half a million acres are to be reclaimed from overflow. From this it would appear that the Sacramento Valley would be only too giad to part with all the water that San Francisco could take.

from overflow. From this it would appear that the Sacramento Valley would be only too glad to part with all the water that San Francisco could take.

A few brief notes regarding the increase of value of farms and of production in Stanislaus County attributable in great measure to irrigation. (Report of State board of agriculture.) Value of all farm property, 1900, \$17,032,000; 1910, \$43,788,000; increase, 157 per cent. Increase in value per acre greater than any other interior county. There was very little alfalfa in 1900; the area now is estimated at 130,000 acres. The butter product in 1900 was about 800,000 pounds; in 1912 Stanislaus was the leading butter county in the State, with 6,894,225 pounds, practically all from irrigated land. The total irrigated area in 1899 was 17,500 acres; in 1903, 84,000 acres with 341,000 acres in existing projects. There are now 120,000 acres with 341,000 acres in existing projects. There are now 120,000 acres irrigated in the Modesto-Turlock districts, and about 30,000 acres outside. The works have not been extended to cover all the area included in the districts, but extensions have been already planned. Meanwhile, the lands to the eastward, now in pasture or stubble, and suitable either for citrus or deciduous fruit or for alfalfa, are being looked over with a view toward new irrigation districts, which, however, the passage of the Hetch Hetchy bill would exclude for all time. So that even if the existing districts are fully protected by the bill (regarding which the lawyers differ), the outside lands must remain arid. True, San Francisco did magnanimously consent to the enlargements of the districts from 257,000 acres to 300,000 acres, to include the proposed Waterford district, but would allow for no extra water for their development.

Much more might be said, for the subject is a wide one and important on account of the precedents it may establish, but enough has been set forth to demonstrate that the farmers and landowners of the San Joaquin Valley.

As a comment upon

As a comment upon that, Mr. President, aside from the general comment that it seems to be an effort to fairly and impartially present the matter by one whom I do not know to be interested, but can not say he is not—in addition to that comment, anything to my mind which in this country is calculated to withhold from irrigation and from farming or utilizaton for agricultural purposes any considerable area of land is a detriment and a calamity to this country which you can not measure in dollars and cents.

I remarked this afternoon that for the last five years the figures disclose that we are giving over to our sister Government upon the north 100,000 of our citizens. I was about to say our best citizens, because I consider that the man who goes out into the desert and waste places to make a farm where there never had been a farm before, and thereby add not only to the home-builders' dominion, but add to the general comforts and to the general supplies of the entire country, is altogether to be classed as one of our best class of citizens. Everyone who is familiar with the western country knows that for the last several years there has been a gradual pushing more and more to that part of the public lands which are very costly to

reclaim.

There is no such thing any longer, Mr. President, as a man going out on a piece of prairie land rich and fertile, turning it 1

over, and raising a crop without any further expense than that of merely reducing it to a cultivable condition. He must now go into those almost inaccessible places, where it is difficult to get water with which to supply the land; he must be at an extra expense in order to get water upon the land; and then he must wait until the water goes upon the land, until the land has been tamed, as it were, to the production of crops. So, Mr. President, we are now engaged in an effort to secure enough land in dif-ferent parts of the West, where it has not actually been taken, to hold our own people, and it has been demonstrated in the last five years that so far we have not the land or, if we have, that we have not the means available by which the people can get it. So we have lost 100,000 of our citizens year by year of our best blood and best brain, who have gone over to help build up the great Dominion of Canada.

Anything, Mr. President, that is calculated to reduce to an eternal desert or a portion of it for all time one of the most fertile and beautiful valleys in the country is not to be measured by an estimate of \$20,000,000, to say nothing of the other

conditions which might be of importance.

Therefore, if it is true, Mr. President, that the Sacramento Valley has a surplus of water and that there is an efficient and sufficient supply for San Francisco, or if it be true, as I think I shall show later, that the American River, the McCloud River, and the Eel River will afford a sufficient supply of wholesome water, the mere question of cost or additional cost ought not to insure the passage of this bill. So far as I am concerned, there is no difference to my mind between granting to a city a piece of property belonging to the Government that is worth from fifty to one hundred million dollars than it is to take \$30,000,000 out of the Treasury and give it to the city. I stated a moment ago as my candid judgment that it would be infinitely less costly to the United States Government to make an appropriation outright to transfer the water across from the Sacramento Valley than it would be to make this grant if the grant has the effect upon the San Joaquin Valley that seems to be conceded in these reports.

It is very difficult, Mr. President, interrupted as I was this afternoon, to present this matter in a logical way; so I refer back for a few moments to one feature of it, which I passed over, to make an additional statement in regard to it. What I shall now read is from the report of Mr. John R. Freeman, the expert for the city of San Francisco, which says:

THE EXISTING SUPPLY TO SAN FRANCISCO.

John R. Freeman, expert for the city, says of it: "The present quality of the water furnished by the Spring Valley Water Co. is. I believe, thoroughly wholesome and safe." (Freeman's Report, p. 61.) It is a mountain water from the coast range and, according to the Army engineers, can be developed to 131,000,000 gallons daily—more than three times the present supply (Report, p. 16) and sufficient for a population of 1,300,000, according to Mr. Freeman. Even taking into account all the cities around the Bay of San Francisco, the Army engineers find the "economical development" of the coast range supply is 233,000,000 gallons daily (Report, p. 17), or enough for a population of two and a quarter millions of people (present population about 750,000). One hundred gallons a day per capita is the present use.

THE HETCH HETCHY AT LEAST FIVE YEARS AWAY. Should this bill pass, water can not be brought from the Hetch Hetchy under 5 years (Freeman, p. 74), or 10 years according to former City Engineer Manson. Long before this the "Calaveras" supply would be ready, and with this Mr. Freeman advises "deferring" the building of the Hetch Hetchy works "four or five years," and thus "put off for a few years the paying of interest on the large sum of money involved in building the Hetch Hetchy Dam." (Report, p. 69.)

In 1910 George Otis "mith, Director of the Geological Survey, reported to the Secretary of the Interior, after a careful examination by engineers:

"The Lake Eleanor project is amply sufficient to meet the present and prospective needs of the city, and it is not necessary that the Hetch Hetchy Valley should be available to San Francisco for the purpose of a municipal water supply."

That statement was made by a responsible officer of the Government in 1910.

This board reported four other such sources: (1) McCloud River: (2) Sacramento River; (3) Lake Eleanor, etc.; (4) American River, etc.—all ample. Upon this showing Secretary Fisher, who visited the valley, refused a permit to the city, which therefore now makes this appeal to Congress.

TWO HUNDRED AND FIFTY SQUARE MILES OF ARABLE AND IRRIGABLE LAND

TO BE LEFT FOREVER ARID.

The demands of the San Joaquin Valley for complete irrigation are in excess of the water available. \* \* There can be no question but that a large portion, if not all, of the flow of the Tuolumne (from the Hetch Hetchy) could be used for irrigation if stored. \* \* It seems quite certain that to irrigate the southern part of the San Joaquin Valley would be less expensive from the Tuolumne than from the streams farther north. (The Army Engineers Report, p. 35.)

When I returned from dinner, after the recess, I found on my desk a letter under date of November 30, written by J. E. Gardner, an attorney at Watsonville, Cal. I am inclined to pay a good deal of regard to this letter, for the reason that the

writer refers to himself as just simply a country lawyer, and I have a very profound respect for the country lawyer. I do not know Mr. Gardner otherwise than as he introduces himself; but he says:

I am not directly or indirectly interested in any water supply for San Francisco, existing or prospective, and have no clients, friends, or relatives who are, nor am I directly or indirectly connected or associated with the so-called "system" which is supposedly in league with his santanic majesty to deprive San Francisco of this boon; but, as a citizen of the United States and of the State of California, for a number of reasons I am vitally interested in the preservation and perpetuation of Yosemite National Park. From the experience of several visits to this section, I have certain personal knowledge of the subject, which I feel to be sufficient excuse to inflict upon you some views of an obscure country lawyer.

I will not read the entire letter, Mr. President, but will ask to insert in the RECORD that portion which I do not read. will, however, read a paragraph or two from it. The writer states:

4. There are a lot of ridiculously false stories in circulation as to the water famine in San Francisco. I believe Mayor Rolph is now on his way to Washington with some 20,000 signatures to a statement that the condition of his city is desperate, the health of its people threat-

In the first place, this condition absolutely does not exist, has not existed, and there is not one bit of danger that it will come to pass.

I think that statement could be well based upon the report made by the parties in interest from San Francisco.

There is and has been an abundance of admittedly good water for all the people and for all purposes, and to supply the possible demands of the city for many years to come. But San Francisco for a long time has been fighting with the Spring Valley Water Co., and because of this fight pipes have not been laid to certain districts.

As I understand, the Spring Valley Co. and San Francisco have now come to an agreement about the sale, and a friendly suit for condemnation is proceeding.

Inasmuch as there are no connections with the established water system, these districts have suffered. Hetch Hetchy would not relieve this condition. The water from that source could not be landed in San Francisco within five years, and then, as now, would have to be piped. Long before that time expires, through condemnation proceedings, or some other available means, these neglected districts will be supplied with water.

To permit this grant would be a serious blunder, both from a sentimental and an economical viewpoint.

Then he discusses what he considers the sentimental view, which I do not at this time discuss. He proceeds:

That there are other adequate sources of supply for San Francisco is so well established as a fact that it does not need comment. To be sure, they can not be had for nothing, as the city would have this. But that is no reason why the people of the Nation should make San Francisco a present of that which should be worth to her, at the very least, \$160,000,000.

The entire letter is as follows:

WATSONVILLE, CAL., November 30, 1913.

Hon. W. E. Borah, Washington, D. C.

Watsonville, Cal., November 39, 1913.

Washington, D. C.

Sir: I presume that you are overwhelmed with correspondence relative to the Raker bill, proposing to grant to the city and county of San Francisco the right to convert Hetch Hetchy Valley into a reservoir and to use a part of the water flowing in the Tuolumne River. At any rate, I note that San Francisco publications are printing circular letters urging their readers to address you on the subject favorably to that city's interests.

I do not know what is being done by those who are opposed to the grant, but I do know that there is a vast amount of lying going on concerning this subject, and that the campaign being made on behalf of San Francisco is such that it is almost sure to give Members of Congress many false impressions as to the physical facts, and to lead them to believe that thousands of people are urging the grant with a full comprehension of its meaning, when in truth they are doing so as a mere matter of form or courtesy and with no real understanding of the subject.

I am not directly or indirectly interested in any water supply for San Francisco, existing or prospective, and have no clients, friends, or relatives who are; nor am I directly or indirectly connected or as sociated with the so-called "system" which is supposedly in league with his satanic majesty to deprive San Francisco of this boon; but as a citizen of the United States and of the State of California, for a number of reasons I am vitally interested in the preservation and perpetuation of Yosemite National Park. From the experience of several visits to this section I have certain personal knowledge of the subject, which I feel to be sufficient excuse to inflict upon you some views of an obscure country lawyer.

1. I have seen the statement repeatedly printed that San Francisco proposes to take only 25 square miles of territory, a goodly portion of which is now held by it in private ownership. This point is emphasized in literature seen out to chambers of commerce, women's club

strictions are placed upon the use of such areas. It is utter folly for an instant to suppose that with Hetch Hetch Hetchy devoted to this use campers, or pleasure seekers. The law would not permit it, and public sentiment would absolutely forbid it.

The company now supplying San Francisco owns a large portion of its watersheds. These are carefully fenced, diligently patrolled, and under strict and constant inspection. The city officials, who are now the supplying san beautiful that the supplying san francisco owns a large portion of its watersheds. These are carefully fenced, diligently patrolled, and under strict and constant inspection. The city officials who are now the supplying that could be heard in Jerusalem if the company's watersheds were used as public camping places, or if summer resorts should be established along the streams from which the water comes much more readily subject to pollution than those of the Spring Valley Water. Co. The Tuolumne gathers its waters from a district near by, a precipitous region, a region of granite peaks and slopes, a region that yearly is covered with a heavy fall of snow, and which with the melting most is washed clean every spring. To pollute this stream it is not. A typhold germ, deposited a mile away, might easily be carried into the river with the melting of the snow. The "leavings" at any old camp site may be carried into the river with the melting of the snow. The "leavings" at any old camp site may be carried more where water, flowing into its streams is pretty well distered before it arrives.

Now, if San Francisco must—as she rightfully and havfully does—ansist upon a rigid inspection and careful sanitation of Spring Valley's expanse, and a region where water, flowing into its streams is pretty well distered before it arrives.

Now, if San Francisco must—as she rightfully and havfully does—ansist upon a rigid inspection and careful sanitation of Spring Valley's seek exceed from these watersheds; why should she be expected to veter expanse, and a region wh

ceauty; that a road will be built into the caryon and around this lake; and that the people will thus be enabled to enjoy that which is now denied to them.

To one who knows, such an argument is so absolutely ridiculous as to be intensely amusing. To say that this most beautiful and picturesque of all the mountain valleys will be improved in appearance by converting it into a lake is a statement so obviously devoid of truth that it should need no refutation. There are hundreds of lakes more beautiful than this could possibly be. There is no valley—not even the Yosemite—that in natural beauty approaches it. Yosemite exceeds it in grandeur, but Hetch Hetchy stands alone in the picturesque.

As for roads about this lake, it is easy to understand that a road might be built into the valley, but to discover the route of a boulevard around it (when converted) would be a difficult task. It would have to run along the perpendicular canyon wall for a distance of something like 16 miles; nearly every foot of it would have to be biasted from solid granite; and it would be a clever engineer, indeed, who would be able to locate on its course one camping place that would accommodate 20 people; while horse feed would be wholly out of the question. And so they would make this place attractive and accessible to the people.

What should be done is to construct a road into this valley, provide a hotel or camp, condemn all private holdings, and give the people of the Nation a chance to enjoy one more of the wonders at home that so far exceed those abroad.

4. There are a lot of ridiculously false stories in circulation as to the water famine in San Francisco. I believe Mayor Rolph is now on his way to Washington with some 20,000 signatures to a statement that the condition of his city is desperate, the health of its people threatened, etc.

In the first place, this condition absolutely does not exist, has not existed, and there is not one bit of danger that it will come to pass. There is and has been an abundance of admittedly good

of this fight pipes have not been laid to certain districts. Inasmuch as there are no connections with the established water systems, these districts are no connections with the established water systems, these districts are not connections with the established water systems, these districts are not connected to the provided of the connection of the co

\$100,000,000.

So, much is made of the fact that water rights have been granted to Los Angeles and other cities. The cases are not parallel, and anyone who will think a very little and who has any desire whatever to be fair, will concede it to be true. Water rights have been granted

to certain municipalities, but in no case has there been involved the proposition of depriving the people of the whole country of the use and enjoyment of a large portion of one of their choicest treasures. There has never before been an attempt to destroy a national park for the selfish purposes of one municipality. If this is to be done for San Francisco now, who is to say that it may not be done for another city or for a private concern in the years to come. A city or a concern that may take a fancy to Yosemite Valley, for example. It is not a proposition of favoring Los Angeles above San Francisco; it is a case of San Francisco demanding more than Los Angeles or any other city ever had the effrontery to suggest.

I am not alone in entertaining these views. There are thousands of people within 100 miles of San Francisco who are more radical than am I. Some of them you may hear from. Most of them are inactive, as I to this time have been. Of one thing be sure, you will hear from all who favor the grant.

Respectfully,

J. E. Gardner.

That is the beauty always of coming to the Government.

That is the beauty always of coming to the Government. If you go elsewhere, of course you must pay something for what you get. The only unqualifiedly generous giver in the country is Uncle Sam. I would pause here to say—and I say this without any reflection upon Senators, but simply as an illustration of how we look upon the disposal of public funds, public property, and so forth, which belongs to all of us in a way—that if it were a grant being made by an individual client under the advice of any lawyer in the Senate, he would not for a moment contemplate advising his client to ever attach his signature to this grant. If we were dealing with anything except public property, except public funds, as it were, if we were acting in a professional relationship to a client and knew the value of this property and its worth to the entire country, we would not think of passing it over under any such conditions or terms as we are seeking to pass it over in this instance.

Mr. POMERENE. Mr. President—
The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). Does the Senator from Idaho yield to the Senator from Ohio?

Mr. BORAH. I yield. Mr. POMERENE. I have not had the pleasure of hearing all of the Senator's argument, but I understand, Mr. President, the reason for his opposition. I have understood that the people of San Francisco were almost a unit in favor of the proposed plan. Now, if there is so much objection to this plan, and the Sacramento River plan is a feasible one, can the Senator explain why it is that the San Francisco people have been so unanimously, or almost unanimously, in favor of the plan contained in this bill?

Mr. BORAH. Well, Mr. President, I do not think I could explain that to the satisfaction of the Senator from Ohio, but I have my own very settled convictions about it. That, how-ever, would lead me into a field of discussion which I have

studiously refrained from approaching.

Mr. THOMAS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Colorado?

Mr. BORAH. I yield. Mr. THOMAS. I think the Senator was just reading from a letter from a citizen of San Francisco?

Mr. BORAH. No; a citizen of Watsonville, Cal. Mr. THOMAS. The writer states, does he not, that there is abundant water for San Francisco at present?

Mr. BORAH. Yes.

Mr. THOMAS. Will the Senator permit me to read right here a notice from the Spring Valley Water Co. which it gave to the people of the city of San Francisco last summer? It is headed:

THE WATER SUPPLY-WARNING.

The water consumption in San Francisco now exceeds the safe, dependable supply available for distribution. Until the city or the company can increase the development of sources now owned and install more aqueducts to San Francisco, extreme care must be exercised in the use of water or the supply will fail. Stop all waste; stop hosing steps and sidewalks with water. Please prevent all unnecessary use of water. We earnestly ask for your cooperation in maintaining the supply.

Spring Valley Water Co.

Mr. BORAH. Yes; I have read that. Mr. THOMAS. Does not the Senator believe that the company which supplies this water would scarcely issue a notice of this kind if it were not for the fact that the shortage of the supply makes it absolutely essential for the welfare of the city?

Mr. BORAH. Mr. President, I read that notice the other day in a special edition of the San Francisco Examiner which came out in this city, and reflected upon it at the time. When you come to examine that notice it is no more than such a notice as any water company might very well give to its patrons, namely, not to waste so valuable a thing as water in an arid region.

Mr. THOMAS. Does the Senator recall any other notice of

this kind?

Mr. BORAH. The notice is not to waste the water, which should not be done at any time, but it also says "until further developments are made," which developments are now in process

and arranged for, and which will take place whether this bill goes through or not, and which, when they have taken place, will, according to the reports, give an ample supply to the city for the next 10 or 15 years.

Mr. THOMAS. But the statement is made that-

Until the city or the company can increase the development of sources now owned and install more aqueducts to San Francisco extreme care must be exercised in the use of water.

Mr. BORAH. Exactly.

Mr. THOMAS. My interpretation of it is that the company is obliged to issue this request and insist upon its observance because of the fact that it has not sufficient water to go around

and supply the real needs of San Francisco.

Mr. BORAH. Mr. President, the attorney whose letter I am reading states very frankly that the conflict in San Francisco between the water company and the city of San Francisco has been such for a time that they have not kept up the supply and provided for the increased demands of the city. I have no doubt that that is true; at least, whether it is true or not, I am perfectly willing for the calculations. fectly willing, for the sake of the argument, to admit that it is

Mr. NORRIS. Mr. President—
Mr. BORAH. Just a moment; but notwithstanding that that does appear, according to the reports the Senator from Colorado will remember-and he is more familiar with the facts than I am-that with these provisions for an increased supply and the arrangements which have been made and which will be carried out, an increased supply will be given sufficient to take care of the wants of the city for many years to come.

Mr. THOMAS. Oh, yes. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho

yield further to the Senator from Colorado?

Mr. BORAH. I do. Mr. THOMAS. That is true; but the Senator must not forget that this increased supply through the source of the Spring Valley Co. is one which affects, and injuriously so, the agricultural interests and development in the vicinity and neighborhood from which the supply is to come; that is to say, that no supply, whether it comes from the Spring Valley source, from the McCloud River source, from the Sacramento River source, or from anywhere else, can be had without confronting the same difficulty, the same opposition, and inflicting the same injury.

Mr. SMOOT. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Utah?

Mr. BORAH. I yield. Mr. SMOOT. In the hearing before the Committee on Public Lands of the Senate on Senate joint resolution 123 in February, 1909, the same question arose. Mr. McCutcheon, who testified before the committee at that time, gave the committee to understand that in the development of the water for the city of San Francisco as planned by the Spring Valley Water Co.—and, by the way, I suppose the Senator knows that he represented the company at that time—there was to be no interference whatever with agricultural lands. If there is some testimony on that point anywhere in the hearings of a later date I do not know where it is; and I will ask the Senator if he can recall any testimony showing that the plan mapped out by the Spring Valley Water Co. will interfere with agricultural lands.

Mr. THOMAS. My recollection is that at the hearing before the Senate committee last year Mr. Freeman was examined, or, rather, during the course of his statement some questions were asked bearing upon this subject, and that there and elsewhere asked bearing upon this subject, and that there and eisewhere—although I am not able at present to speak specifically as to any particular part of the testimony or hearing—statements were made to the effect that any further pressure upon the water supply will diminish the present level of the subsurface water, and to that extent affect injuriously the farms and supply dependent upon that supply for their meighton.

ranches dependent upon that supply for their moisture.

I should think that would appear to be an inevitable consequence, because if the present supply of the company is 37,000,000 gallons per day, and that is increased to 100,000,000 gallons per day, the added draft upon the general source of supply must necessarily diminish the quantity which is available for agriculturists. It does not make any difference whether or not the Spring Valley Co. declares that it does not propose to interfere with agricultural rights; the fact remains that it

will necessarily injuriously affect them.

Mr. SMOOT. Mr. President, I think the underground storage system that has been adopted by the Spring Valley Water Co., and percolation from that system into the mains, are such as not to interfere with the waters that are used for agricultural purposes. The water comes from a watershed whose slopes are very precipitous and goes from that watershed into an underground reservoir. I understand, at least, that as far as the in-

crease of water for the Spring Valley Water Co. is concerned, it does not in any way affect the agricultural interests of California.

Mr. THOMAS. We differ as to that, then. Mr. NORRIS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Idaho

yield to the Senator from Nebraska?

Mr. BORAH. I yield to the Senator from Nebraska.

Mr. NORRIS. I wish to inquire of the Senator if this Mr. Gardner, who has written this apparently quite lengthy letter, discloses in the letter any means of knowledge that he has of the facts of which he is speaking in regard to the water?

Mr. BORAH. No; he simply asserts that they are facts with-

in his knowledge.

Mr. NORRIS. He does not live in San Francisco? Mr. BORAH. Oh, no; he does not live in San Francisco. Mr. NORRIS. Does the Senator know how far from San Francisco he lives?

Mr. BORAH. No; I do not; but there are not very many people who live in California who do not know a great deal

about San Francisco.

Mr. NORRIS. I have no doubt he has been there if he is a lawyer; but I should like to ask the Senator now this question, which I ask without making any reflection on Mr. Gardner—I think that is his name. I do not know him, of course. I never heard of him before. He may be absolutely accurate and absolutely right. He says he is a lawyer. It seems to me the absolutely right. He says he is a lawyer. It seems to me the Senator must concede that on the simple statement of a man who shows in his own statement that he does not reside there, at least, we ought not to give very great weight or consideration to that kind of a letter at this time. I wish to ask the Senator if he does not agree to that proposition.

Mr. BORAH. No; indeed I do not, Mr. President.

Mr. NORRIS. Does the Senator think, then, that any man

who sends in a letter here without disclosing on the face of it that he has any knowledge and who simply makes assertions, ought at this time, particularly after opportunities for investigation as to what he says have all passed by, to be given great

consideration by the Senate?

Mr. BORAH. Mr. President, we proceed here and legislate all the time, from day to day, upon newspaper clippings and upon petitions and upon letters printed in the Record, and in every other way convey information to our minds. We determine for ourselves, upon our own sense of what is right, and upon our own ideas, as to the probable standing and character of the person, and as to whether the information given by him

is right or reliable.

Here is an attorney apparently practicing law in a city in California; and, as I say, one thing which leads me to believe that he is not wholly without reputation and character and standing is the fact that he asserts these things. He says he has traveled over this territory it is sought now to grant, and has traveled over this territory it is sought how to grant, and that he evidently knows these facts. Another thing: He does not do as a great many other people have done who have written me from California and say, "Do not use my name." He is willing to stand upon what he says, and to have the world know that he has said it. Therefore I felt that it was reasonably safe to put it before the Senate.

Mr. NORRIS. I have not complained that the Senator has put it before the Senate. I have not even suggested that it is

put it before the Senate. I have not even suggested that it is not admissible. The suggestion I made to him, which he seems to repudiate, is, coming at this time from some one who does not show the means of his knowledge, whether or not it ought

to have very great weight with the Senate.

It is a question as to how much weight I think we ought to give to that kind of a statement. If letters of that kind are to decide this question, it seems to me we will have to wait until to-morrow, when we commence to ballot, and see who sends in the last letter.

Mr. BORAH. I really think we ought to wait until to-morrow, when we commence to ballot; that is, be ready to accept new Something might come in here to-morrow which would

control the judgment of this body.

Mr. NORRIS. Oh, that is true. It may be that to-morrow there will be laid on our desks a communication from some man who has an entirely new source of supply that never has been investigated.

Mr. BORAH. Yes; there may be another edition of the paper.
[Laughter.] Who can tell?
Mr. NORRIS. Yes; that might happen.
Mr. BORAH. I desire now to read an article by the editor of a paper called Alfalfa. It has been printed in the New York Evening Post. I think it is worthy of our consideration, although, of course, it would not be accepted in court as evidence. Nevertheless, it may be a matter which we will want

to consider, as this man evidently knows what he is talking about:

to consider, as this man evidently knows what he is talking about:

Sir: The newspaper comment upon "The fight for the Hetch Hetch," shows that "the opposition is based partly on the general principle that national-park territory, the property of all the people, should not be surrendered," etc.; "partly on the theory that the scheme involves the destruction of one of the Nation's beauty spots"; and "partly on the suspicion that San Francisco's interest in the Hetch Hetch is due to its possibilities as a source of hydroelectric power."

Now, it is curious, from our standpoint here in the San Joaquin Valley, that the contention of the waters of the Tuolumne River should be entirely ignored in the East. It is held by Congress, and I think property so, that the doctrine of "highest use" should govern the disposition of public property, whether in land or water. If San Francisco or some other community is in dire need, a need which can only be satisfied by the grant of the proposed privileges, then pass the bill, even should the land remain dry. But we contend and are ablil, even should the land remain dry. But we contend and are ablil, even should the land remain dry. But we contend and are ablil, which have a succession of stanislaus, are strenhously opposing the claims of San Francisco?

The San Joaquin Valley is a broad, level expanse, the bed of an ancient arm of the sea, reaching from the Tehachapi Range on the south, with Bakersfield at its base, to the mouth of the San Joaquin River, where it joins the Sacramento, at Suisun Bay. On the west is the Coast Range and on the east the high Sierras. The valley is 200 miles long and 40 to 60 miles wide from foothills to foothills, and contains seven and a half million acres, almost all of which is arable. The average rainfail at Modesto is 10 inches, and at Fresno 9 inches, with a much heavier precipitation in the mountains. It is from the mountions, holding back in their forests and valley reservoirs the snows of winter, that the dry valley below must depend for it

We heard something about that this afternoon-

We heard something about that this afternoon—

The reply to that statement will be found in the last volume of the United States Census on irrigation, in which it will be seen that up to 1910 the eight valley countles have spent \$20,000,000, in round numbers; were irrigating 1,383,000 acres, and had under existing projects (bona fide undertakings already begun) 2,690,000 acres. Certainly no lack of diligence in making beneficial use of waters of their rivers. In some cases, however, progress was retarded for lack of capital or from the fact that some of the systems were the property of large land and cattle companies who did not care to develop their lands for purposes of settlement.

In Stanislaus County (say 50 miles south of Sacramento and the same distance east of San Francisco) the Turlock and Modesto irrication districts, including together 257,000 acres, were organized in 1887, and the La Grange Dam and canals on the Tuolumne were completed and the water turned on in 1903. The cost of the works was about \$2,000,000. Mark the result: In 1902 the banks of Stanislaus County held \$871,000 in deposits; January, 1913, they held \$6,417,000. There were two banking towns in the county in 1902; there are now nine. There were about 100,000 pounds of butter made for market in the county 10 years ago; now Stanislaus is the banner butter-producing county in the State, producing last year 6,894,225 pounds. There was no alfalfa, except in small areas of river bottom, before the water came; now there are about 130,000 acres in the county and more being seeded every year. Record crops of 10 and 12 tons of hay in a season are made. So much for production. In population Stanislaus County increased in the last decade from 9,550 (after a period of decline) to 22,522, an increase of 135.8 per cent, which was greater than that of any other agricultural county in the State and second only to Los Angeles. All this remarkable development may be attributed to irrigation and to nothing else; without irrigation it would have been imp

Between the irrigation districts and the foothills of the Sierras is a wide tract of stubble land and pasture, probably greater in extent than the Modesto irrigation district. It is capable of irrigation from the same source—the Tuolumne River. The run-off of this river, which takes it rise under the glant peaks just north of the Yosemite Valley, through which flows the Merced, varies from some 800,000 acre-feet to upward of 3,000,000 acre-feet, showing a great variation between the wet and dry years.

Without going into bewildering details, suffice it to say that in some years, as in the two just past, there has not been sufficient water in the river to give the irrigated lands the water required for their crops, to say nothing of the amount upon which they had filed. Irrigation stopped in August instead of continuing to the 1st of October, as it should.

Now, whatever prejudiced engineers may say any project.

stopped in August instead of continuing to the 1st of October, as it should.

Now, whatever prejudiced engineers may say, any project to permit a considerable amount of water to be drawn from the river, whether it be called "flood water" or "natural flow," could not be otherwise than injurious to the interests of the irrigators. True, provisions of the bill permit them to buy surphus water at cost of storage, under certain onerous conditions, and also permit the districts to buy electric power "when any such excess of electrical energy may not be wanted for pumping the water supply for said grantee." Such protection, regarded also by San Francisco as "restrictions" to be got rid of later by legal process, is absolutely worthless. It is to be noted, too, that the amount of water filed apon and claimed as necessary by the irrigators, 9,500 second-feet, has been arbitrarily cut down by the bill under consideration to 2,350 second-feet. Is it surprising that the farmers of the valley oppose the scheme?

It is claimed that the people of the districts affected consented to the passage of the bill. Not so. It is true that their representatives, overawed by the attitude of the proponents of the bill, gave up their opposition. The county board of trade and the water users themselves never gave their consent, and they now, with a large proportion of the press and public bodies, are firmly opposed to the bill.

That, Mr. President, is written by a man who evidently knows something of the situation. I call attention to the fact as to this question of diligence, of proceeding to the ripening of their

this question of diligence, of proceeding to the ripening of their claims as to this water, as to the amount of money which they

have expended there, of all people in the world, you can not expect a farmer who has gone out for the purpose of reclaiming his farm to expend any more money than is necessary to supply the particular amount of water which he wants for the particular year. That is to say, if they had a certain acreage in these districts they would, in the first instance, reclaim sufficient to cover the acreage in those districts, but they have filed upon a very much larger amount. They have arranged for the diversion of a very much larger amount. The evidence of their good faith lies in the fact that they are there upon their farms improving them, extending the area, voting bonds to reclaim them, and paying interest upon the bonds, and increasing from year to year as their means will permit them to do.

I have not any doubt, Mr. President, from the facts stated here in this record upon the part of all parties that the irrigable lands of the San Joaquin Valley are entitled to all the water that is necessary for their irrigation upon the ground of diligence and upon the fact that they have thus far kept their water right alive under the statutes of the State of California.

It is hardly fair to say that those men who have been making homes under some stress of condition have been letting this water run on useless to the sea, and that we are simply taking up that which would become waste water, when it is shown here that they have expended millions of dollars for its reclamation and have undoubtedly reclaimed it as fast as their means

would permit.

Now I come to another feature. It is constantly urged that they consented to this bill as it was originally drafted and as it passed through the House. There is an extraordinary condition of affairs presented in regard to that. No man knows why those representatives consented to that change. It is far from me to assert that there was any reason for their change which would come under the term of corruption, or anything of that kind, because I have no knowledge of any such thing, and I would not for a moment assume it unless there was some fact. But this condition of affairs is disclosed by the record, that the farmers and the water users in the San Joaquin Valley have been opposed to this proposition from the beginning; that they expressed their opposition to it in different ways from the time it was first agitated; and that these men were sent here to the city of Washington not to compromise, not to agree, but that they were sent here to oppose the passage of this bill. It is clear as to purpose, the motive for which they were sent, and the status of mind of those who sent them. They were not sent here for the purpose of making a compromise, but they were sent here at the expense of the water users for the purpose of opposing the passage of the bill.

After they arrived here, for some reason that was unknown to their principal and some reason unknown to me, they concluded to enter into this compromise, and undoubtedly thought when they made the compromise that it was not only sufficient in fact but sufficient in law, unless there were other reasons moving, about which I know nothing.

Mr. President, what has happened since that took place? The very fact that those men are no longer representing the water users and that others have been selected in their placeother officers chosen-discloses that the water users were not represented in this compromise-I was about to say deal-at any rate in this settlement. Even the Congressman who represented that district was led to believe that that was a satisfactory settlement to protect the water users, and he gave his consent, as I understand, to the agreement. But the Congressman also learned upon a visit to his constituency that there had been a misunderstanding or misrepresentation upon the part of the representatives in Washington, and he put into the RECORD upon last evening, through the Senator from California [Mr. Works], his opposition to this bill, stating that he was from the beginning opposed to it and was led to accept this agreement, but now, as the representative of those people, he is opposed to its passage.

I think I am warranted in saying that it is a rather extraordinary situation, because it brought about a one-sided investigation on the part of the Public Lands Committee. There never was any real contest before that committee upon the matters which are now before the Senate. After that compromise was entered into it simply became a question whether San Francisco, without any real opposition, could establish her right to

have this water under the terms of this grant.

As I said this afternoon, not seeking for a moment to criticize the Public Lands Committee, because I know that they are careful, yet I have no doubt but if a contest had gone on, if the compromise had not been reached, this bill would not have come into the Senate with these terms, if it had ever reached here with a favorable report at all.

Mr. MYERS. Mr. President-

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Montana?

Mr. BORAH. I yield.

I rise to ask the Senator to what Public Lands Mr. MYERS. Committee he refers that had a one-sided hearing, the Public Lands Committee of the House or the Senate?

Mr. BORAH. I have reference to the Public Lands Com-

mittee of the Senate.

Mr. MYERS. I wish to state that the Senator is in error about that, because the parties who were opposing this bill appeared before the Public Lands Committee of the Senate and took a whole day practically to make their argument.

Mr. BORAH. The representatives of the water users' asso-

ciation?

Mr. MYERS. One was there, a Mr. Lehane.
Mr. BORAH. I am familiar with the appearance of Mr.
Lehane before the committee. That was after this contract had been entered into, after the arrangement had been made, and after the committee was led to believe that the water users' association, through their representative, had had all that they were entitled to have.

Mr. MYERS. But it was after some of the water users had repudiated the action of their representatives in making the compromise to which the Senator refers. The opposition of

the water users was active at that time.

Mr. BORAH. I am not seeking to censure the Public Lands

Committee at all.

Mr MYERS. I know the Senator is not censuring it. I merely wanted to have the facts stated correctly, that is all.

We had a hearing, and both sides were represented,

Mr. BORAH. I understand the facts to be that after this agreement was reached the real contest both before the Public Lands Committees of the House and Senate was practically eliminated by reason of that agreement. It is true that there gradually reached the farmers in the San Joaquin Valley the fact, and farmers are sometimes slow to move, they are slow to wrath, and they did not immediately express their views in regard to it; but finally, just at the very close of the hearing, Mr. Lehane appeared. When Mr. Lehane appeared here, it was charged that he did not represent the farmers at all, that he was representing some speculative proposition, and that the real representatives of the landowners had been here and foreclosed the proposition.

Mr. SMOOT. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Utah?

Mr. BORAH. I do.
Mr. SMOOT. I want to say to the Senate that the statement just made by the Senator from Idaho is exactly as I understand I was not present at the last hearing. It was held at a time when I was in Utah, as the chairman well knows. But I was at the hearing or pretended hearing before, and there was no opposition whatever. All were asking that this compromise that was made by the House and put into the bill be

passed by the Senate.

Mr. MYERS. Mr. President—

Mr. SMOOT. Just a minute, please. The Senator from Montana knows that the representatives of the Water Users' Associated the Market Users' A ciation made the statement positively that unless the objectionable regulations were in the bill they did not want the bill to pass, and the representatives of San Francisco said that they preferred the regulations not to be in the bill, but they compromised the matter so that they could get votes enough in the House to pass it.

Mr. MYERS. Mr. President, as to the hearing before the Senate Committee on Public Lands, which the Senator from Utah denominated a pretended hearing, he ought to know whether it was a pretended hearing or not, because he was the chairman of the committee at that time. He denominated it a pretended hearing, but the time had been set for it. I was not able to be there at that time, and I am not prepared to speak so much about what was done at that time. I was in and out, but I was

not there all the time.

The last time, when the Senator from Utah was not present, the opponents of the bill were afforded all opportunity to oppose it. That was after the water users had repudiated ex-Representative Needham and their other attorneys and agents and sentative Accountment their other attorneys and agents and declared they were sold out—when Mr. Lehane represented some of them. There was no opposition made to his appearing. Nobody, according to my recollection, branded it as being a speculation, and they were afforded all the opportunity they wanted. That is all I can say.

Mr. SMOOT. Mr. President—

The PRESIDING OFFICER. Does the Senator from Idaho yield further to the Senator from Utah?

Mr. BORAH. I yield.

Mr. SMOOT. I want to remind the Senator that before I ever left Washington to go home I asked the chairman of the committee if this measure could go over and not be reported in my absence, and I understood the chairman to say that it would not be reported.

Mr. MYERS. Oh, no; I did not say that it would not be reported. I said that as far as I was concerned it would not be; that I would request for the Senator a postponement, which I

Mr. SMOOT. I was going on to say that when I left here that was the understanding and I want to add, Mr. President, if I had been in this Chamber—and I would not have left the city if I had thought the bill was to be reported, for my daughter could have been married without my presence, the same as my son was the year before—I never would have allowed the unanimous-consent agreement to be made, and this measure would have been thrashed out upon its merits, no matter how long it would have taken to do so.

Mr. MYERS. I am as sorry as the Senator from Utah that there was any unanimous-consent agreement given, but the advocates of the bill were forced to enter into that arrangement because the bill was being pressed and it was impossible to

reach a vote at that time.

· Mr. BORAH. Mr. President, I do not want the Senator from Montana to understand that I am criticizing the Public Lands Committee.

Mr. MYERS. Oh, not at all.

Mr. BORAH. I know precisely the modus operandi by which

the matter was diverted from a contest.

Mr. SMOOT. In this connection, if the Senator will just permit me, I think the Senator from Montana knows what was my position. I was opposed to the regulations that were put in this bill, and that is what I was opposed to more than any other thing. I wanted the question of regulations taken out of the controversy and the bill reported to the Senate without those regulations in it.

Mr. MYERS. I called the attention of the committee to the attitude of the Senator from Utah, and I, myself, personally voted against making a report of the bill in his absence, but I am not the committee and I can not control the committee.

Mr. BORAH. Mr. President, I ask leave to insert in the Rec-ORD, without reading, the resolutions of the annual meeting of the San Joaquin Valley Water Problem Association, representing the eight counties of San Joaquin Valley, at Merced. Cal., November 17, 1913.

The PRESIDING OFFICER. Without objection, it is so ordered.

The resolutions referred to are, as follows:

The resolutions referred to are, as follows:

Resolution No. —, adopted at the annual meeting of the San Joaquin Valley Water Problem Association, representing the eight counties of the San Joaquin Valley, at Merced, Cal., November 17, 1913.

Whereas the control of floods and the irrigation of arid lands in the San Joaquin and Sacramento Valleys constitute in reality but two phases of one problem; and Whereas in the San Joaquin Valley there is a deficiency in the water supply, and, even with the complete conservation of all the waters in the valley, there will be an insufficient supply of water with which to irrigate efficiently all the irrigable lands in said valley; and Whereas in the Sacramento Valley there is an excess of water, and, with its proper conservation, all of the land in the valley can be irrigated and navigability of the Sacramento River remain unimpaired and a supply of water left for diversion to other localities; and Whereas the city of San Francisco is attempting to divert water from the San Joaquin Valley and take it to San Francisco for municipal purposes; and

Whereas we believe that every unit in the development of water control in the Sacramento and San Joaquin Valleys should be constructed as a part of a comprehensive whole designed ultimately to accomplish the full development of both valleys and the conservation to the utmost of their resources:

\*\*Resolved\*\*, That we deprecate this attempt of San Francisco to violate what we believe to be one of the fundamental principles of the conservation of the resources of the interior valleys of California, because it is entirely unnecessary, and because great injury will result to water users if water is so diverted from the San Joaquin Valley; and, further, because the Sacramento Valley offers an ample source of water supply for San Francisco's need without injury to anyone.

\*\*Resolved\*\* further\*\*, That we hereby declare it to be the sentiment of this association that no water should be diverted from the San Joaquin Valley for any purpose,

Mr. BORAH. Without taking the time of the Senate to read it, I also ask to have inserted a letter from Mr. A. L. Cowell, dated San Francisco, November 26, 1913, in regard to the passage of those resolutions, and discussing the same subject matter.

The PRESIDING OFFICER, Without objection, it is so ordered.

The matter referred to is as follows:

SAN JOAQUIN VALLEY WATER PROBLEM ASSOCIATION, San Francisco, Cal., November 26, 1913.

Hon. W. E. Borah, United States Senate, Washington, D. C.

DEAR Sir: At the annual meeting of the San Joaquin Valley Water Problem Association, held in Merced, Monday, November 17, a resolution was adopted protesting against the diversion of any water from the San Joaquin Valley. I inclose herewith a copy of this resolution, and I was instructed to present with it a statement of the reasons for the adoption.

### WHAT THE ASSOCIATION IS

The association was organized about a year ago to consider the general problem of the conservation and utmost possible use of the available waters in the San Joaquin Valley. It has over 40 members, representing all of the eight counties of the valley. The most of the members are chambers of commerce, boards of trade, irrigation districts, and mutual water companies. There are seven private corporations belonging to the association, but none of them have any pecuniary interest in the Hetch Hetchy controversy.

### FUTURE OF THE STATE SHOULD BE CONSIDERED.

We contend that any measure like the bill to grant the city of San Francisco the use of Hetch Hetchy Valley as a reservoir should be considered with special relation to its effect upon the future development of the State. The fact that the waters of the Tuolumne River have not all been used for irrigation does not justify Congress in allowing the diversion of water which would certainly be used for irrigation in the natural course of the development of the San Joaquin Valley. California has only begun to awaken to its agricultural possibilities. Because the owners of large tracts of land have preferred to hold them undeveloped to profit by the natural increase in land values rather than to provide for their intensive cultivation is no reason why a large section of the State should be condemned to permanent aridity and the public lose the benefit of the wealth that this land under adequate irrigation could produce.

VALLEY'S WATER SUPPLY INADEQUATE.

### VALLEY'S WATER SUPPLY INADEQUATE.

VALLEY'S WATER SUPPLY INADEQUATE.

The official records show that if all of the waters of the San Joaquin Valley could be conserved there would still be an inadequate supply for the irrigation of the arable lands in the valley. The report on the Irrigation resources of California, prepared under the direction of Frank Adams and published as a part of the report of the Conservation Commission of the State of California in 1912, and later published as a bulletin of the United States Department of Agriculture, shows that the irrigable area of the valley exceeds 6,000,000 acres and that the average annual run-off of the valley is about 12,000,000 acre-feet. This would be insufficient in average years to provide such irrigation as is needed for a soil that is in nearly all places of a loose sandy nature, and where the growing season is from 9 to 10 months; and, of course, in years when the rainfall is below the average amount, the shortage of water would be more apparent.

It should be emphatically stated that the less the supply of water the greater is the need for it, as a shortage in the general supply indicates a scantiness of the season's rainfall and irrigation in greater quantities is needed to make up the deficiency. Consequently no plan for the ultimate development of the valley can be complete which does not take into account the necessity for providing an extra supply of water when the natural supply is below the normal amount. Further, it should be noted that in California dry years usually come in cycles, so that it will sometimes be necessary, if all the storage capacity of the valley is to be used to the best advantage, to carry water over more than one season.

Again, it must be remembered that the amount of water available for irrigation is not the total run-off of the valley, but the amount that it is practicable to store and to divert into canals. There will always be some waste, which makes it all the more certain that with the utmost possible conservation of water there will be some portions of

## A MANIFEST ABSURDITY.

A MANIFEST ABSURDITY.

While our association has seriously considered the ultimate necessity of bringing water from the Sacramento Valley to irrigate lands which our own water supply is inadequate to develop, it seems to us manifestly absurd to allow San Francisco to further deplete our natural water supply instead of bringing water for domestic purposes from the part of the State where official records show that there is now too much water. That the bringing of water for irrigation from the Sacramento Valley to the San Joaquin Valley is to be considered only as a last resort is practically admitted in the brief of the city and county of San Francisco and other bay cities before the Senate Public Lands Committee, Sixty-third Congress, 1913, by Percy V. Long, city attorney of San Francisco, and others, in which, on page 18, in commenting upon the suggestion that San Francisco should pump water from the Sacramento River for its domestic use, it is said "there remain very serious objections to this source. First, the heavy operating cost of such a system \* \*; third, the probability that irrigation needs within the next century will withdraw so much water from the upper Sacramento that the high tides of the bay will mingle with the stream below Sacramento and render it unfit for use." If San Francisco regards the lower Sacramento River as an impracticable source for domestic purposes on account of these reasons, it can hardly insist that the people of the San Joaquin Valley be forced to this method of retrieving the supply of water which the city proposes to take from the Tuolumne watershed.

VALLEY CAN USE WATER WHICH SAN FRANCISCO WANTS.

# VALLEY CAN USE WATER WHICH SAN FRANCISCO WANTS

A persistent effort has been made to convince Congress that the water which San Francisco proposes to take from the Tuolumne River would otherwise go to waste. This is an error against which we protest most emphatically. That it has been so generally accepted as true is proof that the measure now pending in Congress has not been considered with a full understanding of the conditions prevailing in the San Joaquin Valley

that the measure now pending in Congress has not occur considered with a full understanding of the conditions prevailing in the San Joaquin Valley.

Under this head two questions are raised:

First. Is the cost of the water storage which San Francisco contemplates so great as to be prohibitive for irrigation purposes?

Second. Is there sufficient area that can be reached economically with this stored water to make beneficial use of it?

Regarding the first question, the impression has assiduously been given that the immense cost of the so-called Hetch Hetchy project is in the storage of water, whereas the truth is that the bulk of the expense will lie in the costly conduits and other works that will be necessary to bring that water to San Francisco. On pages 130 and 131 of the pamphlet entitled "The Report of the Advisory Board of Army Engineers to the Secretary of the Interlor," in the report by H. H. Wadsworth, of the advisory board, are given estimates of the cost of the Hetch Hetchy project for various capacities. In these estimates the total cost of the Hetch Hetchy reservoir, including the construction road, with temporary raliroad, and the proposed scenic road, is less than \$5,000,000, and on page 11 of the same pamphlet the storage capacity of the reservoir is given as 344,000 acre-feet. Assuming that the total cost owuld be \$5,000,000, and that the storage capacity would be conly 300,000 acre-feet, we would have a cost of \$163 per acre-foot. Even supposing that additional items of expense for the purchase of lands in the Hetch Hetchy Valley, etc., might increase the cost of storage to \$20 per acre-foot, that would not be a prohibitive cost for irrigation. The south San Joaquin irrigation district, which takes water from the Stanislaus River, has recently voted bonds to the amount of \$750,000 for the construction of a reservoir having a capacity of not more than 70,000 acre-feet, an actual cost of over \$11 per acre-foot. While the cost of storage in foothill reservoirs is usually less than this, it is well known that an acre-foot of stored water, taking into account the reduction in the estimated capacity of the Hetch Hetchy reservoir, indicated above, would provide two irrigations for an acre of alfalfa. A conservative estimate of the net profits from these two crops would be \$5 per annum. In other words, the cost of \$20 per acre-foot for the storage of water could be met out of the profits of four years' used that a storage of water

Furthermore, it should be remembered that as San Francisco proposes to reduce the net cost of the Hetch Hetchy project by making use of the great power possibilities of that project, the irrigation districts that would be formed to make use of the water for irrigation could reduce the net cost of these reservoirs by making similar use of these power possibilities.

On the second question as to the receivility of the second greater as the receivility of the second great

would be formed to make use of the water for irrigation could reduce the net cost of these reservoirs by making similar use of these power possibilities.

On the second question, as to the possibility of using all of the available water of the Tuolumne River in the San Joaquin Valley, we would emphasize the point that the land that can use the water of this river is not limited to the Modesto and Turlock irrigation districts and the small irrigable areas lying east of them. There is a large reservoir site lying east of the Turlock district and north of the Merced River, known as the "Dry Creek site." It is practicable to divert water from the Tuolumne River into this reservoir. A movement is now well under way to organize a large district, comprising about 270,000 acres, in Merced County. Its source of supply is to be the Merced River, but in making the surveys to determine the boundaries of the proposed district it was learned that water could be diverted from the Dry Creek reservoir to cover at least 400,000 acres of land in Merced and Madera Counties east of the San Joaquin River. By pumping water to the levels above such an irrigating system, the area could be increased by probably 100,000 acres. The engineers who are advising the people planning the Merced district to be irrigated from the Merced River. But if the supply of that river could be augmented by water from the Tuolumne River it would be possible to bring under intensive cultivation the entire area that could be reached from the Dry Creek reservoir. Furthermore, there is a large area on the west side of the San Joaquin River, amounting to at least 150,000 acres, which could be irrigated with the water carried in conduits from the east side of the San Joaquin River, amounting to at least 150,000 acres, which could be irrigated with the water carried in conduits from the east side of the valley or allowed to flow to the San Joaquin River, and the report herefore referred to, prepared under the direction of Frank Adams, and according to the survey m

## EFFECT OF DIVERSION UPON NAVIGATION.

One other point, from the standpoint of our association, is worthy of special note. A survey is now being made at the joint expense of the National and State Governments to determine to what extent it may be practicable to use the San Joaquin River for navigation. The river is now used by light steamers and gasoline launches with barges for a considerable distance above Stockton, and at certain periods of the year it is navigable higher up. The use of the water for irrigation,

where proper drainage is provided, results in the return of a considerable quantity of water to the San Joaquin River, which is the main drainage artery of the valley. The diversion of water to San Francisco would mean absolute loss of any benefit from that much water for navigation. With the rapidly increasing use of light craft in the river and the special study which the Government is now making of the navigation problem on this stream, this point deserves special consideration.

Assuring you that our desire is not to deprive San Francisco of a water supply, but to insist upon such a study of the entire problem as will insure its settlement in a manner that will result in the utmost possible use of the waters of the State, I am,

Yours, respectfully,

A. L. COWELL,

Secretary of San Joaquin Valley Water Problem Association.

P. S.—In this statement I have been able to do little more than outline the general principles involved in the controversy. Several representatives of San Joaquin Valley interests will be in Washington to supplement the arguments with specific data.

Mr. BORAH. I read a line or two from a letter dated Haywards, Cal., October 17, 1913. This letter was sent to Rev. Daniel Gamble, who is a constituent of mine, and it was written by his brother. He says:

MY DEAR BROTHER: I wish you would call Senator Boran's attention to the question of granting to San Francisco the Hetch Hetchy Canyon as a source of water supply.

Then he goes on to discuss the park privileges and the necessity, in his judgment, of maintaining the park as a whole, and

Second. All the water of Hetch Hetchy is needed for the parched and arid plains through which it flows. In the last 10 months I have six times crossed the territory to which Hetch Hetchy belongs, and I can say that in its whole length and breadth it is a waste of sand. We have had two dry winters there. I lived there for several months at a time and I know the situation well. The farmers there are spreading the Hetch Hetchy waters over the thirsty ground as fast as they can, but as yet the results are only some green oases of alfalfa small and far apart. There were practically no grain crops the last two years in the San Joaquin, nor the usual hay crops, except irrigated alfalfa. Last year Charles—

I suppose it is his son, likely, of whom he speakshad no grain-

And so forth.

That letter is read for the purpose of illustrating the situation in which those farmers find themselves at the present time. They have undoubtedly been doing what they have done under a great stress of circumstances, and it seems to me that it could be nothing less than an absolute imperative necessity on the part of San Francisco to take these waters away from the San Joaquin farmers.

Mr. President, I pass now to a brief discussion of the question

of other sources of supply, to which I have referred heretofore.

I want Senators to bear in mind that there is only one question in the proposition of the other sources of supply under dispute, and that is the question of cost. All other propositions have been settled by the showing of San Francisco itself. All other propositions are put at rest by the report of their own engineers and of their own experts. If there were no river, no other source of supply, there would be no argument upon the floor of the Senate against this proposition; but when their own reports, uncontested, disclose other sources of supply to be ample and sufficient and it becomes a mere question of cost, then I feel that it is a legitimate proposition to place the detriment and the damage it will do to other parts of California and to the country against ten or twenty million dollars of extra expense.

The other rivers are accessible if you simply add an extra amount for the purpose of bringing the water to the point of The proposition with which this was placed before the country, that there were no other sources of supply, that they were impracticable, has disappeared as the discussion has proceeded, and now it is simply a question of dollars and cents, with the dispute among the experts as to what that would be.

How much do you suppose the San Joaquin Valley is worth? What is it worth to the people of California, to say nothing of the farmers themselves who have their homes there and those who desire to make homes; to say nothing of giving encouragement to the home builders or those who are seeking to get away from the more congested centers of the earth and make homes; to say nothing of those things, how much do you suppose it is worth in dollars and cents to the other parts of California and to the country to have that valley protected from eternal waste? Is it to be measured by ten or twenty or thirty million dollars?

Is there any difference between taking the money in the way of property from the United States Government and turning it over to a single corporation, and taking \$20,000,000 out of the Treasury and giving it to that corporation if it needs it, and thereby save the farmers and the great San Joaquin Valley from destruction? If you are going to measure it as a mere matter of dollars and cents, then I appeal to the Senate to con-

sider the homes of those farmers which, while they may not be measured in millions, are all in God's world that they have. Mr. MYERS. I should like to ask the Senator a question.

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Montana?

Mr. BORAH. I yield. Mr. MYERS. The Senator from Idaho refers to the destruction of the San Joaquin Valley. Does he claim that the passage of this bill would destroy the San Joaquin Valley?

Mr. BORAH. Mr. President, I claim that it would destroy the San Joaquin Valley as the San Joaquin Valley will be if it is permitted to use this water.

Mr. MYERS. But the Senator does not claim that it will destroy anything that is there now?

Mr. BORAH. Yes; I think it will destroy things that are there now.

Mr. MYERS. I do not see how the Senator can say that. Mr. BORAH. I will tell the Senator why. The Senator lives in an arid region. I do not know whether or not he was present this afternoon when I made the statement-

Mr. MYERS. I regret to say that I was not. Mr. BORAH. Then, at the expense of time and repeating it, I will say that some time ago a farmer from this immediate region came into my office. I said to him, "I want to know why you people are really opposed to this, if you are, or are you being excited by outside influence?" He said, "We are opposed to it." I asked, "Why? Have you not your water rights to it." I asked, "Why? Have you not your water rights fastened?" He said, "Whenever a great and powerful influence or a powerful municipal corporation is located upon the headwaters of our water supply, and we must be at their mercy as to when that water is turned on, or on the question as to whether we are applying it to a beneficial use, how we shall have it, and to litigate with them when they refuse us what we think is right-when that happens there will be hundreds of men who will sacrifice their farms and leave the valley.'

Mr. MYERS. Mr. President, I think that is simply characteristic of a great many people. They imagine, if they have any dealings with a corporation, municipal or otherwise, that they are going to be robbed and lose all that they have; but I do not think the courts of California or of the United States

will uphold any such fear.

Mr. BORAH. Oh, yes; "the courts of the State of California or of the United States." That is a great consolation to a farmer. If he can go into litigation with a fellow farmer he will get along fairly well, but if he must go to San Francisco and get into litigation with that city, when all the city has to do is to have the city council meet and pass an appropriation for an attorney's fee, and to take him to the Federal court in San Francisco, and from the Federal court in San Francisco to the Federal court in Washington—one lawsuit will be enough for him in his lifetime.

Mr. MYERS. I suppose, Mr. President, if these farmers have any litigation at all—and I do not think they will ever have any, because a great deal of apprehension from imagination is unfounded—but if they have any, I suppose they will litigate collectively. Instead of there being one lone, poor individual against a mighty corporation, it would be one corporation against another, for this irrigation company is nothing but a

corporation.

Mr. BORAH. Yes; but it all filters back onto the farmer, and he must pay it just the same in a sense as if he brought the suit individually. I am not in favor of putting those people at the mercy of San Francisco. If the Senator from Montana thinks that they ought not to be placed at the mercy of San Francisco, will be agree with me to strike out of this bill that clause which requires the consent of San Francisco for other municipalities and irrigation districts to enjoy the benefits of this grant?

Mr. MYERS. The clause which provides for municipalities other than San Francisco enjoying the benefit of it?

Mr. BORAH. Yes; which requires the consent of San Francisco.

Mr. MYERS. No, Mr. President, I will not agree to any amendment of the bill. I am for the bill as it is. My first reason for that is that the bill was framed as it is by the consent of the representatives of these farmers, and while it may be true that they have discharged their agents and attorneys and representatives, yet those agents and attorneys and representatives claimed that they were acting under express authority and under instructions in entering into an agreement in framing the bill just as it is. I do not believe in Congress vacillating and squirming around to suit people who change their minds with regard to bills which they desire passed through Congress.

Mr. BORAH. But the Senator knows that whatever the cause is those representatives did not represent the Water Users' Association.

Mr. MYERS. I think they represented them at the time, but the water users simply tried to back out and repudlate the work of their representatives.

Mr. BORAH. Well, this is the clause which I was wonder-

ing if the Senator would join me in striking out from the bill:

Ing if the Senator would join me in striking out from the bill:

That there is hereby granted to the city and county of San Francisco, a municipal corporation in the State of California, all necessary rights of way along such locations and of such width, not to exceed 250 feet, as in the judgment of the Secretary of the Interior may be required for the purposes of this act, in, over, and through the public lands of the United States in the counties of Tuolumne, Stanislaus, San Joaquín, and Alameda, in the State of California, and in, over, and through the Yosemite National Park and the Stanislaus National Forest, or portions thereof, lying within the said counties, for the purpose of constructing, operating, and maintaining aqueducts, canais, ditches, pipes, pipe lines, flumes, tunnels, and conduits for conveying water for domestic purposes and uses to the city and county of San Francisco and such other municipalities and water districts as, with the consent of the city and county of San Francisco, or in accordance with the laws of the State of California in force at the time application is made, may hereafter participate in the beneficial use of the rights and privileges granted by this act.

If we were to strike out of this grant from the beginning to

If we were to strike out of this grant from the beginning to the end those clauses which, in my judgment, make San Francisco the autocrat of the situation and put into her hands the power to create a monopoly of an indispensable element of life in that arid region, water, and secondly, light; if you will eliminate from the bill its monopolistic features, I shall not have very much trouble in supporting it. I have no desire to deprive San Francisco of the water she really needs, but San Francisco does not need a monopoly any more than does any other municipal corporation.

Mr. MYERS. No, Mr. President; but I understand these other communities need an adequate supply of water just as much as does San Francisco, and that they have not now an adequate supply any more than has San Francisco.

Mr. BORAH. Well, if the bill provided that they should have it as San Francisco proposes to get it as a first party of the grant, it would be an entirely different proposition.

Mr. President, without taking the time of the Senate to read, I am going to ask permission to put into the Record some facts gathered from the public records here with reference to the supply of water from the American River, the run-off of the river, and so forth, for the purpose of showing the facts with reference to that particular stream alone. It do not want to take

up the time of the Senate to read it.

The VICE PRESIDENT. Without objection, it will be in-

serted in the RECORD.

Mr. BORAH. Now, Mr. President, one feature more.
Mr. SMOOT. Mr. President, I would like the Senator, if he can state without going into the details of the information that he has just asked to have printed, the extent of the supply of the American River. It has not been discussed in this debate, and I believe it would be a very good thing for Senators to understand just what the extent of that supply is, if the Senator can give the information offhand.

Mr. BORAH. I can not give it offhand. It is an extensive, detailed statement of figures which it would be difficult for me to comprehend, much less recollect. But I have here a general statement by another party, which I have not read, because I, of course, felt that the figures themselves would prove whatever they prove. A party, however, who has gone over the figures makes this statement:

The fact is that there are several. The American River among others. Particularly note the reservoir site in the South Fork of the American, of which I send you a map. This site, with a 300 feet high dam (compared with 325 feet height proposed for Hetch Hetchy), will make a lake 12 miles long, with a capacity of about 350,000 acre-feet (114,000,000,000 gallons), which is about the same as the Hetch Hetchy, with a dam 25 feet higher. The watershed tributary is 665 square miles. compared to Hetch Hetchy's 452 square miles. Distance from San Francisco by conduit line about 50 miles less than Hetch Hetchy. Conduit very much less costly of construction.

Now, I will follow that general statement by the figures which I have been permitted to insert in the RECORD. This statement was not prepared by myself, but is supposed to be based on

The matter referred to is as follows:

INFORMATION RELATING TO AMERICAN RIVER, CAL. T.

Note.-Following the form of Senate resolution 191.

The drainage area east of Fair Oaks (United States Geological Survey gauging station) on the American River 15 miles east of Sacramento is 1,910 square miles. (Authority, United States Geological Survey "Water-supply paper 298," p. 312.)

COMPARISON (A).

The drainage area east of La Grange on the Tuolumne River is 1,500 square miles. (Authority, "Water-supply paper 299," p. 267.)

### II.

The run-off from the watershed of the American River east of Fair Oaks by seasons for the period of the records is as follows (authority, United States Geological Survey "Water-supply paper 298," pp. 312-314, from Nov. 4, 1904, to June 30, 1912, and the unpublished records of gaugings in the office of the United States Geological Survey at San Francisco, reduced by the computation of the writer to acre-fect, etc., from July 1, 1912, to Sept. 30, 1912):

Seasons.	Total.	Depth on drainage area.
Oct. 1 to Sept. 30; 1904-5. 1905-6. 1903-7. 1907-8. 1908-9. 1909-10. 1910-11. 1911-12.	Acre-feet. 11,960,000 4,762,000 5,710,000 1,4540,000 4,540,000 3,540,000 1,243,000	Inches.  46, 76 56, 02 14, 26 44, 65 34, 78 53, 80 12, 15

## 1 For 10.9 month:

CORRECTION.—Three ditches take water out of the tributaries of the American, none of the water taken out returning to the river. From a personal knowledge, I estimate their respective acre-feet of seasonal diversions, the variation from season to season being very small, as

	cre-feet.

Seasons, October to September.	Tuolumne run-off depth.	American run-off depth.
1905-6 1906-7 1907-8 1908-9 1909-10	Inches, 44.09 46.96 13.43 33.10 25.98 42.69	Inches. 47.34 56.60 14.84 45.23 35.36 54.38
Mean	34.37	42 20

Note.—Mean seasonal depth of run-off from American watershed is indicated 20 to 25 per cent greater than from Tuolumne watershed. (Authority for Tuolumne figures, Water-Supply Paper 290, pp. 269-270.)

## COMPARISON (C).

Seasons, October to September.	Tuolumne run-off (acre feet).	American run-off (acre feet).
1905-6. 1906-7. 1907-8. 1908-9. 1908-0. 1909-10. 1910-11. Mean.	3,530,000 3,760,000 1,070,000 2,650,000 2,080,000 3,410,000 2,750,000	4, 822, 000 5, 760, 000 1, 510, 000 4, 600, 003 3, 600, 003 6, 540, 000 4, 472, 000

Note.—Mean seasonal acre-feet of run-off from American watershed is indicated between 60 per cent and 65 per cent larger than from the Tuolumne watershed. (Authority for Tuolumne figures, Water-Supply Paper 299, pp. 269-270.)

The total area of land irrigable or that can be irrigated from the American River and tributaries is approximately 260,000 acres.

As it happens, the larger part of the land north and west of the American River in Placer and Sacramento Counties is already irrigated, or can be irrigated, with water from the South Yuba and Bear Rivers. There is no other land on which to put the water of these rivers now diverted. The Consumnes River is assumed available to irrigate part of the land area north and west of it toward the American River. This is the reason that 260,000 acres is the utmost extent of probable irrigation from the American River. The area at this time irrigated is about 40,000 acres.

The land irrigated and which may be irrigated from the American River in seasons of average rainfall consumes an average of little over an acre-foot of water to the acre of land. In seasons of most deficient rainfall the consumption may average as much as 1½ acre-feet (21 inches depth) to the acre. The reasons for this are that there is always some rainfall to start with, the soil is heavy and holds water well without wasting it, and the crops for which the land is best adapted are not large water consumers.

The extreme seasonal quantity of water which can be foreseen as ever requirable for irrigation from the American River is 450,000 second-feet, and this is the total quantity of water from the American River which can be put to beneficial use in irrigation.

The writer is authority for the preceding. He knows of no better authority, having resided in the territory which is irrigable from this river for nearly 20 years, and during that period and during 15 years since has made most exhaustive investigations of the use of water for irrigation in it.

irrigation in it.

### COMPARISON (D).

The total area dependent on the Tuolumne River for irrigation is estimated at 411.520 acres, compared with 260,000 acres estimated as the total area which may become dependent on the American River for irrigation. (Authority for the Tuolumne area is the Report of the Advisory Board of Army Engineers, p. 105.)

### COMPARISON (E).

The mean seasonal number of acre-feet required per acre for irriga-tion of the Tuolumne lands is estimated 2½ acre-feet, compared with 12 acre-feet estimated required per acre for irrigation from the American River. (Authority for Tuolumne figure is Report of the Advisory Board of Army Engineers, p. 105.)

### COMPARISON (F).

The mean total seasonal number of acre-feet required for the irrigation of lands dependent on the Tuolumne River is estimated at 1,132,000 acre-feet, compared with 517,000 acre-feet (including 15 per cent allowance for wastage) estimated as required for the irrigation of lands dependent on the American River. (Authority for Tuolumne figure, Report of the Advisory Board of Army Engineers, p. 106.)

Note.—The mean seasonal acre-feet irrigation requirement from the American River is indicated 55 per cent less than the mean seasonal acre-feet irrigation requirement from the Tuolumne River.

### IV.

The quantity of water that can be stored in feasible reservoir sites on the American River and its tributary streams is 921,000 acre-feet, estimated detail as follows: North Fork tributary, 10 sites, dams 40 feet to 130 feet high.

(Authority: The writer's personal surveys.)

Middle Fork of Middle Fork tributary, French Meadows site,
dam 150 feet high.

(Authority: United States Geological Survey map, sheet No.
9 annexed, and computation by writer.)

60,000

60,000

195,000 66, 000

40,000

COMPARISON (G).

The total estimated feasible capacity of reservoir sites on the Tuolumne River and tributaries is 1,020,300 acre-feet, compared with 921,000 acre-feet estimated feasible capacity of reservoir sites on the tributaries of the American River. (Authority for Tuolumne figure: Report of Advisory Board of Engineers, p. 111.)

Note.—It is probable that precise surveys of the unsurveyed sites on tributaries of the American will show increased capacities over these estimates for them which will make the feasible total reservoir capacities of the two rivers about the same.

The quantity of water which it would be deemed advisable should be stored seasonally for irrigation is estimated as not exceeding 160,000 acre-feet. The shortage of the run-off as it came in the season 1912-13 from the full quantity required for irrigation would have been 159,000 acre-feet in the months of July, August, and September. (Authority: Computation by writer employing United States Geological Survey run-off gaugings and assuming one-half the total irrigation use after July 1 each year.)

## COMPARISON (H).

The quantity of water estimated necessary to be stored for irrigation requirements from the Tuolumne River is 370,000 acre-feet, compared with 160,000 acre-feet estimated necessary to be stored for irrigation requirements from the American River. (Authority for Tuolumne figure: Report of Advisory Beard of Army Engineers, p. 110.)

NOTE.—The storage requirement for irrigation utilization on the American River is indicated as 57 per cent less than the storage requirement for irrigation utilization on the Tuolumne River.

## VI.

The drainage area and run-off of such part of the total drainage area of the American River as may be available as a source of water supply

for incorporated cities and towns are, respectively: The drainage area, 1,500 square miles and the run-off for the seasons 1911-12 and 1912-13 as follows:

Seasons, October to September.	North Fork near Col- fax.	Middle Fork near Auburn.	South Fork near Pla- cerville.	Total, three forks.
1911–12. 1912–13.	Acre-feet. 253,000 309,000	Acre-feet. 575,000 829,000	Acre-feet, 469,000 515,000	Acre-feet. 1,297,000 1,653,000

(Authority: "Water-Supply Paper 298," pp. 302, 316, and 338 for period Oct. 1, 1911, to June 30, 1912, and record gaugings in office United States Geological Survey at San Francisco for period July 1, 1912, to Sept. 30, 1913. Computation from gauge records by writer. Correction by adding 15,000 acre-feet diversion by Cedar Creek ditch to North Fork record figures. Computation by writer of watershed areas from United States Geological Survey topographic atlas sheet.)

NOTE.—The only records are the two seasons above. They are, however, the lowest two successive run-off seasons of which there are any conclusive records made in California. The comparison is with Tuolumne records for these two years (which it is assumed will be furnished in response to Senate resolution 191 by the Secretary of the Interior) of the run-off of—

COMPARISON (I).

The preceding demonstrates the sufficiency of the American River tributaries' watersheds, after provision for all possible beneficial irrigation use through the period July 1, 1911-June 20, 1913, the two consecutive years of lowest water, to have provided 800,000,000 gallons daily to cities and have full reservoirs at the end of each year of the period. The comparison would be with the Hetch Hetchy-Lake Eleanor-Cherry Creek watershed of the Tuolumne River to have supplied the cities with half the water, 400,000,000 gallons daily, during the same period.

Separate statement of average annual flows.

Acre-feet. 266, 000 701, 000 402, 000 Average annual flow North Fork American
Average annual flow Middle Fork American
Average annual flow South Fork American

Total average annual flow three tributaries ..... 1, 459, 000

Reparate statement of the amount of hydroclectric power.

Total feasible hydroelectric power\_

cities.

The net hydroelectric power developable from the cities' water between the point (or points) of diversion of the water from the rivers and the cities is about 120 horsepower for each 1,000,000 gallons daily. This is not included in the 240,000 horsepower mentioned above, as its consumption in pumping the water will make possible the lessening of the cost of installation of the conduit by several million doflars.

COMPARISON (7).

The feasible power development on the American tributaries is estimated at 240,000 horsepower, compared with 115,000 horsepower estimated feasible power development on the Tuolumne tributaries. (Authority for Hetch Hetchy figure: "Report of Advisory Board of Army Engineers," p. 131.)

thority for Hetch Hetchy figure: "Report of Advisory Board of Army Engineers," p. 131.)

Nors: The feasible hydroelectric power development on the American River tributaries is indicated as double the feasible hydroelectric power development on the Tuolumne River.

Mr. BORAH. Mr. President, there are a large number of people in this country who are opposed to this grant purely upon what might be called sentimental grounds. I hope I am not wholly without appreciation for this noble sentiment which pleads so earnestly for the preservation of this park on account of its great scenic beauty. My own State is rich, marvelously rich, with these priceless gifts from nature's prodigal hand. But while wanton and prodigal in the particular scene which she seeks to embellish and adorn, there are not many of them in our country as a whole, and I do not wonder that they should be cherished with religious enthusiasm and a most unselfish zeal. I am frank to say, however, that this is not a controlling factor with me in this controversy. I realize that necessity may demand in some instances their destruction, few as they are, and that when the demand comes as a necessity we have nothing to do but to yield. But this ought always to be true-that they should be preserved until there is no alternative but to destroy them or deny some real want of humanity. In fact, sir, these wild, weird exhibitions of nature's beauty, nature's caprice, and nature's power are themselves factors of human development and elements in human wants in the higher and nobler sense, and only health and lives should call for their destruction. few thousand or a few million are as nothing to their value when measured by the wants and needs of the people in the sweep of the years. These people, therefore, who are making the fight upon this ground are entitled to be heard and have their claim seriously considered.

I am going to insert in the RECORD, therefore, some of their arguments, because they are entitled to be heard in their own words. I now want to read a letter from a gentleman connected with the Dally Princetonian, the official daily of Princeton University. The letter is addressed to me and is as follows:

THE DAILY PRINCETONIAN,
PRINCETON UNIVERSITY,
Princeton, N. J., November 24, 1913.

Hon. WILLIAM E. Borau, Washington, D. C.
DEAR SIR: It is my belief that certain facts concerning the proposed destruction of the Hetch Hetchy Valley are unknown to people who

have never visited that part of the country, and a perusal of the Con-gressional Record has led me to believe, also, that many of your col-leagues are in the same position.

No doubt that is true. Senators have to stay here and work: they can not visit these places.

they can not visit these places.

The Yosemite Valley is crowded with tourists and campers, attracted by what is one of the most glorious scenic and pleasure spots in the world. The Hetch Hetchy Valley, 30 miles distrant, is nearly identical with the Yosemite Valley—a level, grassy floor, inclosed by grand, precipiteus meuntains, a paradise belonging to no one section of the country, deserving of a better fate than to be destroyed for any local object, particularly when it is admitted that San Francisco is able, if it chooses, to obtain an adequate water supply from other sources. The only reason that the number of people at present able to visit the Hetch Hetchy is limited is simply because there is no road leading to it. As soon as the yearly increasing number of visitors to the Yosemite forces the State to build a road to the glorious Hetch Hetchy it will, in turn, become of like importance to the country. In the whole world there are no other valleys like these two.

When Italy and Switzcrland subsist on their climate and scenic attractions, is it not folly, even from the vaunted "commercial stand-point," to blot out what is bound to become one of the chief assets of short-sighted California?

I remain, sir,

Yours, very truly,

Hamilton Fish Armstrong.

The remainder, Mr. President, I shall not read, but ask leave to print in the RECORD without reading.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

Borkeley, Cal., November 25, 1913.

Berkeley, Cal., November 25, 1915.

The Hon. William E. Borait,

Senate Chamber, Washington, D. C.

Dear Sir: I hope it will be possible for you to throw your influence against the Raker bill, which proposes the invasion of Yosemite National Fark and the destruction of one of the two principal camping sites in the same. This bill should be defeated for the following reasons: First, there is not enough water in the Tuolumne watershed for both the Irrigationists and the city. This has been abundantly demonstrated by competent engineers. Second, it is not the part of same conservation to take water from a place where it is indispensable for the further development of arid country, when nearer to San Francisco excellent water is running to waste that can never be put to beneficial use. As Mr. Clement H. Miller and others have shown, the McClond and Eel River sources are actually cheaper than the Tuolumne. Third, experts like Mr. Whipple advised at a hearing before Secretary Fisher that within 50 years the city will have to filter Hetch Hetchy water if the Tuolumne watershed continues to be used for park purposes. We shall have to face the possibility that after a number of years the city will lave to Congress for the exclusion of campers from 500 square miles of the Yosemite National Park in order to protect the water supply from pollution. Portland applied to Congress after nine years for the exclusion of all persons from the Bull Run reserve. Fourth, the invasion of a national park for a purely commercial reason will constitute a serious precedent with reference to other parks, and may lead to a serious impairment of our entire national-park system. Fifth, San Francisco derives no benefit from the use of Hetch Hetchy which is not doubly offset, first, by the loss of seenic assets in Hetch Hetchy Valley and the Tuolumne Canyon; second, by the annual loss of \$20,000,000 from lands which can never prolitably be irrigated in the San Joaquín Valley. The water from the Tuolumne is the only water available for this purp

WILLIAM F. BADE.

Hon, William E. Borah,

United States Senate, Washington, D. C.

Dear Sir: Permit me a word of protest against the Hetch Hetchy Reservoir bill.

When this bill passed the House of Representatives it seemed to me beyond understanding how a majority could have been led into voting in favor of a measure which, if enacted, will seriously impair the beauties of the great Hetch Hetchy Valley and will pervent the use of this valley, the grand canyon, and the Tuolumne Meadows as a national park by visiting American citizens.

Then it occurred to me that while many Americans have been impressed with a knowledge of the Yosemite Valley, only a few have had opportunity to learn of the Hetch Hetchy Valley, the grand canyon of the Tuolumne, and of the wondrous Tuolumne Meadows, which contain the headwaters flowing to the Hetch Hetchy Valley, and which are surrounded by the high and snow-capped mountains forming in part the sky line of the Yosemite Valley.

My strong impressions of this region and strong protest against its threatened spoilation arises largely from the trips which I have personally made with my son. With him I have traveled, mule back, over a thousand miles and more of mountain trails throughout the high Sigras, crossing and camping upon the several forks of the Merced, the San Josquin, and the Kings Rivers, and along the Tuolumne River, and over the expanse of the Tuolumne Meadows, from which we have climbed to snow-capped peaks overlooking the Yosemite Valley.

I gave my son full opportunity to see, with me, his own country, including Alaska, before I took him to Europe. Among other places for two successive seasons I traveled with him over the mountains and trails in California.

It thus happened that we became acquainted with the grandeur and beauties of the wonderful Yosemite National Park, which includes as important features the Hetch Hetchy Valley, the Tuolumne Grand Canyon, and the wonder of our own country in preference to trips cardinately eastward across the Atlantic to foreign shores. It was wise

National Parks. Now it is proposed to close to the American public all that wondrous portion of the Yosemite Park through which flow the waters of the Tuolumne.

No one can visit this wonderful region without being aroused to a feeling of opposition and resentment against the present threatened spoliation. I wish it were possible that every Senator, before voting on the proposition, could have opportunity to view the grandeur and beauty of the scenery from which it is now purposed to shut out the American public. The defeat of the measure would then be assured.

Each Senator no doubt will receive descriptive sketches of the Hetch Hetchy Valley, of the grand canyon of the Tuolumne, and of the Tuolumne Meadows. It is not my purpose to enter into these detailed descriptions.

umne Meade descriptions.

descriptions.

As one American citizen who has had opportunity to acquire knowledge at first hand, and to be inspired by the wonderful scenic beauties whose destruction for national-park uses is now threatened, I wish only to enter a strong protest against this wanton scheme and to urge upon you to vote against the bill.

I have the honor to remain,
Yours, with respect,

Ben. L. Fairchild.

MR. JOHN MUIE'S REPLY TO A LETTER RECEIVED FROM HON, JAMES GARFIELD IN RELATION TO THE DESTRUCTIVE HETCH HETCHY SCHEME.

Hon. James R. Garfield, Secretary of Interior, Washington, D. C.

MR. JOHN MUR'S REPLY TO A LETTER RECEIVED FROM HON. JAMES R. GARPIELD IN ELATION TO THE DISTRUCTIVE HERCH HETCHY SCHEME.

Ron. JAMES R. GARPIELD,

Scorciary of Interior, Washington, D. C.

DEAR Sir. I have just received your letter on my return from some letter of the control of the control

eighty millions.
You say that Mr. Pinchot has given this matter the most careful consideration, and is in full accord with your action in granting the right to the city. Unfortunately, Mr. Pinchot never saw the Hetch

Hetchy Valley or the great Tuolumne Canyon above it, and therefore his opinion should have, very little weight against that of hundreds of mountain lovers who have long enjoyed and appreciated its wonders.

Anyhow, Mr. Secretary, though devoutly differing with you on this important matter, I am still, with sincere respect,
Faithfully, yours,

Mr. BORAH. Mr. President, I am going to take the liberty of reading to the Senate a description of one of the great scenic displays of this country, shout which Yow few records levery

displays of this country, about which very few people know anything, and which, too, is going the way of all the others, to destruction. I want to put in the Record as a permanent plece of literature a description of this piece of great natural scenery from the gifted pen of the veteran editor of the West, Mr. C. C. Goodwin. This is a description of what are known as the Shoshone Falls, in the State of Idaho:

from the gifted pen of the veteran editor of the West, Mr. C. C. Goodwin. This is a description of what are known as the Shoshone Falls, in the State of Idaho:

They are real rivals of Niagara. Never anywhere else was there such a scene; never anywhere else was so beautiful a picture hung in so rude a frame; never anywhere else was so beautiful a picture hung in so rude a frame; never anywhere else on a background so forbidding and welrd were so many glories clustered.

Around and beyond there is nothing but the desert—sere, silent, life-less, as though Desolation had builded there everlasting thrones to Sorrow and Despair.

Away back in remote ages, over the withered breast of the desert, a river of fire 100 miles wide and 400 miles long was turned. As the flery mass cooled its red waves became transfixed and torbidding face. But while this river of fire was in flow a river of water was fighting lis way across it, or has since made the war and forged out for itself a channel through the mass. This channel looks like the grave of a volume of the Household of its dead.

But while this river of fire was in flow a river of water was fighting lis way across it, or has since made the war and forged out for itself a channel through the mass. This channel looks like the grave of a volume or the Ohio, springing from the distant snow-created Thou was the angust display begins.

Saddenly, in different places in the river bed, jagged, rocky reefs are upraised, dividing the current into four rivers, and these, in a mighty plunge of 80 feet downward, dash on their way. Of course the waters are churned into foam and roll over the precipice white as are the garments of the morning when no cloud obscures the sun. The lovellest of these falls is called "The Bridal Yell," because it is made of the lace which is woven with a warp of falling waters and a woof of sunlight. Above this and near the right bank is a long trail of foam, and this is called the "Bridal Trail." The other channels are not so the lace which is woven with a w

energy that creates that endless panorama is comprehended; all the deep throbbings of the mighty river's pulses are felt; all the magnificence is seen.

In the reverberations that come of the war of waters one hears something like God's voice, something like the splendor of God is before his eyes, something akin to God's power is manifesting itself before him; and his soul shrinks within itself, conscious as never before of its own littleness and helpiessness in the presence of the workings of nature's immeasurable forces.

Not quite so massive is the picture as is Niagara, but it has more lights and shades and loveliness, as though a hand more divinely skilled had mixed the tints and with more delicate art had transfixed them upon that picture suspended there in its rugged and somber frame.

As one watches it is not difficult to fancy that away back in the immemorial and unrecorded past the angel of love bewailed the fact that mortals were to be given existence in a spot so forbidding, a spot that apparently was never to be warmed with God's smile, which was never to make a sign through which God's mercy was to be discerned; that then Omnipotence was touched; that with His hand He smote the hills and started the great river in its flow; that with His finger He traced out the channel across the corpse of that other river that had been fire, mingled the sunbeams with the raging waters, and made it possible in that Fe-blasted frame of scoria to swing a picture which should be, first to the red man and later to the pale races, a certain sign of the existence, the power, and the unapproachable splendor of the Great First Cause.

And as the red man through the centuries watched the spectacle, comprehending nothing except that an infinite voice was smitting his ears, and insufferable glories were blazing before his eyes, so through the centuries to come the pale races will stand upon the shuddering shore and watch, experiencing a mighty impulse to put off the sandals from their feet, under an overmastering consciousn

There is nothing elsewhere like it; nothing half so weird, so wild, so beautiful, so clothed in majesty, so draped with terror; nothing else that awakens impressions at once so startling, so winsome, so profound. While journeying through the desert to come suddenly upon it, the spectacle gives one something of the emotions that would be experienced to behold a resurrection from the dead. In the midst of what seems like a dead world suddenly there springs into irrepressible life something so marvelous, so grand, so caparisoned with loveliness and irresistible might that the head is bowed, the strained heart throbs tumultuously, and the awed soul sinks to its knees.

It is no wonder that those who see those vast displays of nature, so weird and so wild and so majestic, such exhibitions of nature's caprice and of nature's power, and appreciate them as this veteran editor did, are fighting earnestly and unselfishly and zealously for the preservation of one of the great beauty

spots of the world.

The marvelous scene which this editor has depicted has passed away. That river, too, has been dedicated to commer-The great Shoshone Falls are practically no more. In time they will be but the scene of commercial strife. One of the scenes which would have invited, in time to come, millions from all parts of the earth has been wiped out by commercialism. We stand here to-night contemplating the question whether we will dismember a spot set apart only a few years ago for the people of the United States, for all time to come, for resort recreation. We ought to pause and consider well our act. What we undo in the way of defacing and marring these marvelous scenes nature herself in all her majesty and strength can not restore.

Mr. LANE. Mr. President, I am sure it will be difficult to make an impression on this audience after the very beautiful closing speech of the Senator from Idaho. But to me, though I have never seen the Shoshone Falls, a rosy-cheeked baby, healthy and happy, appeals more strongly as a good and great creation than does a cliff with water pouring down over it.

If it is necessary for the health of the people and the lives of the little children that they have a greater supply of water than that which they now have in San Francisco, or a purer supply of water, and in the balance on the other side of the scale lies at stake merely the beauty and the grandeur of the Hetch Hetchy Valley, I would give the preference to the people of San Francisco and wipe out Hetch Hetchy just as quickly as I could do so.

I do not think there is any difference of opinion among us here in that respect. With me it is merely a question of whether or not San Francisco is in need of this water and

whether that is the only source of supply.

If there are other sources from which San Francisco can obtain as pure a supply of water at no greater cost or at no excessive cost, then San Francisco should be asked to do so.

That is the problem I have been revolving in my mind here for a number of days. They are the points I would like to have settled in order that I may vote intelligently upon this bill.

If it be true that by taking the waters from the Tuolumne River and impounding them behind a dam in the Hetch Hetchy Valley and conveying 400,000,000 gallons a day in a pipe line to San Francisco the people occupying the San Joaquin Valley will be forever deprived of the use of their lands, while at the same time San Francisco can obtain an equal amount of pure water at no greater cost from the McCloud River or other sources, then it seems to me she should be forced to go to the McCloud River, or to the Eel River, or to Putah Creek, or to any other source from which she may obtain the necessary amount of water.

In California a climatic condition exists which is different from that which obtains in this eastern country. In California every drop of water is almost as valuable as a grain of gold. They do not have one drop to waste. San Francisco is entitled to every last ultimate drop that she needs. She is not entitled

to one more drop than she needs.

There is something about this proposition which I can not understand. There is an appropriation made here in this bill for a city of 500,000 inhabitants, we will say—I believe that is a full and free estimate. The population of San Francisco is, I think a little less than that—in which she is granted a water supply of 400,000,000 gallons a day, which means 800 gallons supply of 400,000,000 gallons a day, which means 800 gallons each and every day for every man, woman, and child in that city, for the baby born yesterday and for the old man who is going to die to-morrow. It is enough water to drown the whole outfit twice a day every day in the year. [Laughter.] They can not get away with that amount of water. It is too much water. There must be something in this proposition besides water, although there is an excess of that. [Laughter.]

Quite a number of years ago I was camping up in the mountains with a party doing some work upon a water course; among other things, building a bridge. I had a gang working for me and we were living on canned food, as you have to

in the mountains when far from a source of supply of fresh vegetables. One day the foreman's wife drove in about 1 o'clock with a little bit of a boy. He was about 2 years old, I guessa smart little fellow, precocious, rosy-cheeked, and hungry. Almost everything had been eaten up, but the cook stirred around and got together what little he could, and among other things he had left a few tablespoonfuls of stewed canned corn. The little fellow was very fond of corn and he asked for it. His mother gave it to him and he ate it, and then he wanted more corn. She said, "There is no more corn," and the cook said, "There is no more corn." He pointed to the stewpan in which it had been cooked, and the cook scraped it out. Those of you who have ever cooked canned corn know that most of the pepper settles to the bottom of the stewpan in which it is cooked. The residue was scraped into his plate and the little fellow got his spoon in it and put it in his mouth. He took a swallow of it and suddenly turned to his nother with great indignation and said, "There is too damned much pepper in this corn." [Laughter.]

It strikes me that there is a similar excess of water in this appropriation for San Francisco. [Laughter.] It evidently is not simply a proposition of securing water for San Francisco, for they can not use that much of it if they get it. It must be

something else. It is probably a power proposition.

There are other things about it which are curious. a grant here to the city of San Francisco, with a sort of limited permission to the other cities about the bay to procure some of this water from San Francisco, after San Francisco receives from Congress the right to pass its pipe lines over the lands of the Government, if they do so. But if you will read it carefully you will notice there is no clause there in the nature of a common user, giving either Berkeley or Oakland or Alameda or San Jose the right to go to San Francisco and say, "We will take a little of this excess water which you are procuring, and pay our proportion of the cost of bringing it here, for the construction of the dam, the pipe lines, and so forth." 'There is nothing of that sort. The entire bill is silent upon that point.

I have seen a few franchises drawn. If I were a resident of Oakland, you could not sell me that franchise for a nickel.

[Laughter.]

That strikes me as peculiar. I like San Francisco. ple who live up north of San Francisco are friends of San Francisco. We always have been. My father went into San Francisco in 1848, and worked during the winter of 1848 and 1849 in the mines on the American and Feather Rivers. My mother's father went to San Francisco in 1849; my people have lived all their lives on the Pacific coast. We are fond of them. They are a good lot and good neighbors. There has been no jealousy between us. Nevertheless, they are at this time clamoring for a whole lot of water. [Laughter.] I do not know what they are going to do with it. You can take that amount of water, with the fall which at-

tends it—San Francisco being at sea level and the Hetch Hetchy Valley 3,500 feet up in the air above it-and you can sluice the entire city of San Francisco into the Pacific Ocean every four

[Laughter.]

Mr. MYERS. Mr. President, may I interrupt the Senator? The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Montana?

Mr. LANE. No; let me go on, please. I want to ask the Senator from Montana some questions after a while, and I think I will keep him busy when I do.

Mr. MYERS. Ask them now, Mr. LANE. If there is any question the Senator wishes to ask about any statement I am making, I would like to hear it

now. Yes; the Senator may interrupt me.

Mr. MYERS. I just wanted to say that the Senator seems to be under the impression that drinking is the only use to which water can be put. The people of San Francisco need water for bathing, for fighting fires, for laundry purposes, for cooking, for street cleaning, and for the great number of purposes for which water is needed in all large cities. The Senator should not be under the impression that they are to drink all of this water or to be drowned in it.

Mr. LANE. I am glad the Senator called my attention to that matter, for I have been looking it up. I have taken into consideration the water supply of a city for all municipal uses. Those uses consist of the water they drink, the water they bathe in, the water they cook with, the water for sluicing the sewers, for fighting fires, for washing streets, and for manufacturing

Durposes

San Francisco, with a population of 500,000 people, has now a supply of water of 40,000,000 gallons a day, according to your report. This is your report, I think. No; this is the report of Mr. RAKER, in the House. It uses 40,000,000 gallons a day

at the present time. That is 80 gallons per capita-80 gallons every day for every man, woman, and child, for all municipal That is more water than the average city uses for similar purposes. It may astonish you to know that, and yet it is true. It is more water than they use in New York. is more water than they use in St. Louis. It is more water than they use in a number of cities, if waste is excluded.

I had occasion at one time to check up this question. were putting in a plant of our own in the city of Portland. were having a great deal of waste. By the way, please bring me some water to drink. [Laughter.] We had to go out into the mountains and procure a supply of water. We were putting into the city 23,000,000 gallons of water every day by a gravity system. Along would come a spell of hot weather in the summer, and every man jack in town would turn on the faucet and let it run until it got cold, so that he could get a cold drink of water. Down would go our pressure, and that would exhaust the supply, out of our reservoirs. Then, in the wintertime there would come a cold spell of weather, and they would turn on the faucets. You know how that is done. They would be too lazy to go outdoors in the cold and turn off the house supply, and down it would go again. Our supply was 23,000,000 gallons of water a day, which was 100 gallons for every man, woman, and child in the city of Portland. Then there would come a spell of weather like we have been a positive would come as a spell of weather like we have been spelled by the like we have been spell of weather like we have here now, not quite so warm, but ordinary weather. There is hardly ever much cold weather and hardly ever a great deal of hot weather there.

Then, I found to my astonishment after checking day after day, week after week, that the actual ordinary consumption of the city was but 7,000,000 gallons a day, or about 28 to 30 gallons per capita. You will not believe that. No man will believe You will think I do not know what I am talking about, but

It will just read to you another authority on this subject.

Here is a report that was put out in New York City. It is entitled "Waste of water in New York and its reduction by meters and inspection," a report to the Merchants' Association of New York. It was an inspection that was authorized by an act of their State legislature, and this report was sent around all over the country. I had seen it before. Here are some figures which I will present to you. It was published in New York June 18, 1906, signed by the committee on water supply, the Merchants' Association of New York, by Henry R. Towne, chairman. It is a work that is considered reliable by all engineers in water departments all over the United States. It is quite interesting.

Of course, different cities vary according to their population and the business enterprises they are engaged in. Manufacturing cities use more water than do those that do not manufacture. In a dry climate they naturally use more than in a climate that is more damp, as is the case in the city where I live. Yet the figures run pretty close together, and I want to call your attention to some of the cities in which there are comparatively few meters. The bulk of water, perhaps nearly half of the water, which is piped into a city is wasted. There is only about 60 per cent of water that is put to use. The rest of it is wasted by leaky pipes and neglect.

I remember one instance where we suspected a citizen of wasting water on account of leaky pipes, and we sent an inspector to see him and give him the proper warning to fix up his pipes. He promptly ordered our inspector to get off his premises. We had a flat rate, under which he was paying about \$1.50 a month for water. We put a meter on his service pipe, and the next month his bill amounted to \$113. He repaired the leaks in his pipes and his bill went right down again. He was wasting \$111.50 worth of water every month, and had been doing so for months before we discovered it.

We had trouble with a prominent business man who owned a large brick building. His bill on metering was \$60 a month, jumping up suddenly from about \$5 or \$6 to \$60. He got a plumber to look over his pipes and discovered that a rat had eaten a hole in a lead service pipe.

A good part of the water which comes into a city goes directly out in the sewers, without ever being used. If San Francisco gets from Hetch Hetchy 400 gallons for every man, woman, and child in the city, 350 gallons of it will go down through the sewers unused. They will rip off the power up in the mountains with a 3,500-foot head. It will be a beautiful plant for manufacturing power, but the water will of necessity go down into and through the sewers into the ocean and do nobody any good. Three hundred thousand to three hundred and fifty thou-

Here is a list of cities with the average rate of consumption for municipal use given as less than 50 gallons a day. There are dozens and dozens of cities all over the world which do not use that much water. They do not use it in London. They do

not use it in Berlin. They do not use that much water in hundreds of cities all over the world.

Here is Brockton, in Massachusetts. In 1904 for manufacturing purposes there was used per capita daily 15.5 gallons, and for domestic use 5 gallons, and in addition to that 3 gallons daily for public use, such as street cleaning, and so forth. Water not accounted for-that is, wasted-13.3 gallons; or, in all, 36.9 gallons a day. That is in Brockton, Mass., in New England, and the people who live up in Massachusetts do bathe occasionally, I am told. It has been intimated here that if a fellow does not get a thousand gallons a day he does not bathe. ter.1

In Boston, which is the center of civilization, if you please, they use for manufacturing 30 gallons a day, for domestic use 30 gallons, 3 gallons for public uses—that is, for washing streets, and so forth-water not accounted for, 32 gallons; total, 95 gallons. San Francisco has 80 gallons now, and she is shy of water for people living on the hills. Why? Because the fellows who are below in the lower levels have leaky pipes or waste water. It would be worth a million dollars to San Francisco if she would hire a good plumber to go around and fix up and meter her service pipes. She has more water now than she can legitimately use. I do not think it is good water. I think the system ought to be changed. I am willing to help her to go to Hetch Hetchy, if no other source of pure water is available, and replace it with good water, but the quantity she

asks for is more than she needs.

Here is Cleveland. That is in Ohio. For manufacturing 40 Here is Cleveland. That is in Ohio. For manufacturing 40 gallons, for domestic use 26 gallons, 10 gallons for public use. That makes 76 gallons. Not accounted for, 20 gallons. Total, 96 gallons. I do not know what kind of water they have in Cleveland. Lake water, I suppose.

Here is Fall River, Mass., which uses for manufacturing 7 gallons, domestic use 15 gallons, public use 5 gallons, not accounted for 8 gallons; total, 36 gallons.

In 1902 there was a total per capita consumption of 40 gallons.

In 1902 there was a total per capita consumption of 40 gal-

lons in Fall River.

The next is Hackensack. That is not complete, but there is a tabulation of 446 gallons for a family—a family of five persons, perhaps. That would be something like 80 or 90 gallons per capita for all purposes.

Hartford, Conn., 3 gallons for manufacturing, 30 gallons for domestic use, 5 gallons for public uses, 24 gallons not accounted for (wasted); total, 62 gallons.

San Francisco has 80 gallons now. We have been told here all the time that San Francisco does not have water enough to

use. She has a supply above the average. Her water is impure. I am willing to concede that.

Now, we will take Harrisburg, Pa., in 1904. Manufacturing 81 gallons, domestic 30 gallons, for public uses 5 gallons, water

81 gallons, domestic 30 gallons, for public uses 5 gallons, water not accounted for 30 gallons, making a total of 146 gallons.

Milwaukee, Wis., in 1904, used 45 gallons for manufacturing and 25 gallons for domestic use. Water for public uses 5 gallons, water not accounted for 14 gallons, a total of 89 gallons.

Mr. SMOOT. And half of it for beer.

Mr. LANE. Probably that is true.

Madison a total of 44 gallons. I will read the totals now. Syracuse, a total of 108 gallons.

Taunton. In 1904 Taunton had 64 gallons.

Ware, 44 gallons.

Wellesley, 55 gallons.

Wellesley, 55 gallons. Woonsocket, 29 gallons.

Worcester, 68 gallons. Yonkers, Yonkers, in 1904, had 94 gallons.

Bamberg had 15 gallons. That is in Germany.
Berlin had 18 gallons for all uses. You may read them all
down the line, and Germany had 13, 14, and 15; Eisenach,
Hanover, Rudolstadt, Stralsund, Darmstadt, Gotha, Magdeburg, Mainz, Mannheim, Potsdam, Quedlinburg, Strassburg, Weimar, Worms, 14, 15, 13, 14, 32. The highest in the whole list is

32 gallons per capita for all uses, municipal and otherwise.
With all kindness in our hearts for San Francisco, for I like her people-and before now, at the risk of my political career, I have fought for her—I say she is asking for too much water. It is a power proposition. That is a valuable use of water, and I am willing to concede such a right to San Francisco, but if to secure it she must wipe out the farmers in the San Joaquin Valley, the richest valley on the Pacific coast when watered, and without water a desert, let her be just and pay the farmers for their loss.

No city and no person on that coast or anywhere else has a

right to waste any of nature's resources.

The McCloud River, I am informed, has an excessive amount of water. It has more than the Tuolumne River, and it is in a country where they do not need it so badly as they do in the San Joaquin Valley. I am informed that they would be glad to get rid of some of it.

This question has two sides to it. Rather than see San Francisco go without water I will vote for the bill, but if it can be shown that San Francisco can secure this supply from some

other source and do less harm to the people who live in the district from which it is proposed to take the water, I think she ought to be made to do it, in justice and without prejudice and without fear or favor to anyone, if you please. I do not be-lieve we have a right as Members of this Senate to allow ourselves to be whooped into the proposition without digging down into it and ascertaining the facts and then standing upon them and voting for what is right. If anybody can show me that it is proper to go to the Hetch Hetchy, I will vote for Hetch Hetchy and let the park go, and that despite the fact, if you please, that I am chairman of the committee for the preservation of forests. As between the needs of San Francisco and her people and the beauties of Hetch Hetchy, I would wipe out the Hetch Hetchy Valley as quick as the snap of a finger, but I would not give San Francisco the water to run it wastefully through her sewers into the sea while the people over in the San Joaquin Valley need it to raise grain with which to support their families.

Mr. PITTMAN. Mr. President, I realize the sincerity of the Senator from Oregon, and for that reason I want to call to his attention something for his consideration. I do not intend at this time to discuss this matter, because I have given notice that to-morrow I will discuss the bill, but I want to say that the plan of San Francisco for the utilization of this water does anticipate the bringing of this water to San Francisco on the original plan. The plan, of course, anticipates securing for San Francisco the water on the theory that unless it does so now, when it does need it it will have been appropriated under

the laws of California by others.

Mr. LANE. I know, but, Mr. President, we are here appropriating that amount of water. They are filing a claim for 400,000,000 gallons of water a day. Now, you say you do not need it. I know you do not. I am glad to hear you say so. Then, if you do not need it, why not file on that which you do need for a reasonable use and for a reasonable length of time; if you secure a hundred million gallons a day you will have enough to supply your city when she has 2,000,000 inhabitants.

Mr. PITTMAN. I will say that, according to the estimate of

the Government engineer, by the beginning of the next century there will be 3,500,000 people who will want that water, and it has been considered wise-whether wise or not I am not going to look that far ahead. They have concluded that it is wise to look that far ahead, and if so it would not be a very excessive amount of water at that time.

I also wish to say to the Senator for his consideration, because I know what he has in mind and that he always wants to consider facts, that pending that time every drop of water which is not conveyed to San Francisco for its beneficial use under the terms of the bill will go down in the same channel to the same farming districts where it goes to-day.

It will not be carried as the surplus water there is carried and thrown away, but it will go down to the same places where it is going now; and it will go there until that population shall have increased to such an extent that it will be demanded for

domestic uses

Mr. LANE. Mr. President, if at the beginning of the next century San Francisco shall have 3,500,000 people, using a greater average of water than the average city of the world, she will only require 175,000,000 gallons per day. In the meantime and until the beginning of the next century let us allow these other people the use of it to irrigate their lands. to be provided in this measure that every drop of water taken shall be utilized. Tie them to that; that is fair. Let San Francisco come here and give assurance through her official representatives that she will use for domestic purposes and for electric lighting purposes, for transmission, for the manufacture of power, as she can, the actual amount of water only which she needs, and we will give it to her, and the people of the upper San Joaquin Valley will have but little complaint to make, for it will not take much water from them.

Mr. PITTMAN. But, if the Senator from Oregon please, that is exactly what must be done under the laws of the State of California, because they have a water commission there on behalf of all the people of California, and they can do that; they can protect that when we can not protect it by any law that

Let me call the attention of the Senator to another thing which may not be known to him, that in the utilization of this water power is created between the Hetch Hetchy reservoir and a point on the Tuolumne River before it leaves the Tuolumne River; so that after it has created this power, the portion that

is needed for San Francisco goes through the pipe lines and the other portion continues to flow down the Tuolumne River.

I wish to-morrow, if the Senator will then give me his attention, to try to prove by Government statistics and facts that there is sufficient water in the Tuolumne River, if properly conserved-and it can be conserved more cheaply than it can be conserved in the Hetch Hetchy-to supply more than enough water to irrigate all of that land and yet supply San Francisco with any amount of water that it will ever require.

Mr. LANE. Well, all I have to say in reply to that is that I hope that it is true. If that is done justly, and the waste water from the overflow at the dam is given to these people on reasonable terms, I do not see why there should be any objection

to that.

Mr. PITTMAN. They will give it to them for nothing. Mr. LANE. But we have no assurance from them that that is going to be done; and when we grant them this strip of land, this neck of the gorge, this right of way over our public . lands, over the Government lands, which is the key to all that water, they will be up and gone, like a bird that flies free out of the door. There is not nor can be any check on them. After that is done, write it in the bond and present it with your bill, and then we will be in a position to know that we are doing right. That is all I want. I want them to have water from some pure and abundant source of supply.

Mr. PITTMAN. Mr. President, we can not do that; it is not the law; but I am satisfied that the government of the city of San Francisco is as just and honest as any government of the State of Oregon was when the honorable Senator was in charge of one of the biggest municipalities in that State; and I am satisfied that in his government of Portland he was able to protect the people of that municipality from any wrong or waste, and never tried to impose on anyone else in that State. I believe that every State in this Union is able to protect the people within its limits; but this Government has no right to say how

the water shall be distributed or controlled.

While this bill has some things in it of that character and kind-and I wish they were not in it-I would not have them there if to eliminate them would not defeat the bill, but would take them out of the bill if we had the right. I want to say that to-day the State of California is protected by one of the best water commissions which any State ever had, and the law of that State is as strict about the waste of water as is

that in any other State.

There is no question of one thing, that even though San Francisco be granted the right to build this dam 300 feet high and to impound 400,000,000 gallons of water daily, she will not be allowed to take away any more than is reasonable and just for the benefit of her people, and the water will go back down that valley where it has always gone after it has served its power purposes. We could not protect them any more in this bill than the people of the State of California can protect them by their own laws. I am just as anxious to see those people protected as is the Senator from Oregon. So far as that goes, we are both together on that proposition; we are exactly together on it. It is merely a question of method; we are trying to work it out, and I hope to-morrow to be able to bring facts to the Senator's attention that will convince him that even if San Francisco took 400,000,000 gallons of water daily away from that valley, to-morrow there would still be ample water, if there were a proper conservation, to irrigate all of the lands tributary to that stream.

Mr. LANE. Just a word and then I am through. I would say if they have no better success in protecting public property than I had as mayor of Portland in keeping the coyotes and thieves that were after it from getting away with it, there will be nothing much to boast of. About 33½ per cent of public expenditures get picked off by the way or lost by the unfit and the

Mr. SMOOT. Mr. President, I was very much surprised at the statement made by the Senator from Nevada [Mr. PITTMAN] in relation to the waters of the Tuolumne River running down and being sufficient to irrigate all the lands of that valley. Mr. President, I want to say to the Senator that he must know if water runs down the Tuolumne River after that dam is constructed it will be at a time of the year when the farmer will not particularly need the water, because every drop of the natural flow of that river to-day is appropriated. The time when the farmer most wants the water is when the water is the lowest, and then there will be no water running down the Tuolumne River to go into the valley; and if the farmers in that valley can not have water at the time they need it it will do them no good. What good will the water do in the wintertime for the farmers in that valley if it should run down as it has run down in the past? The only time it will do them any good will be when their crops are being matured and when the quan-

tity of water is at the very lowest.

Mr. PITTMAN. If the Senator please, I presume he was asking a question, and I will try to answer it for him. I want to state that if he has carefully read the bill he knows, as a matter of fact, that the bill does provide that during the very season that the farmers require water for irrigation, and when it is lowest, 4,000 second-feet of water are to be turned down that stream

Let me say further that the Senator is right, that the flood waters of all those mountain streams come down the river at a time of the year when they are least needed for irrigation. That is absolutely correct. For years and years it has been going to waste, and is going to waste now. For the very reason that there is not a dam sufficient on that river to stop it, it goes out to the sea. If this dam is placed at Hetch Hetchy, it will stop at least a portion of that flood water and keep it from going to the sea, and there will be enough of it turned over the dam to equalize that flow to 2,300 second-feet many days of the year; and they will have opportunity to use up to 4,000 second-feet during those months when they need water, and that, too, during those months in which they do not have the water at the present time, because they have no dam to retain that very flood water. That is the fact about it. The Senator should know that this dam will correct an evil that is existing now; will preserve water that goes to the sea; and will guarantee the farmers a uniform flow just at the season they have not any water at the present time.

Mr. SMOOT. Mr. President, nobody has denied that proposition. I certainly have said nothing that the Senator could construe as even intimating such a thing. Everybody knows that if a dam is put there, it will be put there for the purpose of storing water in the flood times. If it were not for that, the filings of San Francisco would not be worth a five-cent piece, because all of the water in the stream in its regular flow had been appropriated long before San Francisco made a filing upon

the stream. The Senator knows that.

I recognize the truth of what the Senator said in relation to water in a reservoir being a saving, just as much as he does. know that it would be a great benefit; and whatever benefit it may be and whatever filing San Francisco has, whether it be 160,000,000 gallons daily or 200,000,000 gallons daily, they are entitled to and they ought to have, and I never would vote to take it away from them; but I do not want to say by any vote of ours that San Francisco can have 400,000,000 gallons of water if she does not want to use it within a reasonable time and stop every citizen of the United States from filing on the waters that have not already been filed on.

Mr. NORRIS. Mr. President—
The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Nebraska?

Mr. SMOOT. I was merely answering the Senator from

Mr. PITTMAN. I yield the floor, if I have it.
The VICE PRESIDENT. The Senator from Nebraska is recognized.

Mr. NORRIS. Mr. President, I want to call the attention of the Senator from Oregon [Mr. Lane], if he has not left the Chamber, to what I believe is an answer to his question. It is in the bill itself, and I think it would be well also for the Senator from Utah [Mr. Smoot] to consider it, in view of what he has said. I am informed that the Senator from Oregon is not here, but I will read it into the RECORD. I believe it answers the dilemma in which the Senator seems to be. It is found on page 17 of the bill, subdivision (h); and I also call the atten-tion of the Senator from Utah to it:

(h) That the said grantee

That means San Francisco-

(h) That the said grantee shall not divert beyond the limits of the San Joaquin Valley any more of the waters from the Tuolumne watershed than, together with the waters which it now has or may hereafter acquire, shall be necessary for its beneficial use for domestic and other municipal purposes.

Mr. SMOOT. The language "and other municipal purposes" covers all purposes,

Mr. NORRIS. Does not that cover the proposition?

Mr. SMOOT. Yes; it covers not only the domestic but all

other purposes.

Mr. NORRIS. I think that would be for washing streets and such other purposes as a city usually uses water for.

Mr. SMOOT. No; that is not what that means; that is not what San Francisco wants, and that is not what San Francisco

Mr. NORRIS. Does the Senator say that that is not what it means? I want to assert that it is. That is what it is intended to mean, and I believe that is what it does mean. I am only giving my belief as to that.

Mr. LANE entered the Chamber. Mr. NORRIS. I want to read the provision again for the benefit of the Senator from Oregon:

(h) That the said grantee shall not divert beyond the limits of the San Joaquin Valley any more of the waters from the Tuolumne watershed than, together with the waters which it now has or may hereafter acquire, shall be necessary for its beneficial use for domestic and other municipal purposes.

Mr. LANE. Mr. President, in answer to that, I would say that when we picked up a grant for a water right which some sharp fellows had staked ahead of the city, all the right they would grant us was for municipal domestic use-none for other purposes, none for manufacturing of "juice."

Mr. NORRIS. Oh, no; this provision does not cover that.

Mr. LANE. Oh, yes; it covers that, in my opinion.
Mr. NORRIS. In my opinion, the "juice" of which the Senator speaks will all be manufactured before the water gets into the city. There is no intention of having electric power manufactured in the city of San Francisco proper. There is no such thing in contemplation.

Mr. LANE. It takes more water to manufacture electricity for municipal use than it takes to supply domestic use. It takes

a bigger head; it takes

Mr. NORRIS. But there is no idea of manufacturing electricity in the city.

Mr. LANE. No; it is manufactured at the headgates.

Mr. NORRIS. The Senator will notice that this subdivision provides that they shall not take any more water away from that particular valley, which he says ought to have the water, than they can use beneficially for municipal purposes.

Mr. SMOOT. But they make take it away from the reservoir for the purpose of creating power, and it will never get

back into that reservoir.

Mr. NORRIS. No; that is not what it says, as the Senator will notice if he will read it again-

That the said grantee shall not divert beyond the limits of the San Joaquin Valley-That is where the land is located which you want to irri-

That the said grantee shall not divert beyond the limits of the San Joaquin Valley any more of the waters \* \* \* than \* \* \* shall be necessary for its beneficial use for domestic and other municipal

Mr. SMOOT. "And other purposes." Mr. NORRIS. No; "other municipal purposes."

And that will be for the creation of power for Mr. SMOOT. the municipality.

Mr. NORRIS. The Senator certainly does not mean that.
Mr. SMOOT. Certainly I do.
Mr. NORRIS. The Senator knows that the power is going to be developed before it reaches the city. If this bill passes, there will be no electric-power plant within the city limits of San Francisco. Nobody contemplates such a thing and nobody has ever suggested such a thing.

No opponent of this bill, so far as I know, has ever made the charge that when they get the water down there they will use it for such a purpose. If they did the Senator does not believe that it would be permissible under the laws of California. The power is going to be developed before it gets anywhere near the city. Most of it will be developed before it gets to the San Joaquin Valley.

Mr. SMOOT. Mr. President, I do not think there ought to be any misunderstanding about this matter. The Senator himself, I think, will admit that the principal object of this bill is to provide for the creation of power, and the power can not be

created unless the water goes through the water wheel—
Mr. NORRIS. The Senator is not answering the proposition.
Mr. SMOOT. And when the water passes through the dam site, through the wheels, and creates the power it will never

go back again.

Mr. NORRIS. I want to say to the Senator that he is entirely mistaken. Most of that power will be developed before it reaches the San Joaquin Valley. The water that will go to the irrigationists will have created power before it gets to their ditches.

Mr. SMOOT. Anybody knows that the power has to be created right where the fall is. You must have a fall.

Mr. NORRIS. Then, the Senator ought not try to make the Senate believe that it is going to be created in the city limits of San Francisco.

Mr. SMOOT. The Senator has never said any such thing,

and never had any such idea.

Mr. NORRIS. Did not the Senator say, in regard to municipal purposes for the city, that it was to make "juice"-to

make electricity?

Mr. SMOOT. I never used the word "juice" at any time.
I never designate electricity by the word "juice." Mr. President, I simply say that if the Senator's position is right, then San Francisco would be building the dam site there for the purpose of taking out only sufficient water for domestic purposes, and that only to the amount the people of San Francisco and the surrounding cities may use. Does the Senator believe that that is true?

Mr. NORRIS. Out of the dam? Mr. SMOOT. Yes. Mr. NORRIS. No; I do not believe it is true. I never said it was. Nobody has claimed it. Why, that dam is a great many miles from the San Joaquin Valley, where they want to use the water for irrigation purposes. Before the water gets to that valley it will have gone through the water wheel and will have created the power, and the water will go on to the land, and the power on to wherever it is going to be used.

Mr. KERN. Mr. President, for reasons which I shall state presently, I have no purpose of discussing the merits of this

controversy

During the session last night, when a letter from Hon. DEN-VER S. CHURCH, Member of Congress from California, was read, in which he announced his opposition to the pending Hetch Hetchy bill, I expressed some surprise that Mr. Church should have changed his views on the question at this late date; and inquired of the junior Senator from California [Mr. Works] if he had any information as to the mental processes of that gentleman in reaching a conclusion so at variance with his former views, as expressed on the floor of the House. The change in his attitude was so out of the ordinary that it challenged my attention.

The Senator from California, expressing the highest opinion of the standing and integrity of Mr. Church, in which I fully concur, stated his belief to be that Mr. Church had changed his attitude because of an honest effort on his part to reflect here the views of his constituents, which had also changed, and

an earnest desire faithfully to represent them.

Since the colloquy referred to I have talked with Congressman Church; and if I had entertained the slightest doubt of his entire good faith, the sincerity of his purpose, or the patriotism of his action, such doubt would have been instantly dispelled by his own frank statement of the reasons which have prompted his action.

He came to Congress with the firm conviction that all the waters of the watershed of the Tuolumne River, including storage facilities, should be reserved for the exclusive use of the owners of the irrigable lands of the San Joaquin Valley. Accordingly he was opposing the Raker bill, when several gentle-men of prominence—men of high character and standing came to Washington as a committee especially representing the irrigationists of the Modesto and Turlock irrigation districts.

Mr. Church naturally was pleased that these men, representing so largely the people of his district, should come here to second his efforts in their behalf; and, working together, all proceeded to the task of protecting the interests of the people

of the San Joaquin Valley.

Early in the contest here in Washington this committee was induced to go into conference with those representing the in-terests of San Francisco for the purpose of determining whether a measure could be drafted and agreed upon which would give to San Francisco a water supply and at the same time fully protect the interests of the water users of the irrigation districts and of the San Joaquin Valley generally. As a result of this conference there was an agreement between the respective parties, the terms of which are substantially embodied in the pending bill.

The committee representing the water users reported to Mr. CHURCH that all the rights of his constituents had been fully safeguarded, and that the bill as then agreed upon contained every provision necessary for the full protection of all his

people.

Mr. Church relied upon the representations of these men. He believed in them, as he had a right to believe in them. They were special representatives of the people of the San Joaquin Valley and held a commission bearing a later date than the one held by him. It transpired subsequently, however, that they had been overreached in the conference, at least in the opinion of the people back home, as ascertained at a later date. But Mr. Church had no reason for suspecting the good faith of these representatives of the people or doubting the wisdom of their action. So when they solicited his support of the Raker bill it was but natural that he should accommodate himself to the desires of his constituents, for whom they had a right to speak.

But, as already suggested, as time went on and after the people affected by this proposed legislation had opportunity to study its provisions, the belief became widespread that their interests had not been properly guarded, and that their interests

would be seriously imperiled by the passage of the proposed measure

This feeling continued to grow, until there came to be a well-nigh unanimous belief amongst the people of the San Joaquin Valley that enactment of the Raker bill would mean the destruction of property values in that region and the utter ruin of many of its people. So, almost as one man, they arose and demanded of their Representative that he stand by their interests, even though that action should involve a charge of inconsistency against him.

Mr. Church received hundreds of communications to this effect, a few of which he has handed me, which, in justice to him, I take pleasure in reading. This is one of the later ones:

Modesto, Cal., December 4, 1913.

Modesto, Cal., December 4, 1913.

Congressman Denver S. Church, Washington, D. C.:

Sentiment here is unanimous against the Raker or any bill having for its object the taking of any water out of the valley. The sentiment is radical. To protect yourself from attacks that are being made here against you and for your future protection better place yourself at the services of local committee now in Washington. You can square matters with House committee by saying political suicide not to change now. Ferris and other committee men will appreciate your position. Telegrams here from committee that you alone stand in way of their success in defeating Raker bill. Protect yourself in this matter.

Modesto, Cal., December 4, 1913.

Modesto can be very bill having for any bill having for

Here is another:

Modesto, Cal., December 3, 1913.

Congressman Denver S. Church, Washington, D. C .:

Be it resolved. That the president of the board of directors of the Modesto irrigation district be directed to wire Congressman Church, at Washington. D. C., to oppose the passage of the Raker bill and to use all means in his power to defeat the passage of the same and also to oppose any other measure having for its object the giving to the city and county of San Francisco reservoir sites in the Hetch Hetchy Valley.

J. B. TRASK, President Board of Directors.

Another one of the telegrams is as follows:

Water users here request you to cooperate with our committee there and to do all in your power to defeat the Raker bill. The following telegram sent to Mayor Rolph by the Turlock irrigation board:

"There has been great change in public sentiment here since our committee returned from Washington. People here generally agitated and are now strenuously opposing all acts providing for taking any water from San Joaquin Valley.

E. J. CADWALLADER.

Another is as follows:

Modesto, Cal., December 3, 1913.

DENVER S. CHURCH, Washington, D. C.:

Washington, D. C.:

Unanimous vote of Hickman Board of Trade against Raker bill or any bill allowing Hetch Hetchy water for any but irrigation purposes. Shall expect you to use every effort in your power to defeat Raker bill and protect irrigators in Turlock irrigation district.

HICKMAN BOARD OF TRADE, F. C. HALDEMAN, President.

One more:

SAN FRANCISCO, CAL., December 3, 1913.

Hon. DENVER S. CHURCH, Washington, D. C.:

Have written all Senators for water problem association. Please see letter to Kern and other Democratic leaders, and assure them of our sincerity. Facts vital to valley's development deserve serious consideration. Better settle Hetch Hetchy question right than quickly, Appreciate your position. Additional information justifies revised

In the face of such a public sentiment as is here indicated, what was Mr. Church to do. Should he, because of the opinion originally expressed under a misapprehension of facts, and especially of public sentiment, blindly cling to that opinion and close his ears to the appeals of his constituents? He chose the wiser part, and, remembering that he is a mere servant of the people of the San Joaquin Valley, hearkened to their voice, and boldly proclaimed his allegiance to them and his devotion to their interests.

Mr. President, I have not yet fully made up my mind as to the merits of this controversy, and shall not do so until the arguments are concluded. I have, however, made up my mind as to the good intentions and patriotic purposes of Representative Church, and do not hesitate to commend him for his fidelity to duty and the readiness with which he has responded to the desires of the people whom he has been elected to serve.

Mr. President, I now move that the Senate adjourn. hour of meeting has been already fixed at 10 o'clock to-morrow

morning.

The motion was agreed to; and (at 11 o'clock p. m.) Senate adjourned until to-morrow, Saturday, December 6, 1913, at 10 o'clock a. m.

# HOUSE OF REPRESENTATIVES.

Friday, December 5, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

We bless Thee, infinite Spirit, for the beautiful world in which Thou hast placed us, for the hopes and aspirations which fill our breast, for the unity of spirit which more and more obtains in the one God and Father of all men, for the joy of a clean conscience and a well-ordered life, for the certainty of just retribution for sin, for the faith which dispels doubt, for the hope that quickens our way, for the love which casteth out fear and unites us to Thee and our fellow men, for a cheerful disposition and a broader, saner optimism which puts music in the voice, wreathes the face in smiles, and the glow of a warm heart in the touch of the hand. So may we trust, so may we hope, so may we love, in the consciousness of a living God as revealed in the heart of the Christ. Amen.

The Journal of the proceedings of yesterday was read and

### RESIGNATIONS FROM COMMITTEES.

The SPEAKER laid before the House the following communications: DECEMBER 3, 1913.

Hon. Champ Clark, Speaker House of Representatives.

MY DEAR SIR: I hereby respectfully tender my resignation as a member of the Committee on Accounts.

Yours, very truly,

W. R. SMITH.

DECEMBER 5, 1913.

Hon. Champ Clark, Speaker House of Representatives.

DEAR SIR: I hereby tender my resignation as a member of the Naval Affairs Committee.

Very truly, yours,

JOHN J. MITCHELL.

The SPEAKER. Without objection, Mr. SMITH and Mr. MITCHELL will be excused from further service on these committees. Is there objection?

There was no objection.

### IMPROVEMENT OF RIVERS AND HARBORS.

Mr. GOULDEN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include the admirable address delivered by Gov. Martin H. Glynn, of New York, a former Member of this House.

The SPEAKER. The gentleman from New York asks unanimous consent to extend his remarks in the Record and to include an address by Gov. Martin H. Glynn, of New York, formerly a Member of this House, Is there objection?

Mr. MANN. Mr. Speaker, I reserve the right to object. Mr. DONOVAN. Mr. Speaker, reserving the right to object, I wish merely to call attention to the presence of the distinguished Member from New York [Mr. GOULDEN], to give him credit for being here for a few days. On account of his distinguished service and constant attendance, I have no objection. The SPEAKER. The gentleman from Illinois reserves the

right to object.

Mr. MANN. Mr. Speaker, I will ask the gentleman from New York the subject of his address? Mr. GOULDEN. It is upon the improvement of the rivers and

harbors of this country.

harbors of this country.

Mr. MANN. Where and when was the address made?

Mr. GOULDEN. It deals particularly with the improvement of the Hudson River. The address was delivered yesterday at about 3 o'clock before the National Rivers and Harbors Constant of the Hudson Rivers with distinguished ability a former gress, over which presides with distinguished ability a former Member of this House, now a Member of the body at the other end of the Capitol, Senator RANSDELL.

Mr. MANN. Mr. Speaker, I have a great deal of respect and admiration for the governor of New York, based upon my acquaintance with him while he was a Member of the House. I am not so sure, however, that we ought to undertake to print in the RECORD all the speeches delivered at the National Rivers

and Harbors Convention.

Mr. GOULDEN. Does not the gentleman think that a former Member of this House should be extended more courtesy than a

man who has never sat here?

Mr. MURDOCK. Mr. Speaker, I should say that it would be according to the importance of the other gentleman.

Mr. MANN. Mr. Speaker, personally I shall not object to the request, but I am not so sure about publishing everything that everybody delivers. We have had four or five congresses, besides this particular one, in session in Washington lately. Are we to undertake to print everything in the RECORD that is said at these different congresses?

Mr. GOULDEN. Mr. Speaker, I would not ask for it were it not for the fact that Gov. Glynn served with distinguished ability here on the floor of this House for four years and is the chief executive of a sovereign State with 43 Representatives in

The SPEAKER. Is there objection? Mr. BORLAND. Mr. Speaker, rese Mr. Speaker, reserving the right to ob-

Mr. BARNHART. Mr. Speaker, I object.

The SPEAKER. The gentleman from Indiana objects.

MAILABILITY OF GAME BIRDS.

Mr. ANDERSON. Mr. Speaker, I move to discharge the Committee on the Post Office and Post Roads from further consideration of House resolution 314, which I send to the Clerk's desk.

The SPEAKER. Is the resolution privileged?
Mr. ANDERSON. It is.
The SPEAKER. How did it become privileged?
Mr. ANDERSON. It is a resolution of inquiry.
The SPEAKER. And has been in the possession of the com-

mittee for seven days?

Mr. ANDERSON. It has been in the committee since November 20.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

Resolved, That the Postmaster General be, and he is hereby, directed to inform the House of Representatives whether any order, ruling, or instruction has been made or issued by him or by any officer of the Post Office Department relative to the mallability of game or game birds or animals when the exportation or shipment of such game or game birds or animals from any State or Territory of the United States is prohibited by the laws of such State or Territory, and to transmit to the House of Representatives copies of any such order, ruling, or instruction.

Mr. UNDERWOOD. Mr. Speaker, I move to lay the motion on the table.

The SPEAKER. The gentleman from Alabama moves to lay the motion on the table.

The question was taken, and the Speaker announced the ayes seemed to have it.

Mr. ANDERSON. Mr. Speaker, I ask for a division.

The House divided; and there were—ayes 64, noes 49.
Mr. ANDERSON. Mr. Speaker, I make the point of order there is no quorum present. I ask for the yeas and nays, Mr. Speaker, and withdraw the point of order.

The SPEAKER. The gentleman from Minnesota asks for the

yeas and nays.

The yeas and nays were ordered.

Mr. Speaker, I came in from lunch just as my name was being called, and I thought it was the first roll call. The SPEAKER. Did the gentleman hear his name called? Mr. RUBEY. I heard it; but, as I said before, I thought it TII. was the first roll call. The SPEAKER. The Chair hardly thinks the gentleman The result of the vote was announced as above recorded. PRIVATE CLAIMS. Mr. GREGG, Mr. FERRIS, and Mr. CLARK of Florida rose. Dak. The SPEAKER. The gentleman from Texas [Mr. GREGG] is Mr. GREGG. Mr. Speaker, I yield a minute to the gentleman from Oklahoma [Mr. FERRIS]. Mr. FERRIS. Mr. Speaker, I call up H. R. 27, being the first bill on the Private Calendar. The SPEAKER. The House has not gone onto the Private Calendar Mass. Mr. FERRIS. This is claims day, is it not? The SPEAKER. The Chair understands that very well, but the gentleman from Texas [Mr. GREGG] is on his feet to make the gentleman from Texas [Mr. Gregg] is on his feet to make a motion to go into the Committee of the Whole to consider bills on the Private Calendar.

Mr. MANN. Will the gentleman permit an interruption?

Mr. GREGG. Mr. Speaker, I thought the gentleman from Oklahoma [Mr. Ferris] wanted to make a correction.

Mr. MANN. I suggest as to the first bill that the gentleman from Oklahoma [Mr. Ferris] ask unanimous consent to consider it in the House as in the Committee of the Whole, so that we will not have to go into the Committee of the Whole twice.

The SPEAKER. The gentleman from Texas [Mr. Gregg] yielded to the gentleman from Oklahoma [Mr. Ferris].

Mr. GREGG. I thought it was simply a correction. I did Mr. GREGG. I thought it was simply a correction. I did not yield for any other business to precede this.

Mr. MANN. Will the gentleman from Texas yield a moment?

Mr. GREGG. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House for the considera-Y. tion of the bill H. R. 8846. Mr. MANN. Mr. Speaker, I make a point of order that that motion is not in order. Now, will the gentleman yield a moment? Mr. GREGG. Yes, sir.
Mr. MANN. The gentleman can not move to go into Committee of the Whole on the specific bill. I think we can arrange the matter. Mr. GREGG. I will change my motion. I move that the House resolve itself into the Committee of the Whole House

Mr. Sisson with Mr. Peters of Maine.

LEAVE TO SIT DURING RECESS AND SESSIONS OF THE HOUSE.

for the consideration of bills on the Private Calendar.

Mr. GOLDFOGLE. Mr. Speaker-

The SPEAKER. For what purpose does the gentleman from

New York [Mr. Goldfogle] rise? Mr. GOLDFOGLE. I rise for the purpose of offering a reso-

lution. I understand the gentleman from Texas [Mr. Greco] is willing to give way to me for a moment.

Mr. GREGG. I withhold my motion for the one offered by

the gentleman from New York.

Mr. GOLDFOGLE. Mr. Speaker, I send to the Clerk's desk a resolution and ask that it be reported.

The SPEAKER. The House will be in order. Is this a privileged resolution?

Mr. GOLDFOGLE. This is a resolution to give the Committee on Elections No. 3 leave to sit during recess of the House and during the sessions of the House.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

House resolution 330,

Resolved, That the Committee on Elections No. 3 during the sessions and during the recess of the House 3 have leave to sit

The SPEAKER. The question is on agreeing to the resolu-

Mr. MANN. Mr. Speaker, that is not a privileged resolution. Mr. GOLDFOGLE. Mr. Speaker, I ask unanimous consent for the present consideration of the resolution.

The SPEAKER. The gentleman from New York [Mr. Gold-FOGLE] asks unanimous consent for the present consideration of the resolution. Is there objection?

There was no objection.

The SPEAKER. The question is on agreeing to the resolu-

The resolution was agreed to.

LEAVE TO ADDRESS THE HOUSE.

The SPEAKER. The gentleman from Florida [Mr. CLARK] wanted to make a request.

Mr. CLARK of Florida. Mr. Speaker, I ask unanimous consent to address the House on next Tuesday, after the disposal of the morning business, for 40 minutes.

The SPEAKER. The gentleman from Florida [Mr. Clark] asks unanimous consent that on next Tuesday, after the reading of the Journal and other routine business, he be permitted to address the House for 40 minutes.

Mr. UNDERWOOD. Mr. Speaker, reserving the right to object, I wish to say to the gentleman from Florida that it is possible an appropriation bill may be in at that time.

Mr. CLARK of Florida. It is subject, of course, to anything

of that character.

The SPEAKER. The Chair should put it that way. gentleman from Florida [Mr. Clark] asks unanimous consent that on next Tuesday after the reading of the Journal and the transaction of routine business to address the House for 40 minutes, provided that no appropriation bill is up or ready

Mr. LANGLEY. Mr. Speaker, reserving the right to ob-

Mr. GARRETT of Tennessee. Mr. Speaker, reserving the

Mr. LANGLEY. Mr. Speaker, I would like to ask the gentleman the nature of the question which he proposes to discuss.

I want to be here if it is important.

Mr. CLARK of Florida. Mr. Speaker, I intend to address the House on a bill I have introduced for the repayment of the illegal cotton taxes.

Mr. LANGLEY. I do not think I will come, then. I thought the gentleman was going to talk about the Everglades. [Laughter.]

The SPEAKER. Is there objection?

Mr. GARRETT of Tennessee. Mr. Speaker, reserving the right to object, I wish to make this announcement, and I do it for the information of Members and the public generally, by whom I have been questioned very much in the last week relative to a report. It is my hope that on Tuesday next the select committee of the House of Representatives appointed under House resolution 198 will be able to file its report, which is a privileged report under the resolution. It is my purpose, at the suggestion of many Members of the House, to ask unanimous consent that when that report is presented it shall be read in the House. Or I am perfectly willing now to ask unanimous consent that when the report is made it shall be read in the House.

Well, I think it would be better to dispose of it at the time. The gentleman then will know, I take it, whether

it requires unanimous consent.

Mr. CLARK of Florida. Mr. Speaker, has my request been

disposed of?

Mr. GARRETT of Tennessee. Mr. Speaker, I ask unanimous consent, in order that there may be no doubt about it, that when the report of the select committee appointed under House resolution 198 is made it shall be read in the House.

Mr. SLAYDEN. That is on the Mulhall investigation?

Mr. GARRETT of Tennessee. Yes.

The SPEAKER. Does the gentleman from Tennessee couple that with the request of the gentleman from Florida [Mr.

Mr. MANN. Mr. Speaker, I think there will be time to make that request when the report comes in.

Mr. GARRETT of Tennessee. I understood the gentleman to

suggest that it be made now.

Mr. MANN. No; it was just the other way.

The SPEAKER. Is there objection to the request of the gen-

tleman from Florida [Mr. CLARK]?
Mr. UNDERWOOD. Mr. Speaker, I do not intend to object to the request of the gentleman from Florida with the limitation placed upon it, but I wish to say this: That within the next few days the appropriation bills will be before the House. It is customary and usual in the House to have general debate on the appropriation bills when they come up. In order to translamendment.

act business during the winter I think the debate will have to be confined strictly, under ordinary circumstances, to debate on the appropriations. I therefore wish to give notice that as soon as the appropriation bills do come before the House I shall object to general debate in the way that we had it during the summer, because if we set apart an hour or two for debate for every gentleman who wants time during the winter session it will seriously interfere with the transaction of the public business. do not intend to make objection at this time but will do it further on

Mr. MANN. Mr. Speaker, reserving the right to object, I do not think the objection of the gentleman from Alabama [Mr. Underwood] to the discussion of general subjects in general debate on appropriation bills will avail anything unless he changes the rule. In view of his announcement, I shall object to setting aside any other time for discussion, because if the rules as we now have them are to be violated I do not propose to see ingrafted a new set of rules setting aside another time, and I therefore object.

The SPEAKER. Does the gentleman object?

I do. Mr. MANN.

The SPEAKER. The gentleman from Illinois objects.

READING OF HOUSE LOBBY COMMITTEE REPORT.

Mr. GARRETT of Tennessee. Mr. Speaker, there is an intimation that there would be an objection to my request. I ask unanimous consent that when the report of the select committee appointed under House resolution 198 is presented it may be read in the House.

The SPEAKER. The gentleman from Tennessee [Mr. GAR-RETT], chairman of the investigation committee under resolution 198, asks unanimous consent that when the report is presented to the House it shall be read in full.

Mr. MANN. Mr. Speaker, I take it that that request will include any minority views, if there are any?

Mr. GARRETT of Tennessee. Oh, yes; certainly. The SPEAKER. With the understanding that if there are minority views they shall be read, too. Is it intended by this

to undertake to crowd out the appropriation bill?

Mr. GARRETT of Tennessee. Mr. Speaker, that will be merely a matter of recognition on the part of the Chair. An appropriation bill is privileged under the rules of the House, of course, and this report is privileged by the terms of the resolution; so that it comes merely down to a question of recognition

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. There is no objection, and the order is ade. The question is on the motion of the gentleman from made. Texas [Mr. GREGG].

Mr. MANN. Will the gentleman withhold that for a sug-

gestion?

Mr. GREGG. The gentleman from Illinois [Mr. MANN]

wished to ask me some question.

Mr. MANN. If we go into Committee of the Whole the first bill that will come up will be House bill 27, that the gentleman from Oklahoma [Mr. Ferris] wants to call up. I suggest that the gentleman withhold his motion until the gentleman from Oklahoma can have the opportunity of asking unanimous consent to consider that bill in the House as in Committee of the Probably it will only take a very few minutes Whole.

Mr. GREGG. When we get on the Private Calendar that

will come up anyway.
Mr. MANN. Yes.
Mr. GREGG. All right; I did not have the calendar before me. H. W. O'MELVENY.

Mr. FERRIS. Mr. Speaker, I have no disposition to delay the House going into Committee of the Whole. Here is a little bill, H. R. 27, that will take only a moment, and I ask unanimous consent to consider it in the House as in Committee

The SPEAKER. The gentleman from Oklahoma asks unanimous consent to consider in the House as in Committee of the

Whole the bill H. R. 27. Is there objection?

Mr. JOHNSON of South Carolina. Mr. Speaker, I suggest that the bill be stated from the Clerk's desk. We do not know what it is.

The SPEAKER. The Clerk will read the bill by title. The Clerk read the title of the bill (H. R. 27) to authorize the sale and issuance of patent for certain land to H. W. O'Melveny

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The Clerk will read the bill by sections for

Mr. MANN. Mr. Speaker, some gentleman-I think it was the gentleman from California [Mr. Stephens] who introduced this bill—said that there was an identical Senate bill that it was

Mr. FERRIS. There is.
Mr. MANN. You had better have that read instead of the other, by unningual consent.

Mr. FERRIS. I ask unanimous consent that the Senate bill be read instead of the House bill.

The SPEAKER. The gentleman from Oklahoma asks unanimous consent to read the identical Senate bill in lieu of the House bill. Is there objection?

There was no objection.

The Clerk read the bill (S. 488) to authorize the sale and issuance of patent for certain land to H. W. O'Melveny, as fol-

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to issue patent to H. W. O'Melveny for the following real property situated in the county of Los Angeles, State of California, more particularly described as follows, to wit:

The east half of the northeast quarter of the northwest quarter, and the northwest quarter of the northwest quarter, and the northwest quarter, and the northeast quarter, and the northeast quarter, and the northeast quarter, and the southwest quarter of the northwest quarter of the northeast quarter, and the west half of the northeast quarter, all in section 7, township I north, range 9 west, San Bernardino base and meridian; also the west half of the west half of the southwest quarter of the southeast quarter, and the west half of the west half of the southwest quarter of the southeast quarter, all In section 6, township I north, range 9 west, San Bernardino base and meridian; on the payment of the sum of \$2.50 per acre.

Mr. FERRIS. Mr. Speaker, I take it that the House would

Mr. FERRIS. Mr. Speaker, I take it that the House would like to know something of what this bill is. It authorizes H. W. O'Melveny, a private citizen, to purchase 65 acres of ground at \$2.50 an acre, which ground he has been occupying for some 16 years. It is located in California. He has tried every conceivable means, under every conceivable law, to buy and acquire this tract of land. He first tried to buy it from the railroad, who had secured it by grant, but the Supreme Court finally held that the land did not belong to the railroad. then put up his money and tried to acquire it as public land. The Government took his \$200, and while his money was up, and while he was trying to acquire the land, they threw it into a forest reserve.

Now, I take it that the House will want to know whether this bill is in any manner objectionable to the Forestry Department? The forest-reserve people have indorsed it in the warmest terms. The Secretary of Agriculture and the Secretary of the Interior are favorable to the proposition, and everybody wants this man, who has occupied this "Z" shaped piece of land, 65 acres in extent, to acquire the legal title to it. I yield to the gentleman from California [Mr. Stephens] who can tell you more about it than I. How much time does the gentleman want?

Mr. STEPHENS of California. Five minutes.

Mr. FERRIS. I yield to the gentleman from California five minutes.

The SPEAKER. The gentleman can not yield under the fiveminute rule, but the gentleman from California may be recognized in his own right for five minutes.

Mr. STEPHENS of California. I ask for recognition. The SPEAKER. The gentleman from California is recog-

nized for five minutes.

Mr. STEPHENS of California. Mr. Speaker, this case has been set forth so clearly in a few words by the chairman of the Committee on the Public Lands [Mr. Ferris] that I feel it unnecessary to occupy the time of this House much longer in order to obtain favorable consideration of the bill.

H. W. O'Melveny, who asks to be allowed to purchase this certain 65 acres, is a citizen of my home city. He is a firstclass, patriotic, public-spirited man, who has given years of service in various public commissions in Los Angeles, and always without pay. He has given his time and money year after year to the betterment of forestry conditions, and is the one man more responsible than all others for the law in California authorizing counties to expend up to \$10,000 each year for the conservation of forests and the protection of watersheds. He has a patriotic and a sentimental interest in the forestry service and in this particular tract of land. This can best be told in his own words. I quote from his letter to me, dated May 12, 1912:

I make no attempt to conceal the fact that, by reason of 14 years of occupation of the property and it being the place where my children have spent all of their vacations, I am attached to the place next to my own home; that I desire to devote a good deal of time and attention to the study of tree growth upon our southern California mountains, and that I feel like the encouragement to do so would be lacking if I have such an uncertain tenure upon this property. I am willing to observe and have, as a condition of the conveyance, any reasonable

regulations that the department may desire to insert in the bill, and surely would be willing to pay any reasonable price for the property. I do not wish to have it inferred that my interest in the Forestry. Service is based upon a hope that I may get a patent to this property, for I shall continue the same interest in the matter whether the Government sees fit to grant me this favor or not.

Mr. Speaker, the Department of Agriculture, the Forestry Service, the Geological Survey, and the Interior Department generally have made thorough investigation and have given fullest consideration to this bill and all are favorable. Hon. A. A. Jones, Acting Secretary of the Interior, in a letter dated July 31, 1913, and directed to Hon. Scorr Ferris, chairman Committee on Public Lands, says in part:

A. A. Jones, Acting Secretary of the Interior, in a letter dated July 31, 1913, and directed to Hon. Scott Ferris, chairman Committee on Public Lands, says in part:

It appears from this record that Mr. O'Melveny has been endeavoring for 15 years to secure title to the property under the various laws which from time to time have appeared to him to be applicable. Mr. O'Melveny is not qualified under the homestead laws to enter lands otherwise, so the forester states in a letter dated March 30, 1912, and addressed to the Hon. W. D. Stephens, M. C., it would be possible to list under the act of June 11, 1906, so much of the land occupied by him as is chiefly valuable for agriculture. It appears, therefore, that there is no way for him to acquire this land under existing law. Mr. O'Melveny has always been an earnest and practical supporter of the forestry policy of the United States. He has at all times cooperated to the fullest extent with the forest officers, and is reported to have constructed at his own expense a firebreak and trails which, though used mainly for the protection of the property which he is occupying under the permit from the Forest Service, would be of great value to that service in case of forest fires. Ownership of this tract by him would, therefore, not result in injury to the reserve. The forest supervisor states in a report to the district forester that the tract contains no timber of value, being chiefly covered with brush and a few live oaks; that the improvements consist of a substantial house, with suitable outbuildings, a reservoir, pipe lines, and orchard, these improvements representing an investment estimated at from \$5,000 to \$6,000.

It appears from the records of the General Land Office that parts of the lands involved were withdrawn on March 2, 1909, from all disposal under any of the public-land laws, except the various right-own as the sum of the public land laws, except the various right-own as the sum of the public land laws, except the various right-own and the public land

In short, Mr. Speaker, Mr. O'Melveny wants the land. He is willing to pay any reasonable price for it. He deserves it, and his owership, possession, and occupancy of it will benefit the Forestry Service. All departments of the National Government have agreed to the advisability of a sale to him. passing of this bill will afford him the only way of acquiring title. I hope there will be no vote against it.

The SPEAKER. The question is on the third reading of the Senate bill.

The bill was ordered to a third reading, was accordingly read the third time, and passed.

On motion of Mr. Ferris, by unanimous consent, House bill 27 was ordered to lie on the table.

On motion of Mr. Ferris, the motion to reconsider the vote by which the bill S. 488 was passed was laid on the table.

## COLD STORAGE.

Mr. McKellar. Mr. Speaker, I ask unanimous consent that, after the regular business on Monday next, I may be allowed to address the House for one hour on the subject of the cold-storage bill (H. R. 9987), introduced in the House by me. Mr. Mann. Will the gentleman let me make a suggestion

that the Hensley resolution might still be before the House?

Mr. McKELLAR. Of course, that would take precedence of

my motion.

Mr. UNDERWOOD. Mr. Speaker, as I stated a few moments ago, I am not going to raise an objection to gentlemen asking unanimous consent to speak until the appropriation bills come before the House, but I would like to have the gentleman exempt appropriation bills.

Mr. McKELLAR. I understand that is included in my re-

Mr. MURDOCK. Mr. Speaker, reserving the right to object, I would like to ask the gentleman from Alabama a question. I understood the gentleman to say that when appropriation bills come up hereafter general debate was to be confined to the bills?

Mr. UNDERWOOD. No; I was insisting on the usual procedure in the House, that matters extraneous to the subject matter of the bill should take place in general debate on appropriation bills, and that gentlemen should not ask unanimous consent to address the House at other times because if we continue that practice, which we had in the summer and which was al right at that time because we had nothing to do, it will consume too much time. If gentlemen ask unanimous consent to speak an hour now and an hour then, we shall seriously interfere with the business of the session.

Mr. MURDOCK. I agree with the gentleman and I misun-

Mr. MANN. Mr. Speaker, reserving the right to object, if the gentleman from Tennessee will modify his request so that it will not interfere with debate on the Hensley resolution, or with any privileged business that may come before the House, I do not object.

Mr. McKELLAR. I think that is a proper modification, and

I so modify my request.

The SPEAKER. The gentleman from Tennessee asks unanimous consent that on next Monday, after the transaction of the routine business, he may be permitted to address the House for one hour on his bill on the subject of cold storage, not to interfere with debate on the Hensley resolution or with appropriation bills, or any privileged business. Is there objection?

There was no objection.

## PRIVATE CLAIMS.

Mr. GREGG. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House for the consideration of bills on the Private Calendar.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole, with Mr. Sims in the chair.

The House is now in Committee of the The CHAIRMAN. Whole for the consideration of bills on the Private Calendar.

Mr. GREGG. Mr. Chairman, I move to take up the bill (H. R. 8846) making appropriation for payment of certain claims in accordance with findings of the Court of Claims, reported under the provisions of the acts approved March 3, 1883, and March 3, 1887, and commonly known as the Bowman and the Tucker Acts, and under the provisions of section No. 151 of the act approved March 3, 1911, commonly known as the Judicial Code.

The CHAIRMAN. The Clerk will report the bill.

The Clerk began the reading of the bill.

Mr. GREGG. Mr. Chairman, I ask unanimous consent that

the first reading of the bill be dispensed with.

Mr. MANN. Mr. Chairman, I want a chance to confer with the gentleman from Texas, the chairman of the committee, and temporarily I object.

The Clerk continued the reading of the bill to page 19, line 13. Mr. GREGG. Mr. Chairman, I ask unanimous consent that

the further reading be dispensed with.

The CHAIRMAN. The gentleman from Texas asks unanimous consent that the further reading of the bill be dispensed with. Is there objection?

There was no objection.

Mr. GREGG. Mr. Chairman, I would like to ask the gentleman from Vermont if we can make some agreement as to gen-I think 20 minutes will be long enough.

Mr. PLUMLEY. I think 20 minutes' debate will suffice.

Mr. GREGG. Then, Mr. Chairman, I ask unanimous consent that general debate be limited to 20 minutes, to be divided

Mr. MANN. I will ask the gentleman from Texas not to make that request at present as I want a little time, but not

Mr. GREGG. Very well, Mr. Chairman, I will withdraw the request for the present.

Mr. Chairman, I will consume as brief a time as possible. The amount carried by this bill is \$1,729,012.11. The number of claims included is 1,158. This committee has preriously called attention to the fact that proper legislative regard for the decisions and findings of the Court of Claims would ob-viously result in appropriations being made for the payment of the just claims reported by the court at every session of Congress; but that has not been done, and the result of congressional inaction is that the present Congress is confronted by a the claims on page 5, which were in the bill as it passed the

large number of adjudicated claims, some of which have been awaiting appropriations for eight or nine years, owing to the fact that even the appropriation act of February 24, 1905, was not

brought down to date, but left pending a number of claims previously reported by the Court of Claims.

In the Sixty-second Congress H. R. 19115 was passed by the House, and as passed contained all the claims embraced in the present bill save the small number mentioned, which were not before the House in time for inclusion in that bill. That bill, H. R. 19115, was passed by the Senate, but with numerous amendments, and the conferees were unable to agree upon any final report.

It is thus seen that in each of the three preceding Congresses a bill for payment of war claims allowed by the Court of Claims has passed each House of Congress, but the two Houses never agreed on any one bill. The present bill is presented in the hope that it may meet favorable consideration and become a law.

The claims covered by this bill may be divided, generally, into

three different classes, as follows:

First. Claims of volunteer officers of the Union Army during the Civil War for the difference between the pay they actually received and that which they would have received had they been mustered into the service in the rank of the position which they really filled; also included are claims of Union soldiers or officers of various kinds, each depending upon special circumstances, and several claims arising from service during the War with The total carried for these former officers and soldiers is \$51,240.49 in 163 claims.

Second. Claims of churches, Masonic and Odd Fellow lodges, schools, hospitals, and a few county or municipal corporations not at seat of war for use and occupation of their premises, with incidental damages thereto, and also, in several instances, for buildings torn down and used for military purposes, such as construction of quarters, and so forth. There are 370 claims of

this general class, aggregating \$486,403.29.

Third. Claims of individuals for Army stores or supplies found by the Court of Claims to have been taken under proper authority for Army use, and including some claims for rent of buildings used for military purposes at Federal Army posts during the Civil War. There are 625 of these claims, aggregating \$1,191,368.33.

I want now to explain that these three classes of claims are the claims and the only claims intended to be covered by this I find that through mistake two cases of different character have been included, and when they are reached, I shall join in a motion to eliminate them from the bill.

I reserve the rest of my time, Mr. Chairman, Mr. MANN. Mr. Chairman, the House has on various occasions passed the omnibus war claims bill. In the last Congress, under the leadership of the very distinguished gentleman who is now sitting as Chairman of the Committee of the Whole—the gentleman from Tennessee [Mr. Sims], who was then chairman of the Committee on War Claims-the House passed one day, without opposition, the omnibus war claims bill, and I take it that the House is going to do practically the same thing to-day. In the bill passed last year a few claims were inserted, through accident or oversight, which was very natural with the large number of claims that were pending, which the distinguished chairman of the committee, when his attention was afterwards called to them, did not favor. I believe those claims are all left out of this bill. As I understand it, there were several claims, though not very many, in the bill as it passed the House in the last Congress which are not in the bill as now presented. the bill in the last Congress passed the House it went to the There was pro-It there received long consideration. tracted debate over amendments offered in the Senate. bill afterwards went to conference and did not become a law because the conferees were unable to agree. I forget now how many items were added by the Senate as amendments, but my dim recollection is there were some fifteen hundred items affected by Senate amendments, either adding to or striking out; and while the bill passed the House practically by unanimous consent at that time, and probably will now, just, for instance, as a matter of interest and knowledge I desire to call attention to this fact: On the second page of the bill, which is the first page on which claims appear, there are 10 claims. Every one of those was stricken out as Senate amendments. On the next page of the bill there are 10 claims, every one of which was stricken out in the Senate by way of Senate amendments.

On page 4 there are a larger number of claims.

All of them were stricken out in the Senate by way of Senate amendments. On page 5 of this bill there are a large number of claims. Two of those claims are now in this bill. One of the claims on page 5 was inserted as a Senate amendment. All of

House, were stricken out by way of Senate amendments. I might go through the ninety-odd pages of this bill, and while the same statement would not apply to all of the items, because a few of them which were in the bill as it passed the House before were not stricken out by way of Senate amendments, yet nearly all of them were, after a considerable discussion and long debate in the Senate and long consideration by the Senate Committee on Claims. Most of these amendments of the Senate

were made practically by unanimous consent.

Mr. Chairman, I myself believe that it is quite proper to pay a considerable number of the claims which have been pending. We are often told that the Government refuses to pay claims after the Court of Claims had entered a judgment. That is not correct. In this class of claims the Court of Claims never enters a judgment. It makes a finding of facts. A few years ago I helped get inserted in the law a provision directing the Court of Claims in its findings to find whether a claim was legal or equitable. I am not sure that we did not make a mistake in respect to that. Of course, none of these claims is a legal claim. The Court of Claims gets in the habit of finding almost any old thing is equitable on some basis or other.

On several occasions before I have made the statement which I am about to make now. I am perfectly willing to pay these claims. Unfortunately it has been the habit of the distinguished body at the other end of the Capitol to insert a great many amendments in a bill of this kind with reference to a large number of claims and different classes of claims, to which the

House would not agree.

The truth is, Mr. Chairman, I never really appreciated the importance and value of it until I read in the columns of one of the morning papers in Washington the other day an article by one of the distinguished, if not the most distinguished, Senators of the United States on the subject of social precedence, and after I had read that article I wondered whether, if there were a conflict between a Senator and God, the Senator would be willing to yield to God. [Laughter and applause.] The Senate, if it would give less attention-and I am not seeking to lecture the Senate—to the question of social precedence and be a little more careful about the claims that it inserts in a war-claims bill which had no place in that kind of a bill, would be doing a service to the country, I think, in the way of paying these claims. [Applause.] The Senate has a Claims Committee. The House has a Claims Committee and a War Claims Committee. The War Claims Committee has jurisdiction over claims arising out of the Civil War. The Claims Committee has jurisdiction of claims arising out of ordinary claims against the Government, either by way of legal claims or gratuity, and we do not mix them in the House. When we send a war-claims bill to the Senate, they have become in the habit of inserting claims in that bill which in our body would belong to the jurisdiction of the Claims Committee. The Claims Committee will be familiar with those claims and with the law in regard to them. The War Claims Committee is not, and when it comes to sending a bill to conference we can not put on the conferees both the Claims Committee of the House and the War Claims Committee of the House, and the result has been over the series of terms of Congress that I have served that I think a war-claims bill has passed the House in almost every Congress since I have been here, and never yet in my recollection, I think, has one become a law. Now, if gentlemen who are interested in this bill can persuade the representatives of the States at the other end of the Capitol in considering an omnibus war-claims bill to confine amendments adopted by the Senate to matters growing out of war claims there will be no trouble at all in having the bill become a law; but a bill like this, with the great number of items that it has in it, does not have very much chance in the House of Representatives, except practically by unanimous consent.

Mr. AUSTIN. Mr. Chairman, I wish to congratulate the new chairman of the Committee on War Claims in submitting a favorable report on this bill at this early stage in the session of Congress. There are 10 claims contained in this omnibus bill coming from the district which I have the honor to represent, and I think every one of those 10 claims has passed either the Senate or the House during the past six years-three times through the House and once through the Senate. As stated by the minority leader [Mr. MANN], the defeat of this measure in the past has been with the Senate, and I hope that this bill will reach the Senate early, so that there will be no pretext or excuse for not giving it early consideration and early passage. The Government of the United States, through its Congress, created the Court of Claims for the adjudication of the very class of claims carried in this bill. Many of these claimants have passed away. In one case from the district which I represent one of the claimants is an insane woman. The lower House of Congress has passed her claim in three different sessions, or ville, \$7,500.

during a period of six years, and yet that claimant is patiently waiting, anxiously waiting, the payment of a just obligation on the part of the Federal Government. Another item carried in this bill is for the payment of a brave Union soldier, Mr. Henry L. Kinzel, a man now at least 80 years of age, living in the county in which I reside, and his case has been favorably reported by the Committee on War Claims on three different occasions. It has passed the House three times to be defeated in the other Chamber. Tennessee furnished more than 31,000 soldiers to the Union Army in Tennessee regiments alone, not counting the Tennessee soldiers who crossed the mountains into Kentucky and enlisted in Kentucky and regiments from other States. There is on every page of this bill a story of devotion and loyalty to the Union during the strife between the States, where those people, humble and poor, but yet loyal to the Union, gave up all that they had at the time to maintain the Union Army and care for its soldiers and feed them and house them, and now, after a half a century, waiting patiently all of these years, we have had, as Republican Members on this side of the House, the humiliation of knowing that a Republican Senate for six long years failed and refused to pass favorably these bills that ought to have appealed to the judgment, the justice, the fairness, and the patriotism of all men, regardless of their political affiliations.

I regret that when my party was in power and had the opportunity at the other end of the Capitol they failed to take advantage of it in giving to these people their just deserts, which have been so long delayed. And I hope that the Democratic Senate will do what a Republican Senate ought to have done but failed to do and promptly pass this bill and give relief to these people, who deserve it and who ought to have had it many, many years ago.

#### MESSAGE FROM THE SENATE.

The committee informally rose; and the Speaker having taken the chair, a message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed without amendment joint resolution of the following title:

H. J. Res. 155. Joint resolution extending time for completion of classification and appraisement of surface of segregated coal and asphalt lands of Choctaw and Chickasaw Nations, and of the improvements thereon, and making appropriation therefor.

#### PRIVATE CLAIMS.

The committee resumed its session.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

To the Masonic Lodge of Bexar, Marion County, \$600.

Mr. GREGG. Mr. Chairman, I move to strike out that item. want to explain to the committee here why I make that motion. In formulating this bill, as you will see in the report, it was intended to embrace no items in it for property burned and destroyed. Our reason for that was this, namely, that there are hundreds of small items here, as stated by the gentleman from Tennessee [Mr. Austin], for things taken for the benefit of the Army from private individuals, and those people are growing old and need their money and should be paid. think the passage of this bill has been complicated in the past by including in it these items for burned property, and we thought it best only to report items about which there was no controversy. So the committee agreed that we would embrace none of those items in the bill at this time.

Mr. LANGLEY. Mr. Chairman, will the gentleman yield?

Mr. GREGG. Yes.

Mr. LANGLEY. Was the opposition to these items in the

Was it there where the trouble occurred?

Mr. GREGG. There is always opposition. I do not know whether it is confined to the Senate. It was agreed in the committee that we include none of those items in this bill, but that a separate bill be introduced for that, that we propose to fight out and try to get passed by Congress. Therefore, in order to act in good faith with other Members of Congress, for whom we declined to put in items of similar character, I move that this item be eliminated from the bill.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 5, line 25, strike out the line which reads as follows: To the Masonic Lodge of Bexar, Marion County, \$600.

The CHAIRMAN. The question is on agreeing to the amendment. The question was taken, and the amendment was agreed to.

The Clerk read as follows:

Mr. GREGG. Mr. Chairman, on the same ground I move to strike out that item.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 6, lines 13 and 14, strike out the item which reads as follows: "To the trustees of the Methodist Episcopal Church South, of Huntsville, \$7,500."

The CHAIRMAN. The question is on agreeing to the amend-

Mr. LANGLEY. Mr. Chairman, I would like to ask if this is a case where they occupied the property and it was burned afterwards?

It was not while it was occupied. Mr. GREGG.

Mr. LANGLEY. How can you consistently refuse to pay them for occupancy of property and then refuse to pay them for occupancy and destruction?

Mr. GREGG. Well, we want to get these bills allowed, and these bills for burning property have impeded the passage of the bill so often heretofore that we have agreed to eliminate all of those burning cases, and we can not leave this in and act in good faith with other Members of Congress.

Mr. LANGLEY. I am sorry that the situation is such that

an injustice of that kind has to be done for the sake of ex-

pediency.

Does not the gentleman make any distinction Mr. HULL. for compensation for the occupancy of property and compensation for the occupancy and also burning of property?

Mr. GREGG. We pay for occupancy of property.

Mr. LANGLEY. But not for occupancy and burning both?
Mr. HULL. You pay for the occupancy of it in cases where
it is burned, following the occupancy?

Mr. GREGG. The occupancy up to the time it was burned. But for the actual destruction of the property we do not allow anything

Mr. LANGLEY. This item, as I understand it, provides for

both the occupancy and the burning?

Mr. GREGG. As I understand, it involves the occupancy of the church.

Mr. HULL. You do not pay anything for the occupancy of this church because it is burned? If it had not been burned, you would have done so?

Mr. BYRNES of South Carolina. If the claim had been made for the amount due for occupancy, I think we would have ac-

cepted it.

And in all of these other cases of churches the Mr. HULL. allowance is for occupancy and not for burning or destruction?

Mr. GREGG. It is for occupancy.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Texas [Mr. Gregg].

The amendment was agreed to.

The Clerk read as follows:

To the trustees of the Missionary Baptist Church, of Waterloo, \$615. The CHAIRMAN. The Chair will call attention to the incorrect spelling of the word "Arkansas" in the next item.

Mr. MANN. That can be corrected by unanimous consent. Mr. GREGG. Mr. Chairman, I ask unanimous consent that

the spelling of the word "Arkansas" be corrected in line 6.
The CHAIRMAN. Unanimous consent is asked to correct the spelling of the word "Arkansas," page 7, line 6. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will correct it. The Clerk will

The Clerk read as follows:

ARKANSAS.

To N. B. Ashcraft, administrator of estate of Eliza Ann Ashcraft, deceased, late of Grant County. \$400.

Mr. MANN Mr. Chairman, I move to strike out the last word. The CHAIRMAN. The gentleman from Illinois [Mr. Mann] moves to strike out the last word.

Mr. MANN. I do not know whether the gentleman from Arkansas [Mr. Wingo] is interested in this item or not. He Arkansas [Mr. Wingo] is interested in this item or not. He stepped into the cloakroom a moment ago. This item of N. B. Ashcraft, which is not a large sum, includes a finding of value for damages to crops and fences. I am sure the gentleman from Texas [Mr. GREGG] will agree with me that the Government can not at this time start in to pay for damages to crops and fences committed by the Federal Army.

Mr. GREGG. I trust the gentleman will excuse me a mo-

ment until I can locate the findings.

Mr. MANN. The gentleman can pass that over until he finds them. It is the first item under "Arkansas." I ask unanimous consent, Mr. Chairman, temporarily to pass over that item.

Mr. GREGG. I ask unanimous consent to pass this over for

further investigation, and I will look into it.

The CHAIRMAN. Unanimous consent is asked to pass over the item. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

To Mattie U. Boykin, Thaddeus C. Ferrell, and Lulu D. Merlwether, heirs of Thaddeus N. Ferrell, deceased, of Arkansas County, \$5,119.

Mr. GREEN of Iowa. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Iowa [Mr. Green] moves to strike out the last word.

Mr. GREEN of Iowa. I do this simply for the purpose of asking the chairman of the committee a question. Will not the gentleman kindly give me his attention for a moment? In the case of all of these claims which have been allowed to minors who were adjudged to be loyal by reason of their tender years, was it found by the Court of Claims that the minors were owners in their own right of this property at the time it was taken?

Mr. GREGG. I could not tell the gentleman that in respect to all of them.

Mr. GREEN of Iowa. I notice it is suggested here in reference to this claim and in reference to some other claims.

Mr. GREGG. What case is that particular one?

Mr. GREEN of Iowa. In the case of the heirs of Thaddeus Ferrell.

Mr. GREGG. Mr. Chairman, I ask unanimous consent to ass that over. What line is it on? pass that over.

Mr. GREEN of Iowa. On page 8, lines 11, 12, and 13. Mr. GREGG. Who is the claimant? Mr. GREEN of Iowa. The claimants are Mattle U. Boykin, Thaddeus C. Ferrell, and Lulu D. Meriwether, heirs of Thaddeus N. Ferrell.

The CHAIRMAN. Unanimous consent is asked that lines 11, 12, and 13 of page 8 of the bill be passed over for the present. Is there objection?

There was no objection.
The CHAIRMAN. The Clerk will read.
The Clerk read as follows:

Committee amendment: On line 4, page 15, insert:
"To Mary A. Gammon, O. B. Whatley, and D. A. Whitehead, sole surviving heirs of Wilson O. B. Whatley, deceased, late of Pope County, \$1,019."

The CHAIRMAN. The Chair would like to ask the gentleman from Texas [Mr. GREGG], the chairman of the committee, a question. On page 15 of the bill, lines 5, 6, and 7, there are these words:

To Mary A. Gammon, O. B. Whatley, and D. A. Whitehead, sole surviving heirs of Wilson O. B. Whatley, deceased, late of Pope County, \$1,019.

That language being in italics, is it a committee amendment? Mr. GREGG. It is a committee amendment. Mr. MANN. On what page is that?

Mr. GREGG. Page 15.

The CHAIRMAN. The question is on agreeing to the committee amendment.

The amendment was agreed to.

Mr. GREGG. Mr. Chairman, whenever the Clerk reads any of these items in italics they should be understood to be committee amendments.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

KENTUCKY.

To John W. Alves, of Henderson County, \$5,250.

[Mr. LANGLEY addressed the committee. See Appendix.]

The Clerk read as follows:

To Eliza Leathers, administratrix of the estate of Alfred Leathers, deceased, late of Anderson County, \$825.

The Clerk read the following committee amendment:

On page 22, after line 8, insert the following: "To Lucy C. Lee, administratrix of the estate of Jane T. Lee, deceased, of Mason County, \$915."

The amendment was agreed to.

The Clerk read as follows:

To William J. Worthington, of Greenup County, \$36.40.

The Clerk read the following committee amendment:

On page 24, after line 13, insert the following:
"To the vestry of Christ Protestant Episcopal Church of Bowling Green, \$300."

The amendment was agreed to.

Mr. GREGG. Mr. Chairman, I ask unanimous consent to return to line 3, page 24, for the purpose of correcting a name. The CHAIRMAN. The gentleman from Texas asks unanimous consent to return to line 3, page 24, for the purpose of correcting a name. The gentleman will state the correction.

Mr. THOMAS. The name which is spelled "T-r-a-n-g-h-b-e-r" in the bill should be "T-r-a-u-g-h-b-e-r."

The CHAIRMAN. Is there objection to making the correc-

tion stated by the gentleman from Kentucky?

There was no objection.

The Clerk read as follows:

To Remy Bagarry, of Iberia Parish, \$1,520.

The Clerk read the following committee amendment:

On page 28, after line 7, insert the following:
"To the heirs or succession of Selzer Bass, deceased, late of West Carroll Parish, \$3,407.50, representing his interest in property taken from him and his coowners."

The amendment was agreed to. The Clerk read as follows:

To Adolph Hartiens, tutor of Sidney L. Hartiens, William W. Hartiens, and Mary R. Hartiens, grandchildren and heirs at law of William H. Osborne, deceased, late of Rapides Parish, \$54,875.

Mr. GREEN of Iowa. Mr. Chairman, this is a very large claim, amounting to \$54,875. If I understand the report correctly, it has not been allowed by the Court of Claims.

Mr. GREGG. That was included in the bill that was passed in the last Congress.

Mr. GREEN of Iowa. That does not really answer what I intended to inquire about. It has not been allowed by the Court of Claims

Mr. GREGG. We will have the report here in a moment, covering that case.

Mr. GREEN of Iowa. In order that the consideration of the bill may not be delayed, I suggest that the gentleman pass that

Mr. GREGG. I ask unanimous consent that that item be passed without prejudice.

The CHAIRMAN. The gentleman from Texas [Mr. GREGG] asks unanimous consent that lines 16 to 19, inclusive, on page 32, be passed without prejudice. Is there objection?

There was no objection. The Clerk read as follows:

Mississippi.

Mr. UNDERWOOD. Mr. Chairman, I offer the amendment which I send to the Clerk's desk.

The Clerk read as follows:

On page 40, after line 16, insert the following:
"To Antonio Q. Lovell, Rosalie Q. Duncan, Fredrica Q. Ogden,
Eliza T. Routh, and Louisa Q. Lovell, deceased, children and heirs at
law of Gen. J. A. Quitman, deceased, and Eva C. Lovell and Alice Q.
Lovell, children and heirs at law of Louisa Q. Lovell, deceased, or to
their legal representatives, the sum of \$13,500."

Mr. UNDERWOOD. Mr. Chairman, this claim has been

found by the Court of Claims.

These premises were occupied by the United States Government from the year 1865 until January, 1866, a crop year. They were used by the Government for the Freedmen's Bureau and were taken without compensation.

In the two years prior to the occupation of this plantation, which consisted of several thousand acres of land, the plantation rented, as the records disclose, for from \$40,000 to \$50,000 a

The year after the occupation by the Government this plantation again rented for \$40,000, with a contract that the lessors were to have a part of the crop. It was estimated that that rental amounted to \$60,000 or \$70,000 for that year.

The Court of Claims found that the fair rental value of this place was \$13,500. The finding is in Senate Document No. 77, Fifty-ninth Congress, first session.

The difficulty in this claim has been this: The Court of Claims found the amount asked here, and there is no question, in my judgment, about its being under the fair rental value of the plantation, because before and after the occupation by the United States Government the plantation rented for four or five times as much as the amount found here and I am asking for. The Court of Claims went on and found that the claimants were not loyal. That is where the difficulty in this claim has

Now, at the time of the war the claimants were women, and a number of them were minors. I do not think there is any question but that the family were in sympathy with the Confederate Government. I want to be perfectly frank in my statement. But these claimants were women, and, as I say, many

of them were minors.

After the siege of Vicksburg these claimants all took the oath of loyalty to the United States Government. They took the oath of loyalty before this plantation was occupied by the Federal Government. Therefore I insist that at the time of the occupa-tion by the Government, which was in 1865, after the war was over, they were loyal to the Government, both by reason of the

fact that the war was over in June, 1865, and from the further fact that prior to that time they had taken the oath of loyalty. But, Mr. Chairman, this claim was referred to the Court of Claims under the Bowman Act for a finding. There is no provision in the Bowman Act as to loyalty for property used by the Federal Government. The provisions in reference to loyalty apply to supplies and stores that were taken, and not for the occupation of property. Therefore I contend that the finding of the court in this particular case that these claimants were not loyal was not within the power of the court to find, or within the law, because this is not for supplies or stores. Government went upon this plantation after the war, took it away from the women, put the freedmen's bureau there, and occupied it, and there is some testimony to show that the rental which the Government got from the freedmen who were forming a bureau amounted to more than the \$13,000 that these claimants are demanding. I think that is a full statement of I think it is a just claim. the case.

There is no question about the fact that these people owned the land or plantation, that it was taken away from them after the war without compensation, that the compensation that is found here by the court, and that they are asking for in this amendment because the court found the amount, is very much less than the rental value of the plantation either two years before or the year immediately following the occupation.

Mr. MANN. Mr. Chairman, the gentleman from Alabama puts the House in a rather embarrassing position. The leader on that side of the House offers an amendment for a personal and private claim, and asks the House to accept the amendment, not reported by the committee, a claim that has not been favorably acted upon by the committee of the Congress or heretofore, but in flat violation of the rules which have prevailed in the committee. He asks the House to do this without notice to the House, so that no Member except himself has a copy of the findings of the court, which findings are not favorable to his claim. If it shall become the practice in the House to make up these bills in the House and adopt a claim because some Member offers an amendment, the House will be in a worse condition about the claims bill than even the Senate has come to be in. If we may judge by the omnibus claims bill when it came back to us from the Senate, if they had any rule of procedure over there, as I am sure they had, it was violated when some distinguished Senator asked for it to be violated in some particular case. The result was that no bill became a law. It does not seem to me that the gentleman from Alabama ought to ask the House to act upon one of these claims without notice, where the committee has not reported it. If there is merit in it let the Committee on War Claims report it in a separate bill, so that the House can have an opportunity to examine it, and not endeavor to embarrass the omnibus claims bill by amendments of this sort.

Mr. UNDERWOOD. Mr. Chairman, I will say to the gentleman from Illinois that I have often heard gentlemen on that side of the House complain that there could be no amendment

that had not been reported offered to a bill.

Of course, this bill comes before the House subject to amendment, as all bills do. I very seldom offer a claim, but I wish to say this: This claim was called to my attention by one of my constituents last October. It is a Mississippi claim, but this particular constituent happens to have moved to my district. I do not think he has any interest in it himself, but one of his sisters has. At the time I called on the chairman of the committee he happened to be out of town. In the meantime I went to Alabama and when I returned the bill had been reported. I attempted to see the chairman of the committee before I left. bill was reported sooner than I expected it would be, and when I returned I did not have a chance to present the claim to the I have since that time presented the facts in recommittee. spect to the claim to the committee and I am willing to leave it to what the chairman of the committee says, as to whether he thinks it is a meritorious case.

Mr. MANN. But, Mr. Chairman, with all due respect for the chairman of the committee, the chairman of the committee does not attempt to control the matter of these\*claims wholly by himself. There is no new claim in this bill the findings in respect to which have not recently been carefully examined by this side of the House. As far as I can remember, since I have been a Member of the House I think there never has been an amendment to one of these bills, except that offered by the chairman of the committee or at his suggestion. It is impossible for the House to make up a claims bill in the House, especially when we have not before us the information upon which the claim is based. The gentleman from Alabama now offers a claim as to which he himself says the Court of Claims has found that

I have no doubt that a very large share of the membership of the House would like to pay claims of that sort to people whom they know, but if we do, how are you going to say to the next Member of Congress, if the claim which he presents is not paid on that ground, "Oh, well, we let the gentleman from Alabama have his claim because he is the leader, but you can not get that kind of a claim in." Mr. Chairman, let the gentleman from Alabama present his claim by itself. The Committee on War Claims has plenty of time at this session of Congress to report a bill.

Mr. Chairman, will the gentleman yield? Mr. CARLIN.

Mr. MANN. Certainly.

Mr. CARLIN. I was going to suggest that it is perfectly apparent that this item is going to cause some debate, and that we better allow it to be passed over without prejudice until we can take it up later.

Oh, I think we better dispose of it now. Mr. MANN.

Mr. UNDERWOOD. Mr. Chairman, I will ask the gentleman to let the matter be acted upon. I have stated the case. I am perfectly willing to take the judgment of the House. There is no reason why the claim should be passed over now.

Mr. MANN. I do not see any reason for passing it over now. Mr. CARLIN. The only purpose I had was to pass over matters that required debate. I supposed that was the under-

Mr. MANN. I had not heard of that.

Mr. CARLIN. The gentleman asked to have an item of his

Mr. MANN. Oh, I beg the gentleman's pardon-no item of my own at all.

Mr. CARLIN. Then an item on which the gentleman raised a point.

Mr. MANN. Yes. Mr. CARLIN. Several of that kind have been passed over.

For the benefit of the committee.

Mr. GREEN of Iowa. Mr. Chairman, with all deference to the distinguished gentleman from Alabama [Mr. Underwood], the point he makes with reference to objection made on this side on account of lack of opportunity to examine the bill is not well taken. The bill he offers now is practically a bill by itself. We have under consideration an omnibus bill, and what he offers is practically a new bill by itself, which he wishes to have considered without any notice to the House whatsoever.

The CHAIRMAN. The question is on agreeing to the amend-

ment offered by the gentleman from Alabama.

The question was taken; and, on a division (demanded by Mr. UNDERWOOD), there were—ayes 50, noes 26.

Mr. MANN. Mr. Chairman, I make the point of order that

there is no quorum present.

The CHAIRMAN. The gentleman from Illinois makes the point of order that there is no quorum present. The Chair will count. [After a pause.] One hundred and nine members -a quorum.

Mr. GREGG. Mr. Chairman, a few moments ago on an objection from the gentleman from Iowa [Mr. Green] we passed over lines 16 to 19 on page 32. I understand, now, that the gentleman has been satisfied upon that point.

Mr. MANN. Mr. Chairman, I am not satisfied with anything

ir the bill now. You better bring in your forces.

Mr. GREGG. Well, we will return to it later on.

The Clerk read as follows:

To T. A. Norris, administrator of the estate of N. M. Aldridge, deceased, late of Tishomingo County, \$980.

Mr. MANN. Mr. Chairman, I move to strike out the last word. I do not have the full findings in that case here, but I notice in the report this was a finding under the Bowman Act which was sent to court April 24, 1896. In that case the court found the claimant loyal and that supplies worth \$980 were taken for Army use. It also seems that the claim was filed before the Southern Claims Commission, appearing on page 8 of the index of such claims. It seems that the claim also passed the Senate in the Sixtieth Congress and has passed the House in the Sixtieth, Sixty-first, and Sixty-second Congresses. In this respect it is entirely different upon the claim which the House has just inserted in the bill on an amendment; not because it had merit, but because it was presented by the distinguished gentleman from Alabama [Mr. Underwood], who was absent from the city and House while the War Claims Committee was considering these claims, and therefore thought he ought to insert it as an amendment on the floor, by reason of his position as leader of the majority. The claim offered by the gentleman from Alabama opens up the question, contrary to the practice of the House in the past, of allowing claims to persons who were not loyal. If that practice is to be followed, it ought to be followed in the case of every Member of the House

and not in the interest of some particular Member of the House. I do not desire to detain the House, because there will be opportunities as other items are reached to say a little further, and I shall take the opportunity as the items are read to call attention to what they provide. I move to strike out the paragraph.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 40, lines 17 and 18, strike out the paragraph which reads as follows: "To T. A. Norris, administrator of the estate of N. M. Aldridge, deceased, late of Tishomingo County, \$980."

The question was taken, and the Chairman announced the noes seemed to have it.

Mr. MANN. Mr. Chairman, I ask for a division.

The committee divided; and there were—ayes 14, noes 55.

So the motion was rejected.

The Clerk read as follows:

To I. P. Watts, administratrix of estate of Charles Baker, deceased, late of Warren County, \$8,213.

Mr. MANN. Mr. Chairman, I move to strike out the last word. In this case the claimant originally was one Charles The claim is now the claim of the administratrix, I. P. Watts. This claim was sent to the Court of Claims under the Tucker Act by Senate resolution, July, 1897. It appears from the report of the Committee on War Claims—I do not happen to have the original findings in my hand-that the facts are

not as explicit as they should be.

I suppose the Committee on War Claims meant that the findings of fact are not as explicit as they should be, because I take it the facts are always absolutely explicit. The detail of fact may not be so explicit; the facts are always absolutely the same. It says the facts must be read in connection with the allegations of the petition in order to ascertain the exact facts which the court intends to report. It appears from the findings that Charles Baker is dead. He died in 1861, and that, subject to two legacies, his estate was bequeathed to Amanda Malinda Heath (afterwards Powell)-Amanda Malinda ought to be a name that would draw tears from a stone-was bequeathed to Amanda Malinda Heath (afterwards Powell) and to Elizabeth Jane Snyder (afterwards Welch); that said two persons were loyal. In this respect the findings in this case are entirely different from the findings of the court in the amendment which the committee just accepted, where the court found that the claimants were not loyal, where the practice of the House has been always, under either Democratic or Republican rule, until to-day that the claims should not be paid.

Mr. McKENZIE. Mr. Chairman, will my colleague yield for

question?

Mr. MANN. Certainly.

Mr. McKENZIE. I would like to ask the gentleman if these claims are not as a rule worked up and brought into the House by claim agents?

Mr. MANN. Well, I suspect the claim agents have some connection with most of them, but not all of them.

Mr. McKENZIE. From the gentleman's experience can be tell us about what is the usual and customary charge made by these claim agents for getting through a claim of this character?

Mr. MANN. Well, I think they usually charge a percentage, generally one-third if they can get it, sometimes less and some-

times more.

Of course the truth is that a large share of the claims that are presented here are not discovered by the people who have the claims, but are discovered by a claim agent through collusion with some employee in one of the departments. Then the claim agent sends word to the claimant that the claimant has a claim against the Government which the latter does not know anything about, and which the claim agent will collect on a percentage basis. I have received such communications myself from claim agents when I knew I had no claim, and I did not fall for it. Perhaps they would have discovered a claim for me. I do not know. I know I did not have any claim.

Mr. McKENZIE. Under such circumstances as you have re-

Mr. McKENNIE. Chief such that the attorney would certainly be entitled to a very good fee.

Mr. MANN. Well, I guess they get it.

The CHAIRMAN (Mr. HAY). The time of the gentleman from Illinois [Mr. MANN] has expired. Without objection, the pro forma amendment will be allowed.

Mr. MANN. I object.
The CHAIRMAN. The question is on agreeing to the amend-

The amendment was rejected.

Mr. MANN. Mr. Chairman, I move to strike out the para-

The question was taken, and the Chair announced that the noes seemed to have it.
Mr. MANN. Mr. Chairman, I ask for a division.

The committee divided; and there were—ayes none, noes 80. So the amendment was rejected.

The Clerk read as follows:

To Leopold Bickart, of Natchez, \$1,500.

Mr. MANN. Mr. Chairman, I move to strike out the paragraph. This is a claim of one Leopold Bickart, which was sent to the Court of Claims under the Bowman Act on March 6, 1888, something over 25 years ago. In that case the Court of Claims found the claimant loyal, in marked contradistinction to the finding of the Court of Claims in the claim presented by the gentleman from Alabama [Mr. Underwood], where the court found that the claimants were not loyal, and where, forgetting the practice and precedents of the House ever since the war, the committee inserted an item without consideration, not presented from the Claims Committee, and inserted it simply because the gentleman from Alabama presented it-not because it had merit, but because the leader of the majority took advantage of his side of the House and put them in the embarrassing attitude of considering without knowledge a proposition which he presented.

The court found in this case that the supplies were taken from Bickart and his coowner, Christian Schwartz, and further that Bickart's share in the supplies taken for Army use was worth \$1,500. It seems that this claim was presented by Schwartz to the Southern Claims Commission, and it has been favorably acted upon before by the House, again in marked contrast with the action which the House has taken concerning the claim presented by the gentleman from Alabama, where, if I am correct—and I may not be—committee after committee has re-fused to include that claim in the omnibus war-claims bill because it violated all the practices and precedents of the com-

Mr. UNDERWOOD. Mr. Chairman, I am very sorry that the gentleman from Illinois [Mr. Mann] should see fit to make a personal attack on me because I offered an amendment for legitimate claim.

Now, the gentleman is absolutely mistaken when he says that this claim has not been inserted in the bills before. It has been inserted in a bill by the Senate, I think the claims bill of last year, but not inserted by myself. It came from Missis-It was in one of the last bills, and I think it was in last year's bill, although I am not sure whether it was that bill or the bill of the year before. However, it has been favorably reported before, but it was one of those claims that went down with the general bills when they were up before. I explained to the House a few minutes ago the reason this claim was not reported by the committee. It was because unfortunately I was absent about three weeks last October and November. When the letters came to me about this claim, the chairman of the committee was absent, and when I got back the bill had been reported. I consulted the chairman of the committee, and introduced the amendment here to-day with his consent and concurrence.

Now, it is not a question of these people not being loyal. As I stated, this claim has been carried before and there is no question about the amount. The court found the amount, and it is very much less than the proof showed the plantation was rented for before that time and the year after. There is no dispute about the facts, except as the court did hold, as I stated myself, that their loyalty was not proven. Well, I was candid with the House in the present case, and said I had no doubt that these ladies belonged to a family that were not loyal at one time, but that after the fall of Vicksburg they took the oath of loyalty, before the war ended, and that this plantation was occupied after the war was entirely over, when everybody was loyal.

That was the only issue involved in the case. It is a perfectly clean, legitimate claim. And, more than that, the Bow-man Act, under which it is submitted, does not require the proof of loyalty for property that was kept and used. It is only in the case of claims for supplies and stores that the proof of loyalty is required, and not as to the proposition of the Government coming and turning a lot of women out of their home and off their plantation and putting the Freedmen's Bureau in it and not paying them the rent.

Those are the real facts in this case. Here were a lot of women owning this plantation and living off it; the war was over; and a general of the United States Army marched his troops on this plantation and put off those women and put the Freedmen's Bureau in there and rented it out to the negroes and collected more rent from the negroes than is claimed here.

I repeat, it is a perfectly clean, legitimate claim, and I am surprised that the gentleman from Illinois [Mr. Mann] under these circumstances should take the position that a Member of this House has not a right to submit an amendment to any bill that is under consideration here. It is for the House to accept or reject such an amendment.

Do the Members on the Republican side of this House want to take the position that when a committee brings a bill before this House it shall not be subject to an amendment; that no man shall offer an amendment on the floor of the House to any bill that is reported here by a committee; that a claims committee can not report a bill and have a Member of this House either offer to inject or to reject a claim?

And more than that, I will say to the gentleman from Illinois that he does not do justice to this side of the House when he says that this claim was put in this bill and inserted here merely because I offered the amendment. I would not ask my colleagues on the floor of this House, simply because I happen to be the floor leader, to vote for any proposition I might offer that does not meet with their approval any more than any other man's. I did not do it in this case. I candidly stated the entire facts with reference to this claim to this side of the House, and I demonstrated beyond peradventure that this is an honest claim.

It is a claim to pay women who had been driven off of their plantation by the United States Government after the war was over; a claim that had been reported and carried in another bill; and I think that the gentleman from Illinois is not doing credit to himself when he seeks to filibuster against this entire bill by reason of the fact that the majority Members of this House should adopt one item that does not meet with his

approval. [Applause.]
Mr. MANN. Mr. Chairman, the gentleman from Alabama [Mr. Underwood] says that this claim of his was inserted in the omnibus bill in the last Congress.

Mr. UNDERWOOD. No; I did not say that. I said in one of the recent Congresses. I said I thought it was in the last

Congress, but that I was not sure. Mr. MANN. Well, the gentleman says he thought it was in the last Congress. The distinguished gentleman from Tennes-[Mr. Sims] who now occupies the chair in the Committee of the Whole House was the chairman of the Committee on War Claims in the last Congress, when he presented his bill in the House, and it was passed by unanimous consent, under a practical agreement or understanding that the majority and minority members of the Committee on War Claims would go through the bill, that all claims would be presented to them, and that they would have opportunity to examine them.

The claim of the gentleman from Alabama was not in the bill as reported in the House in the last Congress and was not inserted as a Senate amendment. I do not doubt that the gentleman believes that the claim has been in some omnibus claims bill. If it was in one of the previous omnibus claims bills it was stricken out by the gentleman from Tennessee [Mr. Sims], who is now Chairman of the Committee of the Whole, as an unworthy claim, because all of those omnibus claims bills previously, with all the claims that were in them, were taken up and passed by the Committee on War Claims of the House.

Mr. CARLIN. Mr. Chairman, will the gentleman from Illi-

nois permit an interruption?

Mr. MANN. Certainly,
Mr. CARLIN. Mr. Chairman, the present occupant of the
chair, Mr. Sims, only had an opportunity to act on the last omnibus bill. He was not chairman except in the last Congress.

Mr. MANN. He had before him all the previous omnibus

bills. There has been no omnibus bill enacted into law, and the previous omnibus bills were before him. If the claim was ever in an omnibus bill, it was in some of these omnibus bills when the Committee on War Claims in the last Congress acted, and the committee left it out, knowing they left it out as an unworthy claim.

Mr. UNDERWOOD. Oh, the gentleman should be perfectly fair,

Mr. MANN. I am perfectly fair.
Mr. UNDERWOOD. The gentleman is not perfectly fair,
when I made the statement that the claim had not come to my attention and I did not personally know of it at the last Con-

Mr. MANN. I say that all the claims in the previous omnibus bills were considered by the committee.

Mr. UNDERWOOD. Some of these bills, or a number of bills, have already died. I said it had been in the bill on a Senate amendment. I am so informed, and I am satisfied that my information is correct.

Mr. MANN. The claim was inserted as a Senate amendment,

but that would not add anything to it, in my opinion, and would

be rather against it than in favor of it. If it was in, it was turned down by the committee in the last House. They refused They refused to report it. The committee of the last House did not require Members to come before the committee and call attention to the claims; they took all the findings that had been included in the prior omnibus war-claims bill. Those that they thought ought to pass they included in the bill of last winter.

Mr. UNDERWOOD. Mr. Chairman, without arguing away

from the point, will the gentleman come down to the point and let me ask him this question: Does the gentleman think the finding of the Court of Claims that there was \$13,500 due for

the rent of this plantation is incorrect?

Mr. MANN. I do not know anything about it. I do not remember this claim. The gentleman presents the claim un-

Mr. UNDERWOOD. Not at all. I did not present it unfairly. I notified the chairman of the committee and had his consent to offer this amendment, although it was not necessary to have his consent to offer an amendment. I never before heard any gentleman on that side of the House say that he thought a Member had not a right to offer an amendment if he saw fit.

Now, the facts in this case are so simple that you can not get away from them. Here is a finding of the Court of Claims that there is \$13,500 due, and the only thing adverse to it is that the court said that they were not loyal. There is no question that these were women; that they were driven out from their plantation by the soldiers of the United States after the war was over; and the gentleman from Illinois knows as well as I do that under the Bowman Act the question of loyalty does not apply under the law.

Mr. MANN. The gentleman may be correct, but I do not

know it.

Mr. UNDERWOOD. I will furnish the gentleman with a copy of the law.

Mr. MANN. Oh, I have read the law many times.

Mr. UNDERWOOD. It applies to the supplies and stores and not to rental value of property occupied. Now, I want to know if the gentleman from Illinois, or any other gentleman on this side of the House, is willing to stand for a proposition—

The CHAIRMAN. The time of the gentleman from Illinois

Mr. UNDERWOOD. I move to strike out the last word, and I assume that the I will give the gentleman a part of my time. finding of the court for \$13,500 is correct, although the plantation rented for \$40,000 a year two years before and more than \$40,000 the year after, so at least the amount is reasonable and is under the amount that ought to be allowed. Now, assuming that the court has found the value that is correct, I want the gentleman from Illinois to say whether, under these circumstances, a lot of women, some of them widows, occupying a plantation, having taken the oath of loyalty to the United States Government before the war closed, and a general of the United States Army marching his troops onto the plantation, driving them off and putting the Freedmen's Bureau in charge, those women ought not to be compensated?

Mr. MANN. If the gentleman will give me an opportunity to examine the findings in this case I will be glad to express my opinion on the merits of it, but the gentleman is seeking to

prevent my having such an opportunity.

Mr. UNDERWOOD. I am not seeking to prevent the gentleman having such an opportunity. I have read the report, I have given him the address and the number of the document, where he can read from the document the findings of the court, which court at that time was composed of all Republican judges

I really do not think the gentleman intends to carry this argument so far as to assume that he is not taking my state-

ment of fact as to what was in the document.

Mr. MANN. I never take the statement of fact as being absolutely correct of any man who is seeking to get a claim allowed, because the bias is natural and inevitable. question the word of the gentleman from Alabama. Of course that goes without saying, and I do not need to say that, because everybody knows that I take the word of the gentleman from Alabama on any proposition.

Mr. UNDERWOOD. Then the only proposition involved in this case is the fact, as shown by the record, that from June to January, 1865, this plantation was occupied. The gentleman The gentleman

himself knows the war was over at that time.

Mr. MANN. If the war was over, of course the claim has no business at all in this bill.

Mr. UNDERWOOD. The gentleman knows there are a great many claims that came in long after that date. I have no doubt there are claims in this bill of dates much later than 1865.

Mr. MANN. There are a great many claims in this bill which never were thought of until more than 40 years after the

Mr. UNDERWOOD. The war claims in this bill relate to claims of the time of that war, and there is no question in the world that this is a perfectly legitimate claim. The only thing world that this is a perfectly legitimate claim. in the world that has ever stood in its way was that one single, finding of the court, in which the court said that these women were not loyal. That is all there has ever been in its way; and the proposition I put to this House is that when these women took the oath of allegiance before the war closed, and then their property was occupied after the war, it is too late in this day and time to say in this House that these were not loyal women, and that they should not receive compensation for being turned out of their own home when the Government of the United States received more for the rental than they are claiming.

Mr. MANN. Mr. Chairman, if the Committee on War Claims wish to report in favor of the payment of a claim in behalf of persons whom the Court of Claims has found were not loyal, they will take that responsibility; and if the House passes such a bill and the Senate passes such a bill, it establishes that precedent. If the precedent is established, it ought to be applied impartially to all who come under it. Up to the present time such a precedent has not been established. I do not know

whether it ought to be established or not.

Mr. SLAYDEN rose.

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Texas?

Mr. MANN. There are two things I wanted to say, but the gentleman may go ahead. I will say them at some time or other. I yield to the gentleman.

Mr. SLAYDEN. It was on that question of claims arising after the war. I happen to have knowledge of the fact—and I want the gentleman's opinion on this—that claims for property not destroyed, but taken and used by the Army of the United States, which came into Texas in December, 1865, seven or eight months after Gen. Lee had surrendered, and property which the Government continued to take until April, 1866, are reckoned as war claims, and the question of loyalty has been considered in connection with the payment of such claims. Does the gentleman think that sort of a claim is anything more than technically a war claim, and that the question of loyalty ought to cut a figure in its settlement?

Mr. MANN. I prefer not to express an offhand opinion about matters of that sort. I never thought a current opinion was

of much good.

Mr. SLAYDEN. The property being taken more than a year after Gen. Lee surrendered and when we down there thought the war was over.

Mr. MANN. I am one of the Members of the House-I think they are not very numerous-who have taken the trouble to examine the findings of the Court of Claims in at least a large share of these cases. For several years and in the last Congress we had an understanding in the House, not binding upon anybody, that the Committee on War Claims would endeavor to reach a decision in reference to these claims from both sides of the House, and that the bill should be passed practically by unanimous consent. That was done.

On this occasion the distinguished gentleman from Texas [Mr. GREGG], the chairman of the committee, offered to furnish to me a copy of all the findings on the new claims inserted in this bill. I asked that they be referred, as they were, to the gentleman from Vermont [Mr. Plumley], the ranking Republican on the committee. He examined all of those findings. He called attention to the findings in two cases, and the chairman of the committee moved to strike those items out. And in the consideration of these omnibus bills, while the right to offer an amendment on the floor has existed, we have always understood that that right would not be presumed upon successfully by any Member of the House proposing to insert in the bill new items which had not been considered by the Committee on War Claims. That is what I am complaining about now.

This bill would have been read in full the first time and there probably would have been some general debate upon the bill. We are passing a bill, or were, by unanimous consent on the basis that the claims had all been recommended by the Com-mittee on War Claims, after examination. Thereupon my distinguished friend from Alabama [Mr. Underwood] injects a proposition that the omnibus claims bill, instead of being made up by the Committee on War Claims and passed practically by unanimous consent, should be made up in the House, where it is impossible for Members of the House to examine all of these findings or to know about all of these findings. As I said before, I do not think the gentleman from Alabama presumes upon his position, but I will say to him from knowledge of

prior events, that if any other Member of the House than he had offered his amendment it would not have received 10 votes. I do not think that he ought to put sand in the machinery. There are many Members on his side of the House and on this side who have items they would like to insert in this bill by way of amendment, and if the bill is amended without receiving the approval of the Committee on War Claims, those Members will be complained of, because they did not secure their par-ticular items in the bill. The same rule has been followed always in the consideration of this bill. I do not think the gentleman from Alabama ought to attempt to break up the entente cordiale that existed relating to this bill after gentlemen

had worked upon it for a year.

Mr. GREEN of Iowa. Mr. Chairman, the distinguished gentleman from Alabama [Mr. Underwood] has inquired whether any gentleman on this side would take the position that amendments ought not to be offered to bills of this kind. Speaking for one on this side I say that I intend to oppose any amendments, either in a war claims omnibus bill or a general claims omnibus bill, which introduces a new item, a new claim, for the reason that it is practically a new bill sought to be included in the omnibus bill. What is the use of our having committees make reports to the House, telling us what they have ascertained with reference to these bills, if the leader upon one side or the leader upon the other can offer an amendment in effect introducing a new bill and have it passed, the same as if it had been submitted to the committee?

Mr. Chairman, will the gentleman yield? Mr. CARLIN.

Mr. GREEN of Iowa. Certainly.

Mr. CARLIN. What is the use of having the House, if we have not the right to review the action of the committee'

Mr. GREEN of Iowa. The House has the right to review the action of the committee, and the House has repeatedly-as I know from experience as a member of the Claims Committee after the committee has examined and found in favor of a claim on every point, seen fit to reject it; but on this occasion the House has taken a claim that has not been examined or passed upon by the committee, and which no Member of the House except the gentleman from Alabama has had an opportunity to examine, and the House has now approved that The gentleman from Alabama asked if any one questioned his statement. No one questions the good faith of the gentleman from Alabama, no one would think of anything of that kind, but if I had the facts of this case before me I might reach a different conclusion from that which the gentleman has reached, and so might others, and valid objections to it might be made. What way is this in which to pass bills before this House—simply to introduce a bill as an amendment on the motion of the leader of one side or the other? Such a practice has never been heard of before, and I do not believe it will stand in this instance in the final conclusion reached on the

Mr. UNDERWOOD. Mr. Chairman, the reckless statements of some gentlemen on the other side of the House are only warranted by the fact of their lack of information as to the past history of the House. The gentleman from Iowa [Mr. GREEN] being a comparatively new Member, his experience dating back only a few years, does not remember back to the time when many other Members of the House can, when bills of this kind were continually amended on the floor of the House, were fought out item by item on the floor of the House, and passed The objection which I have to the procedure which the gentleman wants is this: My distinguished friend, the leader of the minority, says that he has been making up this bill and that he has had the claims submitted to him. I presume the main objection he has to this bill is the fact that I did not But I really have been so busy about other matters that I did not know that this war-claims bill was being made up by the gentleman from Illinois [Mr. Mann] or the gentleman from Iowa [Mr. Green]; but to say the time has come in this House when a Member can not offer an amendment to any bill is to enunciate a proposition that gentlemen on that side of the House have howled against ever since we have been in session, and there is this to say about that: Since this House has been controlled by a Democratic majority, there has been more latitude for amendment of all bills and more opportunity for real fair consideration of amendments than there has been in the 20 years preceding. There is no question about that. [Applause on the Democratic side.] Now, if the attack made on this amendment was a legitimate attack on its merits, I would say this side of the House ought to reject it. The issue is only two things. One is the amount of the findings of the court, which is placed in the bill. There can not be any ques-tion about that. The other is a question of loyalty.

Mr. ANDERSON. Will the gentleman yield?

Mr. UNDERWOOD. I merely have submitted the question of loyalty to this House. Yes; I will yield to the gentleman.

Mr. ANDERSON. Is there any difference in that respect in

the claim which the gentleman suggests and any other claim that a dozen or fifteen or twenty Members might offer on the floor?

Mr. UNDERWOOD. None whatever. Mr. ANDERSON. Is it not a fact that the gentleman is merely presuming upon his position as leader of the House to

secure this amendment?

The gentleman from Minnesota, who Mr. UNDERWOOD pretends to be one of those up-to-date Progressives, is evidently saying to the country to-day it is a pretense. Does the gentle-man from Minnesota stand here to-day before his country and say that he will surrender the right of himself and his constituency to offer an amendment on the floor of the House to any bill he thinks is right?

Mr. ANDERSON. I do not.
Mr. UNDERWOOD. Then he asks me to surrender my right.
Mr. ANDERSON. I do not. I ask the gentleman not to presume upon the position he occupies in the House which no one

Mr. CARLIN. The gentleman has the right to offer an amendment.

Mr. UNDERWOOD. In other words, the gentleman from Minnesota says that he would not surrender his right as an individual Member, and I take it no other Member ought to be precluded from offering an amendment on the floor of the House, according to the views of the gentleman from Minnesota, except the floor leader. [Applause on the Democratic side.] But because of the fact I happen to be floor leader of the majority, my constituency has no right to be represented here; and if a question comes up about a local matter in which I desire to present the views of my constituency, according to the distinguished Member from Minnesota, my constituency has no right to have their views voiced here because I happen to have been selected as floor leader of this House. Why, the gentleman from Minnesota could not sustain that position for one moment before his own constituency. The only issue that can properly and honestly be voiced here is the question as to whether this is a legitimate claim. As far as I am concerned, I want to say that after the surrender of the Confederate Army I would not raise the question of loyalty against any claim that was passed here.

Mr. HULINGS. Will the gentleman permit a question?

Mr. UNDERWOOD. Yes.
Mr. HULINGS. Why was not the item put in the bill? was not this claim of the gentleman presented in the bill?

Mr. UNDERWOOD. I am sure my friend was out. stated several times, and I will state it again, that in October this claim was called to my attention. It is not an Alabama claim; it is a Mississippi claim. My constituent, however, lives in Birmingham and called the claim to my attention. After examining it I concluded it was a just and legitimate claim, and went to the chairman of the Committee on War Claims to present the claim to him, and he was out of town. In the meantime, before he got back, I left the city, and when I got back and went to present it to him I found he had reported the bill. Then I explained the case to him and asked if it would not embarrass him, which I did not propose to do, although I had the right to do it, if there was any objection to my offering this amendment, and he said he did not see any, and I therefore offered it. I did not know my distinguished friend from Illinois Mr. Mann] was running the bill, or I would have called on my friend from Illinois and asked his permission.

Mr. MANN. Mr. Chairman, the gentleman from Alabama—
The CHAIRMAN. The Chair wishes to state that all time has been exhausted and the Chair has been allowing this debate

to go on by unanimous consent-

Mr. MANN. Mr. Chairman, the gentleman from Alabama has occupied the floor three different times, but I accept the ruling made just as the gentleman from Alabama finished after the third time

Mr. UNDERWOOD. Mr. Chairman, I ask unanimous consent that the gentleman from Illinois may have five minutes.

The CHAIRMAN. The Chair desires to state that the Chair has not attempted to be strict in this matter, inasmuch as the chairman of the Committee on War Claims has made no objection. The Chair recognizes the gentleman from Illinois.

Mr. MANN. Mr. Chairman, the gentleman from Alabama, contrary to his usual custom, seems to wish to resort to personal abuse in some way, first with the gentleman from Minnesota [Mr. Anderson], entirely unwarranted, and secondly by the untrue statement that I stated I made up this bill.

Mr. UNDERWOOD. I did not state that the gentleman said he made up the bill. I said that the gentleman was engaged in

making up the bill, not that he said so, but the gentleman stated that these claims had all been submitted to him.

Mr. MANN. I did not state that.

Mr. UNDERWOOD. You stated that you had examined the

old claims in the bill and that-

Mr. MANN. The gentleman from Texas [Mr. GREGG] tendered to me the findings in this bill, and I asked to have them submitted to the gentleman from Vermont [Mr. Plumley], the ranking Republican member of the committee.

Mr. UNDERWOOD. Certainly; and if the gentleman was not engaged in making up the bill at that time—

Mr. MANN. I was not engaged in making up the bill.

Mr. CARLIN. I want to say that the gentleman is doing now what he has done ever since I have been a Member of the House in making up this bill and every other bill.

Mr. MANN. I do not expect to do any less of it in the future than I have in the rest. I do not expect to do any less of it in the future

than I have in the past. I do not do anything illegitimately or

improperly.

The gentleman from Alabama wants to say that we want to deprive him of the right of offering an amendment. He has exercised the right of offering an amendment. It is in the bill, but the omnibus war claims bills always, when they have been passed, have been passed practically by the unanimous consent that items should not be offered on the floor, and the gentleman from Alabama [Mr. Underwood], who has never been here before, I think, when an omnibus claims bill was under consideration, was in error when he stated to the gentleman from Iowa [Mr. GREEN] that it was the practice during his day and mine to amend the omnibus war claims bill in the House.

Mr. UNDERWOOD. If the gentleman will refer to the RECORD, he will find where I have engaged in several very vigorous fights on these war-claims bills in the past on the floor of the House. Most probably the gentleman was simply

not here at the time.

Mr. MANN. Well, I think the House will remember that I have always been present when we had the omnibus warclaims bills up. I have no doubt there are various gentlemen who have wished that I was absent, and wish I was absent now, when such bills are being considered, and I do not think the gentleman from Alabama usually has been here.

Mr. UNDERWOOD. I have not been here—
Mr. MANN. I do not know whether he has offered an amendment or not before. I do not recall a time when any amendment to the omnibus war-claims bill was inserted, except when the Committee on War Claims itself urged the acceptance of the amendment, practically as a committee amendment.

Mr. UNDERWOOD. The gentleman's memory does not date

back far enough.

Mr. MANN. My memory goes back about as far in these matters as the memory of the gentleman from Alabama. While the gentleman came in in a prior Congress, he did not stay in very long.

Mr. UNDERWOOD. I am not referring to the gentleman's

service, but the gentleman's memory.

Mr. MANN. I am willing to put my memory about House proceedings against the memory of the gentleman from Alabama at any time, especially as to war-claims propositions. I followed the war-claims bills, not attempting, as the gentleman from Alabama erroneously and improperly says, to try to make them up and try to pass upon them when they were made up. The gentleman from Alabama knows, as every other gentleman of the House knows, that it is not possible for Members of the House in the House to consider the merits of all of these various items. There are hundreds upon hundreds of these claims in the bill and hundreds upon hundreds of claims which were not inserted in the bill.

The gentleman from Alabama gives as an excuse the statement that he was not in the city. Why, if the gentleman from Alabama were familiar at all with the method of making up the war-claims bills, he would know that his absence would not make any difference about the committee giving consideration to the findings. All of these findings are examined by some one connected with the committee, and the committee did not insert this finding in the bill. They took the items in the last war-claims bill as it passed the House, inserted a number of items as the bill was introduced, and afterwards inserted a number of items as amendments, not including the amendment of the gentleman from Alabama. The gentleman stated awhile ago that he would not press a matter that was really controverted. Well, there is a controversy over the question of whether there ought to be anything paid in this case, regardless of the question of loyalty, and, second, whether the courts ought to start in any pay claims where loyalty does not appear. If the House wants to do that, very well; but treat everybody alike when you do it.

Mr. GREEN of Iowa. Mr. Chairman, the distinguished gentleman from Alabama [Mr. Underwood] has very courteonsly referred to my lack of experience in this House. I yield to the distinguished gentleman in matters of experience, and also in capacity to evade the issue which is before the House.

The gentleman has stated that we upon this side, and myself in particular, are claiming that there ought to be no amendments offered to any bill. We make no such claim, have not made it, and do not make it now. We simply insist upon what has been the past practice and uniform custom in this House of requiring these matters to be investigated by the committee when a separate, independent claim is brought before this House.

The gentleman from Alabama declined to take my statement with reference to what had been the previous rule and custom in this House. I made it, Mr. Chairman, upon the statement, which has since been repeated, by the gentleman from Illinois [Mr. Mann], who has always been on watch and present when these bills were being considered, whereas, so far as my own limited experience is concerned, to which the gentleman from Alabama refers, the gentleman from Alabama has not been present heretofore, and is only present now because he has this bill, which he expects, by weight of his personal authority and position in this House, to carry through. [Applause on the Republican side.]

Mr. GREGG. Mr. Chairman, I ask for the regular order. The CHAIRMAN. Is not an amendment pending to strike

out the last word?

Mr. MANN. There is an amendment pending to strike outthe paragraph.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Illinois [Mr. MANN] to strike out the paragraph referred to.

The question was taken, and the Chairman announced that the noes seemed to have it.

Mr. MANN. Well, I think we had better have a division. I ask for a division, Mr. Chairman.

The committee divided; and there were—ayes 0, noes 57.

So the amendment was rejected. The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

To Hiram Baldwin, of Adams County, Miss.; Joseph De France Baldwin, of Madison Parish, La.; and Richard Robert Baldwin, of Tensas Parish, La., in equal shares, as heirs of Robert Bradley, deceased, \$2,000.

Mr. MANN. Mr. Chairman, I move to strike out the para-

The CHAIRMAN. The gentleman from Illinois [Mr. MANN]

moves to strike out the paragraph.

Mr. MANN. Mr. Chairman, this is a claim which was referred to the Court of Claims under the Tucker Act by Senate resolution in 1904. It appears from the report upon the bill that in the findings a statement of the case was made with exclusive findings of fact, and that Robert Bradley died in 1863, leaving various heirs; that the claimants herein, Hiram Baldwin, Joseph De France Baldwin, and Richard Robert Baldwin were grandchilden and heirs of said Robert Bradley, owning an undivided 16 per cent of the estate; that supplies were taken for Army use from the Bradley heirs; and that the reasonable value of the interest of these three claimants there was \$2,000.

The report proceeds:

These three claimants were all under 7 years of age at the time the property was taken. Hiram Baldwin is the oldest of petitioners and was born about 1857. Claim was not presented to Claims Commission, and it is plain that the eldest of these present claimants did not attain majority until about 1878, or about five years after the right to present claims to that commission had been abrogated by act of Concress

This claim was presented to the Court of Claims under the Tucker Act. The claim which has just been inserted by way of amendment offered by the gentleman from Alabama [Mr. UNDERWOOD] was referred to the Court of Claims under the Bowman Act.

The gentleman from Alabama has stated on several occasions in the House that under the Bowman Act it was not necessary to make any findings as to loyalty. The gentleman from Alabama may be correct, but I think he is not. He has been in error about all the rest of the statements he has made, and I assume that he is in error about this one. I do not think the Court of Claims makes findings except where it is required to. Being required to make findings, it made findings in that case. All of the war-claims cases which have been presented have had a finding as to the question of loyalty.

Now, of course, the question of loyalfy has to be acted upon. In these cases the claimants were of such tender age that they

could not be supposed to be either loyal or disloyal.

I do not think that is the case with a woman. The gentleman from Alabama stated a moment ago that a woman could not be disloyal—that was practically what he stated. my stars, in this day, when we are about to grant to the women all the rights which men have, we ought not now to begin to say that they do not have sense enough to know which side they were on during the conflict. If there were any people who could be disloyal more than anybody else, it would be the women, who were very much excited and interested. And where the claimants are found to be disloyal there is no reason why they should be paid. Wherever an army goes into a new field or a war occurs it is impossible for the successful contestant to pay the claims for all property which is damaged, regardless of loyalty or disloyalty.

Not desiring to consume time unnecessarily, seeing that my time is about up, I temporarily yield the floor, and if no one else desires to be heard I would like to have a vote on my mo-

tion to strike out the paragraph.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois.

The question being taken, the Chairman announced that the noes appeared to have it.

Mr. MANN. On such a close vote I ask for a division. The committee divided; and there were-ayes none, noes 34. Accordingly the motion was rejected.

The Clerk read as follows:

To D. H. Chamberlain, of Jefferson County, \$340.

Mr. MANN. Mr. Chairman, I move to strike out the paragraph.

The claim of D. H. Chamberlain was referred to the Court of Claims on March 3, 1909, under the Tucker Act. The Court of Claims found that the claimant was loyal, and that supplies were taken from him and his coowners to the extent that his share is stated to have been \$340.

While it was not found as one of the facts reported by the court, it was alleged in the petition in the case that was filed in the Court of Claims that the claim of T. J. Chamberlain, who had been a coowner with D. H. Chamberlain, the claimant in this case, had been allowed theretofore, and an examination of the claims appropriation act of February 4, 1905, shows that the claimant T. J. Chamberlain, of Jefferson County, Miss., was paid to the extent of \$340.

The present claimant was of tender age in one sense, being only 15 years old when the war was ended. His brother has already been paid his share for the supplies taken, and the committee believe, as reported, that there is no reason for refusing to pay this brother his share for the property that was taken, as his other brother, either elder or younger, I do not

remember which, has already been paid his share.

It will be noticed, Mr. Chairman, that the committee in this case have not recommended the payment of a claim where the court has found that the claimant was disloyal. So far as I recall, from my observation of these cases, the House has never attempted to allow claims where the court found the claimant was disloyal, except in those rare instances where the majority leader, by reason of his influence on the majority side of the House, was able to secure an amendment, not because he was presuming upon his position but because they were afraid to vote against it.

The CHAIRMAN. The question is on the amendment offered

by the gentleman from Illinois.

The question was taken, and the Chairman announced that

the noes appeared to have it.

Mr. MANN. I ask for a division.

The CHAIRMAN. The gentleman from Illinois demands a

Mr. CLARK of Florida. I make the point of order that that is dilatery

The CHAIRMAN. Does the gentleman make the point that the motion is dilatory?

Mr. CLARK of Florida. I make the point that the demand for a division is dilatory.

The CHAIRMAN. The Chair can not determine that it is dilatory

Mr. CLARK of Florida. Because there were absolutely no votes in the affirmative. This thing has occurred three or four

The CHAIRMAN. All those in favor of the motion of the gentleman from Illinois will make it known by rising.

Mr. CLARK of Florida. I want to be heard on my point of

I think the gentleman ought to be heard. The CHAIRMAN. The gentleman from Florida wishes to be heard on his point of order.

Mr. CLARK of Florida. On several occasions there has been a call for a division by the gentleman from Illinois, and not a single Member upon that side has stood up. It is apparent that it is dilatory, simply to kill time.

Mr. MOORE. Nobody on that side stood up.

Mr. CLARK of Florida. Oh, yes; they did. I insist on the

point of order.

Mr. MANN. I should like to be heard on the point of order. The gentleman from Florida, who makes the point of order, is of course an authority on parliamentary law, and I feel a good deal of diffidence in differing from him on an important proposition like this. I think, perhaps, however, that he is like the gentleman from Alabama. I stated that the gentleman from Alabama was the only gentleman in the House who could have secured the adoption of that amendment, and I am sure the gentleman from Florida is the only Member of the House who could make such a point of order, even with his great knowledge on the subject.

The Chair is required to grant a division upon the demand of any Member of the House, under the rules of the House, and it is not required that a Member of the House shall burst his throat by voting "aye" or "no" in order to secure the

right to a division under the rule.

I hope the gentleman from Florida will not attempt to demand tellers upon each of these amendments. It is quite possible to obtain tellers and occupy more time than with a division, but the gentleman from Florida insists upon having tellers instead of a division, why, pretty soon I will ask for tellers.

Mr. UNDERWOOD. Mr. Chairman, speaking to the point of order, I am sure that my genial friend on the other side of the House [Mr. Mann] is only making his point of order and his observations, not to secure the adoption of his amendment, but to delay the consideration of the bill. Of course that is entirely satisfactory. I do not think our friends need disturb themselves about it, because we have not much to do now, but after awhile, when we get ready to pass this bill, why, we will pass it, regardless of whether the gentleman from Illinois or anybody else on that side of the House desires it passed or not.

I would like to have it run along to give gentlemen on that side of the House an opportunity to consider the bill, like we have always given opportunity to consider all bills. Of course, as I have often said before, we on this side of the House have followed the procedure of allowing bills to be open to amendment and real consideration, which they did not have when the House was controlled by the gentleman from Illinois. Naturally we realize that he is not familiar with the line of procedure we have adopted, but of course there is a limitation to that. We can not go on indefinitely considering a bill when the opposition to it is manifestly only for the purpose of filibustering. I hope my friend from Florida will withdraw his point of order and allow the gentleman to proceed a while longer.

Mr. CLARK of Florida. Mr. Chairman, I withdraw the point

of order.

The CHAIRMAN. The gentleman from Florida withdraws the point of order. The question is on the division demanded by the gentleman from Illinois.

The committee divided; and the Chairman announced that the

ayes were none and the noes were 17.

Mr. MANN. I make the point of order of no quorum, in order

to see if there is a quorum present.

The CHAIRMAN. The gentleman from Illinois makes the point of no quorum. The Chair will count. [After counting.] Eighty-five Members are present, not a quorum, and the Clerk will call the roll.

The Clerk began calling the roll.

Mr. GREGG. Mr. Chairman, I ask unanimous consent that the further calling of the roll be dispensed with in order that I

may make a motion that the committee do rise.

The CHAIRMAN. It is out of order. The Clerk will proceed.

The Clerk proceeded to call the roll, and the following Members failed to answer to their names:

Adair	Burke, Pa.	Dale	Gardner
Aiken	Butler	Davenport	Gerry
Ainey	Calder	Davis	Gillett

The committee rose; and the Speaker having resumed the chair, Mr. Sims, Chairman of the Committee of the Whole House, reported that that committee, having under consideration bills on the Private Calendar, had found itself without a quorum; whereupon he had directed the roll to be called; that the roll was called; that 264 Members answered to their names, a quorum, and he reported to the House the names of the absentees.

The committee resumed its sitting.

Mr. GREGG. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. Sims, Chairman of the Committee of the Whole House, reported that that committee had had under consideration the bill H. R. 8846, the omnibus claims bill, and had come to no resolution thereon.

#### ENROLLED JOINT RESOLUTION SIGNED.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolution of the following title, when the Speaker signed the same:

H. J. Res. 155. Joint resolution extending time for completion of classification and appraisement of surface of segregated coal and asphalt lands of the Choctaw and Chickasaw Nations, and of the improvements thereon, and making appropriation therefor.

### ORDER OF BUSINESS.

Mr. CLARK of Florida. Mr. Speaker, I ask unanimous consent to address the House for 40 minutes on Tuesday next, after the reading of the Journal, not to conflict with any privileged matter or with any appropriation bill

matter or with any appropriation bill.

The SPEAKER. The gentleman from Florida [Mr. Clark] asks unanimous consent that on Tuesday next, after the reading of the Journal and the completion of routine business, he shall have 40 minutes to address the House, not to interfere with privileged matters and the consideration of appropriation bills. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, this morning I objected to the request of the gentleman, because this side of the House, erroneously perhaps, understood the gentleman from Alabama to state that he proposed hereafter to object to general debate on appropriation bills, apart from the bill itself.

Mr. UNDERWOOD. Mr. Speaker, I did not make myself clear, if I made that statement. My idea was to limit general debate to the time when we were considering appropriation bills.

Mr. MANN. I understood otherwise, else I would not have objected to the request this morning.

The SPEAKER. Is there objection. [After a pause.] The Chair hears none, and it is so ordered.

#### ADJOURNMENT.

Mr. GREGG. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 50 minutes p. m.) the House adjourned until to-morrow, Saturday, December 6, 1913, at 12 o'clock noon.

# EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Comptroller of the Treasury, transmitting the annual report of the commissioner (ex officio)

of the Freedman's Savings & Trust Co. for the year ended December 1, 1913 (H. Doc. No. 388); to the Committee on the District of Columbia and ordered to be printed.

2. A letter from the Secretary of War, transmitting 1,623 reports of inspections of disbursements and transfers by officers of the Army received in the office of the Inspector General during the fiscal year ended June 30, 1913 (H. Doc. No. 289); to the Committee on Expenditures in the War Department and letter only ordered to be printed.

letter only ordered to be printed.

3. A letter from the Secretary of War, transmitting a letter from the Chief Signal Officer of the Army, reporting expenditures of the Washington-Alaska military cable and telegraph system, pursuant to act of Congress approved August 24, 1912 (H. Doc. No. 387); to the Committee on Expenditures in the War Department and ordered to be printed.

4. A letter from the Secretary of War, transmitting a letter from the Chief Signal Officer of the Army, reporting expenditures of the Washington-Alaska military cable and telegraph system, pursuant to act of Congress approved March 3, 1911 (H. Doc. No. 386); to the Committee on Expenditures in the War Department and ordered to be printed.

# REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. ASHBROOK, from the Committee on Public Buildings and Grounds, to which was referred the bill (S. 2689) an act amending an act entitled "An act to increase the limit of cost of certain public buildings; to authorize the enlargement, extension, remodeling, or improvement of certain public buildings; to authorize the erection and completion of public buildings; to authorize the purchase of sites for public buildings, and for other purposes," approved March 4, 1913, reported the same without amendment, accompanied by a report (No. 101), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

#### CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 1267) granting a pension to James Lennon; Committee on Invalid Pensions discharged, and referred to the Committee on Pensions.

A bill (H. R. 8262) granting an increase of pension to Catharine Dillane; Committee on Pensions discharged, and referred to the Committee on Invalid Pensions.

A bill (H. R. 8408) for the relief of the estate of John Barry, deceased; Committee on Claims discharged, and referred to the Committee on War Claims.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

# SENATE.

# Saturday, December 6, 1913.

The Senate met at 10 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. The Secretary read the Journal of yesterday's proceedings. Mr. GALLINGER. Mr. President, I suggest the absence of a quorum

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

O'Gorman Overman Page Perkins Pomerene Reed Robinson Ashurst Bacon Stone Sutherland Hollis Sutherland Swanson Thompson Thornton Townsend Walsh Warren Weeks Williams Works Bacon Brady Brandegee Bristow Bryan Burleigh Hughes James Johnson Jones Jones Kenyon Kern Lewis McCumber McLean Martine, N. J. Nelson Norris Burton Chilton Clapp Clark, Wyo. Shafroth Sheppard Shields Shively Colt Works Cummins Gallinger Goff Smith, Ga. Sterling

Mr. SHEPPARD. I wish to announce the necessary absence of my colleague [Mr. Culberson]. I will let this announcement stand for the day

The VICE PRESIDENT. Fifty-seven Senators have answered to the roll call. There is a quorum present. If there be no objection or correction, the Journal will stand approved as read. SAN FRANCISCO WATER SUPPLY.

Mr. McCUMBER. Mr. President, following the list on the calendar, I wish to give notice at this time that at the conclusion of the address of the Senator from Wyoming [Mr. CLARK],

if there be any time left of the calendar day, I will take 10 minutes to explain an amendment which I have offered to the

Hetch Hetchy bill.

REPORT OF THE PUBLIC HEALTH SERVICE (H. DOC. NO. 392).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, transmitting, pursuant to law, the report of the Surgeon General of the Public Health Service for the fiscal year 1913, which was referred to the Committee on Public Health and National Quarantine and ordered to be printed.

BUREAU OF CHEMISTRY, DEPARTMENT OF AGRICULTURE (H. DOC. NO. 393).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of Agriculture, transmitting, pursuant to law, a statement of expenditures paid for the Bureau of Chemistry, Department of Agriculture, for compensation of or

payment of expenses to officers or other persons employed by State, county, or municipal governments during the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Agriculture and Forestry and ordered to be printed.

LIST OF JUDGMENTS (H. DOC. NO. 394).

The VICE PRESIDENT laid before the Senate a communication from the chief clerk of the Court of Claims, transmitting, pursuant to law, a statement of all judgments rendered by the court for the year ended November 29, 1913, the amounts thereof, the parties in whose favor rendered, and a brief synopsis of the nature of the claims upon which the judgments were rendered, which, with the accompanying paper, was referred to the Committee on Claims and ordered to be printed.

#### MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the bill (S. 488) to authorize the sale and issuance of patent for certain land to H. W. O'Melveny.

SAN FRANCISCO WATER SUPPLY.

Mr. PERKINS. I have received three telegrams relating to the Hetch Hetchy bill, which I ask may be read.

There being no objection, the telegrams were read and ordered to lie on the table, as follows:

Hon. George C. Perkins,

Senate Chember, Washington, D. C.:

Missouri Society of California strongly favor Hetch Hetchy bill and urges its passage by United States Senate.

THEC L. FORD, President.

Mrs. L. Marmaduke Eskridge, Secretary.

CAL., December 5, 1913.

Senator George C. Perkins, Washington, D. C.:

The Ashby Improvement Club of Berkeley strongly urges the passage of the Hetch Hetchy bill, which provides the best means of supplying water to the bay cities. We send this as an assurance that the people are not deceived by the proceedings of the convention of the civic center in Oakland, our sister city, which appears to have been held for the benefit of the corporations whose financial interests are opposed to the bill.

JOHN T. SHORT, Secretary.

Hon, George C. Perkins,

Senate Chamber, Washington, D. C.:

Within a day or two the newspapers here have published telegraphic statements from Washington to the effect that it was thought in some quarters that this company had inspired opposition to the Hetch Hetchy bill. The source of authority for these statements was not given. The evening papers print a statement to-day purporting to have been made to the Senate by Senator Thompson, to the effect that this company has a lobby in Washington opposing the bill. We do not feel that that statement, coming from the source it does, should go uncontradicted. The company has not made, promoted, or encouraged opposition of any nature to the bill in Washington or elsewhere and any statement that it has is unfounded. It has no lobby or representative in Washington; is not in communication directly or indirectly with anyone there, and no one in Washington has any authority or warrant to speak for it or in its interest, and no one, no matter where, has any right, authority, or warrant to oppose the bill in its interest. When this company opposed the grant it did so openly and above board. We request that you have this telegram read to the Senate.

Spring Valley Water Co., By W. B. Bourne, President.

Mr. HOLLIS. I present two communications regarding the Hetch Hetchy bill, one from President Charles W. Ellot, for many years president of Harvard University, and the other from Frederick Law Olmsted, of Brookline, Mass., a member of the National Fine Arts Commission. I ask that they be read.

There being no objection, the communications were read and ordered to lie on the table, as follows:

Hon. HENRY F. HOLLIS.

CAMBRIDGE, MASS., November 7, 1913.

CAMBRIDGE, Mass., November 7, 1913.

Hon. Henry F. Hollis.

Dear Senator Hollis: The final vote on the present bill to transfer the Hetch Hetchy Valley from park uses to San Francisco water and power uses is to be taken in the Senate, I believe, on the 6th of December. Thinking that you have an open mind on the subject, and that you understand the value of parks in general, large or small, national, State, or municipal, I beg leave to put before you in compact form the arguments against the use of Hetch Hetchy Valley as a water and power supply for San Francisco.

In the first place, the presumption is strong against alienating to other uses any territory which has ence been appropriated to park uses. All reservations made for purposes of public health and enjoyment derive a large part of their power to give satisfaction and pleasure from their unquestioned permanence, from the people's sense that these open spaces with their woods, shrubs, grass, and flowers age to be enjoyed generation after generation, so long as the Government which created them shall endure. If Congress or a State legislature may be expected to alienate them at will, or to destroy parts of them from time to time, the people's sense of security in such possessions will be low or much impaired. Moreover, as the population of the country increases the need and value of parks of all sorts will surely increase; so that the passing generation should not part with public possessions which are already useful, but will surely be much more useful in the future. The granting of the valley to San Francisco weuld be a bad precedent.

Secondly, enjoyable park areas ought not to be diverted or applied to other public uses such as city water supplies, unless it can be shown that the need is extreme and can be met from no other source. This is not at all the case in regard to a water supply for San Francisco. There are plenty of other available supplies. The city wants to use the Hetch Hetch Valley merely because it will probably cost less to get a water supply from that source than from any of the nearer sources, and it can also make the valley the source of salable mechanical power.

Thirdly, far the most profitable use of the water which might be stored in the Hetch Hetchy Valley, the interests of the whole State and of the country being considered, would be its use for irrigation purposes on the farming lands which lie within easy reach of the valley. If any large amount of water is to be stored in the Hetch Hetchy Valley in the immediate or the remote future, it should be for the irrigation use, and not for the urban and suburban uses of faraway San Francisco. The time may come when the Hetch Hetchy Valley ought to be converted into a lake—to its great injury as a health and pleasure resort—but it should be for the purpose of increasing the food supply raised on a large area of the State's arable but too dry lands. If that time should come, it would be a heavy public loss if San Francisco had already secured its water supply from the Hetch Hetchy Valley, and so made it impossible to convert hundreds of square miles of arid lands not far from the valley into highly productive agricultural areas.

I venture to hope that you will become in the Senate a vigorous defender of all the national parks we have and an advocate of new national parks in New England. Why should not the hilly, wooded parts of Maine, New Hampshire, Vermont, Massachusetts, and Connecticut supply some national parks? The New England brooks and rivers need such parks in perpetuity, and need to have them policed, developed, and conserved by national authorities. Why should on

DENVER, Colo., October 11, 1913.

Hon. HENRY F. Hollis, United States Senate, Washington, D. C.

DEAR SENATOR HOLLIS: I find your letter of October 1, forwarded from Brookline, on my return here from a brief absence, and thank you

Dear Senators Hollis: I find your letter of October 1, forwarded from Brookline, on my return here from a brief absence, and thank you heartly for it.

As to the effect of the proposed dam and accessory features upon the value of the Hetch Hetchy Valley for the purposes of a national park, it would be entirely unsafe to conclude on general grounds or upon argument by analogy either that the effect would be seriously harmful or that it would be beneficial. For that reason, in the absence of direct personal investigation on the spot, I had formed not even a tentative opinion until Mr. Freeman put me in possession of the facts contained in his report, with the accompanying maps and photographs. It is my business to form judgments upon exactly this class of questions, and while I should be unwilling to render a professional opinion for pay upon such an important matter without a personal examination of local conditions, I did obtain sufficient data from Mr. Freeman's excellent report to form a decided personal opinion that the effect of his recommendations would be injurious to the park. As a citizen, I felt the matter to be important, and if I could have afforded to do so I should have gone to the Yosemite to confirm or modify this opinion by personal investigation. I did not feel able to do this, and can only offer my opinion for what it is worth under the circumstances. I will not attempt to traverse the grounds that led to my opinion on this point, but I may as well mention one point: The reservoir would of necessity fluctuate in level in the performance of its function of storage and regulation of flow. The floor of the valley has a very gentle inclination, and the fluctuation in water level would alternately cover and expose a long stretch of this bottom land at the head of the lake. I have not the exact facts at hand here, but the length of the mufats thus alternately and irregularly exposed and flooded, as shown by Mr. Freeman's data, would be very large and their appearance very unsightly.

Assuming my opi

thereto.

From all that I have been able to gather, it seems clear that this is not the case. It appears that an adequate water supply can be obtained by the city elsewhere at an expense which is not prohibitive or strikingly disproportionate to that incurred by some other large cities for similar purposes. On the other hand, it appears to be equally clear that to obtain a water supply for San Francisco by damming the Hetch Hetchy Valley and as a by-product developing and selling water power affords, from the engineering standpoint, a peculiarly favorable opportunity for an efficient economic solution of the problem. To this must be added the further economic advantage to the city involved in the hope that the United States will grant the land or easements in land necessary for the execution of the project without demanding compensation.

land necessary for the execution of the project without demanding compensation.

Two distinct questions are here involved. One is whether the development of some other water supply for San Francisco, with or without an incidental power development, would involve, as compared with the Hetch Hetchy project, an absolute economic waste sufficient to counterbalance the waste involved in depreciating the value of the Hetch Hetchy Valley for the purposes of a national park, and also sufficient to offset the presumption which requires that any public property deliberately set apart for a given public purpose shall not be diverted to any conflicting purpose unless the public advantage of so doing is very decided. Upon this question I am not in possession of enough facts to warrant me in forming a positive opinion; but I am certain that Mr. Freeman very greatly underestimates the loss of value to the park.

certain that Mr. Freeman very greatly underestimates the loss of value to the park.

The other question is whether Congress, as trustee for the people of the United States, owning the land in question, would be justified in giving away to the corporate representative of the taxpayers of San Francisco this confessedly valuable right to develop and sell water power and to collect, store, and sell water for agricultural and other purposes as well as for the use of the people of the city, not only without demanding a fair compensation for the value of the rights thus alienated, but at a positive sacrifice of a portion of the value of the national park for its primary purpose. To this second question I

can see but one answer: Congress would not be justified in so doing except as a necessary means of averting from the people of San Francisco a catastrophe such as would call for a similar contribution from the national purse if it threatened any city in the country. No such catastrophe is threatened, and I can view the demand of the city in no other light than as a raid on national property, for local pecuniary advantages, and not for local necessities.

If Congress makes the grant to the city the peculiar viciousness of the precedent would lie not so much in repeating the old story of giving away national property for the benefit of limited local interests as in the fact that it would be the first serious inroad of local or private interests upon the lands that have been definitely and specifically set apart as national parks. It is extremely difficult to appraise the extent of any given injury to the recreation value of a park in such a definite manner as to make a clear case against the plea of a strong special interest, although the cumulative effect of such injuries may be enormous; and for this reason it is peculiarly important in the administration of parks to avoid a precedent that will weaken the presumption against every act that tends in any degree to impair their value as places of public recreation.

I received by the same mail as your letter one from Mr. Allan Chamberlain, of Boston, an active opponent of the Hetch Hetchy bill. He writes that almost the only hope of defeating the bill appears to be that of getting the Senate leaders to put the matter over until the December session for a more complete inquiry into its merits. He adds that Mr. Muir is of the opinion that the public sentiment in California is beginning to turn strongly against the city's position, and says that new facts are coming out all the time which will greatly strengthen the case against the bill by December.

I hope, therefore, that you will not only vote against the bill when it comes up, as you propose, but that you may be

FREDERICK LAW OLMSTED.

Mr. ASHURST. Mr. President, I present a telegram from Hon. H. D. Ross, one of Arizona's most valued public servants, a judge of the Supreme Court of the State of Arizona, urging me to vote for the Hetch Hetchy bill. I ask that the telegram

may be read at the desk.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read the telegram, as follows:

PHOENIX, ARIZ., December 5, 1913.

Senator ASHURST, Washington, D. C .:

Personally I am strongly favorable to Hetch Hetchy bill and would like to see you vote for it.

Mr. ASHURST. Mr. President, as I said on yesterday, I presume I have received 4,000 communications regarding the Hetch Hetchy bill. I have received many hundreds of communications from my own State urging me to vote for the Hetch Hetchy bill, but this morning I have received a communication from a

very worthy and cultured lady of that State urging me to vote against the bill. I ask that it may be read at the desk and incorporated into the RECORD.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

PHOENIX, ARIZ., November 39, 1913.

PHOENIX, ARIZ., November 39, 1913.

Hon. Henry F. Ashurst,
United States Senate, Washington, D. C.

Dear Sir: I trust that it seems as sacrilegious to you as it does to me to grant to the city of San Francisco for reservoir purposes the beautiful Hetch Hetchy Valley; if so, you will by argument and vote oppose the bill on December 6.

I urge you to do this and thus save to the people—the people of Arizona, the people of the whole country—this beautiful valley, which should be to them a joy and inspiration.

Yours, sincerely,

(Mrs. B. A.) Ella O. Fowler.

(Mrs. B. A.) ELLA Q. FOWLER.

Mr. BRISTOW. Mr. President, I have here a memorial from a number of very worthy citizens of Kansas, protesting against the passage of the Hetch Hetchy bill. I have received a large number of communications, not only from my own home State but from other States, on both sides of this question; a majority of them, however, being against the bill. The memorials I have received from Kansas have been very largely against the bill, by very worthy people, and opposing it for reasons quite similar to those which have been contained in other communications which have been read to the Senate. I present this memorial to the Senate for proper reference, and take this occasion to say that its signers are among the best people of our

The VICE PRESIDENT. The memorial will lie on the table. Mr. WORKS. Mr. President, I have received a couple of short telegrams that I should like to have read.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read the telegrams, as follows:

LONG BEACH, CAL., December 4, 1913.

. JOHN D. WORKS, United States Senate, Washington, D. C .:

The Women's City Club, of Long Beach, to-day unanimously adopted a resolution most emphatically protesting against the despoilation of Hetch Hetchy Valley, as proposed by citizens of San Francisco. The claim that the waters are urgently needed by that city we regard as

entirely unsupported by facts, and we further believe that the divergence of these waters as proposed would work irreparable injury upon settlers in the San Joaquin Valley, who depend entirely upon that source of supply.

Mrs. C. F. A. Johnson, President. Mrs. May B. Moore, Secretary.

STOCKTON, CAL., December 4, 1913.

Hon, John D. Works,

Senate Chamber, Washington, D. C.:

Stockton School Women's Club, 96 members, protest against the destruction of Hetch Hetchy Valley, a national playground, and urges you to oppose any bill which will permit San Francisco to use Hetch Hetchy Valley for municipal purposes.

ETHEL BONNEY President.

ETHEL BONNEY, President. ALMA C. SIMON, Secretary.

PETITIONS.

Mr. BURLEIGH presented resolutions adopted by the Chamber of Commerce of Waterville, Me., favoring the adoption of a 1-cent letter postage, which were referred to the Committee on Post Offices and Post Roads.

Mr. WEEKS presented a petition of the congregation of the Methodist Episcopal Church of Chester, Mass., praying for the passage of the so-called antipolygamy bill, which was referred to the Committee on the Judiciary.

BRIG "LITTLE JOHN BUTLER."

Mr. BRYAN. A day or two ago the Presiding Officer laid before the Senate communications from the chief justice of the Court of Claims, requesting the return of papers in certain cases, and they were referred to the Committee on Claims for action. I send to the desk three resolutions reported from the Committee on Claims, each of them designed to comply with the request of the chief justice of the Court of Claims. I ask unanimous consent for the present consideration of the resolutions.

The VICE PRESIDENT. The Senator from Florida reports a resolution, which will be read.

The resolution (S. Res. 228) was read, as follows:

Resolved, That in compliance with a communication from the chief justice of the Court of Claims, the Secretary of the Senate be, and he is hereby, directed to return to the Court of Claims the following French spoliation case, namely, the brig Little John Butler, Smith, master, for further examination, and the said court is hereby authorized to proceed in said case as if no return therein had been made to the Senate.

The VICE PRESIDENT. Is there objection to the Senate.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

Mr. BRISTOW. May I inquire of the Senator from Florida if the claim has been allowed by the court in this case?

Mr. BRYAN. I am not sure about it. The findings of the

The VICE PRESIDENT. The Chair can give the information to the Senator from Kansas. The claim was allowed and referred to the committee, and upon yesterday or the day before the chief justice of the Court of Claims requested the return of the papers

Mr. BRISTOW. I do not intend to oppose the resolution at all.

Mr. BRYAN. Some finding has been made, but, as I understand, an application has been made for a new trial, and the court requests the return of the papers for further considera-

Mr. BRISTOW. I do not care to oppose the resolution at all, but the French spoliation claims grow year by year, and every time the court gets at them there is official evidence that has been accumulating during the century to increase the amount which ultimately the Government will have to pay, not because it is just but because the evidence against the claims has long been lost

Mr. BRYAN. That will not affect the merits of the case and will not control the Senate in its action.

The resolution was considered by unanimous consent, and agreed to.

ADAM L. ROSE V. UNITED STATES.

The VICE PRESIDENT. The Senator from Florida [Mr. BRYAN] reports another resolution, which will be read.

The resolution (S. Res. 229) was read, as follows:

Resolved, That in compliance with the request of the chief justice of the Court of Claims, under date of August 4, 1913, the Secretary of the Senate be, and he is hereby, instructed to return to the Court of Claims the findings of that court in the following case, namely, Adam L. Rose v. The United States, No. 13727-132, contained in Senate Document 432, Sixty-first Congress, second session, and the said court is hereby authorized to proceed in said case as if no return therein had been made to the Senate.

The Senate proceeded to consider the resolution.

The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

The resolution was agreed to.

T. L. LOVE V. THE UNITED STATES.

The VICE PRESIDENT. The Senator from Florida [Mr. BRYAN] reports another resolution, which will be read.

The resolution (S. Res. 230) was read, as follows:

Resolved, That in compliance with a communication from the chief justice of the Court of Claims, the Secretary of the Senate be, and he is hereby directed to return to the Court of Claims the following congressional case, namely, of T. L. Love, surviving partner of Robert Love & Son, v. The United States, No. 12781, and the said court is hereby authorized to proceed in said case as if no return therein had been made to the Senate.

The Senate proceeded to consider the resolution. The VICE PRESIDENT. Is there objection to the present consideration of the resolution?

The resolution was agreed to.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BURTON:

A bill (S. 3500) granting an increase of pension to Leander R. Sayles; to the Committee on Pensions.

By Mr. OVERMAN:

A bill (S. 3561) to appoint Frederick H. Lemly a passed assistant paymaster on the active list of the United States Navy; to the Committee on Naval Affairs.

By Mr. CHAMBERLAIN:

bill (S. 3562) granting a pension to Ellenor M. Watson (with accompanying paper); to the Committee on Pensions. By Mr. SWANSON:

A bill (S. 3563) to authorize the Secretary of the Treasury to acquire, by condemnation or otherwise, such additional land as may be necessary for the enlargement of the post-office building in the city of Norfolk, Va., to cause said building to be enlarged, and making an appropriation therefor; to the Committee on Public Buildings and Grounds.

A bill (S. 3564) to provide for an examination and survey of the Norfolk-Portsmouth Harbor and entrances thereto from the Virginia Capes, with a view to increasing the depth of the channel to 40 feet from the Norfolk Navy Yard to the said

capes; to the Committee on Commerce.

By Mr. JONES: A bill (S. 3565) granting an increase of pension to Louis W.

A bill (S. 3566) granting an increase of pension to Jeremiah Robbins;

A bill (S. 3567) granting an increase of pension to Mary J.

chenck (with accompanying papers); A bill (S. 3568) granting a pension to Elizabeth E. Harris (with accompanying papers); and

A bill (S. 3569) granting an increase of pension to William McKinzy (with accompanying papers); to the Committee on Pensions.

By Mr. McLEAN:

A bill (S. 3570) granting an increase of pension to Clarkson

D. Ayers (with accompanying papers); and A bill (S. 3571) granting an increase of pension to Curtis B. Ralph (with accompanying papers); to the Committee on Pensions.

By Mr. WARREN:

A bill (S. 3572) granting to various States public lands for the construction, repair, and maintenance of public roads; to the Committee on Public Lands. By Mr. WEEKS (for Mr. LODGE):

A bill (S. 3573) granting an increase of pension to Sylvester Rhodes (with accompanying papers); to the Committee on Pensions.

By Mr. BANKHEAD:

A bill (S. 3574) granting a pension to Winona Hawthorne Buck; to the Committee on Pensions.

By Mr. O'GORMAN;

A bill (S. 3575) to supplement and amend the act entitled "An

act to incorporate the North River Bridge Co. and to authorize the construction of a bridge and approaches at New York City across the Hudson River, to regulate commerce in and over such bridge between the States of New York and New Jersey, and to establish such bridge a military and post road," approved July 11, 1890; to the Committee on Commerce.

AMENDMENT OF THE RULES.

Mr. SHEPPARD. In accordance with the notice I gave yesterday, I submit the following resolution and ask that it be read:

The resolution (S. Res. 231) was read, as follows:

The resolution (S. Res. 251) was read, as follows:

Resolved, That Rule XXV of the standing rules of the Senate shall
be amended as follows:

"Insert, after the paragraph which reads 'A Committee on Revolutionary Claims, to consist of five Senators,' a new paragraph, to read
as follows: 'A Committee on Roads, to consist of 17 Senators, to which
shall be referred all proposed legislation relating to the construction and
maintenance of roads.'

The VICE PRESIDENT. The resolution will be referred to the Committee on Rules.

Mr. SMOOT. I desire to give notice that during the session of the next legislative day of the Senate, or at a later day, I will offer an amendment to paragraph 1, Rule XXIX. nection with this I ask that the proposed amendment to the lles may be read. (S. Res. 234.)
The VICE PRESIDENT. The Secretary will read as rerules may be read.

The Secretary read as follows:

Amend paragraph 1 of Rule XXIX by inserting, in line 8, between the words "Senate" and "otherwise," the words "shall by vote," so that the paragraph as amended shall read:

"1. Every motion to print documents, reports, and other matter transmitted by either of the executive departments, or to print memorials extend to the state of the executive departments, or to print memorials extend the executive departments. transmitted by either of the executive departments, or to print memorials, petitions, accompanying documents, or any other paper, except bills of the Senate or House of Representatives, resolutions submitted by a Senator, communications from the legislatures or conventions, lawfully called, of the respective States, and motions to print by order of the standing or select committees of the Senate, shall, unless the Senate shall by vote otherwise order, be referred to the Committee on Printing. When a motion is made to commit with instructions, it shall be in order to add thereto a motion to print."

The VICE PRESIDENT. The notice will be entered.

HOUR OF DAILY MEETING.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a preceding day, which the Secretary will read.

The Secretary read the resolution (S. Res. 225) submitted by

Mr. Kern on the 1st instant, as follows:

Resolved, That the hour of daily meeting of the Senate be 10 o'clock a.m., and that the Senate shall on each day at 6 o'clock p. m. take a recess until 8 o'clock p. m. and adjourn at 11 o'clock p. m., until otherwise ordered.

Mr. TOWNSEND. Mr. President, I have but little to say in completion of the statement which I started yesterday, and which I was unable to conclude then because of the expiration

of the morning hour.

I suggested that I considered this resolution unwise, first, because it is unnecessary and, second, because it seems to me to be entirely impotent to promote the intelligent and speedy consideration of the business of legislation. It is unnecessary, because the majority of the Senate is Democratic, and it is entirely docile and subservient to any orders which may be given it, and it can certainly from day to day arrange the hours which seem necessary for the purpose of considering any matter.

The history of the proposed currency legislation is that the bill came here from the House in such a condition that it is now admitted, I believe, by all Senators that it would have been unwise to have enacted it into law in its then condition. Through the intelligent efforts of the committee, changes were made in the bill which more nearly meet the necessities of an This was done through deliberation, through acceptable law. This was done through deliberation, through careful and intelligent discussion and exchange of views. After the committee had reported the bill to the Senate-in fact, after it had made two reports to the Senate, six members of the committee being in favor of one report and six in favor of another—on the 24th day of last month, a week ago last Monday, the Senate for the first time had something of a definite idea of what was proposed for consideration. A week later than that, after the caucus of the Democratic Party had considered the bill, rewritten it, and virtually passed it, it was printed and submitted to the Senate again, namely, on Monday of this week. Then, again, we had a new proposition submitted to the Senate, and with it came this resolution compelling Senators to come here at 10 o'clock in the morning, thus obliging them to deny themselves the privilege of attending committee meetings and of looking after their correspondence, and to remain in session until 11 o'clock at night.

This is certainly an extraordinary proposition, and one that I have never before known in any matter of legislation. It is further openly admitted that there has been no effort made to filibuster or to retard currency legislation. It is conceded that Senators are honestly intent on getting the best possible law for the country, and yet, I repeat, this extraordinary resolution is submitted and extraordinary reasons are given for its

adoption.

The experience of this week shows that we have not made any more progress, and we have not made as careful progress as we would have made had not the legislative hours been lengthened.

We were bound under the unanimous-consent order to vote to-night on the Hetch Hetchy bill, and the longer hours have not hastened, could not hasten, that vote.

I said yesterday that history was repeating itself.

All of us remember that 20 years ago there was a Democratic bill passed revising the tariff. We were promised by the Democrats at that time the same conditions of prosperity which the proponents of the late tariff bill recently promised the country. They did not materialize. The results were not what they

expected. Three years later the issue was changed from the tariff to the currency measure, and the Democratic Party insisted that the trouble with the country, and it was in great trouble, was the lack of proper currency laws. That was made the issue in the campaign 17 years ago. We know that that proposition did not prevail in the ensuing election, and prosperity did return to the country with the exactment of a protective tariff.

It seems to me we are confronted with exactly the same situation now. We have passed a tariff bill which, it was stated, was going to increase the prosperity of the country. is a significant fact that in the last address of the President of the United States to Congress no reference was made to the tariff or to its workings. It was eloquently silent on that subject. It is another significant fact already admitted by Senators on the other side that there is a condition of unrest and uncertainty, there is a disturbance of business in the country; but they say it is largely due to the fact of the uncertainty as to currency legislation—the same old excuse that was uttered 17 years ago. Mr. O'GORMAN. Mr. President-

The VICE PRESIDENT. Does the Senator from Michigan yield to the Senator from New York?

Mr. TOWNSEND. I yield. Mr. O'GORMAN. I fear the Senator from Michigan is laboring under a misapprehension when he states that it has been claimed by any Democrat that the business unrest or disturbance which may prevail in this country is due to the pendency of currency legislation. It is generally recognized that the condition of business unrest at the present time is world-wide, and is not due to any local cause. It is felt in every section of the world, and business in this country is affected by that condition, as business in every other country is affected. In this situation, however, every course taken by the Congress of the United States that may have a tendency to improve conditions ought to be encouraged by every patriotic citizen, particularly in this body, whether on that side or on this.

In this connection I am tempted to say that we may well challenge the patriotism of a public official who needlessly strives to make conditions worse than they are, particularly for

partisan advantage.

Mr. TOWNSEND. Mr. President, that excuse sounds familiar. It is always urged that something else is the cause of the unfortunate condition; but it is a notorious fact that whenever the Democratic Party has sought to change the tariff of this country, and has succeeded, excuses of this kind have been necessary, because depression has occurred. It, however, is a remarkable coincidence that Democratic control of this country is accompanied by business depression and hard times.

I agree with the Senator from New York that it is the duty of Senators and of all men, Democrats and Republicans alike, to assist in legislation which will make for peace and pros-perity. I have tried to do that, but by secret-caucus legislation I have been denied all rights except the right to protest. The Republican Members of the Senate are in favor of wise currency legislation. They are in favor of speedy enactment on that question. They have commended the Senator from New York because he dared stand out against what seemed the inevitable, and assist in making changes in a bill which will tend for prosperity instead of for the condition which would have prevailed had the original bill passed.

All they are pleading for now, sir, is that the bill shall be considered upon its merits and considered under such circumstances as will bring about the best possible results. Nobody wants to delay action. Nobody wants to hinder the legislation. I am as anxious as any man can be for a good law. As I said yesterday, if we had been looking for partisan advantage, we would have insisted upon the passage of the bill as it came to the Senate; and if partisanship had been all that was being sought the Republican members of the committee could have well refrained from taking part in its consideration. Because I want to avert disaster, I am pleading for intelligent nonpartisan consideration of the currency bill.

Mr. President, when Congress shall have passed the currency bill under the proposed rule there will be some other excuse offered for the unfortunate condition of the country—some other important legislation will be advocated—but all these will be of little avail, for the cause of the trouble that exists to-day and will exist to-morrow is the change of the fiscal policy of the country, which is showing itself in its disastrous effects not only upon production, but upon the revenues of the country. No permanent cure can be effected until the American policy of protection under which our prosperity has been attained shall have been restored. There lies the remedy. The respon-sibility for present conditions must be met by the Democratic Party. It can not be put aside by the suggestion that some other legislation is necessary in order to complete the work which is already begun. The people will judge by results and

not by promises

I am opposed to this resolution, and shall vote against it, because, as I said in the first place, I do not believe it is intended to promote the interests of careful, considerate, and wise legislation. I think the Senate can well afford to take up this question from day to day as it comes. If the majority of the Senate will be in its seats, there will be no question about its ability to legislate, because there will be no disposition on this ability to legislate, because there will be no disposition on this ability to legislate. this side to filibuster. I am willing to come here at any time and assist in legislation, but I want to be given the opportunity I do not want the questions foreclosed before they are submitted to the Senate, and then be compelled to sit here from 10 o'clock in the morning until 11 o'clock at night to assist the other side in maintaining a quorum to carry out the plan which they have already adopted.

Therefore I shall vote against the resolution. Mr. SHAFROTH. Mr. President, if the Senator from Michigan is so anxious to proceed in this matter, it seems to me he should be willing to take a vote soon upon the resolution which has been introduced by the Senator from Indiana.

Mr. TOWNSEND. I am ready to vote now, Mr. President.

[Laughter.]

Mr. SHAFROTH. I desire to say just a word. I will not occupy much time. [Laughter.] Very well; if the Senator is willing to vote now, let us have a vote.

The VICE PRESIDENT. The Chair understands that the Senator from New Hampshire has withdrawn his amendment.

Mr. GALLINGER. I have withdrawn it.

The VICE PRESIDENT. The question is upon agreeing to the resolution proposed by the Senator from Indiana. [Putting

the resolution proposed by the Senator from Indiana. [Putting the question.] By the sound, the ayes have it.

Mr. SUTHERLAND. I call for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. CHILTON (when his name was called). I have a general pair with the junior Senator from Maryland [Mr. Jackson]. If he were present, I should vote yea. I understand he would vote nay, and in his absence I withhold my vote.

Mr. GALLINGER (when Mr. Roor's name was called). The senior Senator from New York [Mr. Roor] is necessarily absent.

He is paired with the Senator from South Carolina [Mr. SMITH] and requested me to announce that if he were present and privi-

leged to vote he would vote against this resolution.

Mr. SIMMONS (when his name was called). I have a general pair with the junior Senator from Minnesota [Mr. Clapp], who is unavoidably absent from the Chamber; but before leaving the Chamber he advised me that if he were present he would vote as I should vote. Therefore I am authorized to vote, and

Mr. SMITH of Georgia (when his name was called). a general pair with the senior Senator from Massachusetts [Mr. Mr. STERLING (when his name was called). I announce my pair with the senior Senator from Oklahoma [Mr. Owen].

Mr. SUTHERLAND (when his name was called). I inquire

whether the Senator from Arkansas [Mr. CLARKE] has voted? The VICE PRESIDENT. He has not.

Mr. SUTHERLAND. I have a pair with that Senator, and in his absence I withhold my vote.

Mr. KERN (when Mr. Tillman's name was called). The senior Senator from South Carolina [Mr. Tillman] is detained from the Senate by illness. If he were present, he would vote "yea."

The junior Senator from South Carolina [Mr. SMITH] is un-

avoidably absent from the Senate on account of severe illness

in his family

Mr. WILLIAMS (when his name was called). I have a pair with the Senator from Pennsylvania [Mr. Penrose]. I transfer that pair to the junior Senator from Virginia [Mr. Swanson] and vote "yea."

The roll call was concluded.

Mr. DILLINGHAM. I have upon this question a pair with the senior Senator from Maryland [Mr. SMITH], for which reason I withhold my vote. If permitted to vote, I would vote "nay."

Mr. WEEKS. I wish to state that my colleague [Mr. Lodge] is absent on account of illness and that he has a general pair

with the junior Senator from Georgia [Mr. SMITH].

Mr. SUTHERLAND. I will transfer my pair with the Senator from Araknsas [Mr. Clarke] to the Senator from Maine [Mr. Burleigh] and vote. I vote "nay."

Mr. STERLING. I wish to announce the unavoidable absence of my colleague [Mr. Crawford], and to state that he is paired with the senior Senator from Tennessee [Mr. Lea].

Mr. CHILTON. I transfer my pair with the Senator from Maryland [Mr. Jackson] to the Senator from Oklahoma [Mr. Gore] and vote "yea."

Mr. SMOOT. I desire to announce that the Senator from Del-

aware [Mr. DU PONT] is unavoidably detained from the Senate, and that he has a general pair with the senior Senator from Texas [Mr. Culberson].

Mr. REED (after having voted in the affirmative). I voted a moment ago without recollecting that I have a conditional pair with the Senator from Michigan [Mr. SMITH]. I transfer that pair to the Senator from Mississippi [Mr. VARDAMAN], and allow my vote to stand.

Mr. GOFF. I transfer my pair with the Senator from Alabama [Mr. Bankhead] to the senior Senator from Illinois [Mr.

SHERMAN] and vote "nay."

Mr. CHILTON. I announce the necessary absence of the Senator from Oregon [Mr. CHAMBERLAIN] and his pair with the junior Senator from Pennsylvania [Mr. OLIVER].

Mr. SHIVELY. The Senator from Arizona [Mr. SMITH] has been called to one of the executive departments on important public business. He is paired with the Senator from New Mexico [Mr. Fall]. Were the Senator from Arizona present, he would vote "yea."

Mr. WEEKS. I should have announced when I had the floor

that the Senator from Illinois [Mr. Sherman] is absent on ac-

count of illness

Mr. OVERMAN. I wish to announce that the Senator from Alabama [Mr. Bankhead] is absent at one of the departments on public business, and that if he were present he would vote yea."

Mr. GALLINGER. I have been requested to announce a pair between the Senator from New Mexico [Mr. CATRON] and the

Senator from Nebraska [Mr. HITCHCOCK].

The result was announced—yeas 41, nays 18, as follows:

James Johnson Kenyon Kern La Follette Lewis Martine, N. J. Myers Norris O'Gorman Overman	Perkins Pittman Pomerene Reed Robinson Saulsbury Shafroth Sheppard Shields Shively Simmons	Smith, Ga. Smoot Stone Thomas Thompson Thornton Walsh Williams

So the resolution was agreed to.

ADMINISTRATION OF THE LAND LAWS.

The VICE PRESIDENT. The Chair lays before the Senate resolution coming over fror a previous day. It will be read. The Secretary read Senate resolution 226, submitted by Mr. CLARK of Wyoming on the 2d instant, as follows:

CLARK OF Wyoming on the 2d instant, as follows:

Resolved, That the Secretary of the Interior be directed to furnish to the Senate the cost and expense of administering the land laws of the United States for the fiscal years 1908, 1909, 1910, 1911, and 1912, respectively, including rents, salaries of officers in Washington and elsewhere, and salaries, expenses, and subsistence of all agents, servants, and employees wherever and whenever employed, together with all and every expense incurred in or on behalf of the administration, supervision, care, and disposal of the public lands of the United States during the years mentioned.

The VICE PRESIDENT. The question is on agreeing to the resolution

Mr. BURTON. I should like to ask a question in this connection. Does the resolution contemplate including the expense of the Forest Service?

Mr. CLARK of Wyoming. It does not, because the Secretary of the Interior could not furnish that information. It must

come from the Secretary of Agriculture,
Mr. McCUMBER. Why could not the Senator ask in connection with that information, so that we may better understand all the matters pertaining to it, the sources of income from the Land Department?

Mr. CLARK of Wyoming. It is my purpose to follow this resolution with others, one directed to the Forest Service and the other directed to the amount of income derived from the lands; but I thought it was best in this single resolution simply

to ask for the cost of the administration of the land laws.

Mr. McCUMBER. The Senator speaks only of the income derived from the lands. I should like to know, if I could get the figures—they may be in the reports already—the amount of the income derived from the general sale and disposal of public

Mr. CLARK of Wyoming. I desire to have that information, and it is my intention to offer another resolution covering it, but this resolution refers only to the expense of the administration of the land laws.

Mr. McCUMBER. Very well; if it is covered in one of the

resolutions.

Mr. CLARK of Wyoming. I have not as yet offered it. The VICE PRESIDENT. The question is on agreeing to the resolution.

The resolution was agreed to.

#### SAN FRANCISCO WATER SUPPLY.

Mr. THOMAS. I have just received a telegram, which I desire to read into the RECORD.

SAN FRANCISCO, CAL., December 5, 1913.

SAN FRANCISCO, CAL., December 5, 1913.

Hon. Chas. S. Thomas,
Senate, Washington, D. C.:

The California Water Commission act, supplementing previous State legislation, furnishes ample State power to protect fully interests of water users on San Joaquin drainage and Insures San Francisco water supply for municipal needs from same source. Bases on Installation of storage and use. Facilities by San Francisco available for all rightful users. Interests comprising power companies and promoters of private water schemes to mulet not only San Francisco but people of the State now opposing Hetch Hetchy act opposed passage water commission bill before last legislature and are engineering referendum to delay its operation. Among the active representatives of these Interests at Sacramento was Theodore A. Bell.

Francis J. Heney.

FRANCIS J. HENEY.

#### ELECTION OF SENATORS.

Mr. WALSH. Mr. President, yesterday morning I sought to get consideration for the bill (S. 2860) providing a temporary method of conducting the nomination and election of United States Senators. I now ask unanimous consent for the present consideration of that bill. I invite the attention of the Senator from Kentucky [Mr. Bradley] to the request. It comes up on a report from the Committee on Privileges and Elections recommending a measure providing for the election of United States Senators in various States under the recently adopted constitutional amendment, and making effective for that purpose such laws as are now in force in the various States touching the nomination and election of Representatives in Congress at large, and in case there is no such law making applicable the general laws of the States concerning the nomination and election of

the principal administrative and executive officers of the States.

Mr. CLARK of Wyoming. Will the Senator permit me a question? Does the Senator understand that the bill will give

rise to very much debate?

Mr. WALSH. I should imagine not. Otherwise I should not now make the request, but I expect some response possibly to the request from the Senator from Kentucky.

Mr. BRADLEY. I did not exactly catch the motion of the

Senator.

Mr. WALSH. I asked unanimous consent for the present consideration of the measure.

Mr. BRADLEY. I object. The VICE PRESIDENT. There is objection.

Mr. SUTHERLAND. Mr. President, I hope the Senator from Montana will move to proceed to the consideration of the bill, notwithstanding the objection. It is a very important measure. It is a bill that ought to have been passed months ago. had been passed we would have saved the difficulty with the Maryland case and the difficulty with the Alabama case; and the longer the matter is delayed the more likely it is that other cases of a similar character will come up. I think the bill ought to be disposed of.

Mr. WALSH. If the motion is in order, I move

Mr. CLARK of Wyoming. Mr. President, I hope the Senator from Montana will not make that motion, and for this reason: I for one am in favor of the passage of the bill, but the motion will evidently, from the objection that has been made, lead to some considerable debate. Of course, the Senator will recognize that this time has been given by unanimous consent to the consideration of the Hetch Hetchy bill, and I think that ought to be concluded.

Mr. WALSH. Mr. President, I appreciate the great force of the suggestion made by the Senator from Wyoming, and if the

consideration of the measure were to give rise to any considerable debate I should not press it at this time. Of course, the Senator from Kentucky will probably be able to advise us best concerning the likelihood of protracted debate.

I may say in this connection, however, that I gather from the expressions of the Senator from Kentucky in the committee that the only reason why he objects to present consideration is that in his judgment it might be considered as in some measure prejudging the questions arising upon the credentials which have been presented from Alabama and from Maryland. really feel that upon reflection the Senator from Kentucky will not be likely to think so, and, so far as those supporting the bill are concerned, I think I shall be able to speak for them when I say that none of them feel that it will or that it has any right to be considered as in any manner a prejudgment of the merits of either of those controversies.

Mr. GALLINGER. Mr. President, I am very warmly in favor of the bill, but I feel constrained to call attention to the fact that the motion is not debatable under the rule.

The VICE PRESIDENT. The Chair is compelled to rule as the Senator from New Hampshire has suggested. The question

is, Will the Senate proceed to the consideration of the bill?

Mr. CLARK of Wyoming. Mr. President, I make the point of order that the motion is not in order under the unanimous-

consent agreement.

The VICE PRESIDENT. If there is an objection, the Chair will be compelled to sustain the point of order. The morning business having been closed, the Chair lays before the Senate House bill 7207, in accordance with the unanimous-consent agreement.

#### SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

Mr. NORRIS obtained the floor.

Mr. PITTMAN. Will the Senator from Nebraska permit the reading of two or three telegrams before he commences?

Mr. NORRIS. I yield to the Senator from Nevada. Mr. PITTMAN. The reason why I ask this permission is because these telegrams may be of use to the Senator in the address he is about to make on the bill, and they are particularly introduced at this time because the Senator from Idaho [Mr. BORAH], in addressing the Senate yesterday, argued that San Francisco was given an unfair advantage or an unreasonable monopoly of this water over the other bay cities. As the other bay cities probably understand the circumstances better than even the Senator from Idaho, I send these telegrams to the desk

and ask that they be read by the Secretary.

The VICE PRESIDENT. Is there objection?

Mr. BORAH. Mr. President, I have no objection to the reading of the telegrams. I presume the telegrams originated something like all the agreements which were made outside with reference to this bill. But I was arguing the grant upon the face of the bill itself, and the telegrams can not change the terms of the grant. We can only change that by a vote of the Senate. If the Senator from Nevada does not think that the words to which I called attention give a special privilege, will the Senator from Nevada join with me in striking them out of the bid?

Mr. PITTMAN. I do not desire to trespass upon the time of the Senator from Nebraska, but I will take great pleasure in answering that a little later in the day when answering a great

portion of the Senator's remarks.

Mr. BORAH. I will be glad to be present. Mr. PITTMAN. I want to say in regard to these telegrams that while it might be a matter of construction as between us as to whether San Francisco is given a monopoly over the other bay cities, the other bay cities desire that the bill shall be passed. I do not believe that there is any such intention; at least they have confidence in the intention of San Francisco in this matter. They have confidence in the integrity of the government of San Francisco, and the telegrams go to show at least that the object of the obtaining of this water is not solely for the use of San Francisco, but it is for the joint use of all the

bay cities which require the water.

Mr. BORAH. I take it if they have confidence in the integrity of the government of San Francisco it must be of late

origin.

Mr. PITTMAN. We have a new administration in San Francisco, and I am very glad to say that the old administration is the one that tried to defeat and prevent the passage of this bill for a great many years. The present administration is very much in favor of the passage of the bill.

The VICE PRESIDENT. The telegrams will be read, as requested by the Senator from Nevada.

The Secretary read as follows:

OAKLAND, CAL., December 5, 1913.

Hon. Key Pittman, Washington, D. C.:

Any statement that this city and other bay communities are opposed to the Hetch Hetchy project is absolutely false. Sentiment here is overwhelmingly in favor of Hetch Hetchy water supply and for passage of the bill.

FRANK K. MOTT, Mayor City of Oakland.

BERKELEY, CAL., December 5, 1913.

BERKELEY, CAL., December 5, 1913.

Senator Key Pittman,
Senate Chamber, Washington, D. C.:

The city of Berkeley, which is as vitally interested in the solution of the water question for the San Francisco Bay district as the city of San Francisco, joins with the representatives of that city in an earnest appeal that the Hetch Hetchy grant be given to San Francisco at this time.

CHARLES B. HEYWOOD,
Mayor of Berkeley.

SAN JOSE, CAL., December 5, 1913.

Senator Key Pittman, Washington, D. C .:

The passage of the Hetch Hetchy bill will be of great benefit to San Jose and Santa Clara County.

Jos. Monahan, Mayor of San Jose, Cal.

SAN FRANCISCO, CAL., December 5, 1913.

Hon. KEY PITTMAN, Washington, D. C.:

All of the peninsular cities, as well as San Francisco, urgently require a greater and better water supply. Hetch Hetchy is the solution absolutely necessary, not only for present needs but for their future development. Five millions of people can find homes and health on the peninsula, but we must have pure water if this development is to be realized. We stand with San Francisco and demand Hetch Hetchy.

GUSTAY J. McGREGOR,

Mayor of Burlingame.

SAN FRANCISCO, CAL., December 5, 1913.

San Francisco, Cal., December 5, 1913.

Senator Key Pittman,
United States Senate, Washington, D. C.:
Following additional indorsements of San Francisco's Hetch Hetchy bill have been received from large labor organizations throughout United States: Elkhart Central Labor Union, Elkhart, Ind.; W. W. Scherling, secretary Central Labor Union of Lancaster and Depew, N. Y.; William J. Gerringer, secretary Central Trades and Labor Assembly of Syracuse, N. Y.; Charles A. Yates, secretary Everett Trades Council, Everett, Wash.; M. T. Allmian, secretary Kokomo Trades and Labor Council, Kokomo, Ind.; S. Banner, secretary Lansing Trades and Labor Council, Lansing, Mich.; M. J. Early, secretary Union County Central Labor Union, Elizabeth, N. J.; George J. Reiss, secretary Kewanee Trades and Labor Assembly, Kewanee, Ill.; W. H. Aldrich, secretary Eureka Federated Council, Eureka, Cal.; B. Kropp, secretary Bloomington Trades and Labor Assembly, Bloomington, Ill.; O. D. Stiles, secretary Waterbury Central Labor Union, Waterbury, Conn.; J. T. Burke, secretary Central Federated Union of Greater New York; John C. O'Brien, secretary Galveston Labor Council, Galveston, Tex.; James P. Walsh, secretary Georgia Federation of Labor, Savannah, Ga.; Robert Fechner, secretary.

JOHN A. O'CONNELL.

JOHN A. O'CONNELL Secretary San Francisco Labor Co

Mr. NORRIS. Mr. President, I am not physically able to-day to do justice to the subject upon which I shall try to speak; and if it were not for the fact that, after as intelligent and painstaking and honest investigation as I have been able to make I have become enthusiastically in favor of this bill, I should not detain the Senate at this time.

Mr. President, the Yosemite National Park contains about 15,000 square miles. You could drop the State of Rhode Island into it and it would be almost lost. Hetch Hetchy Valley, it is true, is within the Yosemite National Park and therefore a part of it, but the Hetch Hetchy Valley is 40 miles from the Yosemite Valley on a different watershed, and there is practically

no communication between one valley and the other.

I mention this because there are millions of honest citizens in the United States to-day who have, by misrepresentation, been led to believe that Congress in the passage of this bill is about to destroy Yosemite Valley.

Let us see for just a few moments what the Hetch Hetchy Valley is; and, for the purpose of illustration, I want to assume that the Senate Chamber here is Hetch Hetchy Valley.

Mr. MYERS. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Montana?

Mr. NORRIS. I yield to the Senator. Mr. MYERS. I suggest the absence of a quorum. The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst Gallinger Myers Norris Overman Page Perkins Simmons Bacon Goff
Hollis
Hughes
James
Johnson
Jones
Kenyon
Kern
La Follette
Lewis
Lippitt
McCumber
Martine, N. J. Smoot Stephenson Bradley Brady Brandegee Bristow Sterling Sutherland Thomas Thompson Thornton Pittman Poindexter Pomerene Bryan Burton Chilton Clark, Wyo. Clarke, Ark. Thornton Townsend Walsh Warren Weeks Williams Ransdell Reed Robinson Saulsbury Colt Cummins Dillingham Fletcher Shafroth

Mr. SHAFROTH. I wish to announce that the Senator from Oklahoma [Mr. Owen] is engaged to-day in matters concerning legislation and will be absent all day. I wish this announcement to stand for the day.

Mr. LEWIS. Please permit me to announce the absence of the Senator from South Carolina [Mr. SMITH], because of pre-

carious illness in his family.

Mr. CHILTON. I want to make the same announcement I made on the last roll call as to the Senator from Oregon [Mr. CHAMBERLAIN]. He is necessarily detained from the Senate and is paired with the junior Senator from Pennsylvania [Mr. OLIVER 1

The VICE PRESIDENT. Fifty-nine Senators have answered

to the roll call. There is a quorum present.

Mr. NORRIS. Mr. President, when I was interrupted I was about to describe the Hetch Hetchy Valley, and I started in to use the Senate Chamber as an illustration. Let us suppose that the Senate Chamber represents the Hetch Hetchy Valley. It will then represent an irregular floor containing between 21 and 3 square miles, surrounded by cliffs that rise 5,000 feet The floor will be the ordinary meadow land. into the air. irregular it is true, and the walls not straight, as those of the Senate Chamber are, but irregular and varying, as we would naturally expect in a large canyon of that kind. The floor of valley has some timber on it, but nothing of any value, although there are thousands of honest people who believe that the flooding of this valley is going to ruin some of the great trees of California. The trees in the valley are ordinary scrub pines.

Away over yonder in the distance there is a waterfall, the Tuolumne River, that comes down over the cliffs, falling between the rocks, and then trickling through the outlying rocks into a stream that runs through the valley. At the outlet of the valley the walls of this great chasm come almost together, so that they are at the opening less than 65 feet apart. There are thousands of people in the United States who honestly believe that this beautiful waterfall coming down over the cliffs is going to be ruined if we pass this bill, but I shall show you that it not only will not be ruined, but that it will be made accessible, where now it is inaccessible, and that it will be flowing many days and months in seasons when it is absolutely dry now.

This valley in the wintertime is filled with snow. I presume there are 40 feet of snow in that valley to-day. It comes early in the fall. In the springtime when the sun comes out and reflects its heat from the surrounding cliffs the snow melts and the watershed farther back over the mountains is also denuded of its snow, which is turned into water by the sun's rays; the waterfall then commences to pour itself down over the mountains, and there is a rushing flood; it can not all get out of this opening of less than 65 feet, and the result is that the floor of the valley is covered with water. The floor, as I have said, is irregular and not perfectly level and not densely wooded, as some believe, and the trees there, as I have said, are of no particular value to look at or to use. When, however, in the course of time the flood waters get out of this opening, the floor of this valley becomes a marsh, and as the summer advances and it becomes hot this valley becomes a place where it is absolutely impossible for men to stay on account of the millions and millions of mosquitoes that infest it. Men who go in at that time to work or to survey have to cover their faces and their hands to protect themselves.

Later on in the season the marsh dries up and the mosquitoes disappear. For a while thereafter the temperature in this valley is so hot that it is impossible for anyone to remain there with comfort. We must remember that the reflection of the sun in the heated season from the surface of 5,000 feet of granite will bring down upon the floor of this valley a heat that is almost unendurable. Being surrounded as it is by such huge cliffs and with only this small opening, there is practically no circulation of air. Later in the season, however, when the heat is not so intense, the atmosphere becomes comfortable, and the view from the valley is, no doubt, one of great beauty, but for the reasons I have just stated, even though Congress spent a couple of millions of dollars in building roads into this valley so it would be accessible, there would only be a very short time in any year that the valley could be comfortably visited. On account of the high altitude the snows begin early in the autumn, and the valley could not be visited, at least by sightseers, until the summer of the next year had begun to disappear and the temperature reduced.

A large part of the land in this valley that is going to be flooded-practically all of it that is of any consequence so far as soil is concerned-is owned in fee simple by San Francisco. She bought it and paid over \$100,000 for it when it was not really worth more than 100,000 cents. She was compelled to buy it to protect her water rights in this stream, by the orders of the officials of the United States Government. No man denies that she was compelled to do this, and that she has actually ex-

pended this money. I know it is said-Mr. POINDEXTER. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Washington?

Mr. NORRIS. I yield to the Senator.

Mr. POINDEXTER. Mr. President, I rise to ask a question purely for information. This is a claim that I never have heard of before—that the city of San Francisco was compelled by orders of officers of the United States Government to buy the 700 acres which were bought. What officers ordered them to buy that land, and by what authority did they compel the city of San Francisco to buy it?

Mr. NORRIS. When I said "compelled" I meant that she would have to do that or lose all the rights she had.

Mr. POINDEXTER. What officer was it?

Mr. NORRIS. The Secretary of the Interior. I think the Senator will find the order of the Secretary of the Interior setting forth certain things that she would have to do. This is only one of them. Under those orders San Francisco has actually expended between a million and two million dollars.

Mr. POINDEXTER. Did the Secretary of the Interior order the city to pay over a million dollars to Mr. John Hays Hammond and his associates for the Lake Eleanor and Cherry Creek

water-power site?

Mr. REED. Mr. President, it is impossible to hear in this

part of the Chamber what is being said.

Mr. POINDEXTER. I am sorry. I suppose that is due to the fact that I had my face turned in the other direction, speaking to the Senator from Nebraska.

Mr. POINDEXTER. I should like to ask the Senator from Nebraska if the money that was paid to Mr. Hammond is not the greater part of the money of which he was speaking, which

the city of San Francisco paid?

Mr. NORRIS. My understanding is-and I may be wrong; it does not make any difference who got it, for she paid it, anyway-that as far as the floor of the valley is concerned the money was not paid to Mr. Hammond, but a large amount of money was paid, so I am told, to corporations that are con-

trolled by Mr. Hammond.

I have no knowledge in regard to that matter. I did not intend to go into it, but since the Senator has spoken of it I will. I intended to confine what I had to say to what I thought I had evidence to prove, but I shall not be able to prove that. have heard a great many times that corporations owned by Mr. Hammond were the recipients of a whole lot of this money that San Francisco had to pay because Secretary Ballinger made orders that made it necessary for her to pay it. I am not making that statement on anything but hearsay. I would not have mentioned it had it not been that the Senator from Washington has brought it up, because, as I say, I am not able to prove it.

Mr. POINDEXTER. Will the Senator from Nebraska yield to me for just a moment further?

Mr. NORRIS. Certainly.

Mr. POINDEXTER. I only wish to say, by way of comment on the Senator's answer, that it is utterly inconceivable, and it seems to me impossible, that the Secretary of the Interior could have possibly made any order that would have required the city of San Francisco to enter into this deal with Mr. Hammond. I do not see how that can be demonstrated.

Mr. NORRIS. There was not any deal with Mr. Hammond. If I have the report right, it was simply a holdup that this corporation was able to exercise over the citizens of San Francisco. I will say to the Senator that I am going into the power proposition at some length. I think, as has been said before,

that to a great extent it is a power proposition.

Mr. SMOOT. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska ield to the Senator from Utah?

Mr. NORRIS. I yield to the Senator from Utah.

Mr. SMOOT. I suppose the Senator will agree with a statement I made the other night, and I believe he will also agree that the record shows that a great part of the \$1,700,000 spent by San Francsico was not spent in the Hetch Hetchy Valley, but was spent at Lake Eleanor and Cherry Creek.

Mr. NORRIS. Certainly; all of which will be useless, just as useless as the money she spent for the floor of the Hetch Hetchy Valley, if she is not allowed to build this dam and oper-

ate this aqueduct or right of way.

Mr. WORKS. Mr. President—

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from California?

Mr. NORRIS. Yes.

Mr. WORKS. I rather think the Senator is mistaken about that. Lake Eleanor and Cherry Creek can be developed independently of Hetch Hetchy, and those two will furnish San Francisco all the water she needs. She has already acquired title to them by the deal she made with Hammond. not connected in such a way that one is at all necessary for the

Mr. SMOOT. Mr. President, I believe— Mr. NORRIS. Mr. President, I should like to answer one Senator at a time. What the Senator from California says is true in part, as I understand, but I will not agree to the statement that the other two lakes are sufficient. The proposition to permit San Francisco to conduct this water over the public lands and to build this dam means that into the very ditch or tunnel through which she conducts this water she will bring the

waters of Lake Eleanor and Cherry Creek.

I would have brought that out, if Senators had let me go on without interruption a little bit further, in the picture I was trying to describe; but I think, and I have no doubt, that both of these things must go together to make a success of the whole

project.

Mr. WORKS, Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from California?

Mr. NORRIS. Yes; I yield again.
Mr. WORKS. The Senator from Nebraska is unquestionably right, if it is necessary to develop 400,000,000 gallons of water per day, because the two sources mentioned would not produce that supply of water; but the evidence here is conclusive that San Francisco does not need any such quantity of water as that, and that these two sources, independently of the Hetch Hetchy source, will produce all the water San Francisco needs for a

century.

Mr. NORRIS. Mr. President, that statement I absolutely

Mr. NORRIS. The statement is anyone holding that opinion. The deny. I have no objection to anyone holding that opinion. The Senator has argued it and discussed it, and says it is true.

do not believe it, however.

I was going to say that back of the Hetch Hetchy Valley, which I have been describing, over and through the mountains, The plan is to are two lakes, Cherry Lake and Lake Eleanor. conduct the waters of those two lakes over to the Hetch Hetchy Nobody denies, so far as I know, that under the laws of California San Francisco owns the water of those two lakes; and I do not believe anybody denies that San Francisco owns in fee simple the land within the Hetch Hetchy Valley. I believe nobody denies that when they came to survey the land there and make a correct survey of it, it was found that the city not only owned the land, but that one of the sides of this outlet is included in the land she owns. I do not think anybody will deny that under the laws of California, if she goes on and completes this great project, she is entitled to all the waters of that stream that do not belong to the two irrigation districts which I am going to discuss in a short time.

Mr. WORKS. Mr. President—

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from California?

Mr. NORRIS. I yield to the Senator. Mr. WORKS. I think the Senator is mistaken again. The city of San Francisco has filed upon only 161,000,000 gallons of water per day. She has no claim or title, incheate or otherwise, to take out more water than that from the stream; and even as to that quantity, under the new law that has been passed in California, she would be subject to the regulation and control of the water commission. But she has no claim upon more than that

Mr. NORRIS. The Senator is speaking now of the flood waters of the Tuolumne. Can the Senator name any individual or corporation outside of the irrigation districts and the city of San Francisco who, under the laws of California, has title to a

single drop of this water?

Mr. WORKS. It does not make the slightest difference. do not know whether they have or not. It does not make the slightest difference, however, because San Francisco has limited her own claim upon the water by her filings.

Mr. NORRIS. And the filings go away beyond the amount of water, as they always do everywhere. This irrigation company has filed on three times more water than the flow of the

stream.

Mr. CLARK of Wyoming. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Wyoming?

Mr. NORRIS. I yield to the Senator. Mr. CLARK of Wyoming. I have been trying for several days to get some definite notion as to the amount of water in these streams and the amount that can be made available on these watersheds. Nearly every Senator who has spoken has indirectly said either that there is or that there is not an oversupply of water to fill these filings. Now the Senator says there is not enough water in Lake Eleanor and Lake Cherry to fill the needs of San Francisco. I should like to have the Senator say, in view of that statement, how much water Lake Eleanor and Cherry Creek will furnish.

Mr. NORRIS. I have not the information just at hand, but I presume it is on the Senator's desk-at least it is on minein the letter of the Secretary of the Interior, which came in answer to a resolution of the Senate. I should like to say to the Senator that it is conceded, I think, that the plans, if carried out according to the bill and the estimates of the engineers, will develop eventually a possible water supply of 400,000,000 gallons I do not think there is any dispute about that. Neither do I think there is any dispute that either one of these sources-Hetch Hetchy proper, if you eliminate the other two lakes, or those lakes, if you eliminate Hetch Hetchy—would not be sufficient to develop that much water.

Mr. POINDEXTER. Will the Senator yield to allow me to

make a statement?

Mr. NORRIS. Yes.

Mr. POINDEXTER. 'The report presented to the Senate November 29, 1913, in response to a resolution of the Senate calling for the identical information which the Senator from Wyoming has just asked for, contains two separate reports from the board of Army engineers and one from the Geological

The Army engineers' table of figures is as follows:

Average discharge for the 16 years from 1895 to 1911 of the Valley drainage area, acre-feet per year, 231,000; gallons per day, 206,000,000.

That is the Cherry Valley drainage area, which comes out

through Cherry Creek.

In the case of Lake Eleanor, it is 160,000 acre-feet per year,

or 143,000,000 gallons per day.

Approximate continuous discharge attainable by practical storage, regardless of prior rights (gallons per day): Cherry Valley, 160,000,000; Lake Eleanor drainage area, 130,000,000; making a total of 290,000,000 gallons a day altogether, independent of the Hetch Hetchy tributary, Lake Eleanor and Cherry Creek being the two other tributaries of the Tuolumne. Mr. NELSON. Will the Senator yield to me? I desire to

ask a question for information.

Mr. NORRIS. Yes. Mr. NELSON. Does not the water conserved in those two creeks or lakes-Cherry Creek and Lake Eleanor-in order to be utilized, have to be conducted through the Hetch Hetchy Canyon or Valley?

Mr. POINDEXTER. It does not.

Mr. NELSON. It can be taken outside of it?

Mr. POINDEXTER. Yes. It could not be conducted through the Hetch Hetchy Valley, because those streams flow into the Tuolumne River away below the Hetch Hetchy Valley. The Hetch Hetchy is one of the tributaries of the Tuolumne; so are Cherry Creek and Lake Eleanor. The three form a junction lower down the stream.

Mr. NORRIS. Mr. President— Mr. POINDEXTER. If the Senator will pardon me just one second, I should like to couclude this.

Mr. NORRIS. All right. The second is up, though. [Laugh-

Mr. POINDEXTER. I should like to state the water power of these two streams.

Approximate amount of power that may be developed from water from these portions of drainage areas, but with power plants necessarily located below them: Cherry Valley, 59,000 horsepower; Lake Eleanor, 48,000 horsepower.

Mr. NORRIS. Mr. President, I am not objecting to interruptions. For reasons that I stated at the beginning, however, I am anxious to get through as soon as I can. I think other Senators, particularly the Senator from Washington, who has used five or six hours of the time of the Senate so far on this bill and is going to use several hours more as soon as I get through, ought not to try to make an argument during my time. I shall be glad to yield to questions or to suggestions from any-body, but I hope Senators will not take up my time with arguments. I say this out of respect to the Senators who are going to follow me.

Mr. SHEPPARD. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska

yield to the Senator from Texas?

Mr. NORRIS. Let me finish this first. I wish to say, however, that, in my judgment, what the Senator from Washington has just said is absolutely incorrect. He says the water of these streams can not be taken out through Hetch Hetchy. do not suppose he has been there, and I have not been there. but I have the word of the engineer who is at the head of it all, who has shown me the cuts and the plans and has told me with his own mouth that that is the intention. It is part of the plan. They are going to take this water through Hetch Hetchy. Whether they will bring it down over the falls or bring it in just below the dam has not been determined; but they can bring it and turn it into the stream that is making the waterfall that we have heard so much about in the literature we have had. I have only the word of Mr. Freeman, who, I think, is a far better authority on that proposition than any Senator and as good an authority as any man on earth.

Mr. WORKS. There is not any doubt about the correctness of the statement made by the Senator from Nebraska. By engineering this stream could be brought in above Hetch Hetchy, but its natural flow connects it with the Tuolumne below.

Mr. NORRIS. Nobody has disputed that. The plan of this proposition is to bring it into Hetch Hetchy. If you took it out in the way it has gone before, it would not run through the channel where the power is to be developed.

If you will add those figures together, you will find that they aggregate about 400,000,000 gallons a day. I am going into

that later if I do not get worn out before that time.

Before doing so, however, I wish to say that last night the Senator from Oregon [Mr. LANE], for whom I have such great respect and even admiration-and I regret exceedingly that he is not here to-day-said, in discussing this matter, that after all he thought there was something besides water in it. He

thought there was a power proposition in it. I wish to emphasize that, for, in my judgment, it has not been spoken of as much as it deserves. There is a power proposition involved here, and it is one of the reasons that has led me to support the bill. Think of the Hetch Hetchy Valley, which I have described; in all the universe God never made a place which was better adapted for the building of a dam and the development of power. I confess that one of the great reasons why I favor this bill is because it is going to utilize one of the sources of nature to develop power, and such utilization will not interfere in any way with the use of the water or with

anyone's rights on the stream, as I shall show later. Mr. SHEPPARD. Mr. President, I do not want to inter-

Mr. NORRIS. I beg the Senator's pardon, but he asked me a

while ago, I know-

Mr. SHEPPARD. I want to say that the Senator was giving a most interesting discussion of the physical features of this vallev when he was first interrupted, and some of us on this side wish him to proceed with his remarks on that phase of the subject.

Mr. NORRIS. I have been interrupted so often that I do not know whether I left anything out. I think I had about completed the description of the valley itself.

Mr. SHEPPARD. The Senator was speaking of the fact that the valley was a hopeless swamp during certain seasons and that the surveyors had to wear gloves for protection against mosquitoes

Mr. TOWNSEND. Before describing it, will the Senator, for my own information, state whether I understand him correctly as to the quantity of land in the valley owned by California?

Between seven and eight hundred acres.

Mr. TOWNSEND. Then, in the course of the description, can the Senator answer the argument which has been put forth here showing that a lot of this land may be used for agricultural purposes, and that the use of the valley for the reservoir would tend to destroy it for agricultural purposes?

Mr. NORRIS. I never heard that argument.

I think I shall show, and I have reasons that are satisfactory to me, that the beauties of nature are not going to be inter fered with; but so that there may be no misunderstanding, let me say here that I would be in favor of the development of this power even though all that has been said about the destruction of this beauty were true.

It is said that this can not be done without interfering with nature as it is there and without practically rebuilding the floor of the entire valley, because the waters from the snows are coming down there in torrents every year. When they get out through this opening they rush down into the valley, and instead of benefiting man they destroy his property, and the waters go to waste without being used either for irrigation or for the development of power.

The Senator from Michigan for the first time has suggested to

Mr. TOWNSEND. May I interrupt there?

Mr. NORRIS. Certainly

Mr. TOWNSEND. I did not make myself clear, I presume, a that proposition. I want this point cleared up if I can. It on that proposition. has been charged that the building of this dam and the collection of the water here is going to interfere with the agricultural possibilities of this stream.

Mr. NORRIS. Farther down, does the Senator mean?

Mr. TOWNSEND. Anywhere.
Mr. NORRIS. I am coming to the irrigation proposition later on in my address. I will not take that up now; but in the valley no one has ever claimed that it would interfere, that I know of. Suppose it did. San Francisco owns the land. Think of it for a moment. There has never been in that valley a vehicle. We have read circulars by the thousand that have gone over the country describing it as the Nation's playground. In the sand of that valley there has never yet been made the impression of a child's foot. As far as I know, the eyes of no woman or child have ever beheld it. You can not get within 8 miles of it with a wagon. It is even dangerous to wind your weary way down through there. A man who has not lots of money and lots of time does not even try to go in there. Outside of the men who go there officially, either from San Francisco or the War Department, there has not been an average of

five persons a year who have gone in there to see it.

It has been said, and said truly, that this condition can be changed by the Government expending money in the building of roads so that this valley shall become accessible. It has been said also that the necessary changes can be made so that mos-quitoes can not live there. It is true that the Government of the United States by the expenditure of a couple of million of dollars could build roads in there, but who is there here who thinks for a moment that it is going to do it? It will not be within the lifetime of any of us or any of our immediate descendants that such an expenditure will be possible through any appropriation of Congress. As far as I know, no one contends that it will. It would be possible for the Government to change the floor of this valley so that mosquitoes could not live there, but this would be a more serious change in the physical features than those proposed by this bill. This would destroy the floor of the valley, because it would have to be made so that no water could stand anywhere in the valley. It could not be fixed so that it would not overflow every year when the flood rushes into the valley and is unable to get out on account of this small opening where the dam is to be built. The valley is overflowed every year. It would be necessary, to make it secure from mosquitoes, to change the entire floor and in reality to pave it so that the rushing waters would not tear up gullies and leave places for water to stand, thus breeding the mosquitoes. But no work that we can ever do with any amount of money will do away with the intolerable heat that will come from the reflection upon these giant walls.

TOWNSEND. Have we not had telegrams and communications presented here showing that various clubs-outing

clubs, and so on-visit it annually?

Mr. NORRIS. No; I think not. There is a club that went up there, quite a number of them, I understand, several years ago. No man has ever gone there a second time.

Mr. THOMAS. Mr. President

The VICE PRESIDENT. Will the Senator from Nebraska yield to the Senator from Colorado?

Mr. NORRIS. I yield.

Mr. THOMAS. If the Senator from Nebraska will allow me,

I will say, for the information of the Senator from Michigan, that the maximum number of visitors to the Hetch Hetchy Valley is 279. It is extremely difficult to get within the precincts of the park.

Mr. NORRIS. I do not understand the Senator. Did he say

279 annually?

Mr. THOMAS. Two hundred and seventy-nine I understand

to be the maximum in any one year.

Mr. NORRIS. But that was only one year, and it included all of the officials who were compelled to go there. Except that one year there have not been half a dozen visitors in any one year outside of the officials who go up there on business. One year this club tried to get up there. Some of them got there. It is pretty nearly a millionaire's proposition. I am aware that the Government may build roads in there and all that, but it never will be any such thing as a playground unless something of this kind is done. A large portion of the season nobody could be there under any circumstances on account of the weather. Later on, when it begins to get cooler, I presume it would be possible to remain there.

I want to take up the power proposition. Before I do it, I want to state what the contemplation of the bill is in regard to the valley. This bill provides that San Francisco shall be allowed to build a dam across that opening of about 60 feet. will be allowed to build it 300 feet high. The estimate of the engineers says that it will develop, if used to its fullest capacity, 115,000 horsepower. The bill provides that San Francisco shall build roads, and she would have to build a road before she could build a dam. There is at present no way to get the material in there. Other roads are described in the bill, stating where they must be built. There is to be a road built around what will be the lake when it is put in there.

It will cost more than a million dollars to build this road alone. When the valley is filled up with flood waters that come down we will have a lake in there 2½ square miles in area and 300 feet deep. But no man could really tell if he was looking at it that the height of the cliffs had been diminished an inch, so small is the depth of 300 feet as compared to the height

of the walls.

The bill provides in addition to that that this dam shall be built of the color of the surrounding rock. All precautions like that are taken so as not to interfere with the beauties of nature or cause any contrast with the colors of those beauties. Over this road that will be built around there they can go with automobiles and other vehicles, and it will take you directly to the beautiful falls that come down. It is true that in looking down you see a bit of clear, pure water instead of looking down upon some scrub pines and some irregular meadow land that no different from what you can see almost anywhere in almost any country.

Then the bill provides that San Francisco must pay, beginning at \$15,000 and running up eventually to \$30,000 a year; that these roads will belong to the Government; that Congress, sees fit, shall have the power to increase the rate she must pay.

I am going to speak of that further on, because some of the enemies of this bill have condemned it, because they said it was a steal, and we were getting nothing for it, and other have condemned it

Mr. CLARK of Wyoming. Mr. President, I rise to a point of

order.

The PRESIDING OFFICER (Mr. THORNTON in the chair). Will the Senator from Nebraska suspend his remarks while the Senator from Wyoming states his point of order?

Mr. NORRIS. Certainly.

Mr. CLARK of Wyoming. The Senator is misstating the language of the Senator to whom he is now referring. The Senator to whom the Senator is now referring never said the words which the Senator attempts to put into his mouth.

Mr. NORRIS. If the Senator from Wyoming had been listening and heard what I said he would know that I did not accuse any Senator of saying that. I said that argument was made. have had it made to me a thousand times. I have not accused any Senator of making it.

Mr. CLARK of Wyoming. But the Senator was referring to an argument made on the floor of the Senate.

Mr. NORRIS. I was not referring to an argument made on the floor of the Senate. I had no reference to any argument made on the floor of the Senate. I do not suppose there is a Senator here who has not received communications calling this a graft and a steal. I received one this morning from a man in whom I have the greatest confidence and whose honesty I do not question for one moment. I have not accused anybody here; I have not accused anybody elsewhere with being dishonest in the matter; and I am not going to do so.

Mr. CLARK of Wyoming. The Senator misapprehended my statement. It was not a question of accusing anybody of being dishonest; it was a question of what had been said on the floor of the Senate in respect to the \$30,000 which San Francisco, under the bill, is to pay, to the effect that that \$30,000 was a steal.

Mr. NORRIS. I do not think any Senator has said that,

but that argument has been made over and over again. Then,

others have condemned the bill, among other reasons, because it had that provision in it, and said we ought not to charge San Francisco anything for this privilege, that all the conditions attached were going to be expensive and cost several million dollars, and they ought to be eliminated from the bill. But both those who oppose it because we do not get enough and those who oppose it because we get too much vote against the

I believe, Mr. President, if we had eliminated the power proposition we would never have had one-thousandth part of the campaign made against the bill that has been made against it. I want to pause there before I go into that to say that in what I shall say in regard to it I am not impugning the motives of any man who opposes it, whether he be here in the Senate or elsewhere, but I do believe that the water-power corporations of California are to blame for what I consider a campaign of misrepresentation made often by men and women who are honestly deceived as to what the real truth is.

Now. I have a circular letter here, an open letter, to the American people. This was one of the first publications put out, as I understand it-one of the first in the recent campaign, at least.

It is addressed to:

Fellow owners of the Yosemite National Park-

And it goes on at great length to tell what is being done here. The circulars that have gone out to the people of the United States have almost invariably declared that this was a graft. For instance, here is a representation that went to the American people. It is said here:

If the legislation is not railroaded through Congress, an even fuller report of the Mokelumne resources than that of the engineer, Bartell, will be presented, along with an offer of rights and sites, by the Sierra Blue Lakes & Water Power Co.

The advantages claimed for this source over that of Hetch Hetchy

Now, remember this corporation, the Sierra Blue Lakes & Water Power Co., and here are the advantages that are set out:

(1) It would obviate the invasion of your national park.
 (2) It would save 70 miles of tunneling, much of it through solid

rock

rock.

(3) It would be a shorter route by 65 miles.

(4) It could be completed in 4 years, as against the 10 needed to make Hetch Hetchy available.

(5) Its owners will offer it to the city at a price to be arbitrated.

(6) Its watershed is virtually in a forest reserve (not a national park), and thus is more fully protected than a scenic resort like Hetch Hetchy. Hetchy.

Then they go on-I am not reading near all of it-

In order to silence the opposition of the irrigation interests the ty's agents have agreed to divide with them the waters of the coveted city's a

That was before the irrigationists were opposing the bill.

The spectacle of thus parceling out the resources of one of God's most beautiful creations has had no counterpart since the casting of lots for the raiment of Jesus.

They have applied various epithets to this plan, calculated to impress the ordinary individual and citizen, especially when they noticed that it was signed by Robert Underwood Johnson, a man, by the way, whose motives I do not impugn; I believe he is perfectly honest and I recognize his ability and his patriotism, but he is so enthusiastic over it I think he is very unreasonable with the proposition.

In the face of these facts

After they have compared them-

After they have compared them—
where is the "emergency" requiring the passage of this piece of inexcusable folly? There is an emergency, but it lies in the other direction.
The emergency is that unless as American citizens you protest to your
representatives in both Houses of Congress, your great national park
is likely to be lost to you and your descendants forever.

Now, listen to this:

Yosemite Valley will become "the back door of San Francisco."

And so on.

Will the reader of these lines also remember that fact?
Citizens, will you not help prevent this outrage by writing in protest, however briefly, to your Senators and Representatives, and to Hon. Reed Smoot, United States Senate, and Hon. F. W. Mondell, Member of Congress, Washington, D. C., and to the press, and by asking others to do the same? "They have rights who dare maintain them."

And so forth.

seems, therefore, that the mighty cohorts of opposition to this bill, at least as far as the Senate is concerned, are under the leadership and the guidance of the Senator from Utah [Mr. Smoot]. This ought to explain fully and satisfactorily to everyone why it is that this Senator has received more than 5,000 letters protesting against the passage of this bill. An analysis of his correspondence would, no doubt, disclose that these letters have a wonderful similarity; that they have mostly originated from one source, and that they have come to him because he has been selected to lead the opposition against the

passage of this bill through the Senate. This letter is only a sample. It has been sent out, no doubt, by the millions, and, as I shall show, these representations in regard to the Blue Lakes water supply, upon investigation, have been shown to be absolutely false and without foundation. But thousands of honest people have been deceived, and Senators have been getting circulars from clubs and societies and organizations denouncing this bill in the severest terms, because those who send in these resolutions have honestly believed that we were about to destroy Yosemite Park. They have honestly believed these representations in regard to getting a supply of water from the Sierra Blue Lakes & Water Power Co.; and yet this claim is not only false, but it is a holdup made by men who have no other desire than to make money out of their opposition.

Now, referring particularly to the expression in this circular

letter regarding the Yosemite Valley, every citizen of the United States, I presume, who will read that circular in full can get no other impression but that Congress is about to desecrate that valley; that it is going to be ruined; it is going to be the back door of San Francisco. Yet the truth is that Yosemite Valley is not within 40 miles of Hetch Hetchy and the dam provided for in this bill. Now, what is the truth about the Sierra Blue Lakes & Water Power Co., mentioned in this circular letter,

that has been the basis of this campaign?

What are the facts? The president of this corporation wired to the House committee, after they had closed their hearings. setting forth in a long telegram the substance of this claim. They reopened the hearings, postponing them in order that he could get here, and the development later on showed that this particular proposition was absolutely without any merit whatever.

It was simply a scheme to sell something to San Francisco that the men themselves did not own, and the cross-examination of the man who represented them in the printed hearings will show that it was simply a plan to hold up somebody and get some money. One of the people interested in this plan that was repudiated even by the opponents of the bill later has lately turned up. I think the Senator from Colorado [Mr. Thomas] read his name in connection with another proposition. As fast as one plan is exposed he invents another. He has invented something else since that one was exploded and exposed. These men were denounced openly by the reputable citizens as being of the worst character possible. One of the men connected with this proposition was denounced as a recent partner of Abe Reuff in the various occupations that he carried on, and that could not be named here, perhaps, without a violation of the Senate's rules.

Now, with such expressions as that contained in this letter the good people of the country have been impressed that something wonderful is going to happen here in the way of robbing them of the park. It is only a sample; I only give it as an illus-

tration.

When Mr. Johnson was before the Senate committee and one other witness appearing before the committee referred to one of the men connected with this institution as his friend, promptly called him to order and repudiated him and said he did not want to be considered as his friend. Yet I have never heard that Mr. Johnson or any other opponent of this bill has ever apologized for that statement or told the people who have been deceived by it that it was a fake.

I said a few moments ago I believed that if the power possibilities had been eliminated this great campaign that somebody has carried on that must have cost somebody a great deal of money, would never have reached the great proportions that it has. I said that I was in favor of this bill to a great extent for the reason that it developed this power. This power will come into competition with the various water-power companies of

California, and there are lots of them there.

Let us pause right here for a few moments and consider some of the corporations that are engaged now, private corporations, in selling power. This bill is not giving to a private corpora-tion any power. It is giving to the people of the locality of San Francisco the right to use a cheap power when it is developed. To my mind, it is the very highest type of conservation. Here for ages this stream has been running down from the mountains, even destroying property, without doing man any good, and this proposition is to harness that power and to put it to public use not to give it to a private corporation. Why do we want to develop water power? Will we give it to the public or to a private individual or corporation?

Here is an instance where we are going to give it directly to the people, if we pass this bill. It is going to come into com-petition with power companies and corporations that have, or will have, if this bill is defeated, almost a monopoly not only in San Francisco but throughout the greater portion of California,

Now, I have here an official report made by the Bureau of Corporations, and, among other things, they have a table

Mr. THOMAS. Mr. President—
The PRESIDING OFFICER. Will the Senator from Nebraska yield to the Senator from Colorado?

Mr. NORRIS. Yes. Mr. THOMAS. I merely wish to ask the Senator what is the

date of the report, please.

Mr. NORRIS. March 14, 1912. Here is a table showing the development of water power in California by basins and streams classified as commercial or manufacturing development. Then it gives what I presume is a complete list, making a total commercial horsepower development of 429,467 horsepower. The commissioner comments on it as I shall read. I will not read the list. I do not think it is material, because I am going to refer to some of them:

The above table discloses the fact that 119,609 horsepower commercial, or more—74 per cent of the total developed horsepower of the State—is on the streams centering in California Bay.

I wish Senators would not that.

Seventy-two thousand nine hundred and twenty-eight horsepower, or nearly 17 per cent of the total developed commercial power of the State, is in the great basin, thus placing more than 90 per cent of all the developed power of the State in these two drainage basins. Six nominally distinct corporations, with their subsidiaries, control practically 94 per cent of the developed power of these two basins, and over 86 per cent of the developed power of the State.

It begins to look, it seems to me, as if the interests of the water companies were greater in defeating this bill than the

interests of anybody else.

Mr. CLARK of Wyoming. Will the Senator allow me to

make an inquiry there?

Mr. NORRIS. Yes.

Mr. CLARK of Wyoming. I have not paid so much attention to the water-power possibilities of the bill, but I should like to inquire of the Senator how the grant to California is going to control or affect the distribution of water power in that locality, outside of that which is used for municipal use? As I said, I have not paid particular attention to that part of the bill, but it provides, as I remember it, that the water power developed under this grant shall be disposed of to these two irrigation districts, for pumping purposes and otherwise, and to the municipalities to which the grant is made, but that it shall not be sold to individuals or to corporations. That, of course, would bar the commercial use of the water power that is generated, and that power would still have to be furnished by the corporations. I am asking for information only.

Mr. NORRIS. I am coming to all that, if the Senator will

wait.

Mr. CLARK of Wyoming. I beg the Senator's pardon. I

will not interrupt again.

Mr. NORRIS. I will go into that as well as I can, but I would prefer not to do it now, because I want to read further from the statement here and call attention to the existence of conditions that are now there.

I am going to read a list of a few corporations that develop horsepower, and then I am going to take up each one of them and show just what they are and where they are using this

The Pacific Gas & Electric Co. has 118,343 horsepower. The Great Western Power Co., owned by the Western Power Co., has 60,000 horsepower. The Northern California Power Co. (Cons.) has 46,900 horse-

Those are the three important ones. There is another one—the Sierra & San Francisco Power Co.—that has 65,500 horse-power. There are two others, but they are not within the region of the State, that would be affected by this bill, so I will not pay any attention to them.

The four corporations first named-

Those are the ones I have read-

operate in all that portion of the State included in the Sacramento and San Joaquin Valleys; the last two, namely, the Southern California Edison Co. and the Pacific Light & Power Corporation, occupy a distinct field centering in Los Angeles. The first four also own more than 570,000 horsepower, undeveloped, and the six companies together operate steam auxiliary plants with a total capacity of about 200,000 horsepower.

Particular states

horsepower.

Particular significance attaches to the figures given in connection with the above corporations when account is taken of the fact that there is a particularly close relationship among the first three. This relationship centers in the Pacific Gas & Electric Co. An apparent relationship of the Southern California Edison Co. to the Pacific Gas & Electric Co. is established through the Great Western Power Co. PACIFIC GAS & ELECTRIC CO. AND ITS SUBSIDIARY AND RELATED COMPANIES,

The Pacific Gas & Electric Co. was incorporated in California in 1905 as a holding company to acquire the stocks of the San Francisco Gas & Electric Co. and the California Gas & Electric Corporation. Among the corporations now controlled are the following: California Gas & Electric Corporation: San Francisco Gas & Electric Co.; California Central Gas & Electric Co.; Bay Counties Power Co.; Valley Counties Power

Co.; Standard Electric Co. of California; South Yuba Water Co.; Central California Electric Co.; Oakland Gas, Light & Heat Co.; Sacramento Electric, Gas & Railway Co.; United Gas & Electric Co.; Stockton Water Co.; Yuba Electric Power Co.; Nevada County Electric Power Co.; Central Electric Railway Co.; Blue Lakes Water Co.

These make in all, as I have counted them, 18 corporations controlling the power in the vicinity of San Francisco that are under the control of this one corporation. Now, let us take another one:

In the organization of the Pacific Gas & Electric Co. and the controlled subsidiaries above given there were absorbed a number of other corporations, mainly electric light and gas companies.

The capital securities of the Pacific Gas & Electric Co. (1911) consist of \$19.272,500 common stock, \$10.000,000 6 per cent cumulative preferred stock, and a bonded debt of \$48,209,000.

And so on, stating what they are.

Now, let us take up another one of these corporations, subsidiaries of the Pacific Gas & Electric Co. That is another one of these holding companies. They-

have 11 hydroelectric plants, as follows: The Bay Counties Power Co. operates three plants on the Yuba River or its tributaries—

And so on, giving a regular list of them.

These five companies together, according to schedules furnished this bureau, have a total developed wheel capacity rated at 118,343 horsepower, as shown in the statement below: The Bay Counties Power Co. has 27,260 horsepower; the Valley Counties Power Co. has 33,500 horsepower; the Sacramento Electric, Gas & Railway Co. has 6,250 horsepower; the Standard Electric Co. of California has 37,500 horsepower; and the Central California Electrical Co. has 13,833 horsepower; a total of 118,343 horsepower.

That is already developed and is a larger development of horsepower than the Hetch Hetchy will make. There is then given a list of them.

given a list of them.

In addition to the power owned by the subsidiaries of the Pacific Gas & Electric Co., as indicated in the above statement, it buys from the Great Western Power Co. 20,000 kilowatts delivered at Oakland; this is equivalent to about 26,000 electrical horsepower at Oakland.

The Northern California Power Co. (Cons.) was incorporated in 1908 and is a consolidation of the old Northern California Power Co. and its controlled companies. These controlled companies consisted of various electric light and power concerns operating in the northern part of the State. There is an evident close relationship between the Pacific Gas & Electric Co. and this company. The Bank of California is its treasurer and Frank B. Anderson, president of this bank, and Joseph S. Tobin, a director of the bank, are also directors of the Pacific Gas & Electric Co.

That shows a connection between these companies and the companies operating in distant parts of the State, so that they can reach out their hands and control all the power in the State of California. Another one of these companies is the Great Western Power Co.

This company was incorporated in California in September, 1906, for the purpose of developing a hydroelectric plant. It succeeded the Golden State Power Co., the Western Power Co. of California, and the Eureka Mining Co. It controls the California Electric Generating Co., which has a steam plant at Oakland. This is leased to the Great Western Power Co. The Great Western Power Co. has \$27,500,000 capital stock outstanding, all of which is owned by the Western Power Co., a New Jersey corporation. All the officers of the Western Power Co. are also officers of the Great Western Power Co.

So we have a maze of corporations here. When you sum them all up you will find that they own practically all of the hydroelectric power of the State of California, and this bill, if passed, will bring into competition with them one of the greatest units for the development of power that has ever been developed in the history of the world. It means competition.

MONOPOLISTIC POSITION OF THE PACIFIC GAS & ELECTRIC CO.

Monopolistic position of the pacific gas & Electric Co.

It will be recalled that the Pacific Gas & Electric Co. controls directly or influences nearly 200,000 horsepower developed and under construction and at least 100,000 horsepower undeveloped. But as large as these holdings are, that alone does not by any means give this company a monopoly of the water power in the territory served. There is undoubtedly a vast volume of undeveloped power in this region that is not owned by it. This lack of ownership of practically all the power in the territory where it operates has not, however, prevented the Pacific Gas & Electric Co. from establishing a fairly effective monopolistic market condition.

The operations of this company and its subsidiaries cover the north central portion of California for about 225 miles from north to south and 125 miles from east to west. This territory embraces at least 30 counties, containing about 38,000 square miles. San Francisco, the largest city in the State. Sacramento, and other important cities are in this territory; more than 46 per cent of all the capital invested in manufacturing enterprises in the State in 1905 was in seven cities, reached by its transmission lines. It owns the street railways of Sacramento and suburbs and the electric-light distributing systems in more than 40 cities and towns.

The Pacific Gas & Electric Co, serves more than 200 communities with one or more of its products. It supplies light direct to 82 of those communities. It has more than 56,000 light and power customers, besides supplying more than 12,000 street lamps.

In San Francisco the company supplies all the lights—

The Senator from Wyoming [Mr. CLARK] was inquiring about coming into competition with this—

and nearly all the power except that used by the street railways, and, in fact, it sells some power to the United Railroads of San Francisco, It sells power to the street railroads of Oakland; to the North Shore Railway Co.; Petaluma & Santa Rosa Railway Co.; Vallejo, Benicia & Napa Valley Railway Co.; Northern Electric Railway Co.; Sacramento

Electric, Gas & Railway Co., which it owns; Stockton Railway Co.; Peninsular Railway; San Jose & Santa Clara County Railway Co.; San Jose Railway Co.—

That is a railway company, I take it, running about 40 miles out of San Francisco, and a ferry company gets its power from

San Francisco, Oakland & San Jose Railway Co.; and Presidio & Ferries Railway Co. It owns gas plants supplying the entire city of San Francisco and at least 17 other cities and towns.

Why, Mr. President, will it be understood in the face of all that that the power that shall be developed at Hetch Hetchy will not come into direct competition with the power that is sold by these private corporations, that this official of the Goverment said has practically a monopoly of power in almost all that portion of California? Here is something that one of the officers of the company said:

In a letter addressed to a banking firm in May, 1909, the vice president and general manager of the Pacific Gas & Electric Co. said:

"The company serves its territory practically without competition. It owns the distributing systems in the principal centers of population, and as its service is adequate and its rates low there is no incentive for other companies to undergo the heavy expense of duplicating systems with a view of offering competition."

That is from the side of the corporation. There is a map inserted here to which the writer is referring.

Interested here to which the writer is referring.

This map shows that the Pacific Gas & Electric Co. occupies almost alone all that populous and prosperous region of the Sacramento and San Joaquin Valleys centering in San Francisco. The only important hydroelectric company in this section of the State that is not connected in some way with the Pacific Gas & Electric Co. is the Sierra & San Francisco Power Co. This company is controlled by the Railroads & Power Development Co., which is controlled by the United Railways Investment Co. of San Francisco. Practically all its power is used in the operation of street railways in San Francisco, and it is, therefore, not a competitor of the Pacific Gas & Electric Co.

This shows with whom and with what the power developed at Hetch Hetchy will come in competition. The railroads of the bay cities, the gas of the bay cities, the electric light of the bay cities, and a large number of other uses to which gas and electricity are put are now under the control in the vicinity of San Francisco and all that part of the State of California of private power companies that own and have developed water power. The power developed at Hetch Hetchy is intended to operate street railways, to furnish electric lights to all those cities and to all the homes in those cities. It will be a direct competitor of gas. We see, therefore, from this report of the Government officials just exactly who is interested in and who will profit by the defeat of this bill. Every power company in California, and especially in the vicinity of San Francisco, every street railway, and every gas company there are anxious that this bill should be defeated, and it seems to me it makes plain why there has been such a nation-wide opposition to this bill, which proposes to put this great power in the hands and under the control and ownership of the people themselves.

Mr. President, I could go on at great length if I were physically able to do so, and develop those propositions and trace down in detail those various corporations, but I think I have gone far enough to show that If the power of the Hetch Hetchy is developed it will come into direct competition with what a sworn official of the Government says is a monopolistic control of the hydroelectric power of California,

Why, Mr. President, we ought to remember that Hetch Hetchy Valley was not originally a part of the Yosemite National Park, and that it was not put into the Yosemite National Park until after San Francisco had decided to get its water from that val-

ley and to develop that power.

Mr. SMOOT. Mr. President, just for the sake of the RECORD-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Utah?

Mr. NORRIS. Yes. Mr. SMOOT. That statement has been made once before during this debate, and I think it ought to be called to the attention of the Senate just when the Hetch Hetchy was added to the Yosemite Park.

Mr. NORRIS. I think the exact date is already in the RECORD.

Mr. SMOOT. The resolution adding Hetch Hetchy was passed June 11, 1906.

Mr. THOMAS. That is even later than the date Mr. Long

gives in his testimony. He gave the date as 1905.

Mr. SMOOT. I take it from the United States Statutes at Large.

Mr. NORRIS. That is still later, is it not?

Mr. THOMAS. Yes.
Mr. NORRIS. I am making the statement from the testimony, and, if I am wrong, I will be glad to be corrected.

Mr. SMOOT. I simply wanted to correct the Senator from Nebraska

Mr. NORRIS. That does not contradict the statement that I have made, as I understand.

Mr. SMOOT. But San Francisco never filed on this water until years after that.

Mr. THOMAS. It made the filing on June 29, 1901.

Mr. NORRIS. The statement that the Senator from Utah makes only strengthens the statement that I have made. I do not say that that is material, but I think when you take all these power possibilities into consideration, it ought to be considered. I am not censuring the people who are responsible for putting the Hetch Hetchy into the Yosemite Park. I know we pass many resolutions and laws at times that have "jokers in them, and we do not know it; but it is peculiar, it seems to me, that when San Francisco said, "We want the Hetch Hetchy for our water supply and power," within a very short time afterwards it became part of the Yosemite Park. That was to make it more difficult for San Francisco to get it.

Mr. DILLINGHAM. Mr. President, does the Senator have in mind the date when San Francisco acquired these titles?

Mr. NORRIS. In 1901. Mr. THOMAS. June 29, 1901.

Mr. SMOOT. Mr. President, of course, I referred to the filings which were made in 1908.

Mr. NORRIS. I want to say to the Senator that an investigation was made quite awhile before that

Mr. DILLINGHAM. I had in mind the title to the land which the city has acquired.

Mr. THOMAS. She acquired those-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Colorado?

Mr. NORRIS. I do. Mr. THOMAS. She acquired the lands in the Hetch Hetchy prior to the extension of the boundaries of the Yosemite Park, so as to take in the Hetch Hetchy.

Mr. NORRIS. I do not think there is any doubt about that, Mr. DILLINGHAM. That was the question I had in mind. Mr. NORRIS. I did not understand the Senator's question. As I understand-and I would like to be corrected if I am not right-San Francisco bought and owned in fee simple the valley of the Hetch Hetchy before it was included in the Yosemite National Park.

Mr. SMOOT. Mr. President, I have not the date here of the purchase of the 720 acres which San Francisco bought in the Hetch Hetchy. I will say to the Senator, however, that when I interrupted him I had reference to the filings of San Francisco in the year 1908. I knew that in 1905 the State of California receded to the United States the original park that was dedicated for recreation purposes; that it was accepted by Congress in June, 1906; and that at the time they accepted the receded land they also added the Hetch Hetchy Valley to that park.

Mr. THOMAS. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Colorado?

Mr. NORRIS. I yield to the Senator. Mr. THOMAS. It is true, as the Senator from Utah states, that there was a filing upon the water by or for the city of San Francisco in 1908, but the original filing was on June 29, 1901, both on the waters of the Tuolumne and those of Lake Eleanor and its tributaries. An attempted abandonment of that filing, as the record shows, some time in 1906 caused the officials of the city of San Francisco, as a matter of precaution, to renew their filings, but they have relied at all times upon their original filings of 1901.

Mr. NORRIS. Oh, yes; I do not think there is any doubt

about that.

Mr. President, I want Senators to approach this subject, and I want to approach it, in an unbiased and fair-minded way. I believe—and I think it is on account of the campaign made over the country by the opponents of this bill in the interest of the water-power companies—that there is a misconception not only of what the bill is, but that the Senate of the United States, sharing unconsciously in the feeling that has been engendered by that campaign, are approaching the consideration of this subject with biased minds. Let us think of it for a moment. Why should San Francisco be interested in doing something that is illegal, that is dishonest, or that is wrong? San Francisco years ago awoke to the fact that she had to get additional water. Was she hunting farmers so that she could murder them? Was she looking for a place where she could injure somebody? Think, for a moment, if we were citizens of San Francisco and we had reached the conclusion that our water supply, perhaps not within 10 years, perhaps not within 20 years, but on account of the peculiar situation of our city, its rapid growth and development, would have to be enlarged, and as wise, patriotic citizens we could look forward and see the time when we were going to suffer for water, what would we do?

We would do what San Francisco has done. She started out to get a supply. She has spent thousands and thousands of

dollars and years of time surveying all the country, all the watersheds, not to see whom she could destroy or injure, but to see where, under all the circumstances, was the best source of supply. She examined all of the other sources that have been mentioned and some that have not been mentioned. She settled on Hetch Hetchy, and one of the reasons she settled on that was because that great watershed was up in the mountains, uninhabitable, where there would not be any interference in the future with the farmers and with irrigation. One of the reasons why she selected it was because of the smaller amount of legal friction that would exist on account of the title having been acquired to the water by irrigationists. Another reason was because of power development. She did it honestly. No man has questioned that. She was only seeking to do the best she could under the circumstances, and she selected Hetch Hetchy.

It is a remarkable fact that all the water-power companies, reaching from one end of California to the other, with interlocking directorates and owning each other ad infinitum, succeeded in creating a public sentiment in favor of the taking of Hetch Hetchy into the Yosemite National Park. The men who took it in were honest, undoubtedly, but it would make it harder for San Francisco, and for every step that San Francisco has taken from that day to this she has been met by an opposition that is untiring and, I believe, unreasonable and unfair.

San Francisco, finally, was in the clutches of a corrupt gang. While they had possession of the city they undertook to surrender all the rights that she had ever obtained in the Hetch Hetchy. That is another remarkable coincidence. I received a letter this morning condemning me for supporting this bill. and the writer said that San Francisco had for a great many years a lot of corrupt politicians at her head who were trying to get this water power, and the writer was suspicious, not knowing that these very men-at the behest, without doubt, of the water-power companies, who could be the only gainers by it-tried to surrender to these corporations the rights of San Francisco and of the surrounding cities.

Mr. SMOOT. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Utah?

Mr. NORRIS. Yes.

Mr. SMOOT. I will not interrupt the Senator if he does not desire me to do so. I may have misunderstood him, and I inquire if I am correct in understanding the Senator to have said that the Hetch Hetchy Valley was put into the park at the

request of water-power companies in California?

Mr. NORRIS. No; I have not any proof that the waterpower companies opposing this bill had anything to do with that. Power corporations and other kinds of monopolistic corporations never come out in the open when they fight a proposition. They go around behind and, perhaps, get some nature lovers who are particularly honest to fight their battles. It will suit them better if they can go to a farmer, deceive him, and get him to fight their battles, so that many a time when they are trying to get something or trying to prevent somebody else from getting something the fight is always made under the name of somebody else and under the guise of being the fight of honest people and of honorable men.

Mr. SMOOT. If the Senator had lived in the Western

States

Mr. NORRIS. I thought I did live in a Western State, but,

perhaps, I do not.

Mr. SMOOT. Where the Senator from Colorado [Mr. THOMAS] and I live, where irrigation is of such vast importance, he would know that there has been no need whatever for any-one outside of the bureaus in Washington to suggest the addition of any public lands to any kind of a reserve. I think the Senator from Colorado will agree with me upon that point.

Mr. NORRIS. That is not any defense. That does not even

have a tendency to prove anything.

Mr. SMOOT. I am not offering it as a defense, but I asked the Senator the question if I understood him to say that the reason Hetch Hetchy was added to the Yosemite Park was because of the fact that the water-power companies were back of it?

Mr. NORRIS. I have before told the Senator that I could not prove that. I Lave not said so; but I have called attention to the fact that this was done after San Francisco had undertaken to get Hetch Hetchy, and that he beneficiaries of it are the same power companies which the official of the Government of the United States says have a practical monopoly to-day in that locality.

Mr. SMOOT. This was done, Mr. President, by act of Congress. Generally such things are done by an Executive order.

Mr. NORRIS. It was done by both, as I understand. It does

not make any difference, however, how it was done. I have said that I am not accusing the men who did it of doing inten-

Mr. PERKINS. Mr. President, if the Senator will permit me, will say it was done at the request of the Legislature of

California.

Mr. NORRIS. The Senator from California says it was done at the request of the Legislature of California. If the power companies wanted something from the Legislature of California, or wanted something from the Senate of the United States, they would not go to the legislature or to the Senate and say: have got a monopoly and we do not want it interfered with." That is not the way they do business, and I do not believe the Senator from Jtah thinks it is.

Mr. SMOOT. No; Mr. President, I do not think so. I was positive that they had nothing to do with that, and the senior Senator from California [Mr. PERKINS] says it was done at the

request of the Legislature of California.

Mr. NORRIS. I understood the Senator from Utah to say awhile ago that if I lived in the West I would realize that western people never made those requests; that they always came from the East. This one happened to comfrom the West. Mr. SMOOT. Mr. President, I did not say that they all came

from the East. I said that we in the West learned that there was no necessity for anyone from any part of the United States suggesting the addition of public lands to forest reserves, because that was attended to by the bureaus here at Washington.

Mr. NORRIS. In this case, as I understand, the West did it. Mr. THOMAS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Colorado?

Mr. NORRIS. I yield. Mr. THOMAS. I think the statement made by the Senator from Utah is, generally speaking, correct; but as to this particular instance it is significant that the extension of the boundaries of the Yosemite Park so as to include the Hetch Hetchy Valley occurred at about the same time that the Ruef government of the city of San Francisco sought to abandon the filings of the city of San Francisco upon that site and water.

Mr. NORRIS. A very remarkable coincidence; of course it was an accident; in such cases it always is an accident; but it is yet a very remarkable coincidence, which I think ought to be

taken into consideration.

Mr. SMOOT. Mr. President-The PRESIDING OFFICER. Does the Senator from Ne-

braska yield to the Senator from Utah?

Mr. NORRIS. Yes.

Mr. SMOOT. I voted for that resolution.

Mr. NORRIS. I presume, if I were present, I did also. I am not complaining about that.

Mr. SMOOT. I want to say to the Senator that I never heard

the intimation until to-day.

Mr. NORRIS. Of course you did not, and I did not hear about it. If such an intimation had been made I would not have voted for the resolution. On the face of it it looked like an honest proposition. There is not any doubt about that.

Mr. SMOOT. The senior Senator from California [Mr. Per-

KINS] supported that resolution.

Mr. NORRIS. Very likely. Mr. SMOOT. And all the Representatives of California who are supporting this bill supported that resolution.

Mr. NORRIS. Exactly.
Mr. SMOOT. I do not think they were all deceived.

Mr. NORRIS. It is a very remarkable coincidence. I said distinctly-and I will not permit any Senator to put me in any other light-that I was not for a moment questioning the honesty of any Member of the Senate or of the House of Representatives, or of any official of the Government who had anything

to do with the matter.

I presume we have all voted for a good many bills that looked nice on their faces, but later discovered that there was some-

thing besides what appeared on the surface.

Mr. President, there are hundreds and thousands of horse-power going to waste in this valley. In this age, when men are toiling and sweating, and when corporations are charging for water and for heat and for light enough to make a profit, perhaps, on watered stock, when we have an opportunity to put into competition with such a thing as that the development of a power that will not cost the Government a cent, but will reach out and relieve, in the course of years, millions and millions of honest men, it seems to me almost a sin not to do it.

Mr. President, the passage of this bill means to lighten the burden of every man who toils in any of the Pacific cities. It means relief to every woman who works and toils. It means that the woman who breaks her back over the washtub will be able to do her washing with electric power. It means that the citizen who has to buy electric light by means of which to educate himself and his children will have the price cut in two. It means that the street railways of San Francisco and other cities will be operated by this power. It means a 3-cent fare

to the poor of San Francisco on their street railways. Hold up your calloused hands, you senatorial strap hangers,

who for years have been riding on cars here and paying for something you did not get. Hold up your hands, and if you can not give relief to the citizens of the District of Columbia from an intolerable situation, at least let your brethren out on the coast get some relief. Defeat this bill and you will receive the plaudits, the acclaim, and the praise of every hydroelectric corporation in the State of California. Pass it and you give into the hands of the people a power that God intended should do some good for man.

Pass this bill and you relieve the burden of every man en that coast who earns his living by the sweat of his face. Pass it and you give relief to every woman who toils, to every child You start countless wheels revolving that will relieve humanity of its present burdens and make them lighter. You give it cheaper power, cheaper light, cheaper heat, cheaper

transportation, and an abundance of pure water.

The hundred thousand horses that we will harness are now idle, doing nothing, occasionally destroying property. Harness them and put them to work—100,000 horses that do not have to be fed, that never will get tired or weary, that never die of old age, that will be working 100 years from now as they can work

now, without tiring and without ceasing.

Pass this bill and you will perform the very highest possible act of conservation. Conservation does not mean to lock up resources. Conservation does not mean dealing out these resources to private capital for gain. It is not necessary to accuse those corporations of doing any wrong; but here will be an instance where the cheapest power on earth will be developed and where it will be sold at cost.

Mr. SMOOT. Mr. President, will the Senator from Nebraska yield to me for just a minute?

The PRESIDING OFFICER. Does the Senator from Ne-

braska yield to the Senator from Utah?

Mr. NORRIS. Yes.

Mr. SMOOT. I approve of all the Senator has said in regard to harnessing this mammoth power, but I wish to say to the Senator that the city of San Francisco can create very nearly the same horsepower by using the Cherry Valley drainage area and the Lake Eleanor drainage area, and do all the Senator has said for the good people of San Francisco.

Mr. NORRIS. No; she can not. Mr. SMOOT. That is what the report says, Mr. President.

Mr. NORRIS. I am going into that somewhat.

I believe the Congress of the United States has never before had the opportunity to pass a bill that will do more good than this bill along the line of putting to work the forces of nature. I was about to say, I think, when I was interrupted, that it did not necessarily follow and I am not necessarily asserting that these corporations are charging an exorbitant rate at the present time, or that they ever would do so. The inclination, of course, always is to do so. Everybody knows, however, that they will make a profit. Here is an instance where it is not intended to make a profit. The people who ride on street cars, the people who use electric lights, the people who are now using gas, those who eventually will use coal for purposes of heat, and those who use water for washing purposes will all receive all the benefit there is in this legislation without any rake-off by any corporation or monopoly.

Pass this bill, and its ultimate effect is going to reach away beyond the lives of any men who live. If by some convulsion of nature the country out there is not destroyed, in a thousand, yes, a million, years from now the people will still be getting the benefit of this legislation, which can hurt or harm absolutely no man on earth. Pass this bill, sir, and millions of children yet unborn will live to raise their tiny hands and bless your

I do not think anything to compare with this matter in importance has been before the country, recently at least. I have no sympathy with the man who in his conservation says that we must lock it all up, never develop water power, never do anything, unless the private corporations do it. Here is an opwhere we have a chance to carry comfort and blessings and happiness not only to the people who live around that bay now but to all those who shall live there in the future.

The charge is made that this is going to interfere with some irrigationists in the San Joaquin Valley. I am not questioning the honesty of those who make that assertion.

Mr. CLAPP. Mr. President-

The PRESIDING OFFICER. Does the Senator from Ne-

braska yield to the Senator from Minnesota?

Mr. NORRIS. Yes.

Mr. CLAPP. In that connection an inquiry is suggested to me that I had intended to make of the Senator, and I think perhaps it will be included. perhaps it will be in order with reference to the phase of the question he is about to discuss.

I should like to ask the Senator if, in his study of this subject, he has familiarized himself with the Los Angeles grant?

Mr. NORRIS. I will say that I have not done so in detail.

In a general way I know what it is.

Mr. CLAPP. What I was going to ask was, if so, whether

the Senator could point out the difference between that situation and this, especially with reference to the rights of settlers,

present or prospective, in regard to irrigation?

Mr. NORRIS. In the course of the argument I am about to make, while I am not going to refer to the Los Angeles proposition, because, as I say, I do not know the details of it, I think I shall be able to satisfy the Senator's mind in regard to the claim that anybody is going to be hurt or any man's rights are going to be taken away from him by this bill.

Mr. THOMAS. Mr. President, will the Senator permit me to

interrupt him?

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Colorado?

Mr. NORRIS. I yield.

Mr. THOMAS. I may say that at the time the Los Angeles

bill was pending in Congress a great many men in the West, myself among the number, were solicited to write to and invoke the favorable action of their Senators and Representatives upon the bill. At the same time we received a great many applications from those opposed to it to attempt to use our influence against the bill. The principal objection to the bill was that it would make the valley of the Owens River a widespread desolation and destroy all the farms and ranches that line both sides of the river from its source to the place where it leaves the border of the State. At any rate, so far as that phase of the opposition to this bill is concerned, it presented a precisely similar condition, although perhaps the opposition was not an organized one, as it seems to be here.

In speaking a day or two ago with a gentleman concerning the conditions down there, I was informed that much of the apprehended disaster never had occurred, the water supply being sufficient for the uses of Los Angeles and leaving practically enough for those whose rights then existed. In instances where damage had occurred the city of Los Angeles, of course,

had to meet it and make due compensation for it.

Mr. CLAPP. If the Senator from Nebraska will pardon a further interruption, I should like to ask the Senator from Colorado with reference to what use of power has resulted or may yet result from the passage of the Los Angeles bill.

Mr. THOMAS. I can not speak about that so definitely. My understanding is that the system contemplated the generation of sufficient power for the municipal uses of Los Angeles, but from reservoirs near the city, there being no such great gorge as Hetch Hetchy to form the initial point or foundation of the system. That is my information.

Mr. CLAPP. Can the Senator answer the question whether

or not, in the Los Angeles case, there was the opportunity to create power that depended upon any act of Congress-not as to the right to create it, but with reference to the right to place structures so that it could be created? That is, did the opportunity to create power depend upon any act of Congress?

Mr. THOMAS. The Senator will find the act granting Los Angeles its rights in the thirty-fourth volume of the Statutes at Large, on page 801, as I now remember. There is nothing in the act which specifically refers to power. Of course the construction of a dam, the creation of a reservoir, and the impounding of water so that it is held would create power and would give to Los Angeles the power thus created.

Mr. SMOOT.

Mr. SMOOT. If she filed on the water. Mr. THOMAS. Yes; as the Senator from Utah suggests, if she filed on the water. I think her filings did cover that power, but I simply assume it because it would be perfectly natural for them to do so.

Mr. CLAPP. The point I am trying to get at—and as I do not intend to speak on the subject I have taken the liberty of rising at this time-is whether Los Angeles could develop power in that case independently of any right to place structures where the right to place them depended upon the grant from the Government.

Mr. THOMAS. In one sense, no; because unless she made this construction she could not get the head of water necessary for power. I do not know that I exactly understand the Senator's question.

Mr. CLAPP. The question is whether or not it required any right granted by Congress to enable Los Angeles, in the placing of structures anywhere, to utilize any power incident to water which she got by filing.

Mr. THOMAS. I now fully apprehend the Senator's question. It did not.

Mr. NORRIS. I was about to take up the question of conflict between these two irrigation districts and the proposition on the part of San Francisco to use the water from the Hetch Hetchy Valley. I wish to say, as I perhaps said to some extent a while ago, that San Francisco investigated all the various watersheds and various water propositions that were anywhere within access of San Francisco. There is not any question of her doing that honestly. She had her engineers do it, and they came to Hetch Hetchy as a result. The Government engineers went after it, and they came to Hetch Hetchy as a result. They were afterwards ordered, I think, by the Secretary of War to get together again and go over the question again; and they did so and came back to the same place.

These men did not say, and I am not claiming, that it is impossible for San Francisco to get water anywhere else. I do not claim that. In these reports they went into the question just as any court would do, reviewed the various propositions, and showed how they could get water here and how they could get water there. Those reports have been read here time and time again. I have followed wearily many and many a night, until I was worn out, the evidence that led along different streams going in all directions from San Francisco; some of them good propositions, some of them proper to develop, I admit, but there is not one of them but that, in my judgment, would bring us more often than this one into contests with irrigationists. There is no one of them but that has all its difficulties. Some of them are impracticable; all of them have their difficulties. So these engineers, after going over and over and over again all the evidence and all the surveys, made by men who were moved by only one intention, and that was to get the proper supply of water, always came to the same conclusion. So when they say, as I have heard Senators read here evidently with a great satisfaction, "the water from the McCloud River would be good," nobody denies it. You could get a supply of water from that source. But all of these engineers have gone over the whole field, and they have always come to the same conclusion, that putting one thing with another, the most practicable and the fairest and the best proposition of all

is the Hetch Hetchy project.

The Senator from Idaho [Mr. Borah] the other day, in discussing the matter, himself admitted that in his judgment there was a difference in cost in favor of Hetch Hetchy of from twenty to twenty-five million dollars, as I remember. The different estimates run all along from thirteen to thirty million dollars, always in favor of Hetch Hetchy. But there is not another proposition that has power connected with it that can be compared with this-not one. Some of them have power companies that want to sell. There is not one that has the possibility of development of horsepower similar to or that can be even compared with the Hetch Hetchy proposition-not one. In my judgment, if they could get any one of the other propositions free, absolutely for nothing, and would have to pay, as they will in this case, \$77,000.000 to develop Hetch Hetchy, the latter still would be the cheapest. We are not considering this matter for to-day alone, but for the generations that shall follow.

Here is an opportunity to harness up one of the forces of nature that shall carry comfort and happiness all down the ages and the centuries. I do not think there is any comparison between Hetch Hetchy and any of the other propositions. Invariably every board-Army board and everybody else-comes back to Hetch Hetchy. It is the best. It is the cheapest,

It is not intended that all this power shall be developed at It is not a practical proposition to do so. It is not intended that all this water shall be carried to San Francisco at once, or that provision shall be made at once for carrying it all. If this bill is passed, however, the first part will pay for the second part. Power will be developed and the extension of the work and the increase of the supply that may be necessary in future years will be paid for out of the power that is first developed.

Is there any injustice to the irrigationists anywhere in this bill? Is there anything here that is going to take away men's homes?

I heard read from the desk here the other day a telegram from a farmer out in the San Joaquin Valley. He said:

The passage of this bill means the destruction of our homes.

If that be true, it is a serious proposition.

I do not believe there is a man here who wants to rob one of those farmers. There is no man here who wants to prevent the development of agriculture there.

Let us get down, now, to what I believe to be the true facts in the case. Objection is made by these irrigation districts to certain provisions of the bill which, when it passed the House, were put in at their request, and were then satisfactory to them. Now they object to them, and say the passage of the bill means the destruction of their homes. There is no man here or elsewhere who has studied this bill who will deny for a moment that if this bill is passed those irrigation districts will get more water than they ever have had in their entire history in the There is no doubt about that proposition. If the real truth were spoken; that is, the reason they had these provisions put in the bill. They had a filing, it is true, on more water than there was in the stream, but they never put it to beneficial use.

I am going to read some of the statutes and some of the decisions of the Supreme Court of California on the proposition. They are entitled, under this bill, to 2,350 second-feet-that is, the bill says that the city of San Francisco shall recognize their prior right to 2,350 second-feet. They have never used more than 2,000 second-feet in the past. They had a filing on 9,000 feet. They had a right to develop a good deal more if it was They went along all these years, and they have not done There is not a farm there, there is not a home there but that has been developed on less than 2,350 second-feet. I think if the real facts were shown, if the real truth were developed, they would not be able to prove in court a right to more than 1.800 second-feet.

So at the suggestion of these men themselves this provision was put into the bill; but that is not all. The bill provides that for 60 days in the irrigation season-from the 15th day of April until the 15th day of June-they shall have 4,000 second-They never had it before. They have not a ditch there now that will carry it. Then, there is an additional provision for supplying them with flood waters. Then there is another provision that they shall be able to get water, even in addition to all that, by paying the cost of the storage, for which, if they stored it, they would have to pay. No profit to San Francisco is provided. Then there is another provision in the bill-and the bill has been criticized on the one hand because the provision is in it, and on the other hand because a Senator thought it did not have it in it-which says that at no time shall San Francisco take out of the San Joaquin Valley more water than she can put to beneficial use for domestic and municipal pur-

The Senator from Oregon [Mr. LANE] discussed the proposition and said: "They are going to get 400,000,000 gallons daily." That is what they do expect to develop. They will never have it in San Francisco unless they have use for it. They do not want it there unless they can use it. The bill provides that they shall not take it there until they can use it. The Senator from Oregon demanded that it be put in the bond that they should not do it. The Senator from Idaho [Mr. BORAH] argued, because it was in the bond, that it ought to be The Senafor from Oregon did not know, perhaps, stricken out. when he said that that it was in the bond. It is there. There is not any question about it.

So these people are getting more water under this bill than they ever had in their lives, more water than they are entitled to under the laws of California. They can not prove title to nearly what they are getting, and there is not a home there but that is going to be benefited instead of injured by the passage

of this bill. Mr. President, here is a possible condition-and I want to be just as fair as I would like to have others fair to me. Suppose in the San Joaquin Valley there is additional land that is now arid, that never has been irrigated, that could be irrigated if this water were impounded here and held exclusively for its benefit. That is a condition which might possibly arise. But suppose some other irrigationists, instead of San Francisco, had filed on this water. Under the laws of California, some of which I am going to read, the man who first perfects the beneficial use, who first files and then perfects it in accordance with the filing, is the man who has the prior right.

These two irrigation districts filed on 9,000 feet. puted that they never have put to beneficial use, although they have had years and years in which to do it, as much as 2,350 feet. They tell me, those who know, that it would probably not exceed 1,800 feet. I think they will admit that it will not exceed 2,000 feet. Now, suppose it prevented the development on some arid land. That would not hurt a home. If a man has built up a home there by irrigating, and if he is going to get more water than he had before, he has not his home destroyed.

As I said awhile ago, I am not disputing the necessity of these men, but when such a ridiculous proposition is brought here in all seriousness by the men who think they are going to be ruined I can not help but call attention to the power possibilities and to the power companies that are interested more than anybody else in defeating this legislation and who are deceiving these farmers as to the real propositions involved.

I want to read that provision of the bill which prohibits

San Francisco from taking more water out of this valley than she can put to beneficial use.

Mr. THOMAS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Colorado?

Mr. NORRIS. Yes. Mr. THOMAS. I I desire the attention of the Senator from Minnesota [Mr. Clapp] for a moment. A question was asked a few moments ago by the Senator from Minnesota concerning the Los Angeles grant. The attorney of the city of San Francisco, Mr. Long, has handed me this memorandum:

cisco, Mr. Long, has handed me this memorandum:

in the Los Angeles grant the city of Los Angeles was permitted to take water from lands which could be irrigated by such water and diverted from such lands to lands around the city of Los Angeles to be irrigated. It is true that the city of Los Angeles purchased all lands having vested water rights, but this project for Los Angeles, known as the Owens River plan, involved the abandonment of a big reclamation scheme contemplated by the Federal Government, as is evidenced by this language: "And provided further, That in the event that the Secretary of the Interior shall abandon the project known as the Owens River project for the irrigation of lands of Inyo County, Cal., under the act of June 17, 1902, the city of Los Angeles, in said State, is to pay to the Secretary of the Interior for the account of the reclamation fund established by said act the amount expended for preliminary surveys, examinations, and river measurements, not exceeding \$14,000," etc.

etc.
The Secretary of the Interior did, in the face of said opposition, abandon the Owens River scheme, and the big tract of land which could have come under irrigation by means of the reclamation plan has been absorbed by the city of Los Angeles.

Mr. CLAPP. If the Senator from Nebraska will pardon me,

that does not go to my inquiry.

Mr. THOMAS. Not the inquiry as last stated, I fully comprehend. I think I gave the only answer that can be correctly given to it.

Mr. CLAPP. It is without dispute here that the city of Los Angeles had filed for a certain amount of water. I do not know whether the laws of California require the damming of streams. Mr. THOMAS. I have no doubt it does; it must do it

Mr. CLAPP. If the laws of California permit the damming of a stream against which an application of water had been filed, and the city of San Francisco owned the land upon which the dam was to be built, then under that law and this filing the city of San Francisco could build a dam and get the benefit of the power.

Mr. THOMAS. If its location notice provided for power.

Mr. CLAPP. Exactly. I was assuming that situation to exist. While the inchoate right, if I may use that expression, is in the city of San Francisco, it so happens that it is not worth a postage stamp, because of physical conditions and because of the ownership by the Government of certain lands until the United States grants the right to build the dam.

Mr. THOMAS. Or sells it the dam site.

Mr. CLAPP. That would amount to the same thing.

Mr. THOMAS. Yes. Mr. CLAPP. I was inquiring whether there was a physical similarity in the Los Angeles case, whether they could use power there under their rights under the law of the State owing to the physical situation and the ownership of property or whether they had to come to Congress to get such a right as to enable them to exercise whatever right they had under the State law.

Mr. THOMAS. They get the right under the laws of the State.

Mr. CLAPP. That was the point.
Mr. NORRIS. Mr. President, I think, when diverted by the
Senators discussing Los Angeles, I had reached a point where I wanted to read a provision of the bill which provides that San Francisco shall not take out of the San Joaquin Valley any more water at any time than she can put to beneficial use:

(h) That the said grantee shall not divert beyond the limits of the San Joaquin Valley any more of the waters from the Tuolumne water-shed than, together with the waters which it now has or may hereafter acquire, shall be necessary for its beneficial use for domestic and other municipal purpos

That means that when she has enough for her use, including what she now gets from the Spring Valley Water Co., she can not take any additional water out of the San Joaquin Valley.

Mr. WORKS, Mr. President—
The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from California?

Mr. NORRIS. Yes,

Mr. WORKS. I should like to know under those circumstances what is to become of the balance of the water? been stored by San Francisco under this grant. Certainly the storage facilities provided for are far above any requirements. The first section, upon which I commented, I think conflicts with what the Senaotr has read.

Mr. NORRIS. I am reading this section in answer to the argument made by some of the opponents of the bill that San Francisco is getting too much water; that she will 400,000,000 gallons daily down to San Francisco and simply throw it away when they are suffering for it somewhere else. That is the argument, and I am reading this to meet it.

Mr. WORKS. But what I am suggesting is that we might as well do that as to impound the water and let it go to waste

Mr. NORRIS. There are other previsions of the bill.

Mr. WALSH. Will the Senator from Nebraska yield to me?

M : NORRIS. Yes.

Mr. WALSH. I think a very plain and simple answer can be given to the interrogatory of the Senator from California. The provision of the bill read by the Senator from Nebraska, like most of the others, is a restriction upon the power and right of San Francisco to supply its own water. It would have the right to carry the water beyond the San Joaquin Valley under this appropriation except so far as by doing so the right of subsequent appropriators in the San Joaquin Valley should be prejudiced. Under this provision San Francisco gives up a right which she would otherwise have under the laws of the State of California, to take this water anywhere she listed. It expressly provides that she will allow it to be used as long as there is excess by anybody who wants it in the San Joaquin Valley. If she could store enough so that all the necessities of the San Joaquin Valley were met and still had something left, she would be nominally by these provisions forbidden even to use that somewhere else. But no one could take advantage of that provision except some one who was injured by it, and no one can be injured by it except some one in the San Joaquin Valley, and we assume that every requirement of the San Joaquin Valley is satisfied.

Mr. WORKS. Mr. President— Mr. NORRIS. I should like to suggest to the Senator that

I would prefer to go on.

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from California?

Mr. WORKS. I simply wanted to say a word.

Mr. NORRIS. I suggest that it is very difficult for me to proceed when constantly interrupted.

The PRESIDING OFFICER. The Chair will suggest to Senators that it is impossible for the official stenographer to report accurately what is said when both Senators are speaking at the same time. The Senator from Nebraska has the floor. Does he yield to the Senator from California?

Mr. NORRIS. I will yield, but I stated in the beginning that I am hardly able to be on my feet to-day, and while some may think that an interruption would operate as a rest, on me it has the opposite effect. My head is giving me a great deal of pain right now, but I have been perfectly willing to be inter-

rupted for questions.

I hope Senators will not get off on side issues. I should like to get through just as quickly as I can. I wanted to answer the suggestion of the Senator from California [Mr. Works] when he said that the provision did not apply to the storage of water. I read it, as I said, to meet the argument made by the Senator from Oregon [Mr. Lane] that they were getting too much water. There are other provisions of the bill that provide as to how this storage water shall be given out to the irrigationists. I tried to go over that fully, and I think I showed that it gave them more water than they ever had before. We are assailed on the one hand that we are storing the water up here in the mountains, and we are assailed on the other hand that we have the water in San Francisco, and it is running down through the sewers into the ocean. Both of these statements can not be true. There is an answer to each one, but when I answer one of them the other Senator says that it is not an answer to the other point, and, of course, it is not intended to be. San Francisco under this bill will not be allowed to take a drop of water and waste it through the sewers like the Senator from Oregon said she would. If this bill passes, the city of San Francisco, in storing up the waters that would otherwise go away and do nobody any good, is required by the conditions of the bill to give out to these irrigation companies more water than they have a legal right to under the laws of California, although they had an opportunity to use all that ever came down through the valley. Now I yield to the Senator from California.

Mr. WORKS. I beg the Senator's pardon; I appreciate his condition, and I shall not interrupt him further; but I really wanted his view upon the question of the conflict between this section and the first section of the bill. I commented upon that line, because under the first section of the bill the right to take out the water is unlimited, and they are allowed to dispose of it to other persons or corporations. This section limits the amount to the actual use of the city of San Francisco. My point was that San Francisco should not be allowed to construct a dam that would store 400,000,000 gallons of water per day when it could only use for its own purposes one-fifth of that amount. I would be glad to have the Senator's view upon that point if he will give it.

Mr. NORRIS. I will say that the first section, to which the

Senator has called my attention, is a very long one. I, of course, would not have time to read it all, as it covers nearly four pages of the bill. In my judgment the subsection that I have read would absolutely control San Francisco in taking the water out of this valley, and it could not take any more. Perhaps I am wrong in saying San Francisco. The bill says the grantee, and the grantee, I believe, is defined in the bill in another place as being not only San Francisco, but the other cities around the coast that may be organized in the future into

some kind of an institution as provided in the bill.

Mr. President, I said awhile ago that there might be a condition in which some arid lands might not be irrigated if this bill were passed that could be irrigated if this dam were constructed and all the water held for the San Joaquin Valley. Of course, in my judgment, that is going a long way for any body to claim as an argument against the passage of this bill, because it is conceded, in the first place, that if there is any arid land there they have no legal right as against the grantee of this bill to take this water under the laws of California, at least the use of the water, for municipal purposes, for drinking and for health is equivalent to that for irrigation. If another irrigationist had filed on this water and were given permission to construct this dam and he impounds the flood waters, there would not be any question raised but that his right would be superior, because the other irrigationists during all these years made no attempt to put this water to beneficial uses. They do not even claim it.

But I want to cite a statement which has been made by those who favor the bill, that if this bill was passed even that arid land down there that never has been irrigated, that these irrigationists have never tried to irrigate, could be irrigated by pumping the subsurface water with the cheap power that they could get at cost—that would be developed at the Hetch Hetchy

Whether that is true or not, I do not know, I have never investigated it because it is not material, and I would not have mentioned it had it not been that so much stress had been laid upon the alleged attempt that is being made by California to deprive those people in San Joaquin Valley of their rights and of their homes. I am going to offer some evidence now upon it, and I am going to offer the evidence of the man who represents that district in Congress. He ought to know. I am willing to take his word. The Senator from California the other day had a letter placed in the RECORD from him showing that he was very much opposed to this bill. Last night the leader on the Democratic side took occasion to take some time to explain this Representative's opposition and read into the Record some telegrams from Democratic committeemen up there.

Mr. ASHURST. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Arizona?

Mr. NORRIS. I yield, but I wish he would allow me— Mr. ASHURST. I want to know to which one of the leaders the Senator refers; there are so many leaders over here.

Mr. NORRIS. I refer to the Senator from Indiana [Mr. KERN], who addressed the Senate in regard to this particular provision.

Now, if it is true that there is subsurface water under this arid land that has never been irrigated and the development of this power will enable them by means of pumping to irrigate it, then there will be another benefit that has not been given very

much attention by those who have favored the bill.

As I said, I do not know of my knowledge whether that is true or whether it is not, but I am going to take the evidence of the Representative from that congressional district. Representative Church, who represents that particular district in Congress—although particular pains have been taken here to show that he is against this bill, both by the Senator from California and the Senator from Indiana-made a speech on this bill when it passed the House, and I think we ought to print in parallel columns the speech he made there and the letter he has

written here. This letter came under duress without a doubt. The Senator from Indiana showed that there were telegrams from the Democratic bosses down in that country telling him what to do. It would frighten almost anybody, probably, although I am sorry that the Representative was frightened. But here in the House of Representatives, before any strong hand of coercion was placed upon him, he stood up before his fellows and made a speech on this bill which ought to be printed in parallel columns with the letter that was put in the RECORD by the Senator from California. What he said in the House is short. Let me read it.

Mr. CHURCH. Mr. Chairman and gentlemen of the committee-

That is the Committee of the Whole of the House of Representatives and the date was September 2 last-

I have heard it frequently mentioned during the progress of this debate that the city and county of San Francisco will be the beneficiary under this act. I rise to say that San Francisco will not be its only beneficiary, for they are numerous.

If you will listen, he will bring these farmers in as being part of the beneficiaries, and I think he was right.

of the beneficiaries, and I think he was right.

Every traveler in the future who visits the Hetch Hetchy Valley will be a beneficiary under this act, for if this bill passes travelers, instead of riding mules, horses, or crawling on hands and knees up and down the narrow, rugged, and devious pathway that leads backward to this place of beauty in the heart of the mountains, can travel in an automobile over the broad and ample road provided according to the provisions of this bill.

And the nature lover, It matters not from what land he comes, in my judgment will be one of its beneficiaries, for after exerting all his strength and reaching at last the mountain top and looking for the first time downward into the Hetch Hetchy, instead of beholding it as it now is, warm, brushy, and covered with an inferior growth of oak, will see a lake, blue, beautiful, and deep, in which fishes swim and on the borders of which campers rest, far away from civilization and the humdrum of active life.

And farmers—

Now he is coming down to his constituents—

Now he is coming down to his constituents-

And farmers far down at the base of the mountains on the San Jacquin plains will be beneficiaries under this act when they draw from this contemplated reservoir, held by a dam, which the millions of others have made, surplus water at a cost with which to irrigate And other beneficiaries there will be-

Some more of his constituents-

And other beneficiaries there will be who pump water with which to irrigate their vines, orchards, and alfalfa fields, pumped by electric power generated far back in the mountains, in power houses not their own, brought to their very gateways at cost, on copper wires they did

A beautiful picture for his farmer constituents!

A beautiful picture for his farmer constituents!

And the great city of San Francisco, Queen City of the West, situated by the Golden Gate, will be the chief beneficiary, but I love to consider its benefit more from the standpoint of the people than I do the city, for a million men, women, and children will be there receiving benefits from this bill, for in the summer time they will have cool, refreshing water, product of Sierra's winter snow, pure as earth affords, with which to slake their thirst, and those there using electric power, whether it be the city operating electric car lines or the washerwoman using her electric iron, each and all will be benefited by this act.

The city itself will grow, and strangers on strange ships, coming from every land, will see her beauty and her growth. What helps our great city helps our State, and what helps our State adds new treasury to this great land, and so I claim from East to West, from North to South, all will be benefited by the passage of this bill.

Now, Mr. President, I have not offered to place in the Record

Now, Mr. President, I have not offered to place in the RECORD any telegrams, editorials, and opinions, because it seemed to me that the matter was perhaps somewhat overdone; but I have a telegram here from Mr. John M. Eshleman, who is the chair-man of the State railway commission of California, and who has charge of the regulation of all public utilities, and who would be the chairman of the commission, as I understand it, which would have charge of this matter if we pass this bill. He says:

I wish you success in your efforts to obtain Hetch Hetchy water supply for San Francisco. The needs of the city and the highest conception of national conservation call for the development of this project. Understanding that you propose to impound and use flood waters now running to waste and to protect irrigationists in their rights, I can see no valid basis for opposition.

I read that, Mr. President, because it seems to me that there are undoubtedly a great many other worthy men who understand the situation. That comes from the man who will be at the head of the very institution of California that has control of all these public-utility corporations, and it seems to me that his opinion is worth more weight and is of a great deal of value.

Mr. President, I want to read a few extracts from some of the statutes of California. It has been said here-or, at least, it was said before the committee-that you ought to defeat this bill, and then permit the irrigationists to build this dam and

for them to handle this power.

Mr. President, I think under the statutes of California that would be an utter impossibility, and I think it is completely answered by reading section 1410 of the code of that State:

All water, or the use of water, within the State of California is the property of the people of the State of California, but the right to the

use of running water flowing in a river or stream or down a canyon or ravine may be acquired by appropriation in the manner provided by law: Provided, That no water for the generation of electricity or electrical power or other power may be appropriated for a longer period than 25 years except by a municipal corporation other than an irrigation district or lighting district, or by an irrigation district when such electricity, electrical, or other power is for use and distribution only within its own limits and as subsidiary to and mainly for the purpose of serving and carrying out irrigation, or by a lighting district when such electricity, electrical, or other power is for use and distribution only within its own limits.

So I say we never could get the high and proper development of this power. That, to my mind, was one of the great reasons why we should pass this bill, unless it is given to a municipality. There are limitations in the law against making it a practical proposition to give it to an irrigation district.

Secton 1411 provides as follows:

The appropriation must be for some useful or beneficial purpose, and when the appropriator or his successor in interest ceases to use it for such a purpose the right ceases.

I am sorry that some of the Senators with whom I have been arguing this bill for a week in the cloakroom, and who particularly desired me to argue this particular point, are not present. Section 1414 is as follows:

SEC. 1414. As between appropriators, the one first in time is first in

Section 1416 in part-I will not read all-is as follows: Within 60 days after the notice is posted-

A prior section provides for the posting of notice showing the intention to file for water-

Within 60 days after the notice is posted the claimant must commence the excavation or construction of the works in which he intends to divert the water, or the survey, road or trail building necessarily incident thereto, and must prosecute the work diligently and uninterruptedly to completion, unless temporarily interrupted by snows of rain. \* \* \* Provided, That whenever any city and county, or any incorporated city or town within this State makes, or has made, or acquires, or has acquired, any appropriation of any waters of this State in accordance with the provisions of section 1415 of this code, it shall not be necessary for such city and county, city or town, to commence the work for development of more water so claimed than is actually necessary for the immediate needs of such city and county, city or town—

Mr. WORKS. Mr. President, does the Senator from Nebraska know the date of that statute?

Mr. NORRIS. No; I do not. I got that statute, however, from the city attorney of San Francisco, Mr. Percy V. Long.

Mr. WORKS. That statute has been repealed—not very long ago, it is true-and it has been repealed by the new act on that subject, which provides simply for permits to take water and the final license. It does not depend on the filing.

Mr. NORRIS. Does the Senator mean the last provision

which I have read, or all the sections?

Mr. WORKS. I mean all the sections which the Senator has read, if they are part of the code.

Mr. NORRIS. Mr. President, of course I am reading these sections without personal knowledge. I supposed, having gotten the document from the city attorney of San Francisco, that I certainly got the law as it is. Does the Senator say that any of these sections which I have read are not, in fact, the law of California now?

Mr. WORKS. They are not, in fact, the law now. Let me tell the Senator why, if I may take the time of the Senator—I will not interrupt the Senator if he should prefer that I should not do so, but it is rather an important matter.

Mr. NORRIS. I yield to the Senator. Mr. WORKS. The provisions the Senator is reading are provisions for filing upon the streams, for the commencement of work, the carrying out and the completion of it, which require no action on the part of anyone else to complete the transaction, but the new statute on that subject provides for applying to the water commissioners for a permit to do the work. That permit must set out the amount of water that is desired, the purposes for which it is to be used, and the various other things provided for in this statute. Then a permit is granted to do the work. After the work is all completed the water commission determines whether the terms of the permit have been complied with. If they have been, the commission issues a license. is altogether different, and I think Mr. Long, who is a very good lawyer, if he is consulted with respect to it and compares the two laws, will say that the new law has the effect of repealing the old statute.

I will say frankly to the Senator that San Francisco may have established her rights by her filing under the previous statute for that quantity of water. The only question would be whether she would have to submit to the regulations of the new statute

in that respect.
Mr. NORRIS.

I do not think it is very material. I do not

read were the law under which the irrigationists would have perfected their right to water if they had ever obtained a right. Is not that true?

Mr. WORKS. Oh, yes. Mr. NORRIS. That is what I am trying to show; that is my object in reading these statutes. I am going to show, I think, that there has never been a possibility of doubt that these irrigationists, although filing on 9,000 feet of water, have never perfected their right to use to exceed 2,000 feet; and that if they lost the right under the laws of California and the decisions of the courts to now come in, and even if they were to attempt to do so.

Of course, if these irrigation companies obtained any right to water at all under the laws of California, they obtained such right under the law existing at the time, and whether or not they have obtained such right must be decided according to the law in existence then. The Senator says that the law has recently been changed, but it will be admitted, I think, without any dispute, that the law which I have read was the law in existence during the years that these irrigation companies acquired whatever right they possessed, and, of course, it is that law, rather than what the law may be now, that will govern.

Mr. WORKS. That may be. I do not know what work has been done, but, of course, the irrigation district would have the right to follow up the work within a reasonable time and apply to beneficial use all the water they have filed upon if that much water was needed. Whether or not they have done so, as a matter of fact, I do not know.

Mr. NORRIS. I am not disputing that. That is what I have asserted to be the law, and the object of reading the statute was to lay the foundation for reading some brief extracts from one or two Supreme Court decisions. I do not think there is any dispute about that, nor do I believe there is any dispute that these men have not gone on uninterruptedly and within a reasonable time and perfected the right to use more water than they have been using for the last 10 years.

Mr. President, I am going to cut short a good deal of what I had intended to say about this proposition, because I fear that the principal object I had in stating it-for Senators have not done me the honor to be present-will be lost sight of, at least until after the vote on the bill, because Senators will have no opportunity to hear it or to read it until we have voted. I can not close, however, without taking up the attention of the Senate long enough to read extracts from one or two decisions of the Supreme Court of the State of California. I read from 115 California Reports, page 496. I am assuming, and the Senators with whom I have somewhat debated this question in private have assumed, that these irrigation districts have not perfected or put to beneficial use any more water than they have been using, which they filed on a good many years ago, and a question rests in those Senator's minds as to how soon must the districts complete their work, how soon must they go on and do it, how long can they wait. While they recognize that they have waited a good many years, the question as to how long they could wait and not lose their right was one that bothered Senators, and that is a question which I wish to elucidate. In Senior v. Anderson (115 Cal. Repts., 496) I read from the syllabus as follows:

Water rights—Appropriation for irrigation—Capacity of ditch— Quantity limited by user—

I think it fair to say that it appears in the hearings that the ditch of these companies has not capacity enough to carry any more water than they have been using.

Reasonable diligence—Abandonment of part.—An appropriation of water by the owner of land by means of a ditch, for the purpose of irrigation, is not measured by the capacity of the ditch through which the appropriation is made, but the appropriation is limited to such quantity—

not exceeding the capacity of the ditch as the appropriator may put to a useful purpose upon his land within a reasonable time, by the use of reasonable diligence, and if he delays increase of cultivation for an unreasonable time such delay must be construed as an abandonment of his claim of right to irrigate his whole tract, and the appropriation is limited, as against a subsequent appropriator, to necessary use as applied to the land cultivated within a reasonable time.

Another part of the syllabus reads:

Another part of the syllabus reads:

Rights of subsequent appropriator—Adverse user—Statute of limitations—Running of statute.—The rights of a subsequent appropriator having become fixed by the fallure of a prior appropriator to use more than a limited quantity for irrigation within a reasonable time, can not be defeated otherwise than by an adverse user for the full period-prescribed by the statute of limitations; and such statute does not commence to run from the mere construction of ditches or the laying of pipes for the purpose of using the water upon the lands, in the absence of a statutory notice of appropriation, but only from the actual adverse use of the water upon such other lands.

Which means as I understand that these invigationists if

Which means, as I understand, that these irrigationists, if think the Senator will dispute that the sections which I have they had not appropriated to beneficial use all the water that

they had filed on after they had appropriated a portion of it and San Frnacisco then filed on the water, they could not thereafter come in and have the right to the amount of water originally named in their notice, unless they commenced to use it, and used it during the running of the time of the statute of limitations, and that the statute of limitations would not commence to run until they had actually commenced to use the water and not from the time they began their improvements.

Mr. President, I want also to read from One hundred and twentieth California Reports, page 88. I read again from the syllabus. I had intended to discuss this at some length, but I am going to drop it without any discussion, because I find that I must draw my remarks to a close. In the case of Smith against Hawkins I find this:

Water rights-Appropriation-Loss of right by nonuser for five

Here is where the Senate will find what is meant by a "reasonable time"—

The failure of one who has appropriated water to devote it to any beneficial use for the period of five years next before the commencement of an action against a subsequent appropriator, operated, under section 1411 of the Civil Code—

That is one of the sections which I read-

to work a forfeiture of plaintiff's rights by nonuse, as against the defendant.

Id.—Partial loss of right—Capacity of ditch immaterial—An appropriation of water by means of a ditch is not measured by the capacity of the ditch, but is limited to such quantity—

Now, notice again:

Not exceeding its capacity, as the appropriator may put to a useful purpose; and no matter how great in extent the original quantity appropriated may have been, any amount less than the whole amount appropriated, which has not been devoted to a beneficial use at some time within five years, is lost and forfeited as against a subsequent appropriator thereof.

It seems to me that that absolutely disposes of the contention that is made here by some-probably not on the floor, but it has been made a good many times in the cloak rooms-that while these men filed a good many years ago on a large amount of water they have never put that much water to beneficial use. That is conceded; but it is said that perhaps under the laws of California and the decisions of her courts they can still do it. I think that question is absolutely settled by these decisions and the opinion, if I had time to read it, bears out what the syllabus says.

Mr. President, I have occupied more of the time of the Senate than I had intended, and yet I have not gone over a great many points that I should like to discuss that I have studied and have looked into. I have hurried over some others without giv-ing that detailed attention to them which perhaps I should have given, but I have reached a point where I am nearly exhausted, and I shall have to close.

It seems to me, summing up the case, that the facts are these: It is a proposition to permit San Francisco to build a dam on public land, to flood land that she already owns, to impound water to which she already has title; flood water that for centuries, in mad torrents, has rushed down to the sea, destroying and damaging property on its way. She has already expended, in good faith, nearly two millions of dollars in carrying out orders that have been made by governmental officials, all of which will be lost if some legislation similar to this is not enacted by Congress. The irrigationists on the San Joaquin Valley, who heretofore have only used from 1,800 to 2,000 secondfeet of water and have legal title to only so much as they have used, are guaranteed not only full protection for all the rights they have but for much more than that amount. In addition, they can have power at cost. In this connection, it must be remembered that from the place where the dam will be built to the San Joaquin Valley, where the water is to be used for irriga-tion, it is nearly 50 miles. It is within this 50-mile strip that all the power will be generated; so that every gallon of water, whether it goes to fertilize the land of the farmer or whether it goes for municipal purposes to the bay cities, will have first passed through the water wheel and done its share to the development of the power.

The impounding of these flood waters by San Francisco to develop water power will bring cheap light, cheap power, cheap transportation, and pure water to millions of people and confer benefits that will not only last during our time but that will continue so long as these mountains stand and so long as God permits this continent to remain unbroken. These benefits will be enjoyed, unless some great catastrophe of nature interferes, a million years from now by those who shall come after us, and no person or corporation anywhere on earth will be injured or interfered with in any way, except the water-power companies of California.

It is not going to destroy the beauties of nature in the park. I think it is going to add to them; at least it is going to make

them accessible to the thousands of our citizens who now are denied access to them.

I do not understand, Mr. President, how any man after he has given a fair and honest consideration to the subject can come to any other conclusion than that in the very highest sense this is a work of conservation. It is putting the works of nature into active operation for the benefit and the happiness and the comfort of mankind.

During the delivery of Mr. Norms's speech, The VICE PRESIDENT. The morning hour having expired, in accordance with the ruling heretofore made by the presiding officer, the Chair lays before the Senate the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting com-mercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, and in accordance with the previous ruling, concurred in by the Senate, House bill 7837 is now temporarily laid aside, and the Senate resumes the consideration of the bill H. R. 7207, granting to the city and county of San Francisco certain rights of way, and so forth.

The Senator from Nebraska will proceed. After the conclusion of Mr. Norris's speech

Mr. THOMPSON. Mr. President, I know there are a number of Senators, some of whom are not now in the Chamber, who have expressed a desire to hear the Senator from Montana [Mr. Walsh] present this question, and I feel that I should suggest the absence of a quorum, so as to give them an opportunity to be present.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gore	Norris	Stephenson
Bacon	Gronna	O'Gorman	Sterling
Borah	Hollis	Overman	Stone
Brady	Hughes	Page	Sutherland
Brandegee	James	Perkins	Swanson
Bristow	Johnson	Pittman	Thomas
Bryan	Jones	Poindexter	Thompson
Burton	Kenyon	Ransdell	Thornton
Chilton	Lane	Reed	Townsend
Clapp	Lewis	Robinson	Vardaman
Clark, Wyo.	Lippitt	Saulsbury	Walsh
Colt	McCumber	Shafroth	Weeks
Cummins	Martin, Va.	Sheppard	Williams
Dillingham	Martine, N. J.	Simmons	Works
Fletcher	Myers	Smith, Md.	WOLAS
Gallinger	Newlands	Smoot	

Mr. LEWIS. May I announce the absence of the Senator from South Carolina [Mr. SMITH] because of sickness in his family?

Mr. CHILTON. I wish to announce the necessary absence of the Senator from Oregon [Mr. CHAMBERLAIN]. He is paired with the junior Senator from Pennsylvania [Mr. OLIVER].

Mr. LEWIS. Permit me also to announce the absence of the Senator from Indiana [Mr. KERN], called suddenly from the Chamber on important official business.

The VICE PRESIDENT. Sixty-two Senators have answered to the roll call. There is a quorum present.

Mr. SUTHERLAND. Mr. President, I desire to rise to a parliamentary inquiry, and one which I think is of some consequence. This morning we adopted a resolution (S. Res. 225) which provided for the hour of meeting and also for the hour of adjournment. The resolution reads:

Resolved. That the hour of daily meeting of the Senafe be 10 o'clock a. m., and that the Senate shall on each day at 6 o'clock p. m. take a recess until 8 o'clock p. m. and adjourn at 11 o'clock p. m., until otherwise ordered.

Under that resolution it seems that the Senate is bound to adjourn automatically at 11 o'clock to-night. We have a unanimous-consent agreement-

that before adjournment on the calendar day of Saturday, December 6, 1913, the Senate will vote upon any amendment that may be pending, any amendments that may be offered, and upon the bill—

That is the Hetch Hetchy bill-

through the regular parliamentary stages to its final disposition.

The inquiry I desire to submit is whether or not, under that unanimous-consent agreement, the Senate must not begin to vote upon the bill at such time that the voting may be completed and the bill passed, if it is to be passed—disposed of, at any rate-before 11 o'clock.

The VICE PRESIDENT. Is the Senator asking the opinion of the Chair upon that subject?

Mr. SUTHERLAND. Yes, Mr. BACON. Mr. President, if I may be permitted not know what may be in the mind of the Chair, and, therefore, I wish to make a suggestion before the ruling-I think the last words of that order plainly put it within the power of the Senate to extend the time to any hour to-night we may see proper. "Until otherwise ordered" is the language of the resolution. It would be impossible for the Chair or anyone else to determine what hour we should begin voting so as to bring the conclusion at 11 o'clock; and it seems to me that there is but one thing for us to do, and that is, at such time this evening, or any time to-day as the debate may indicate a conclusion of that part of our duty, we proceed to vote, and if that conclusion is not reached before 11 o'clock, by order of the Senate, extend the time to a later hour.

Mr. SUTHERLAND. I ask the Senator from Georgia, then,

whether it would not be necessary, if the Senate is not to dispose of this matter until after 11 o'clock to-night, for the

Senate to make an order to that effect?

Mr. BACON. I think when we approach that hour, and it is demonstrated that we will not get through by 11 o'clock, it will be time enough to consider that question.

Mr. SUTHERLAND. That may be quite true, but I think it very well to call attention to the matter.

Mr. BACON. I think it is very well that attention has been called to it, so that we may anticipate it. The parliamentary inquiry, however, is addressed to the Chair, and it is for the Chair to determine. I simply took the liberty of making the suggestion, without knowing what view the Chair might take

of the question.

Mr. LEWIS. Might I be permitted to say, Mr. President, that it seems that one of the able Senators on the Republican side of the Chamber called attention very appropriately the other day to a precedent of the Senate that where there has been adopted a resolution providing that a matter be done on a certain day it would be construed as a legislative day and, therefore, the time would be extended at any length necessary to make that legislative day? I fancy the same thing would

Mr. SUTHERLAND. The unanimous-consent agreement provides that the vote shall be taken "before adjournment on the

calendar day of Saturday, December 6, 1913.

Mr. LEWIS. Then, I must yield my judgment to that of Senators who are better acquainted than am I with the defini-tion of the expression "calendar day."

The VICE PRESIDENT. The Chair has an opinion, which

he is ready to give. He may be wrong—
Mr. O'GORMAN. Mr. President, if I may make a suggestion before the President of the Senate announces his view, I wish to say that it would seem to me that the unanimous-consent agreement under which we are acting can be harmonized with agreement under which we are acting can be harmonized with the resolution which was adopted this morning. The resolution of this morning provides, in substance, that it is to become operative, unless otherwise ordered. We have, by unanimous consent, made an order, or made an agreement which has the effect of an order, and if it shall conflict at 11 o'clock to-night with the provisions of the resolution adopted this morning the unanimous-consent agreement will have the effect of continuing the session automatically, it would seem to me, up to 12 o'clock midnight.

Mr. BACON. Twelve o'clock to-morrow.

Mr. O'GORMAN. Twelve o'clock to-morrow. Mr. BRANDEGEE. Mr. President, I disagree with the Senator from New York about that, for the reason that the resolu-tion which provides that we shall adjourn at 11 o'clock p. m. each day says "until otherwise ordered."
Mr. O'GORMAN. "Until." or "unless"?
Mr. SUTHERLAND. "Until."
Mr. BRANDEGEE. "Until otherwise ordered." I think that

merely contemplates a future order and is not intended and could not be intended to relate back to some order that had been made in the past.

Mr. O'GORMAN. Has it not been established by the precedents of this body that a unanimous-consent agreement could not be impaired or modified either by another unanimous-con-

sent agreement or by an order of the Senate?

Mr. BRANDEGEE. There is no conflict, as the Senator started to say when he first rose, between the two resolutions, in my opinion, and if they both stand they can be both opera-I agree with the Senator; I do not think the unanimousconsent agreement could be changed or modified by this order.

Mr. O'GORMAN. That is the only suggestion I desire to

make.

Mr. BRANDEGEE. If they both stand, what will happen will be that, if the unanimous-consent agreement is kept, we will have to vote on the Hetch Hetchy bill before we adjourn

at 11 o'clock on this calendar day; that is all.

Mr. BACON. Twelve o'clock is not the end of the calender day

Mr. BRANDEGEE. It says 12 o'clock. Mr. GALLINGER. As I understand this matter, the con-

to lose an hour in the consideration of this bill. I trust the Chair will make his ruling, because I am afraid we shall lose the hour at the present time unless the ruling is speedily made.

Mr. SUTHERLAND. Mr. President, I desire to be indulged just to say a word.

I should like to ask a question.

The VICE PRESIDENT. Does the Senator from Utah yield

to the Senator from Missouri?

Mr. SUTHERLAND. In a moment. I make this suggestion in the utmost good faith, because it is perfectly apparent that if the matter should run along until 11 o'clock we should be confronted then with the proposition that under the order we are bound to adjourn, and under the unanimous-consent agreement we are bound to dispose of the bill before we do adjourn.

Mr. BRANDEGEE. That is true, Mr. President. Before the Chair rules, if I may be allowed to say so, I do not think the Chair, unless it desires to do so, can be compelled to interpret or to enforce the unanimous-consent agreement. That is an

agreement made by the Senate.
Mr. GALLINGER. That is true.

Mr. STONE. I wonder if it is possible in the mind of any Senator that we are not going to conclude the consideration of this bill before 11 o'clock to-night?

Mr. BRANDEGEE. I hope not.

Mr. STONE. We will not, however, if we precipitate one of these parennial and inconsequential discussions.

The VICE PRESIDENT. The Chair had hoped that before this question arose the apparent discrepancy between the resolution adopted this morning and the unanimous-consent agreement would have been taken out of the realm of controversy by the temporary suspension of the resolution until the close of the present calendar day. The Chair believes that a unanimous-consent agreement entered into by the Senate of the United States is, of course, enforcible only by the Senate of the United States, but that it is the invariable rule and practice of the Senate of the United States to enforce its unanimousconsent agreements.

The Chair assumes, therefore, for the purpose of the ruling, that the Senate of the United States will enforce the unanimousconsent agreement heretofore entered into. That unanimousconsent agreement, in the opinion of the Chair, could be set aside only by the unanimous consent of the Senate. As the resolution this morning was not adopted by the unanimous consent of the Senate, the Chair, if unfortunately called upon to rule at 11 o'clock to-night, will hold that the unanimous-consent agreement is in force and effect until the expiration of the

present calendar day.

Mr. PITTMAN. Mr. President, I rise to a parliamentary inquiry. The agreement, I believe, provides that all amendments to the bill shall be voted on during the calendar day. Is it the interpretation of such an agreement that if the voting should commence on the calendar day and continue on until after the

calendar day the agreement would be complied with?

The VICE PRESIDENT. The Chair has already perhaps proceeded further than the Chair was required to do under the circumstances, simply for the purpose of expressing the views of the Chair to the Senate, so that, if incorrect, they might be corrected. The Chair now, however, refuses to decide what will become of the present bill if argument continues until 12 o'clock to-morrow. The Chair has at present no opinion on that subject; but if such a contingency shall arise, the Chair at that time will have an opinion.

Mr. GALLINGER. I call for the regular order.

The VICE PRESIDENT. The Senator from Montana is

Mr. WALSH. Mr. President, it was not my purpose to say anything on the bill now under consideration before the Senate beyond the remarks submitted when I occupied the floor by the grace of the Senators who were of right entitled to it. I was moved to depart from that course, however, very largely by reason of the telegrams read into the RECORD on yesterday morning by the Senator from Indiana and others, which indicated a very genuine concern on the part of some of the farmers in the San Joaquin Valley over what they deemed a peril to them in the enactment of this measure.

Lest the alarm thus expressed should infect any Member of the Senate, I concluded to ask your indulgence while I canvass with you for a short time, and in as brief and direct a manner as I may, some of the arguments heard in this Chamber cal-

culated to excite it.

I feel satisfied that I shall be able to convince those who will honor me with their attention that that alarm is entirely Mr. BRANDEGEE. It says 12 o'clock.
Mr. GALLINGER. As I understand this matter, the controversy is over the question as to whether or not we are going acquire, under and by virtue of it, if they should see fit to CONTRACTOR SEZOTERITATION

avail themselves thereof, rights that they do not now possess or enjoy. I shall undertake also to answer some of the arguments that have been advanced in support of the contention that this bill is void as unconstitutional, in whole or in part, because it is an unlawful invasion of the rights of a sovereign State.

I pause at this time to repeat what I said on the floor a few days since-that it is impossible, as it seems to me, to inject into this debate the question of the relative right of the States on the one side and the National Government upon the other to the control of the waters of streams within a State.

I explained at that time the nature of this bill as I view it. In its essence it is not a bill which undertakes to regulate or dispose of or distribute the waters of any river in the State of California or elsewhere. The primary purpose of the bill is to make a grant to the city of San Francisco of certain rights in certain public lands.

That the Government of the United States has the right to dispose of the public lands, or of any interest in the public lands, is, as a matter of course, not a debatable question. That it likewise has the right to attach to any grant of public lands any lawful conditions which it may see fit to impose as a condition of the enjoyment of that grant likewise, I take it, will give rise to no controversy.

This, then, is a question as to whether the Government, in making a grant of certain easements in public lands, is entitled to attach thereto conditions relating to the use of water which it is contemplated will be stored upon those lands or carried over them by virtue of the privileges granted in the pending bill.

It does not require any great degree of perspicacity to recognize that that is a question entirely separate and apart—related to, of course, but by no means identical with—the question whether, when the National Government undertakes to exercise, not a proprietary right at all, but a purely governmental right, the right of controlling the navigation of navigable streams, having no proprietary right either in the adjacent land, the land under the stream, or the water flowing in the stream, it may attach a privilege to dam such a stream conditions in character like those which are found in this bill.

In the consideration of this question the other day a controversy arose with respect to the effect of the conditions prescribed in this bill, the observance of which is required by the grantee in order that it may enjoy the benefits of the grant. It was urged in that connection that if those conditions are unconstitutional and void-and it was asserted that they are-the result would be one of two things, as I understood the course of the argument: Either that the entire act would be void, or that the obnoxious conditions would be held void, and the grantee would have the benefit of the grant without the burden of the conditions; in other words, that it would take the grant made, entirely divested of the obligation to observe the conditions.

The bill grants to the city of San Francisco the right to construct a dam upon public lands, and to back up the waters of the Tuolumne River, flooding lands owned by the city of San Francisco, and likewise lands owned by the Government of the United States. It also gives to the city of San Francisco the right to construct ditches and canals across the public lands for the purpose of conveying the water that shall be thus stored to its place of ultimate use. It gives, likewise, the right to take timber from the public lands adjacent to the line of construction for use in building the works; likewise, to take from the adjacent lands stone, earth, and other material necessary for construction. Throughout, the grant is one of a right in public lands with a condition.

In the first place, be it understood, I do not agree with the proposition thus asserted, that there is anything unconstitutional about the bill as a whole, or about the conditions themwhich it is asserted are beyond the power of national legislation; but if that were true it would by no means follow that the grant itself could be enjoyed by anybody without the performance of the conditions upon which it is made.

Some controversy arose in respect to that matter, and a challenge was hurled at me with some vehemence, and possibly with some asperity, provoked, perhaps, by some uncourteous demeanor upon my part when I had the floor a few days since by the permission of the Senator from Washington [Mr. Poin-DEXTER]. I do not care to do more in following it than to lay before you what the Supreme Court of the United States has repeatedly said upon the subject. Its rule is that when one obtains a grant of any kind upon conditions, the grantee in the act who takes the benefit of it will not be heard to assert that a particular condition of the grant is contrary to the provisions of the Constitution. In other words, he will be estopped from asserting that it is void for any such reason.

For the sake of brevity, I read from the Encyclopedia of United States Supreme Court Reports, which condenses and ex-

presses in terse language the rulings of that court, upon this point. I read from page 77 of Volume IV, as follows:

Estoppel to raise constitutional questions: When a party has availed himself of the benefit of an unconstitutional law, he can not, in a subsequent litigation with others not in that position, aver its constitutionality as a defense—

An evident error; it should be "unconstitutionality "-

although such unconstitutionality may have been pronounced by a competent judicial tribunal in another suit. In such cases the principle of estoppel applies with full force and conclusive effect. And where a litigant in a State court avails himself of a right or power conferred by a State law and joins in a trial or other proceedings in which he relies upon the statute as a valid act, he thereby waives all objections to its validity and estops himself from objecting to it as unconstitutional,

Mr. McCUMBER. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from North Dakota?

Mr. WALSH. Certainly.

Mr. McCUMBER. The Senator can elucidate that matter a little bit further by answering a single question which I should like to ask him in connection with it.

Mr. WALSH. I shall be very glad to do so, if I can.

Mr. McCUMBER. The question is this: Admitting that, as between the parties, the city of San Francisco in this particular bill would be estopped to deny the validity of all the conditions that she assumes, suppose the State of California should intervene, as between the two litigants; and, say, as a basis of her intervention, that this contract or condition is against the economic policy of the State of California and interferes with that policy: can not the State successfully intervene and insist that, notwithstanding the condtion these waters will have to be distributed in accordance with the laws of the State of California. which itself holds jurisdiction over the waters?

Mr. WALSH. I have not overlooked the suggestion implied in the question of the Senator from North Dakota, and I shall be glad to answer it now or to take it up in the course of my discussion of the subject, as the Senator prefers. I shall be glad to answer him now, if he would rather have it that way, or let it go and have him call the matter to my attention again

if I do not answer it.

Mr. McCUMBER. I will allow the Senator to choose his own method.

Mr. WALSH. I shall be very glad to do so. Then, I will proceed.

I take it that no one will doubt that it is impossible for the city of San Francisco to enjoy this grant and at the same time to assert that the entire act is void. That, of course, would not be permitted at all. Neither would it be hard to assert that any particular provision in the act is void. I desire to dilate upon that for a moment. Of course it would be entirely unjust, entirely unfair, and contrary to the first principles of equity that she should thus enjoy the grant freed from the conditions upon which alone it was made.

wish to make that a little more clear by referring to one of the cases which is adverted to in the note. It came before the Supreme Court, and is reported only briefly in One hundred and ninetieth United States—the case of Gano against the Minneapolis & St. Louis Railway Co. The decision was affirmed principally upon the authority of an earlier case by the Supreme Court of the United States in One hundred and sixty-sixth United States. I read now from the decision of the Supreme Court of Iowa, from which a writ of error took the case to the Supreme Court of the United States.

In the opinion is the following:

In the opinion is the following:

In Dow v. Electric Co. (N. H., 31 Atl., 22) the Supreme Court of New Hampshire said: "When a legislative grant of authority to exercise the power of eminent domain contains a condition that the grantee shall pay more than the value of the property taken under the power, the grantee accepting the grant and exercising the power can not question the constitutionality of the condition. The defendants were authorized to flow plaintiff's land upon the condition, among others, that they pay the damage thereby done to him and 50 per cent in addition. \* \* The statute is permissive. It conters a privilege which the defendants were at liberty to exercise or not, as they saw fit. By their exercise of the power conferred, flowing the plaintiff's land, and applying for assessment and damages, they are precluded from denying the validity of the condition. The question of its constitutionality under either the Federal or State Constitution is not open to them. Pitkin v. City of Springfield (112 Mass., 509); Deverson v. Railroad Co. (58 N. H., 129) and cases cited; Dodge v. Stickney (61 N. H., 607); People v. Murray (5 Hill, 468). The defendants' objection that the statute is in conflict with both Constitutions or either of them is overruled."

This case was afterwards appealed to the Supreme Court of the United States, and that tribunal said: "We agree with the Supreme Court of New Hampshire in thinking that the plaintiff in error, by availing himself of the power conferred by the statute, and joining in a trial for the assessment of damages, is precluded from denying the validity of that provision which prescribes that 50 per cent shall be added to the amount of the verdict. The act confers a privilege which the plaintiff in error was at liberty to exercise or not, as it saw fit." (See 166 U. S., 489; 17 Sup. Ct., 645; 41 L. Ed., 1088.)

The act considered was one authorizing railroad companies exercise the right of eminent domain. The statute provided to exercise the right of eminent domain. The statute provided that in case the railroad took the land the owner should be awarded costs and attorneys' fees, thus requiring as a condition to the exercise of the power that the company desiring to condemn should pay attorneys' fees for services rendered to the landowner in the proceedings. It was held that the railroad company, having taken advantage of that statute, and having appealed to it as the basis of its right, could not be heard to contend that the provision was unconstitutional, simply because it was one of the conditions upon which the company was entitled to exercise the right at all.

Mr. BORAH. Mr. President The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Idaho?

Mr. WALSH. I do. Mr. BORAH. The Senator has explained the facts of that case, but I am not sure that I exactly caught them. As I understand, however, in that instance, the railroad company was proceeding under a certain statute to condemn; the statute provided that if parties proceeded to condemn under it they should do certain things—pay costs and attorneys' fees—and by virtue of the fact that the railroad company had proceeded under that particular statute, the court held that it could not be heard to say that any of the provisions of the statute were void.

Mr. WALSH. Exactly. So, here, the city of San Francisco, in proceeding to build this dam and asserting any rights it may care to assert under this act, will be in like manner estopped to deny any of the conditions of the act under which it proceeds.

There is, as a matter of course, a limitation to every principle, and I would not have it understood that there is not in this A consideration of the principle to which I now desire to advert probably will serve to indicate the proper conclusion to be arrived at on the line of thought suggested by the Senator from North Dakota. It is as follows:

from North Dakota. It is as follows:

There can be no estoppel in the way of ascertaining the existence of a law. That which purports to be a law of a State is a law or it is not a law, according as the truth of the fact may be and not according to the shifting circumstances of parties. It would be an intolerable state of things if a document purporting to be an act of the legislature could thus be a law in one case and for one party and not a law in another case and for another party; a law to-day and not a law to-morrow; a law in one place and not a law in another in the same State. And whether it be a law or not a law is a judicial question, to be settled and determined by the courts and judges. The doctrine of estoppel is totally inadmissible in the case. When certain parties have acted and have been placed in obligatory positions toward others under a statute subsequently declared unconstitutional, such persons can not claim the benefit of an estoppel in such manner as to have such void law executed as against the parties claimed to have been estopped. Speaking upon this point, the court said: "We are unwilling to assent to the doctrine of legislation by estoppel. The courts can not by the execution of an unconstitutional law as a law supply the want of power in the legislative department." This result is not inconsistent, however, with the cases which hold that, "although a law is found to be unconstitutional, a party who has received the full benefit under it may be compelled to pay for that benefit according to the terms of the law. This is upon the theory of an implied contract the terms of the law. This is upon the theory of an implied contract the terms of which may be sought in the invalid law and which arises when the full consideration has been received by the party against whom the contract is sought to be enforced."

That is the principle by which we are to be governed in the determination of this matter. This is a contract between the Government of the United States, on the one hand, and the city of San Francisco, on the other. The Government grants these easements to the city; and it, upon its part, agrees to perform the conditions which are designated here as the consideration upon which it gets the grant.

I wish now to address my attention for a while to the claims made on behalf of the irrigationists in the San Joaquin Valley. I shall return later to the feature of the case which I have been canvassing, when, if I have not fully answered the question of the Senator from North Dakota, I shall be obliged to

him if he will call my attention to it.

It will be understood that long years ago all of the water of the stream in controversy here was appropriated and taken out for use in irrigation and other beneficial purposes. We will be entirely justified in assuming that there is to-day no river in the State of California affording any considerable amount of water the waters of which were not many years ago appropriated and put to some beneficial use, chiefly for the purpose of irrigation. So that years ago, and before San Francisco ever contemplated this source for a municipal water supply, it is undoubtedly true that all the water which flowed in the Tuolumne River at the low season of the year was appropriated by the farmers living in the San Joaquin Valley for the irrigation of the lands of which you have heard. Likewise, within recent years efforts have been made, by the construction of dams and the establishment of reservoirs, not only to make available what is flowing in the stream at the low season, but to hold for use at that season the excess waters that go down to the sea

during the period of flood. Undoubtedly long ago whatever opportunities of that character upon this river existed were utilized.

So, Mr. President, we approach this question upon the understanding, in the first place, that the farmers in the San Joaquin Valley have certain vested rights in the waters of this stream. It may be assumed that they have 2,300 cubic feet, or that they have a thousand cubic feet, or that they have 3,500 cubic feet. They acquired those rights pursuant to the laws of the State of California. Lest it might be asserted at any time that there was a question as to the right of the State to parcel out the waters of a stream flowing through it, as early as 1866 the Congress of the United States passed an act to the effect that whenever rights had accrued and were vested and enjoyed pursuant to the local law or custom, such rights should be in the persons who had enjoyed these rights; and in 1870 Congress passed another act to the effect that all patents to lands anywhere within the public domain should be subject to water rights which had accrued or rights to ditches or reservoirs under or which were recognized by the act of 1866.

So these people in the San Joaquin Valley have certain vested ghts in the waters of this stream. That is property. It is rights in the waters of this stream. That is property. It is property in the very highest sense. They own it as much as they own their lands. They own these rights as much as they own their cattle. They own these lands as much as they own

money that they have in the bank.

Mr. President, somewhat strangely an apprehension exists in the minds of some, a fear lest something said in or done under this act might operate to deprive them of any of the rights which they have thus acquired. But I am very sure that not only the lawyers but the laymen in this body will recognize, on reflection, that it is beyond the power of Congress, no matter what they may say in this bill or any other bill, to take away from those people one jot or tittle of the rights

which they have thus acquired.

I want to follow that a bit further. We are going to enact this winter, as I hope, a general dam act; an act to permit those who desire to do so to erect dams upon the public domain for the purpose of damming the waters for power purposes. The Geological Survey estimates that there is undeveloped water power in the State of Montana to the extent of 2,000,000 horsepower. Most of it can be utilized only by the construction of dams upon lands now owned by the Federal Government. Will it be contended for a moment that when we pass an act authorizing the construction of dams generally upon the public lands for the purpose of storing water to generate electrical power we put in peril the holdings of people who have acquired water rights upon any stream? Is it necessary that we shall be careful to ascertain the extent of the right which each of these may have or the amount of all of them, collectively, and make a provision in the bill that we shall enact in order that they may be protected in their rights? Mr. President, you would undertake an impossible task.

Mr. President, we have heard a great deal of contention, a great deal of discussion, upon this floor as to whether these farmers in the San Joaquin Valley are entitled to as much as 2,300 cubic feet per second, or as to whether they are entitled to as much as 3,500, and my distinguished friend, the Senator from Washington [Mr. Poindexter], the other day expressed his dissatisfaction with the bill because he said it did not give those people enough, that they ought to have 3,500 cubic

feet at least.

When we come to pass a bill of the kind mentioned, is it possible that we will be called upon to sit in judgment upon the question as to the amount the several proprietors of water on each river affected is entitled to on account of appropriations made years before? This body is not constituted so that it can determine those questions. They are always the subject of long and heated controversy and protracted litigation in every State in which the right of appropriation exists.

No, Mr. President; nothing that we could do by this act will, as I say, in virtue of the provisions of the fifth amendment of the Constitution, in any manner affect, nor can it affect, the rights of these people. That amendment provides that—

No person shall be deprived of his life, liberty, or property without due process of law.

It is beyond the power of this Legislature to take those rights away from them.

That being the case, we pass to the question of the effect of these conditions, which have been assailed as vesting or attempting to vest in the General Government powers that inhere in a sovereign State and that can be exercised by the State and by the State only. The determination of that question depends upon the answer to the inquiry as to whether, if this grant were made by a private person, similar provisions would be void.

other words, we are to regard the Government of the United States in considering this bill as in the attitude of a proprietor of land. It is undertaking to give to the grantee, the city of San Francisco, certain rights and privileges in its lands. It makes these conditions. If those conditions would be valid in a grant made by a private person, they are equally valid in a

grant made by the Government.

So, I want to consider with you a little while as to whether these grants are valid or not. You can very readily conceive that a public-spirited gentleman might have a large domain in the State of California. Upon that domain there is an excellent dam site. By the utilization of it by anyone who should acquire a right to the waters the highest use could be It could be utilized for irrigation; it could made of the water. be utilized for municipal purposes; it could be utilized for the generaton of electric power. The owner of the site is perfectly willing to give that property to some one who will expend the money necessary to develop it, but he wants the grantee to utilize it for the benefit of his fellow countryman. conditions just the same as those we find in this bill.

I want to examine those provisions with you. Do not let us talk generally about the disposition of the waters of the stream by the State as against the General Government, but let us

inquire what these provisions are.

Take subdivision (d) of section 9 as illustrative of the character and because it has been made the subject of criticism. At page 13 you will find a number of subdivisions of section 9 Subsection (b) provides that the irrigation districts shall be preserved in their rights; that their right to 2,350 cubic feet of water per second shall be recognized. Then subsection (c) provides for the measurement of the water to which they are entitled. Then subsection (d) provides as follows:

(d) That the said grantee whenever the said irrigation districts sire water in excess of that to which they are entitled under the

That is, the 2.300 feet-

shall, on the written demand of the said irrigation districts, sell to the said irrigation districts from the reservoir or reservoirs of the said grantee such amounts of stored water as may be needed for the beneficial nee of the said irrigation districts at such a price as will return to the grantee the actual total costs of providing such stored water, such costs to be computed in accordance with the currently accepted practice of public cost accounting as may be determined by the Secretary of the Interior, including, however—

And so forth.

Thus it is said a power of disposition of these waters is put into the hands of the Secretary of the Interior. He is charged, it is said, with determining what amount should be paid for these waters, and the power is taken away from the State of Califor-

nia or from its water commission.

Let me ask you, Mr. President, if this were an individual making a private grant, and he should provide exactly as is here provided, that his grantee should sell water to this irrigation district at a price-being the actual cost of the same-to be determined by Mr. Jones or Mr. Franklin K. Lane, would anybody say that the provisions of the laws of California had been transgressed? Of course an individual could not impose such a duty upon another without the consent and acceptance of him in whom these powers were reposed, but if Mr. Jones or Mr. Franklin K. Lane, as private citizen, should say, "Well, I will be very glad to accept this trust and to discharge the duties as best I can," would anybody say that the laws of the State of California had been violated in any particular, or that the sovereign rights of the State of California had been invaded?

This section from which I read continues upon the express condition, however, that the said grantee may require the said irrigation districts to purchase and pay for a minimum quantity of such stored water, and that the said grantee shall be entitled to receive compensation for a minimum quantity of stored water and shall not be required to sell and deliver to the said irrigation districts more than a maximum quantity of such stored water to be released during any calendar year.

The Secretary of the Interior, by the next section, is to determine the amount of the maximum and minimum, the language being as follows:

(e) That such minimum and maximum amounts of such stored water to be so released during any calendar year as hereinbefore provided and the price to be paid therefor by the said Irrigation districts are to be determined and fixed by the Secretary of the Interior in accordance with the provisions of the preceding paragraph.

Just substitute for the Government a private individual, and for the Secretary of the Interior substitute a private person, and who is there who would be heard to assert that a provision of the kind read would make the whole thing void or that the condition itself must fall?

Now, Mr. President, I want to pass to another class of provisions of the bill. When it comes to the matter of fixing prices this private grantor might provide, might he not, that the payment was to be made at such a price as should be fixed by the

laws of the State of California, or in the event that the laws of the State of California made no provision for the fixing of the price, then the price was to be fixed by some person named by him. A provision of that character is found in a number of sections of this bill. I refer you to subdivision (m), page 20, where we read as follows:

The said grantee shall develop and use hydroelectric power for the use of its people and shall, at prices to be fixed under the laws of California or, in the absence of such laws, at prices approved by the Secretary of the Interior, sell or supply such power for irrigation, pumping, or other beneficial use, said prices not to be less than will return to said grantee the actual total costs of providing and supplying said power, etc.

So, Mr. President, you will have to determine, if you reach the conclusion that these provisions are an invasion of the rights of the State, that it would be beyond the power of a private grantor of lands to make such requirements as a con-

dition upon which his grant is to be enjoyed.

I now desire to pursue the line of inquiry suggested by the Senator from North Dakota [Mr. McCumber]. He asks, in effect, if the State might not intervene in a proceeding involving these conditions and assert their invalidity as a usurpation of its jurisdiction. I ask the Senator to assume that a private individual makes a grant upon conditions substantially the same as are here provided, that these terms upon which water and power shall be sold are to be fixed by a third party. done for the benefit of prospective purchasers, of parties other than the parties to the contract. The parties who are thus to be benefited are not parties to the contract; they are not bound by it at all; they may, if they choose to do so, come in under the contract and avail themselves of its provisions, or they may say, "No; we do not care to come in under that contract; we prefer to have the water commissioners fix the rates we are to pay.

Mr. President, it will be borne in mind that water can not be impounded and kept without use. In all the States permitting appropriation water is affected with a public use. Anyone who engages in the work of impounding water or in transporting it is obliged to sell at a reasonable price to anyone who may

demand water.

Now, one of the citizens of the State of California might choose to come in under the provisions of such a contract and ask that he be accorded the price provided therein. Another might say "I choose to have the water commissioners fix the price. I do not care to avail myself of the provisions of this contract." So he might likewise say "I do not care to rely upon the contract which the city of San Francisco has made with the Government of the United States. I ask the water commission of the State of California to fix the price which I shall

Have I answered the Senator?

Mr. McCUMBER. Partially, Mr. President. My mind was not focused so much upon the price which is provided for in this bill, and which I can not conceive as being contrary to the rule that would be established by the laws of the State of California, but if I read the bill correctly, there is a guaranty in it that a certain district may have a certain amount of water. If there is water enough for all the districts, in which there could be no possible dispute, I could understand that there would be little chance for a conflict there. But suppose the district, which may be the Modesto or the Turlock district, claims the full amount under the provisions of the bill which is practically guaranteed them by the city of San Francisco, but there is not enough of that water to supply the demand of the district and some other section that is equally entitled to water, and the State of California, through her water commission, should make an award of a quantity of water as between districts or between individuals which would not be in exact harmony with the distribution that would be made by the Secretary of the Interior or under the provisions of the bill.

Mr. WALSH. I am very glad indeed that the Senator has opened that line of thought, because exactly those conditions will be encountered when California undertakes by any proceeding to regulate these matters. There are to-day in existence in the State of California and all over the West private contracts between those who own canals through which water is carried and private individuals by which they agree to pay a fixed price for the water they use, in perpetuity or otherwise. The company is under obligation, under contract, to supply those thus

contracting with water.

It is beyond the power of the State of California to interfere with the performance of those contracts or to decree that the water shall be taken away from those who have contracted for it and given to some one else. Likewise it is impossible for the Legislature of the State of California effectively to say that those having so obligated themselves need not pay the amount which they have thus contracted to pay, but shall pay some other

price to be fixed by their water commission. In other words, legitimate contracts entered into remain, notwithstanding any provision that California may make vesting powers, however extensive, in a water commission.

But, Mr. President, it is suggested that inasmuch as the farmers in the San Joaquin Valley are not parties to this contract

they will have no right to sue upon it.

The question as to when a party other than those making it may sue upon it is one that involves us in many technical distinctions raised by the courts. It is not possible to reconcile the decisions. Some courts will hold that a third party, for whose benefit a contract was made, may sue under certain conditions, while another court will hold that under exactly the same conditions he will not be entitled to sue. Whether or not a farmer in the San Joaquin Valley may avail himself of the provisions of this contract between the Government of the United States upon one hand and of the city of San Francisco upon the other I do not deem it necessary at this time to debate. My own opinion about it is that they have that right and that any of them may come in under this act, appeal to its provisions, ask the privileges it grants them, and have those privileges enforced against the city of San Francisco by any court in the land. But if I am wrong about that and they occupy a position which does not entitle them to that relief, then, Mr. President, the only remedy there is in case a violation of any of the conditions of this grant occurs is, as was suggested, a procedure by the Government of the United States to forfeit the grant.

But, Mr. President, what reason have we to suppose that, if it should be determined that the individuals in whose interest they were written into the bill have not the right to avail themselves of the provisions of this act, the Government of the United States would be remiss in its duty in that regard? What right have we to assume that the city of San Francisco can go on unnoticed by the Government of the United States and violate with impunity the conditions under which it obtained this grant? What right have we to assume that the Department of Justice will overlook any violation of the provisions of this act, intended to safeguard the interest of any citizen; or, if it should, what right have we to assume that this body or the coordinate body upon the other side of the Capitol will be derelict in its duty by failing to call the attention of the Government to the fact, and compelling the institution of a proceeding to forfeit

It has been suggested that in any controversy that may arisethat in a lawsuit to determine whether any rights were taken away from the users of this water by virtue of this act, there would be, upon the one side, a weak litigant, a farmer of restricted means; and, upon the other hand, a great, powerful municipal corporation with practically limitless resources, as his antagonist. In answer to that, Mr. President, I call your attention to the fact that the opposing litigant would not be a single farmer, with his limited resources, at all, because all of the rights granted by this bill, if it grants any right at all, all of the conditions, are written into the bill in favor of two irrigation districts of great wealth. It is conceded that they have the first right to at least 2,300 cubic feet per second of Do you know what that means? That means something like 92,000 miners' inches of water; enough, as water is now utilized, to irrigate from 200,000 to 250,000 acres. The prior rights that these districts enjoy, represent a value that runs into the millions, not to speak at all about the farm values and other property that is back of them. So, instead of a weak single individual on the one side contending with a great city, we shall have these two great irrigation districts, holding and enjoying property of immense value, a patrimony that would do

credit to a prince or that would ransom a rajah.

Then we are presented with a picture of a single isolated farmer seeking to establish himself in the San Joaquin Valley and endeavoring to get some water out of the Tuolumne River and endeavoring to get some water out of the Tubolimine River in antagonism to the great city of San Francisco, which is granted rights by this bill. But, Mr. President, such a condi-tion can not possibly arise, because, as indicated a while ago in the course of my remarks, all of the waters of that stream that flow through during the season of low water were appropriated years ago. All that could be utilized of the flood waters of the stream by the construction of dams at small cost are likewise utilized, and there is no way of increasing the available water now except by the construction of a great dam, such as this bill contemplates, in the Hetch Hetchy Valley. It will be accordingly necessary for that single lone farmer to associate himself with a large number of other farmers or others interested who will be able to build a dam such as that for which this bill provides. Then it will be necessary for those who thus associate themselves to come here to Congress in order to get just exactly the privileges which it is intended by this

bill shall be conveyed to the city of San Francisco. There, Mr. President, is, as I said the other day, the crux of this whole question. It is simply a question as to whether the water to be impounded if this bill passes shall be allowed to run idly and uselessly to the sea until at some future time when other's interested will combine themselves into irrigation districts and ask of us the privilege to construct a dam for the purpose of carrying the water to the arid lands of the San Joaquin Valley still remaining unreclaimed, or whether we shall devote it to the use of the city of San Francisco immediately, as is provided by the pending bill.

The Senator from Idaho [Mr. Borah], in the course of his remarks, made a number of other objections to the bill, which I do not deem it necessary at this time to notice, except for one. Complaint was made about the provision of the bill found at

page 5 and reading as follows:

Sec. 3. That the rights of way hereby granted shall not be effective over any lands upon which homestead, mining, or other existing valid claim or claims shall have been filed or made and which now in law constitute prior rights to any claim of the grantee until said grantee shall have purchased such portion or portions of such homestead, mining, or other existing valid claims as it may require for right-of-way purposes and other purposes herein set forth.

I do not know that I clearly understood the Senator, but I gathered from him that under that language the rights of no one would be safe, except one who had obtained a patent for his claim, or, at least, had made final proof upon it. The Senator must have overlooked the decision of the Supreme Court of the United States in the case of the Northern Pacific Railway Co. against Trodick, reported in Two hundred and twenty-first United States, in which it is ruled that anyone who settles upon public lands intending to assert a homestead right to them, being bona fide in the occupation of them for that purpose, enjoys a "claim." It was undoubtedly to protect the assertors of such claims that this provision was incorporated into the bill, and I deem the language ample to protect them.

Mr. President, I have not undertaken to discuss here those considerations which properly, to my mind, appeal to the judgment and discretion of Senators in relation to the disposition that ought to be made of this bill. That labor has been discharged and the facts have been amply developed with special skill and ability and with much learning in the course of this debate. I have simply endeavored to clear up some questions in relation to which much time has been devoted, but which, as I view the matter, are entitled to very little weight in the determination of this measure. I have accomplished the purpose with which I started out if I have impressed any Members of this body with the view that there is really only one question that is legitimately open to consideration or investigation or debate in this connection, and that is as to whether a small portion of the Yosemite National Park should be devoted to the utilitarian purpose that is contemplated by this bill; in other words, whether the conditions are sufficiently grave to justify us in invading its precincts.

For myself, living, as I do, in a semiarid region of the country and knowing the blessings of an adequate supply of wholesome water, not always as a matter of course obtainable there, I can not, in consonance with my duty as a legislator of the Nation, permit the love that I have for the beauties of nature to outweigh for a moment the appeals for water to drink

of a whole city full of people.

Moreover, it does seem to me that the request of the city of San Francisco comes to us with particular force and strength; it certainly does to me, not at all by reason of that devastating calamity that befell her, but by reason of the superb courage with which she rose after that visitation from amidst the ashes of her stateliest homes and her proudest public monuments. saw her in devastation and ruin, plundered by faithless public servants, racked by strikes, when her corrupt city government had gone to pieces, leaving her a prey to lawlessness. Only four years after I saw her again, rebuilt, celebrating her re-habilitation amid the plaudits of thousands, who were amazed at the work that had been accomplished in that short time and gazed in wonderment at the new city more beautiful and more enduring than the old. I want San Francisco to have this water, and I want her to have the power as well, because, among other reasons, she typifies some of the very best features of American

Mr. STERLING. Mr. President, I had hardly expected to take the time in addressing the Senate upon this question, but by the courtesy of the Senator from Nevada, who gave notice that he would speak to-day, I am to have a little while in which I may at least explain my vote in opposition to this bill. One reason why I think it proper for me to address the Senate is that I am a member of the Committee on Public Lands, which reported this bill favorably. I was not present, however, at the hearings before the committee, nor was I present at the time the report was agreed upon. I was unavoidably absent at that time. But, Mr. President, I find in the report of the advisory board of Army engineers and in some admissions made here on the floor of the Senate ample ground, as I view it, for my opposition to the bill. I want briefly to call the attention of the Senate to some statements in this report. I read from page 50, where the following statement is made:

The valley of the San Joaquin has less rainfall and less run-off from its rivers than the valley of the Sacramento. The Tuolumne River could, if not used for city supply, be used to irrigate a large amount of fertile land, as could almost any river in the valley of California if means are found economically to store the water.

The board believes that on account of the fertility of the lands under irrigation and their aridness without water the necessity of preserving all available water in the valley of California will sooner or later make the demand for the use of Hetch Hetchy as a reservoir practically

Now I turn to page 22 of this report and read as follows:

Now I turn to page 22 of this report and read as follows:

The McCloud River is a branch of the Pitt River, which itself is a tributary of the Sacramento. McCloud River rises on the southern and southeastern slopes of Mount Shasta. It flows in part from glaciers and in part from large springs. The water is clear, cold, and palatable. The inhabitants of the valley drink it at any point and consider it of first-class quality. At some times of the year, said to be for only short intervals, it assumes a milky appearance. This seems to be due to a small tributary, Mud Creek, which at times carries considerable lava sand. On the day of the inspection by a member of the board Mud Creek was carrying a large amount of this sand and the river was quite milky in appearance. It is not thought that this affects the hygienic qualities. It seems probable that by damming Mud Creek and forcing the water to percolate through the soil this sand could be held back or the water could be confined in a reservoir and allowed to settle. The minimum discharge of the McCloud River being about 1,200 cabic feet per second, or 770 million gallons daily, the flow is ample without storage. settle. The minimum 1,200 cubic feet per se ample without storage.

This comes under the discussion by the board of the other available sources of water supply for San Francisco.

Turning again to the conclusions of the board, on page 50, I

The board is of the opinion that there are several sources of water supply that could be obtained and used by the city of San Francisco and adjacent communities to supplement the near-by supplies as the necessity develops. From any one of these sources the water is sufficient in quantity and is, or can be made, suitable in quality, while the engineering difficulties are not insurmountable. The determining factor is principally one of cost; in some cases, however, such as the Sacramento, sentiment must be taken into consideration.

The project proposed by the city of San Francisco, known as the Hetch Hetchy project, is about \$20,000,000 cheaper than any other feasible project for furnishing an adequate supply. The only exception is the filtered Sacramento project, which in actual cost is about thirty millions greater than the Hetch Hetchy project, but by discounting to 1914 becomes only \$13,000,000 greater.

So, Mr. President, this much as a basis for my opposition to the bill as found in the report of the board of Army engineers. There is the McCloud River, in the Sacramento Valley, which will furnish 770,000,000 gallons daily of cold, clear, palatable water at a cost, under the discount, only \$13,000,000 in excess of the cost of the Hetch Hetchy project.

What else have I as a basis for my objection to this bill? The admissions upon the floor of the Senate here, coming from those in favor of the bill. They are that in the Turlock-Modesto irrigation district there are now approximately 150,000 acres under irrigation. What is the minimum value of the 150,000 acres? Three hundred dollars an acre, or an aggregate valuation of the lands now under irrigation of \$45,000,000. What is the further admission on the floor? That there are at least 150,000 acres yet within those districts easily susceptible of irrigation—as much so, I think, as those already under water. What is their value? At the minimum, as given here on the floor, \$300 an acre, or an aggregate valuation of \$45,000,000. So we have \$90,000,000 of land valuation as against the \$13,-000,000 San Francisco would have to expend on the Sacramento project over and above what she would have to expend in securing water through the Hetch Hetchy project. The bill before the Senate gives barely one-half the quantity of water necessary for the irrigation of the 300,000 acres.

I should like to have Senators view this matter for a moment from a purely economic standpoint. What else is there to be considered here? In addition to the 300,000 acres in the two districts to which I have referred there are, according to the reports, at least 150,000 acres lying outside of the Turlock-Modesto irrigation district which are susceptible of irrigation, and which should be brought within the limits of those districts, making, in addition to the \$00,000,000 aggregate valuation of the land if it has sufficient water, \$45,000,000 of further valuation. So, taking it from the purely economic standpoint, and considering, too, the needs of San Francisco and the additional cost of taking water from the McCloud River, in the Sacramento Valley, I say this is a question which the Senate should not hesitate long in determining.

What does it mean to San Francisco? Mr. President, San Francisco will not get through the Sacramento project the power that she will get through the Hetch Hetchy project. That is granted. That power has an estimated valuation of \$45,000,000. It is urged here that in order that San Francisco may have at her command this immense water power, which will enable her to compete with the electric-light companies, with the street car companies, and so forth, and prevent the extortions of those companies, and so forth, and prevent the externols of nose companies, she should be allowed the advantages she would have through the Hetch Hetchy project. The patriotism, the public interest, the high-mindedness of the San Francisco people have been alluded to here.

I think that the patriotism, the intelligence, and the public spirit of the people of San Francisco will cure these evils and prevent the extortion of street car companies and electric-light companies in the future, without the possession of this power coming from Hetch Hetchy, to the detriment of these other great and vital interests.

Think of what is involved, not only for the people immediately and directly affected in the Turlock and Modesto irrigation districts, but for San Francisco herself, with these fields at her very doors—these fields for the varied products of which San Francisco furnishes the market. With 300,000 acres and more devoted to alfalfa, to grains, and to fruits, I can not but believe that from the economic standpoint San Francisco and all the men, women, and children of that great city will be benefited more by having these districts and the various irrigable districts in the San Joaquin Valley under cultivation, and for which all this water is needed, than they will be by having the Hetch Hetchy project opened up to them, other available sources of abundant water supply being considered.

Mr. President, much has been said about the effect a reservoir will have in marring the beauty of Hetch Hetchy Park; there has been much opposition to the project because of the injury it will do to this fine piece of natural scenery.

I think I appreciate all that; but if it were a question between the nature lovers and the urgent needs of the people of San Francisco I would not long hesitate, but would decide in favor of satisfying the needs of the inhabitants of that great city rather than to gratify mere sentiment or please the artistic taste of the nature lovers.

But that is not all that is involved in this question. time when I thought that it was perhaps about the only question involved my impression was in favor of this bill, for the needs of San Francisco were said to be most urgent. But here now is this other element, with the need of San Francisco for Hetch Hetchy at the minimum. Viewing it now from the purely economic standpoint, considering what it would mean to the irrigation districts with lands under cultivation as at present, what it will mean for the lands which may yet be opened to cultivation and to the people who will dwell thereon, what it will mean through them to the people of San Francisco herself, and to the people of the State of California, I can not help but think this measure should be defeated.

Yes; dam up Hetch Hetchy if great human need require it. and there may come the time when a reservoir should be made of that little valley. But it will be for some other use—a more reasonable use, as I view it, a higher use than that of now simply supplying water and power to the city of San Francisco, with a need no more urgent than she has here shown. Let it be for the rich but thirsty lands in the Modesto-Turlock districts and the lands of such other districts as may yet be created. This will be the demand which, in the language of the engineer's report, may be "practically irresistible."

Then when at some future time the nature lover and artist

traveling through these districts views the fields of alfalfa, waving grain, and rich orchards, multiplied in number and in yield, as they will be manyfold with this more abundant supply of water, he will find in seeing all this wealth and prosperity and happiness some compensation for the marring—if they are at all marred—of the beauties of Hetch Hetchy.

Mr. MYERS. Mr. President, I desire to ask a question of the Senator from South Dakota. The scenery which the Senator has so eloquently described—waving fields of grain and alfalfa—is the only character of scenery to be found in the State of South Dakota, is it not?

Mr. STERLING. Oh, no. We can show you in South Dakota, in what is said to be, because of its mineral wealth, the richest 100 miles square on the continent, the Black Hills country, as beautiful a piece of scenery as anyone could desire. It is not, perhaps, so majestic as the Rocky Mountains, as they are known to the Senator from Montana, but in the matter of pure beauty it is equal to the Rocky Mountains themselves.

Mr. LIPPITT. Mr. President, I believe the Senator from Nevada [Mr. Pittman] had given notice that he was going to speak at this time.

The PRESIDING OFFICER (Mr. SHIVELY in the chair). The

notice was given and is on the desk.

Mr. PITTMAN. Mr. President, the Senator from Rhode
Island has asked to take a few minutes of my time. I am more than glad to give him an opportunity to use as much time as he

The PRESIDING OFFICER. The Chair referred to the list because there are a number of Senators whose names are on the list, and those whose names appear subsequently to that of the Senator from Nevada may have some rights in the matter. The Senator from Rhode Island is recognized.

Mr. LIPPITT. Mr. President, I thank the Senator from

Nevada for his courtesy.

I shall take only a few minutes to explain the vote I am about to give upon this measure. I take occasion to do that, not because I think this question needs any additional discussion-for I think all sides of it have been very thoroughly discussed in this body during the past week-but because I have received from citizens of my State a number of letters protesting against what they call the destruction of the Hetch Hetchy Valley. There are some 40 or 50 of them altogether-not, perhaps, a very large number-but on account of the character and importance of the people who sign them I do not like this measure to go to a vote without briefly stating my position.

I presume, and think I am not egotistical in saying so, that there are few men in the United States to whom an appeal of this kind by nature lovers would come with greater force than Ever since I was a boy I have been irresistibly driven to the open places of the earth. For more than 30 years nearly every one of my leisure hours was spent upon the water. For the last 10 years I have had almost as strong an impulse

driving me to the hills.

When the introduction of the automobile made it possible I began to go around the northern part of the State of Rhode Island, which is a beautiful region of wooded hills and ponds and streams, looking for a place where I might locate. Some five or six years ago, after three or four years spent in such research, I found a place in the northern part of the State where, upon the top of a hill, surrounded by dense woods and ponds and streams, I built myself a house where I can look for miles over the surrounding country. This came about, not from any settled purpose upon my part, but because some inclination to those scenes seemed irresistibly to compel it. The result of that has been that for the last four or five years practically every leisure moment I have had while in Rhode Island has been spent in those surroundings.

I think, therefore, that even the most ardent nature lover can not say that I am indifferent to the scenes in which he takes so much pleasure. On the other hand, my busier hours have been engaged in an occupation that compels my attention to the importance of the kind of development that is proposed

at Hetch Hechy.

The prosperity of Rhode Island was dependent upon its water power. It originated with it. It was because there was a water power at Pawtucket that Slater, coming from England, started the first cotton factory in the United States there. It is because of the clear water in her creeks, and the power they have developed, that the textile industry, the most important of her industries, has grown up and prospered there.

It is only within some three or four years that I spent several days going around the State for a man who was about to locate a new industry in this country, one which I think will grow into large proportions, trying to find a water supply in the State that would answer his needs. But because our water was so thoroughly taken up, and because I could not find it for him, the State of Rhode Island lost the benefit of that in-

dustry, and it was obliged to locate elsewhere.

I found myself, therefore, at the beginning of this week, when this question was brought up for discussion in this body, very strongly moved by two directly opposing influences—my appreciation of the benefits of natural scenery, my great sympathy with the people who enjoy them, and the importance and value of water, which had been developed in me by a long business training. Under such conflicting emotions a man is apt to arrive at the time for voting wishing that he could cast two votes. I have found myself in that position before on some of the questions that have come before this body. I do not find myself in that position upon this question to-day. thoroughly convinced of the correctness of the vote which I am going to cast. I am thoroughly satisfied that that vote ought to be in favor of this measure. I am satisfied of that, because I believe that the theory of the nature lovers that a great scene of beauty is going to be destroyed is not correct. Nothing is going to be destroyed. The beauty of the Hetch Hetchy Valley Nothing is is still going to be there.

The grandeur of its cliffs is still going to be there; the beauty of the Wampana Falls is going to be there uninterfered with; and, what is more important, there is going to be a means provided for the general public of seeing these things. There is no use in natural beauty that is inaccessible, and the present condition of that valley is such, as I understand it, that no wagon has ever penetrated to its interior. means of getting there are by trail or on foot, and the number of people, as the Senator from Colorado [Mr. Thomas] said the other night, who visit it annually is only something over 200. Under this project there is going to be built a first-class wagon road, the cost of which will be over \$600,000, which will circle the valley. It is going to be so located that the scenic effects will be readily accessible, and I think that all of this is a strong recommendation for the project.

Different natures enjoy scenery in a different way. love the ocean. Its unceasing restlessness attracts them. love the quiet of a woodland scene, and some are inspired and thrilled by the grandeur of the mountains. I believe that many a man in the future will look at the quietness of the lake that is going to rest at the foot of the Hetch Hetchy hills and

see in it a beauty he would be very sorry to miss.

On the other hand, nature has put in the State of California a great natural resource. A great deal has been said upon the floor of the Senate this week in regard to the benefit that the water of that valley would be for the domestic uses of San Francisco. A great deal has been said about the value it would be for irrigation and agricultural purposes in the Modesto and other districts.

A little has been said about the value of the water power that is going to be developed from this source, but a very little. Nevertheless, as I have studied this bill, and I have studied it as carefully as I know how, I have given it my closest attention, I have followed very carefully the debates, I have talked with many Senators outside in regard to it, the value of that power

appeals to me very strongly.

Our judgments are all the result of our heredity and our environment. Mine has been such as to make me appreciate the meaning of a great water power. It is supposed here that the city of San Francisco is under contract to develop a power of some 60,000 horsepower, but that is by no means all that the engineers' plans call for in that direction. As an ultimate development, they call for a water power at a point about a dozen miles below the Hetch Hetchy Dam, and entirely outside of the Yosemite district, of a plant that will develop 75,000 horsepower. A little lower down in the valley, and to be developed later on, they call for another plant that will develop 75,000 horsepower, and at another point, at some perhaps still more remote period in the future, for a plant that will develop 12,500 horsepower; in all, a development of more than 160,000 horsepower, and a power of such a nature that it runs con-

In our manufacturing districts when we speak of a power we usually think of it as something that is going to run 10 hours a day and perhaps 60 hours a week. At least it used to be that. It is now 54 hours. Here is a power that runs 24 hours a day and 7 days in the week, and it never tires. One of the important things that have made the Atlantic seaboard the populous and thrifty and industrious country that it is is because at the back of it there was coal and there was iron-coal to produce power, iron to serve all the great manufacturing purposes to which that metal is indispensable. California has no coal accessible enough to be cheap coal—cheap enough for manufacturing. She has for the time being oil, but how long she will have oil is, in the minds of many people, a very problematical thing. We are certainly using our oil supplies, which have required countless generations to create, at a very rapid and perhaps a very wasteful rate. But even oil can not furnish power as cheaply as these waterfalls will. I am told that down the west coast of South America there are great iron mines, containing iron of a high grade and in almost inexhaustible quantities. One of the developments that people look forward to from the opening of the Panama Canal is the development of some of those mines. It may well be that if California is supplied with the great power, such as is going to be produced at Hetch Hetchy, and if iron should be found not too far for cheap transportation as the result of this development, there may be created in the future another great manufacturing district in California; and I do not believe it is necessary for me to remind any Member of this body of the great value of a manufacturing industry in close proximity to an agricultural industry. But any such development is impossible unless California can have the power either developed or in potential development.

Now, Mr. President, there has been something said here about the control of this water and this power. I am not worried about who is going to control either. I think that the important matter to-day is to see that it is created. That is the question that is immediately before us. It is to see that this stream which has run for countless generations uselessly down to the ocean is made the servant of mankind, is harnessed to work for man, and when that has been done I have absolute confidence that the legislators of the future, the people of California, will see that proper regulations are made to get the supreme beneficial use out of that great improvement for her people and the people of the rest of the country.

To tell the truth, I am not so much worried about monopolies To tell the fruth, I am not so much worried about monopoles as some people are. I believe there is nothing easier to control by legislation than a monopoly. You have only one person to deal with. We are dealing with them from day to day, therefore, as they exist, very effectively. If there is any undue monopoly connected with this power development, it will be taken care of without any question by the people who are responsible for such carefaking in the future.

sponsible for such caretaking in the future.

I can only say, therefore, that as the result of my study of this question-and it has been as thorough as I know how make it-I should not rest satisfied if I did not vote to give to the people of California-and when I say the people of California I mean to the possession of all the country—the benefit of this great natural resource which is within her borders.

Mr. SMOOT. Before the Senator takes his seat, I appreciate the Senator's position in desiring not only by his vote to give to San Francisco necessary water, but also the development of the power for the utilities that may be established in California at some future period. However, I want to call the Senator's attention to the fact that there can be developed on the Cherry Valley drainage area and the Lake Eleanor drainage area 98,000 horsepower, and that will not interfere at all with the Hetch Hetchy Valley. That creates within a few thousand horsepower what the report shows that the Hetch Hetchy will create. The city of San Francisco has virtually lands around Lake Eleanor and the rights to the water. The water from that source, according to the report, amounts in Cherry Valley to 160,000,000 gallons daily, and the Lake Eleanor 130,000,000 gallons daily, which will be sufficient for a city of 2,000,000 population, 100 gallons per day for each man, woman, and child. Why would it not be better for San Francisco to take that and develop that water power and not interfere with Hetch Hetchy at all?

Mr. LIPPITT. I will say in reply to that, that I am a Yankee, and the Yankees very frequently answer one question by asking another. I might very well ask the Senator why would it be better? I do not ask him to answer that question now, because I know his fertile mind will find a great many most excellent reasons why it will be better, but I will tell him why I think it is better to adopt this measure now. The reason why I think so is because I want both sources of supply I hope some time in the future somebody will come to this body and ask authority-if any authority is necessary, perhaps it is not-for the development of this other source of

hope some time that other 100,000 horsepower he speaks of will be developed for the use of California, and I hope and believe that she will need every unit of power that lies within her borders for the important developments that are going on there. She will need them for her municipal purposes; for light; she will need them for her street railways; she will need them for what are now her steam railways. It can not be far in the future, if the power is available, before the railways of this country will be electrified. They are infinitely better

run by electric power than by steam power.

Therefore my answer to the question of the Senator is that the immediate question before us is that there has been pre-pared by people ready to carry it out a project for the develop-

ment of this power.

If we say "no" to this, we are not saying "yes" to something else, to this particular something else perhaps that the Senator has in mind. Those things can only be done one at a time, and the time now is for the development of the Hetch Hetchy plan. Moreover, that requires Government sanction. We all know how difficult it is to get through this body, owing to the natural and very proper suspicion the Members of it have of propositions for the control of great public benefits by irresponsible private capital, by unregulated private capital. There are not many projects that could be brought in here which would get even a hearing where the result might be for the development of this Government-owned Hetch Hetchy Valley. Therefore I think the time is now for us to vote in favor of the particular project, if we are in favor of the great principle of conservation which underlies this project. One hundred and fifty thousand horsepower means the saving of 1,000,000 tons of coal a year; it means the saving of the equivalent amount of !

oil a year. Conservation, as I understand, is to preserve such things as far as possible for future generations. develop our power by water we injure no one, present or future; when we develop our power with oil or coal, we are taking something away from some one who some day is going to live in this world, and who perhaps will not be able to get it. So far as I am concerned, I want to see the water powers of this country developed just as rapidly as it is possible for them to be developed.

Mr. SMOOT. Mr. President, in order that the Senator may understand my position, I will say that I asked him the questional may be a senator of the senator o tion, not for the purpose of indicating that I am opposed to granting to California any water that she may be entitled to or any right of way over any lands that she may be entitled to. That was not my idea. The claim has been made, and made strenuously, that San Francisco can not get water any where else; that she can not get power anywhere else; that this is the only source of supply. My question was simply designed to show that there were other sources. I also asked the Senator if the mere question of San Francisco being unable to get

water anywhere else was the question involved whether this measure would be satisfactory to him.

Mr. LIPPITT. I will say, Mr. President, that I have made no claim in anything that I have said that this was the only source of supply; that it was physically possible for San Francisco to get a water supply. I do not understand that to be the case. I do, however, understand it to be the case that her engineers, who are amongst the most competent of any in the country, have decided, after careful study of the case, that this is the best source of supply for San Francisco, and, so far as I go, I want her to have it.

Mr. McCUMBER. Mr. President-

The VICE PRESIDENT. Does the Senator from Rhode Island yield to the Senator from North Dakota?

Mr. LIPPITT. While the Vice President was out of the Chamber the Senator from Nevada [Mr. PITTMAN] kindly yielded to me for a few moments that I might make these remarks, and he has the floor.

Mr. PITTMAN. I very willingly yield, for I want to have

that question discussed.

Mr. McCUMBER. Mr. President, I simply want to ask a question of the Senator from Utah [Mr. Smoot]. The Senator from Utah has indicated that there was certainly some reason why the city of San Francisco should adopt some other project instead of this particular one. I should like to ask the Senator if he knows of any ulterior reason that is guiding the purpose of the city of San Francisco in attempting to secure this particular location? Why does the city of San Francisco carry on this very vigorous contest-and certainly it has shown itself to be a contest? Why is she so persistent in insisting that this shall be the project that shall be developed for her particular benefit if she can secure elsewhere just as good water, under just as favorable conditions, and can also develop all the horsepower in electrical energy that she will need for her purposes? That has been a question that has somewhat bothered me right along in the discussion of this matter. The Senator may have reasons which would influence him in believing that waging this constant war for this particular point that he would give the Senate the benefit of.

Mr. SMOOT. Mr. President, the Senator's question is very direct, and is one that perhaps it would be well for me not to try to answer in a few words. I do not know that I can answer it to the full satisfaction of myself, but I do know that what San Francisco wanted in the first place was a grant from Congress for a right of way and the privilege of building a dam. San Francisco never asked that these regulations be put in the bill; San Francisco never asked that authority be granted to the Secretary of the Interior to regulate the rates per horse-power; San Francisco never asked that there be an act of power; San Francisco never asked that there be an act of Congress interfering with the distribution of the waters within the State of California. I will, moreover, say that it is my opinion that the reason San Francisco wants this particular dam site is for the power that she thinks can be developed cheaper than from any other source, and at the same time get a large supply of water. That is my personal opinion.

Mr. McCUMBER. The whole question, then, the Senator thinks, is a question of finance?

Mr. SMOOT. I think so.

Mr. McCUMBER. That it will cost the city less to get the same amount of water?

And to get the same power.

Mr. McCUMBER. And to get the same electrical energy from

this particular project for less than it would cost elsewhere?

Mr. SMOOT. I think that is true. I think that there is not a representative of the city of San Francisco who will not say

that the regulations in this bill were put into it to secure the necessary votes in the House of Representatives to pass the bill.

Mr. President, may I add to that they were also put into the bill by the very men and the very influences that are trying now to beat the bill here because these provisions are in the bill.

Mr. SMOOT. So far as I am concerned-Mr. THOMAS. Pardon me.

Mr. SMOOT. 1 want to say to Senators that I resent that imputation, if the Senator means that it has had anything to do

with influencing any Senator.

Mr. THOMAS. I did not mean a single Senator on the floor, and I am sorry if my statement conveyed any such impression, because I know that it is not the case, and I want to make the statement as fully as possible. I very much regret that my positive statement did not refer to influences outside of this Chamber

Mr. SMOOT. I accept, of course, the Senator's statement

without really a tinge of feeling.

Mr. THOMAS. I am very glad the Senator does, because nothing was further from my mind.

Mr. SMOOT. I want to say to the Senator from Colorado that this is not a new question.

Mr. THOMAS. I understand that. Mr. SMOOT. This matter has been before Congress for about I have attended a number of hearings in relation nine years. to it, and I know just what San Francisco wants. If this bill contained only what San Francisco wanted it would have been passed within one day and all of this discussion would never have occurred in this Chamber, and I doubt whether there would

have been more than a very few votes against it.

Mr. McCUMBER. The Senator and myself can have no contentions about the provisions that are in the bill that ought to be out of it. I agree with the Senator, and I am in favor of granting to San Francisco the right to all the water she is entitled to receive. I would eliminate, and expect to do so by introducing an amendment, all of the provisions that are in the bill-and there are pages of them-which assume control by the Government of waters which belong to the State of California. I do not want them in the bill as a precedent for any future grant that may be made by the Government. I do not think they belong there; so that there will be no contest upon that proposition; but the Senator has now stated that the real question is the question of cost. That might be a legitimate proposition. Then the question that would follow that would be simply this: Is the cost of the other projects to the city of San Francisco so greatly in excess of the cost of the Hetch Hetchy as to make them practically nonavailable at the present time? In other words, will the cost of this project be as much as the city can afford to pay at this time for the service that she will receive? If that be so, then certainly it would seem to me to be a legitimate judgment upon her part to seek to secure this site which she can bond her citizens to pay for rather than to attempt to secure something that will cost her so much more that she can not raise the necessary funds by bonds or otherwise to correspond with the cost of construction

Mr. SMOOT. Mr. President, the Senator's statement so far as he has gone is exactly in accord with my position. If it were only a question of water, I will say to the Senator that San Francisco can get from other sources all the water she needs for less money than it will cost to get water from this source. She has already agreed to purchase the Spring Valley water system, and the whole cost of the Spring Valley Water Co. system, with an expenditure of from \$7,000,0000 \$10,000,000 for the extensions, would amount to not more than \$45,000,000, and the Army board reports show that there would be ample water for domestic purposes and for city purposes

for many, many vears.

Mr. McCUMBER. The Senator can see that that does not fully answer the question, because, while San Francisco might get water at less cost, considering the question of water alone, it may be necessary for her to secure power which she could develop and utilize, and thereby reduce the cost to bring it within her ability to pay for the construction of the project. Therefore, while she might secure another project that would give her water at less cost, still it might give her water at such cost in its ultimate result that she could not afford to take it. That is the question upon which I should like information, because it is an important consideration in passing upon the justness of the claim of the city of San Francisco.

Mr. SMOOT. That is true, Mr. President. I agree with the Senator. If there were not involved in this bill the question of an assumed power of Congress to grant an authority to the city of San Francisco which I do not believe we have the right to grant, there is no question, in my opinion, but that San Francisco would go to some source other than this project. No person that I am aware of wants to deprive San Francisco of any of her lawful holding of water. I understand that her filings have been made on the Tuolumne River. I do not care whether their filings date back to 1901 or if they were not made until 1908; that makes no difference. No one can take her rights away from her, and all that would be necessary for her to begin the development of those rights would be to get the right of way over the public domain and the right to build the dam.

Mr. STERLING. Mr. President, I should like to ask the Senator from Utah [Mr. SMOOT] a question. His attention has been directed by the Senator from North Dakota [Mr. Mc-CUMBER] to the question of San Francisco's motive, as to whether San Francisco had or not an ulterior motive in trying to get this bill through. I should like to ask the Senator from Utah if, in his opinion, that is material, if the economic need to be served will be greater if all the waters can be used for irrigation purposes? In other words, whether or not Francisco's motive in trying to get water through the Hetch Hetchy project is material if a greater economic need can be served by using the waters for irrigation purposes?

Mr. SMOOT. It would not be material, Mr. President, as to results, but I do believe that it would have an influence upon

me as to whether or not I would vote for a measure.

Mr. STERLING. I will ask the Senator a further question:
If 450,000 acres can be irrigated by the use of the waters of the Tuolumne River by damming them up in the Hetch Hetchy or otherwise, and meanwhile San Francisco is able to extend her source of supply and get water at a cost of thirteen or fourteen million dollars more than by the Hetch Hetchy project, would not that serve a greater economic need and purpose than that San Francisco should have the water from the Hetch Hetchy project?

Mr. SMOOT. Mr. President, perhaps I misunderstood the Senator's former question. I will answer the Senator's last question by saying that, in my judgment, it would.

Mr. THOMAS and Mr. REED addressed the Chair. The VICE PRESIDENT. The Senator from Colorado. Mr. THOMAS. I yield to the Senator from Missouri. Mr. REED. Did the Senator from Colorado have the floor?

Mr. THOMAS. The Senator from Nevada [Mr. PITTMAN] has the floor.

Mr. REED. I did not desire to ask a question; I wanted to make a few remarks.

Mr. THOMAS. If the Senator desires to ask a question of the Senator from Utah, I will gladly yield. Mr. REED. No; I said I desired to make a few remarks, and

I will yield to the Senator from Colorado.

Mr. THOMAS. The Senator from Nevada [Mr. PITTMAN] has the floor. I merely wanted to say, Mr. President, that the question asked by the Senator from North Dakota [Mr. Mc-CUMBER] of the Senator from Utah [Mr. Smoot] seems to me to express in concise form the principal issue that is to be here determined. The Senator's emphasis upon the composite purposes of San Francisco, which can be better subserved, and perhaps only subserved, by utilizing this source, is, to my mind, the real key to the history of the Hetch Hetchy project, because there is no other project that will yield the same amount of electric power, regardless of cost; and, of course, hydroelectric power is almost as much of a municipal necessity in these days as is water itself. Consequently I have no doubt that both the city officials and the city engineers were actuated very largely by the general purpose that has been so well expressed by the Senator from North Dakota in his question.

My real purpose, however, for interrupting, Mr. President, was to ask permission to have read into the Record a letter from Mr. Theodore A. Bell which refers to a telegram that was addressed to me which I read into the RECORD this morning, and which referred to him directly by name. I think, therefore, it is but justice to Mr. Bell that he should be permitted to have his reply to that telegram inserted in the RECORD.

The VICE PRESIDENT. Without objection, the letter will be read, as requested.

The Secretary read the letter, as follows:

Washington, D. C., December 6, 1913.

Hon. CHARLES S. THOMAS, United States Senate.

My Dear Senator: I am informed there has been read into the Record a telegram from Francis J. Heney, which states that I am representing power interests in my opposition to the Hetch Hetchy grant, and that in a similar capacity I have opposed the new water conservation law in California.

So far as I am personally concerned, no statement or opinion coming from Francis J. Heney can cause me any mental disturbance; but as I am appearing here for thousands of farmers in the San Joaquin Valley,

and especially the water users of the Modesto and Turlock irrigation districts, I deem it my duty to state that Heney's charges are absolutely

false. My credentials from the people that I represent here are open to inspection. I am not now, nor have I ever been, employed by any power concern, either within or without the State of California.

I am counsel for one irrigation company that is now developing and conserving the waters of Clear Lake, in northern California, and applying the water to a large area of land in the Sacramento Valley. This company may develop some power in the future, if it can be done economically, in conjunction with its irrigation system. This company hasn't the remotest interest in the passage or defeat of the pending bill.

Mr. Heney overlooks the fact that since 1911 there has been in full force and effect a law declaring that no water can be diverted for power purposes in California without a permit from the water commission.

power purposes in California without a permit from the water commission.

The 1913 law, which has been referred to the people, under the referendum laws of California, seeks to extend the law of 1911 so as to include water appropriated for irrigation.

While this last act was pending in our legislature I expressed the view that the principle of the proposed law as an excellent one, but that I was opposed to the provisions that seemed to give the water commission power to destroy riparian rights in that State. The law is all right for the large companies, who have the money to speedily develop and perfect their constructive appropriations, but it is harsh toward the small riparian farmer, who must gradually enlarge his use of the water. I also expressed the view that any attempt to divest riparian owners of their rights would be violative of the Constitution, as the right of the riparian owner to a reasonable use of the water is as sacred as his title to the land itself.

With only these facts to support him, Heney has based a personal attack on the writer, prompted by political animosity, and in a considerable degree due to his habit of abusing everybody that does not happen to agree with him.

With respect to the referendum of the 1913 law, I beg to state that I was absent from California at the time the petitions were prepared and circulated, and I did not even know that the referendum might be invoked until I learned it incidentally at Washington some weeks after the petitions had been filed.

Trusting that I have not trespassed on your patience, and with assurances of high personal regard, I beg to remain,
Very truly, yours,

The OICE PRESIDENT. The Senate may be laboring under

The VICE PRESIDENT. The Senate may be laboring under a misapprehension that the ruling recently made by the Chair as to the hour of the expiration of this calendar day is to remain the ruling of the Chair. The Chair ruled that the unanimous-consent agreement took precedence, and in the course of the ruling held that the calendar day would not expire until

12 o'clock to-morrow.

The Chair was moved to make that ruling by reason of the fact that it has been the immemorial custom of the Senate of the United States to convene at noon on the 4th day of March; and at the time of making it the Chair believed there could be a calendar day for the Senate aside from the usual and ordinary calendar day.

Upon investigation of such precedents as are at hand the Chair finds that prior holdings have been exclusively with reference to legislative days, and that the action of the Senate and House of Representatives in remaining in session until noon of the 4th day of March is in accordance with the extent

of a legislative and not of a calendar day.

The laws of this country recognize Sunday as a separate calendar day. The Chair believes that in the ruling the Chair proceeded further than it was called upon to do, and desires to withdraw that ruling.

Without provoking discussion at the present time, if the question again arises in the event that the pending measure be not disposed of before midnight of to-day, the Chair will submit to the Senate of the United States the determination of the question as to whether the calendar day of the Senate is synchronous with the calendar day of the world or whether it is a separate and distinct calendar day. The Chair believes now the calendar day expires at midnight to-night.

Mr. REED. Mr. President—
The VICE PRESIDENT. The Senator from Nevada [Mr. PITTMAN] is entitled to the floor.

Mr. PITTMAN. I yield to the Senator from Missouri. Mr. REED. Mr. President, I have been asked to say a word

or two upon this question.

It seems to me that if this is not a case of "much ado about it surely is a case of much ado about little. Senate of the United States has devoted a full week of time to discussing the disposition of about 2 square miles of land, located at a point remote from civilization, in the very heart of the Sierra Nevada Mountains, and possessing an intrinsic value of probably not to exceed four or five hundred dollars. The great national park in which the paltry 2 square miles to be taken is embraced contains, I am informed, over 1,100 square miles of territory. It is merely proposed to put water on these 2 square miles. Over that trivial matter the business of the country is halted, the Senate goes into profound debate, the country is thrown into a condition of hysteria, and one would imagine that chaos and old night were about to descend upon

What is it all about? The Hetch Hetchy Valley has remained an undisturbed and uninvaded solitude through all of the cen-

turies. The little stream of water out there has run its course since time began. A few farmers have in recent years drawn from the stream a little water. Nobody has ever dreamed of doing anything to conserve that water, or of storing the surplus waters in a reservoir.

The farmer has gone on his usual course, getting such water as might flow by. Finally, the city of San Francisco, in order to supply its 500,000 people with pure, healthful water, proposed to build a dam and impound the waters now going to waste, and, behold, we have a national issue because somebody concluded to put the water to some use.

Women's societies are meeting and passing resolutions. Business organizations are solemnly pondering the tremendous question. College professors who never have been near enough the Yosemite Park to know anything whatever about it are enlightening us with reference to our duty. The degree of opposition increases in direct proportion with the distance the objector lives from the ground to be taken. When we get as far east as New England the opposition has become a frenzy.

I undertake to say that if it had been suggested that the National Government expend three or four million dollars to build a dam in order to create a lake that was to be of no particular use to anybody anywhere these same lovers of nature and devotees of scenery would have been knocking at the doors of Congress, raving of the glories of water. They would have told us that entire country was an arid desert; that the eye of the traveler grew tired straining for a glimpse of silvery waves dancing beneath the sunshine. They would have dis-cussed the wonderful blessing water is to man; they would have rhapsodized over the ineffable beauties, the indescribable glories, of an artificial lake in the Hetch Hetchy Valley. The good ladies would have passed their resolutions, the college professors would have grown enthusiastic, everybody would have demanded an immediate vote, and the tourist would have packed his grip and started for the enchanted valley of the Hetchy Hetch. when it was proposed that a dam be built in order to obtain water for men and women to drink, that circumstance damned the project, for be it known if there is anything that horrifies these good people it is a suggestion that utility may be united with beauty. The tender sensibilities of the modern esthetician can never bear the thought of having anything around that is of any account.

Mr. President, it is claimed that the creation of an artificial lake in the Hetch Hetchy Valley would mar the beauty of the

national park.

There are two things lacking in that part of the world-one is population and the other is water. They have almost everything else except soil. Beyond all question, if the good Lord were to create a lake of water in that part of the country it would be hailed as a divine beneficence. The claim that the creation of a lake in any part of the great West will detract from the beauty of the scenery is utterly without merit. The truth is that this lake will be a distinct contribution to the natural splendor of that part of the world.

Mr. MARTINE of New Jersey. Mr. President, will the Sena-

tor permit just a suggestion?

Mr. REED. Certainly. Mr. MARTINE of New Jersey. I wish to suggest that that may be very much a matter of taste. It may be the judgment of the Senator from Missouri that it would add very much to the scenery, but just as fairly and honestly it may be the judgment of other Senators that it would detract from it.

Mr. REED. Mr. President, there are people in this world to whom the mere mention of water is obnoxious. [Laughter.] Mr. MARTINE of New Jersey. I have to say that had I been unfortunate enough to have lived on the borders of the muddy Missouri and to drink water that was half water and

half sand I should have echoed the sentiments of the Senator from Missouri. [Laughter.]

Mr. REED. Why, Mr. President, it would not have at all

affected either the generosity of soul or the physical habits of

my friend. Mr. ASHURST. Mr. President-

Mr. REED. It will not be disputed by any man who has traveled over the great arid portions of the West that the country only lacks the waters of rivers and lakes to make it the garden of earth. There are enough rocks, enough chasms, enough gorges, and enough wild and splendid scenery within a few miles of the Hetch Hetchy Valley to satisfy the longings of all the lovers of natural grandeur who live upon the earth.

Does the Senator from Arizona wish to ask me something? Mr. ASHURST. I did want to interrupt just for a moment

upon another point.

The distinguished Senator from Missouri [Mr. Reed] adverted to artists placing in the pictures of the valley an imaginary lake. Permit me to say that in many, if not most, of the pictures that have been painted of this valley the artists have taken care to place a translucent lake in the Hetch Hetchy Valley.

Mr. MARTINE of New Jersey. That, however, was since the San Francisco scheme was started.

Mr. ASHURST. The Senator from Missouri will permit me to reply to that?

Mr. REED. Certainly, Mr. ASHURST. The Senator from New Jersey refers to some "San Francisco scheme." Does he refer to the Spring Valley waterworks, which for more than 20 years mistreated the citizens of that city and extracted exorbitant charges for water? Or does the Senator refer to the occasion upon which the notorious "Abe Ruef gang" of supervisors attempted to waive and relinquish the valuable rights acquired by the city of San Francisco by the then mayor, Hon. James D. Phelan, who made an appropriation of water for and on behalf of the city in July,

Mr. MARTINE of New Jersey. The Senator's observation is most paralyzing.

Mr. ASHURST. I am glad there is something that will para-

lyze the Senator from New Jersey.

Mr. MARTINE of New Jersey. It will take more than that to paralyze me. The Senator will have to try something else.

Mr. REED. Mr. President, nothing would disturb the firm

and settled judgment of my friend. Having made up his mind on this question, he, of course, will not shift his position. It would be as impossible for him to vacillate in his judgment as it would be to change his kindly and genial disposition.

But, Mr. President, I am talking now with reference to the mere question of destroying the beauty of the park. My friend from New Jersey seems to be greatly interested. I simply want to inquire of him if he ever was in the vicinity of the Hetch Hetchy Valley.

Mr. MARTINE of New Jersey. I will respond by saying that

have never been in the Hetch Hetchy.

Mr. REED. Has the Senator ever been within a thousand

miles of Hetch Hetchy?

Mr. MARTINE of New Jersey. If the Senator wishes to make something of a geographical calculation, I will state that I have taken in the beauties of the Yellowstone and the canyons of Arizona.

Mr. REED. Did the Senator ever see any surplus water in that section of the country?

Mr. MARTINE of New Jersey. The Senator is getting funny

Mr. REED. I am not attempting to be humorous. I asked a categorical question, to which I should like to obtain, if possible, the same kind of an answer. I mean, my dear friend, to inquire whether it is not true that in that entire section of the country there is a dearth of water, a lack of rivers and lakes. I inquire whether the country does not thereby suffer. I am

not trying to be funny. Mr. President, there can not be anything in this question of destroying the beauties of the national park. If they had more lakes there, they would have a better park. If somebody, I repeat, proposed to build a lake at Government expense, there would be a great wave of enthusiasm emanating from the very individuals who now criticize. It is curious to note the character of these criticisms. As you know, there are a few people in this country who naturally assume the rôle of animated probono publicos. Sometimes they limit the field of espionage to their own town or village, but the more ambitious frequently constitute themselves the custodians of the morals of several We heard a telegram read this morning from one of these gentlemen, in which he assails the character of another. Then we heard the letter of the man assailed read a few moments ago charging that all that had been said about him was

It is a singular thing-and I simply remark it in passing that about every time the character of any man from the West is brought in question somebody rises with a telegram denouncing that citizen for all that is bad and wicked and villainous, and at the end of the telegram we generally find the euphonious name of Francis J. Heney. He denounces Mr. Bell. I do not know, but I imagine that Mr. Bell is just as good a man as Mr. Heney, notwithstanding the fact that Mr. Heney is for this bill and Mr. Bell is against it.

There are others besides Mr. Heney who regard themselves as the natural custodians of the people's rights. They live in an intellectual altitude which enables them to survey the entire country and to pass upon all questions of religion, of finance, and of politics. We always hear from them at the time when we do not particularly care to hear from them. They generally know less about the questions of which they speak than those they assume to instruct.

I am going to read from a letter that was introduced here this morning:

Moreover, as the population of the country increases the need and value of parks of all sorts will surely increase.

Mr. President, there was never but one excuse in the world for setting aside the Yosemite Valley and creating the national park. It was not that the people needed a breathing place. In the vast open spaces of the West, where mighty mountains rear their lofty and sublime heads above the clouds, there is enough of breathing room for all the men who are and all the shadowy hosts who are to be. The park was never set aside as a breathing place. It was selected because within its boundaries is to be found a combination of indescribable beauty and sublime grandeur beyond poet's pen or artist's brush. No one ever dreamed of establishing the national park as a breathing place where an overcrowded population could go and get a mouthful of fresh air. Why, sir, you must travel about a thousand miles through the mountains, where there is nothing but fresh air, before you get to it.

So our friend who wrote this letter did not worry about the fresh-air problem nor fret lest an increasing population may be deprived of a chance to breathe. Truth to tell, the fellow who needs fresh air never has enough money to get to the park.

Let me call his attention to the fact that the population of the great West do not need fresh air, while the 500,000 men and women of San Francisco do need pure and wholesome water. If he is interested in the crowded population which may some time exist, why deny the crowded population that now exists the prime necessity of life? The stream proposed to be dammed has run its way through countless centuries. The valley, in all the course of time, has scarcely been invaded by the foot of man. Why, then, are we suddenly so agitated because somebody had enterprise enough to propose to impound the water of the stream for the benefit of men, women, and children?

This propaganda of opposition was not born of itself. an ancestor, and it has a number of wet nurses. fully looked after. Its agents are now in Washington. It is in my opinion the offspring of the greed, cupidity, and avarice of the monopoly that holds San Francisco in its grip and furnishes filthy and polluted water for men and women to drink.

I do not charge that Senators who oppose the bill are actuated by improper motives, but I do charge that it took money to carry on this propaganda. I do charge that it took money from some source to send these agents here. I do charge that all the literature that has been piled upon our desks was paid for by somebody. It was not paid for by the gentlemen who are so much interested in the beautiful and the lovely. It was paid for by somebody to whom the clink of gold in a purse is more musical than the songs of birds in mountain valleys.

I will read a little more from this letter: There are plenty of other available supplies,

L have heard that question debated upon this floor, and am convinced there is no other supply really available. That water can be brought from somewhere is probably true. the fact that if you have money enough you could bring water across the continent; but it does not follow because San Francisco can get water some place else she should not have this

Moreover, the opposition to this plan is that the water can be used for irrigation purposes, and that because it can be used for irrigation purposes the people ought to be denied the privilege of having it to drink.

Mr. President, I want to ask the Senators from the West, I ask the Senator from Utah [Mr. Smoot], if there is a single place San Francisco can get water and at the same time that water can not be used for irrigating purposes? I further inquire if the water from other sources is not as necessary for irrigating purposes as is the water of the Hetch Hetchy Valley?

Mr. BRADY. Mr. President—
The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Idaho?

Mr. REED. Certainly.

Mr. BRADY. I will say that from my investigations I have satisfied myself that there is no place from which San Francisco can secure its supply of water and at the same time not come in contact with land that could be irrigated. But I do say that in the Hetch Hetchy Valley there are about 5,000,000 acres of land with a rainfall that will cover the land of that valley only 18 inches deep, if all the land was covered, and in the Sacramento Valley there are about 3,000,000 acres of land and a rainfall that will cover the lands of that valley 8 feet deep.

Mr. REED. Mr. President, I am glad the Senator made the statement he did. Those who contend against the Hetch Hetchy proposition do it upon the hypothesis that the water can be used for irrigation purposes. Hence they say, "You shall not If the water from every other available source can be used, as the Senator has just stated, for irrigation purposes, then it follows that when San Francisco is turned away from the Hetch Hetchy Valley and goes to these other sources, the same argument which denies her the use of the Hetch Hetchy Valley will deny her the use of the waters from other sources

There is, therefore, no argument which can be made against Hetch Hetchy which can not be made against every other source of supply, and the conclusion of all these arguments, if they are harkened to, is that San Francisco shall remain in the grip of the water company that now occupies its streets and at the same time refuses to furnish sufficient water.

Mr. SMOOT. Mr. President-

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Utah?

Mr. REED. Certainly.

Mr. SMOOT. Does not the Senator know that San Francisco has already agreed to purchase the Spring Valley Water Co., that it is only a question of transfer, and that the transfer will take place no matter whether this bill passes or not?

The consideration-Mr. REED. Mr. PITTMAN. Mr. President-

Mr. REED. I yield to the Senator from Nevada.

I wish to say that the price has not been Mr. PITTMAN. agreed upon, and that unless this bill passes it will not be purchased at all.

Mr. SMOOT. I should like to ask the Senator from Nevada what authority he has for that statement?

Mr. PITTMAN. I think it is shown by the whole transaction.
Mr. SMOOT. No; that is not authority.
Mr. PITTMAN. The compensation was based upon this bill.
Mr. SMOOT. Mr. President, I want to say that I am informed, and I believe it to be absolutely true, that there is an agreement now between San Francisco and the Spring Valley Water Co. for the purchase of that company's entire property, and that it is to be purchased even if San Francisco develops the Hetch Hetchy proposition. They will own the water; they will own that system and take control of it.

Mr. REED. Mr. President, I heard read here this morning into the RECORD a telegram from the Spring Valley Water Co. protesting that they had not sent Mr. Bell here to represent them, but stating that they were opposed to, or had been opposed to, this grant. If that was not the substance of that message I did not hear it aright.

Mr. CLARK of Wyoming. I have sent for the message and shall have it again read. It will disclose whether or not the

Senator from Missouri is right,

Mr. SMOOT. The President of the company is now over in Europe. He is taking his ease and rest and is entirely content, because he thinks that this sale is absolutely sure. I want to say to the Senator from Missouri that I think it is sure, and I am glad that San Francisco has purchased the company.

Mr. REED. But, Mr. President, I do not think that the absence of the president of a company in Europe argues either that the plant has been disposed of or that the company is not

exceedingly busy now in this country.

Mr. SMOOT. Not necessarily so, Mr. President, but I simply made that as a side remark. From every source that I have been able to reach comes the information that that sale is to

take place.

Well, Mr. President, the Senator who is in charge of this bill, and who has given it great thought, states that his understanding is that the sale is conditional, or has not been closed, and that it will not be carried out if San Francisco does not secure the water supply. So far as San Francisco having bargained for the pipes in the ground is concerned, the pipes in the ground are of no more use without the water than a gun without ammunition. The whole question resolves itself into whether the city can obtain a supply of healthful water. Whether she has made a conditional bargain or an absolute bargain for the pipes in the ground is, after all, a question of very

Mr. MARTINE of New Jersey. Mr. President-

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from New Jersey?

Mr. REED. I do.

Mr. MARTINE of New Jersey. I simply want to state that I have learned within 15 minutes, from telegrams received in the House of Representatives this morning, that condemnation proceedings for the Spring Valley Water Co. in San Francisco have already been instituted.

Mr. REED. Very well. Then that completely demolishes the statement made by the Senator from Utah that there had been

a bargain and sale made. If there have been legal proceedings taken to condemn the plant, it goes, of course, without saying that the plant has not been sold.

Mr. MARTINE of New Jersey. I did not claim that it had been sold. I claimed that negotiations had been in progress for the sale, but they failed, and they are now instituting condemnation proceedings.

Mr. REED. Very well. Mr. SMOOT. The statement of the Senator is hardly justi-There could be an understanding between the company and San Francisco as to the sale of this water, and yet there be instituted condemnation proceedings as well. I will state to the Senator that the question of the purchase of this company by San Francisco is not a new thing; it has been under consideration for I do not know how long, but I believe for over 10 years. The question of condemnation was brought up here in the hearings in 1908 before the Committee on Public Lands. I am quite sure that condemnation proceedings have been considered, and yet I believe that the agreement and bargain for the sale have been made between the company and the city.

Mr. REED. Mr. President, it is impossible that there should have been a bargain and sale consummated, as the Senator from Utah a few moments ago said he believed had taken place, and yet at the same time there should be a condemnation, for it would be utterly idiotic to condemn a thing you have already agreed to buy and which the other man is willing to sell.

Mr. SMOOT. But condemnation proceedings started before the parties had agreed to purchase.

Mr. REED. But the Senator from New Jersey stated that

he had received a telegram-

Mr. MARTINE of New Jersey. I did not say that, sir. You are putting words into my mouth. I said I had just become aware within 15 minutes that the other House had received a telegram.

Well, my friend has for once lost his reputation and placed an ineradicable blot upon his character for urbanity

and good nature. He has grown angry with me—
Mr. MARTINE of New Jersey. I hope I will be judged through eyes other than those of the Senator from Missouri.

Mr. REED. You could not be judged through more charitable

Mr. MARTINE of New Jersey. I trust not.
Mr. REED. The Senator from New Jersey had said that a telegram had been received by somebody in the other House; that that fact had been communicated to him; and I inadvertently said in the heat of debate that the Senator had received a telegram. I most humbly apologize for misrepresenting the Senator.

Mr. MARTINE of New Jersey. I accept your apology.

Mr. REED. It was a very serious breach of decorum and good taste on my part, and I trust I may have the Senator's

Mr. President, the fight that is being made upon this bill is bottomed upon the allegation that this water about to be taken to San Francisco can be used for irrigation purposes and that other water can be obtained by the city, but it stands now admitted by the Senator from Idaho that if water is obtained from any of the other places it in like manner can be used for irrigation purposes. Hence, I repeat, the argument which denies the use of the waters of the Hetch Hetchy to San Francisco will bar San Francisco from every other source of supply.

Mr. POINDEXTER, Mr. President—
The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Washington?

Mr. REED. Yes; I yield.

Mr. POINDEXTER. I merely want to remark that if they take the McCloud source of supply that would not interfere, and could not possibly interfere, with the irrigation of any lands in the San Joaquin Valley,

Mr. REED. But it might interfere with lands outside of the San Joaquin Valley.

Mr. POINDEXTER. It would not.

Mr. REED. And the lands of the San Joaquin Valley are not, in my judgment, entitled to greater consideration than are

lands of other valleys.

Mr. POINDEXTER. I think the Senator from Missouri might take a different view if he would consider the fact that there is a great scarcity of water for purposes of irrigation in the San Joaquin Valley, and that there is a surplus of water in the Sacramento Valley, where the McCloud River is, so much so that the people of the Sacramento Valley now have bills pending or proposed in Congress for the appropriation of \$5,000,000 to prevent floods in the Sacramento Valley. Furthermore, there are a number of other sources of supply besides the McCloud, which could be used by the city of San Francisco, which are not needed for irrigation, among others the Spring Valley source.

Mr. REED. It is a singular fact that all of this important information never came to the floor, but remained hidden in the womb of obscurity until this bill was about to pass. Mr. POINDEXTER. Mr. President, the Senator is mistaken

Mr. REKD. It is a peculiar thing, if these other water supplies are just as available and so much more abundant, that San Francisco should have expended an enormous sum of money get this particular supply.

Mr. POINDEXTER. Will the Senator yield long enough for me to make a statement?

Mr. REED. Certainly; I always yield to the Senator.

Mr POINDEXTER. I only desire to say that from information which comes to me-and I think it is not seriously disputed by the people who are familiar with the physical conditions of California-the surplus waters of the Sacramento Valley are very great as compared with those of the San Joaquin Valley. That subject has all been gone over in this debate and placed upon the records of Congress. is that the Senator has been absent so much he did not hear it. I do not mean to say in that connection-

Mr. REED. I do not know why the Senator rose-Mr. POINDEXTER. If the Senator will pardon me, I do not wish to reflect in any way upon the Senator for not being here. We have all been compelled to be absent more or less, but it is a very obvious thing that a good deal of this debate has been conducted before empty benches.

Mr. REED. Well, Mr. President, I am a little surprised the Senator rose to interject that remark. He did not understand my remark. I did not say that these facts were not known to the Senator; I did not say they had not been debated in the Senate; I have not claimed that the Senator has not known all about them. What I have claimed is that it is a singular fact, if there were so many available sources of unlimited supply, that San Francisco never found it out and nobody else ever found it out for her until this debate began. mean by that to argue-and I do argue from that fact-that these other sources of supply do not really exist or the city would have gone to them.

Mr. POINDEXTER. Mr. President, if the Senator will pardon me for interrupting once more, the conclusion which the Senator has just announced amounts to this: That the whole matter should be left to the decision of the city of San Francisco, and because the city of San Francisco has decided upon this source of supply that it ought to be granted to her.

Mr. REED. No, Mr. President; but it ought to be granted unless there is an insuperable objection, and that insuperable objection never ought to be a private corporation that is engaged in making money out of the objection.

I made the statement a few moments ago that there had been a telegram read here from the Spring Valley Water Co., in which they admitted their opposition to this bill. I understood that statement to be rather questioned. I have the telegram now. It reads:

Within a day or two the newspapers here have published telegraphic statements from Washington to the effect that it was thought in some quarters that this company had inspired opposition to the Hetch Hetch bill. The source of authority for these statements was not given. The evening papers print a statement to-day purporting to have been made to the Senate by Senator Thomrson to the effect that this company has a lobby in Washington opposing the bill. We do not feel that that statement, coming from the source it does, should go uncontradicted.

Now, notice the language:

The company has not made, promoted, or encouraged opposition of any nature to the bill, in Washington or elsewhere, and any statement that it has is unfounded. It has no lobby or representative in Washington, is not in communication, directly or indirectly, with anyone there, and no one in Washington has any authority or warrant to speak for it or in its interest, and no one, no matter where, has any right, authority, or warrant to oppose the bill in its interest.

If they had stopped there, the denial would have been rather complete, but notice the next clause:

When this company opposed the grant, it did so openly and above-

That last sentence is a confession by the water company that it has opposed the grant.

Mr. CLARK of Wyoming. Mr. President—
The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Wyoming?

Mr. REED. I do.
Mr. CLARK of Wyoming. If the Senator is in a perfectly judicial frame of mind—and I know he is—I will say that the telegram is not at all inconsistent with itself. It is well known that this grant has been asked from Congress for many years. For a good while the Spring Valley Water Co. was opposed to the grant, and they opposed it openly before the committees of Congress, because they believed that it would either injure the property they had in San Francisco or infringe on the terms of their franchise. At the present time the claim of that company is-and I believe it is borne out by the facts-that they are not seeking in any way to oppose or to advocate this grant, for the reason that, as a matter of fact, their property is to all intents and purposes disposed of to the city of San Francisco, and, as they say, they have no interest in this legislation.

Mr. REED. Mr. President, the Senator says that for years this company did oppose the grant, and they opposed it here in Congress. It appears that they have opposed it pretty suc-

cessfully in the past.

Mr. SMOOT. Mr. President, I simply want to call the attention of the Senator to the fact that the last hearings at which the Spring Valley Water Co. appeared before the Senate or the House were the hearings which closed in February, 1909.

Mr. REED. Well, let us look at the situation; let us just take a judicial survey of it for a few moments; let us take what the Senators say as the absolute situation. It then appears that this company, which obtained a grant from the people of San Francisco, which came there hat in hand asking for the privilege of furnishing water to the people of San Francisco, which made its millions of money off the people of San Francisco, was contemptible enough, dishonest enough, infamous enough to go before the committees of Congress and try to prevent that city from obtaining the right to get water elsewhere in order that it might hold its monopoly.

That has been the common practice of concerns of the kind. Senators now say in one breath that the property is sold, while another Senator, who strangely enough is on that side of the question, says that the word comes that condemnation proceedings have been instituted. Of course both can not exist.

Mr. MARTINE of New Jersey. Mr. President, I should like to ask the Senator what he means by saying "strangely enough."

Mr. REED. Mr. President, it is always a strange and marvelous thing and a very regrettable thing when my friend parts company from me. That is what is strange about it all. Mr. MARTINE of New Jersey. I thank the Senator very

much for that reference, but I say that in my own mind and for my own reasons my position is not strange at all.

Mr. REED. Of course the Senator's opinions, whatever they are, are always sincere and always honest. I really do not understand the Senator this afternoon. I could understand his getting impatient with anybody else in the Senate, but for him to get impatient with me is a matter beyond human comprehension.

Mr. MARTINE of New Jersey. Indeed I am not getting impatient with the Senator as an individual, but I am getting impatient with the Senator when he would put me in positions that are false and untrue.

Mr. REED. Oh, I would not do that. I said that strangely enough the Senator is arrayed on the other side, and to save my life I can not understand how the Senator got there. It is just one of those things that happen that have no utility in the world except to prove the fact that all rules have their exceptions.

Mr. MARTINE of New Jersey. That is true.

Mr. REED. And as the Senator from New Jersey is right as a rule, I presume he is wrong this time in order to furnish the necessary example of an exception to the rule.

Mr. MARTINE of New Jersey. The S never made a greater mistake in his life. The Senator from Missouri

Mr. REED. I hope the Senator will get good-natured now, and quit scolding.

Mr. MARTINE of New Jersey. I am perfectly good-natured. It is the Senator from Missouri who is ruffled. Mr. REED. Mr. President, I trust now I shall be allowed to

run along the even tenor of my way for four or five sentences. Why is all this outery being made? I ask the question.

have asked it before. Two square miles of an almost inaccessible valley, where nobody lives, is to be overflowed with water, and that, it is said, is going to destroy a park that has 1,100 square miles of land in it.

Mr. President, we have in the little city where I live a park with 2 square miles of ground in it, and I suppose every acre of that ground is worth more than all the ground that will be overflowed in the Hetch Hetchy Valley. It is said that this bill will deprive some farmers of water. I have two answers to that. First, under the terms of the bill more water is guaranteed to these people than they now use. Second, there is no prospect in the world that they ever will be able to get another gallon of water by building a dam at their own expense, and

certainly nobody is going to build it for them. Hence the claim

is absolutely without merit of any kind.

The other consideration I submit to the Senate is that if the gentlemen who own some land out there have legal rights, as has been asserted, this bill will not deprive them of a single legal right. If they have made filings which in law are valid and legal, every lawyer on the floor of the Senate knows that the passage of this bill will not detract by so much as one hair's weight from their vested rights,

You all know that. When you argue that these people have legal rights, you argue yourselves out of court, for you have taken away from yourselves every reason for opposition to the bill, because all the bill will mean, if these men have legal rights that are paramount to those which are granted, is that we have enacted a bill which deprives them of nothing what-

Then I have this final observation to make: If there is an actual dearth of water and I have to choose between putting that water to the thirsty lips of a child and pouring it out en an alfalfa patch, I am going to give it to the baby. If there is an actual shortage of water and there is not enough to irrigate a vast field and at the same time give the crowded population of a city pure water to drink, I am going to take it off the land and give it to the people. If it takes millions of gallons of water annually to make a bit of desert blossom, and we have the water to spare, I am willing to turn the desert into a gar-den and make the flowers spring forth in their beauty; but if there is not enough water for both the field and the women and children, I would rather see the rose of health spring in the wan cheeks of childhood and womanhood than to behold a desert girdled with flowers.

What ought to be our position? We should deprive no one of his legal rights. But, Mr. President, we can not deprive any man of his legal rights; hence we need not disturb ourselves about that proposition. If there be no legal rights to be disturbed, and they can not be disturbed if they exist, then our position ought to be, "Give this water where it will do the most good." There are more people to be blessed in the city of San Francisco than ever can live upon all the land that can be watered from this stream. There are probably a thousand times

more people.

It is a singular thing that a great city, with a crowded population, to which pure, fresh water is an absolute essential to life, which will be swept with pestilences and decimated by disease and shadowed by death unless water is given to it, should be denied that privilege in order that a few more bushels of potatoes or tons of alfalfa, peradventure, may be raised somewhere in the foothills of the Sierra Nevada Mountains.

Mr. THOMPSON. Mr. President—
The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Kansas?

Mr. PITTMAN. I do. Mr. THOMPSON. Mr. President, I had not observed, before the reading of the telegram from the Spring Valley Water Co. by the Senator from Missouri [Mr. Reed], that my name was mentioned in the telegram, and that I was criticized for the statement I made in my remarks yesterday that the Spring Valley Water Co. was an interested party in opposition to this bill.

In view of the statement in the telegram, I think I owe it to myself and the Senate to say that in addition to the public information we have all received through the press, I have information from a reliable private source, from a gentleman of unimpeachable character who lives in Oakland, Cal., by the name of J. C. F. McGriff, who transacts business every day in the city of San Francisco, and who knows whereof he speaks. He furnishes this information in the following language in a letter addressed to me on November 26, 1913:

The only people here who are opposed to it—the Hetch Hetchy Valley proposition—are the Spring Valley Water Co. and those affiliated with them in commercial interests, and a few nature lovers who do not understand the situation.

This is the exact language which I employed in my remarks. I prefer to take the statement of an entirely disinterested witness whom I know and who is on the ground, and whose reputation for truth and veracity can not be impeached, to the statement of an interested party.

GIFT OF SENATE TO MRS. JESSIE WOODROW SAYRE.

Mr. CLARKE of Arkansas. Mr. President—
The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Arkansas?

Mr. PITTMAN. I do. Mr. CLARKE of Arkansas. I am sure the Senator will yield when he knows the purpose for which I rise.

Due to an unfortunate, but pardonable, inadvertence the communication which I send to the desk did not reach me promptly. It is a letter sent by the fair bride of a few days since, making acknowledgment of her thanks for the present that the Senate was so pleased to offer to her in token of its respect and affection on the occasion of her marriage.

I feel greatly honored at being made the medium through which her thanks have been so felicitously expressed to the Senate. I hope I may be allowed now to record my regret that my absence and the inadvertence of another have delayed the performance of the most agreeable service assigned to me. I am sure, however, that my unintentional tardiness will not be permitted to detract from the appreciation of the Senate of this thoughtful and beautiful recognition of its remembrance.

Mr. GALLINGER. The Senator will ask that the letter be

Mr. CLARKE of Arkansas. I ask that it may be read and included in the RECORD.

The VICE PRESIDENT. In the absence of objection, the Secretary will read as requested.

The Secretary read the letter, as follows:

THE WHITE HOUSE, November 25.

Senator James P. Clarke, President pro tempore of the United States Senate.

President pro tempore of the United States Senate.

My Dear Senator Clarke: May I not express to you, and through you to the Members of the Senate, my most grateful appreciation of the Senate's gift. It is as beautiful as it is useful.

Again and again, as I use it, will the pleasure be renewed of being so generously and so thoughtfully remembered. It will seem as if you had presented to me a store of delightful recollections, recollections of friendship ideally manifested.

With deepest thanks from both Mr. Sayre and myself, I am,

Cordially and sincerely, yours,

JESSIE WOODROW WILSON.

JESSIE WOODROW WILSON.

### SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

Mr. PITTMAN. Mr. President, while I believe there should be no question of sentiment involved in this discussion, it seems to be unavoidable. I believe this bill should have originally contained nothing except a grant of the privilege of building a dam upon Government land, and the impounding of water upon the Covernment land. The only question before this body today, as I take it, is whether or not we are willing to permit San Francisco to use the public land for such purpose.

There are, however, a great many sincere, intelligent people throughout the country who are concerned with regard to more than the actual legal effects of this bill. They want to know what the moral effect will be, and they insist on discussing that moral effect before this body. They want to know, if we grant this right to San Francisco, not alone whether it will injure the park or the land, but whether it will injure anyone else, and if

there is any way of avoiding that injury.

These people have received the impression that some farmers in the San Joaquin Valley below this project will be injured; that they will be divested of some water rights they now possess; and that their farms will be destroyed. Under that view of the matter, some of them say: "Why destroy these farms, if you can get water elsewhere?" Others say: "You should not destroy these farms, whether you can get water elsewhere

Be that as it may, the good people throughout the country, whom we have the honor to represent, are writing to us and urging their opinions upon us; and whether or not it be germane to the consideration of this bill, it is perfectly right and proper that we should respect their sentiments sufficiently to give the matter consideration.

The VICE PRESIDENT. The hour of 6 o'clock having arrived, the Senate of the United States will take a recess until 8 o'clock p. m.

Thereupon (at 6 o'clock p. m.) the Senate took a recess until 8 o'clock p. m.

## EVENING SESSION.

The Senate reassembled at 8 o'clock p. m.

Mr. SMOOT. Mr. President, I suggest the absence of a

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst Bacon Bankhead Newlands O'Gorman Gronna Hollis Smith, Ga. Smith, Md. Overman Page Perkins Pittman Smith, Md. Smoot Swanson Thomas Thompson Thornton Townsend Vardaman Warren Hughes James Jones Brady Brandegee Bryan Burton Kenyon Kern Lewis McCumber McLean Martin, Va. Martine, N. J. Myers Nelson Kenyon Poindexter Clapp Clark, Wyo. Clarke, Ark. Pomerene Reed Robinson Colt Root Shafroth Warren Cummins Works Dillingham Fletcher Sheppard Sherman Shively Gallinger Nelson

Mr. JAMES. The Senator from Kentucky [Mr. Bradley] is unavoidably absent. He has a general pair with the Senator from Indiana [Mr. Kern].

Mr. LEWIS. The Senator from South Carolina [Mr. SMITH]

is detained from the Chamber by illness.

Mr. GALLINGER. The junior Senator from Maine [Mr. Burleigh] is detained by illness and will not be present during

the evening.

The VICE PRESIDENT. Fifty-seven Senators have answered to the roll call. There is a quorum present.

### CLAIMS OF COLOMBIA (S. DOC. NO. 259).

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was read, and, with the accompanying paper, ordered to lie on the table and be printed:

### To the Senate:

Responding to the Senate resolution of April 15, 1913, requesting, if not incompatible with the public interest, the transmission of all correspondence between this Government and the Government of Colombia not heretofore submitted to the Seuate in relation to the claims of Colombia against the United States, I express my concurrence in the opinion of the Secretary of State, as set forth in the report hereto annexed, that the transmission at the present time of the correspondence in question would not be compatible with the public interest. WOODROW WILSON.

## THE WHITE HOUSE, December 6, 1913.

## RURAL CREDITS.

Mr. FLETCHER. I ask that an order be entered, by unanimous consent, that 1,000 additional copies of Senate Document No. 214, having reference to the material collected by the United States commission on the subject of rural credits, be printed. The document has been ordered printed. We are called upon for a number of copies, and additional copies can be provided now at a very small expense, if it is done while the document is in process of printing. I therefore ask that 1,000 additional copies be printed. It comes within the limit of \$500.

Mr. SMOOT. Can the Senator state how much 1,000 copies

additional will cost?

Mr. FLETCHER. I do not know precisely, but it will come within the limit, because I have had the estimate made.

VICE PRESIDENT. Is there objection? hears none, and the order is agreed to.

The order as agreed to was reduced to writing, as follows:

Ordered, That 1,000 additional copies of Senate Document 214, entitled "Information and evidence secured by the United States commission appointed by President Wilson to cooperate with the American commission assembled under the auspices of the Southern Commercial Congress to investigate and study in European countries cooperative land-mortgage banks, cooperative rural-credit unions, and similar organization: and institutions devoting their attention to the promotion of agriculture and the betterment of rural conditions," be printed for the use of the commission.

Mr. ELECTRIED. Last propries of Senate Document 21 and 1997.

Mr. FLETCHER. I ask unanimous consent for the printing of a document entitled "Rural Credits," from the articles by the well-known author, Frederic J. Haskin. It is a very valuable contribution to the subject. I have had an estimate made of the expense, and it comes within the rule. The VICE PRESIDENT. Is there objection? The Chair

hears none, and the order is made.

# SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes

Mr. PITTMAN. Mr. President, I know there are other Senators who intend to discuss the pending bill to-night, and I am | legal questions and complications.

very anxious to govern my time accordingly if it is in any way going to shorten or to interfere with the time desired to be occupied by others. If I can get an expression as to the length of time that Senators who have announced their intention to discuss this matter expect to take, I will try and govern my time to suit their convenience.

Mr. McCUMBER. Mr. President, there are a number of Senators who gave notice yesterday of their intention to speak on this subject. I gave notice this morning that I would desire to explain an amendment. I think the Senator's question is a very pertinent one, indeed, at this hour, and I think all those Senators who intend to discuss the subject this evening ought to give him some idea about the time that they will take.

I will answer the Senator, as far as I am concerned, by stating that I wish to take between 15 and 30 minutes-I guarantee that it will not be over 30 minutes-to explain the amendment and give reasons for the amendment which I have offered. I

will take probably not to exceed 20 minutes.

Mr. POINDEXTER. Mr. President, I gave notice that I would speak on this bill at the conclusion of the remarks of the Senator from Nevada [Mr. PITTMAN]. I think it will require about 45 minutes to say what I desire to submit, and as there will probably be interruptions, I might take as much as an hour.

Mr. GALLINGER. Mr. President, if I have an opportunity during the session this evening, I will occupy two minutes of the time of the session on this bill.

Mr. MARTINE of New Jersey. Mr. President, I beg to state that I should like to occupy at the tail-end of the consideration of the bill 20 or 25 minutes.

Mr. CLARK of Wyoming. Mr. President, since the direct question has been asked, as I am one of those who gave notice that I should like to submit some views, my answer to the Senator's inquiry is that I am utterly unable to make any statement I have no set preparation; I have no desire to prolong the debate, and I have no desire whatever to have the Senator limit himself. Therefore, I pray the Senator to go on Senator limit himself. Therefore, I pray the Senator to go on and take the time that he thinks is necessary to present the matter from his point of view, and I for one will take chances.

Mr. SMOOT. Mr. President, I will say to the Senator from Nevada that I intended to make extended remarks upon this question, but I am not going to feel at all badly if I do not get chance to do so. I very much prefer that the Senator from Nevada, who had given notice that he would desire to make a speech, should go on and take his time and let all others take their chances.

Mr. CLARK of Wyoming. It might help some of us in reaching a conclusion if the Senator from Nevada would indicate the time he would want to take.

Mr. PITTMAN. I could easily take two hours, but I do not

feel that I would be at liberty to do so.

Mr. COLT. I should like to trespass on the time of the Senate

not exceeding five or six minutes.

Mr. PITTMAN. If the Senator from Rhode Island desires the five minutes at the present time, I will yield to him for that Durbose.

Mr. COLT. I thank the Senator.

The VICE PRESIDENT. The Senator from Rhode Island will proceed.

Mr. COLT. Mr. President, I only wish to express in the most summary way my objections to the passage of this bill.

In the first place, I am opposed to the bill because it seems to me that San Francisco has other available sources for a water supply, and therefore there is no public necessity for the passage

I am opposed to the passage of the bill because I think, on principle, the national parks of this country should remain devoted to the uses for which they were intended, in the absence of some grave public necessity.

I am opposed to the passage of this bill because I think that Congress occupies a peculiar relation toward the people with respect to the national parks; that we are in a broad sense the custodians and trustees of the people—to protect and safeguard these parks-and that, therefore, in the absence of any urgent public necessity, we should recognize what appears to be the overwhelming voice of the people in opposition to the passage of this act.

I am opposed to the passage of this bill because I believe it will set a bad precedent, and we lawyers know what force and

effect precedent has upon our future conduct.

I am opposed to the passage of this bill because I am suspicious of it and because I do not know what will be the effect of it. The ablest lawyers in this Chamber disagree as to the meaning of its provisions, and the bill seems full of unsettled

I am opposed to the passage of this bill because I do not know what effect it will have, with respect to irrigation, upon the present or the future settlers of the great San Joaquin Valley.

For these reasons, I deem it to be unwise and inexpedient to

pass this bill at the present time.

I thank the Senator from Nevada.

The VICE PRESIDENT. The Senator from Nevada will proceed.

Mr. GALLINGER. Mr. President—
The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from New Hampshire?

Mr. PITTMAN. I do.

Mr. GALLINGER. I will ask the Senator if he will give me Just two minutes. That is all the time I shall take,

Mr. PITTMAN. Certainly. Mr. GALLINGER. Mr. President, I feel sure that a very brief discussion of the bill now before the Senate will be refreshing, especially to those Senators who have complained that many of the speeches already made have occupied too

I have received hundreds and hundreds of letters and telegrams in opposition to the Hetch Hetchy bill, and so far as I can recall not a single letter or telegram has come to me in favor of the measure. In deference to the views held by the people of the New England States, and believing that there is no urgent necessity for the passage of the bill, I shall vote against it. The discussion has clearly shown that San Francisco is not in need of a larger water supply than she now has, and that even if the supply is inadequate there are other sources from which additional water can easily be secured without invading the beautiful valley of the Hetch Hetchy. I have always given warm support to the national forests of the West and am unwilling that any one of them should be invaded at the behest of commercial interests, which manifestly is the case in this instance.

Mr. PITTMAN. Mr. President, I was interrupted, I believe, in the middle of a sentence at the time of the recess, and I have forgotten what was the first part of the sentence, but for the moment I will digress to say that this bill has evolved more peculiar conditions in the Senate than any bill since my presence here. It has received exhaustive argument and exhaustive investigation, yet it appears that neither that argument nor that investigation is being considered, but that there are other matters regarded as more important to be considered than the facts and the arguments.

It is a peculiarly strange thing that all municipalities in the State of California, with the possible exception of one town and I have no recollection of that-have unanimously indorsed this bill, have unanimously stated that there is a need for this water, have unanimously stated that there is not an adequate supply that can be at this time obtained from any other source than the Hetch Hetchy.

It is indeed a strange thing that every character of business man in San Francisco, in the adjoining bay cities, and throughout that State has declared the need of San Francisco for this water and that this is the only real available source of supply; it is indeed strange that the men of every occupation and every profession have agreed in this state of facts, and yet from other portions of the country come petitions to the Senate denying those facts and urging upon this body to deny the relief granted in this bill. It seems to me that the people who live in a State, that the people who must suffer by a monopoly of the water by one person or another, that the people who are to benefit by the bill or to be damaged by the bill are the people who should be listened to. Is it not perfectly natural that those people in that State should know its conditions? Is it natural that the residents of the State of New Hampshire should know as much about the State of California as the Californians do? it natural that the residents of the State of Massachusetts should know as much about the conditions in San Francisco as the people in San Francisco?

I want to call your attention to the fact that nearly all the protests against this bill have emanated either from Massachusetts or from some of the other New England States, and with the rapidity of slander have worked out through the East and the South. Is it not strange that a matter involving facts and physical conditions in the State of California should first be attacked in the far New England States? The evidence adduced in favor of this case is based upon Government records almost entirely, while the evidence being used by those who are opposing this bill consists of telegrams and letters, a character of evidence that would not be considered in a court for a minute and should have no weight whatever except to stimulate investigation.

There is nothing even to indicate that 99 per cent of the writers of those letters and telegrams have ever seen the State of California. There is a presumption that the people who live in San Francisco know something about the conditions there. Their letters and their telegrams are not hearsay; there is a presumption that they know something about the conditions of those rivers and those watersheds, because they travel in that region in the summer time; but do you not know, at least have you not a right to assume, that a man in New England, a man in Massachusetts, or a man in Indiana in writing to you to oppose this bill on the ground that there is no need for it in San Francisco is doing so because he has been influenced either by newspaper articles or some other form of hearsay evidence? Do not Senators in this body know that they have received letters, and in those very letters it has been stated that the writers knew nothing personally of this matter, but that they had been requested by some friend to write the letter, and such an endless chain of letters has started out through this country? If that character of argument, if that kind of evidence is to decide a vital question such as is involved in this bill, then it seems to me that legislation enforces very little responsibility in this body. I want to say that those who are supporting this bill have not relied on that character of support and do not intend to do so. Unless we are able to show by the facts, by the statistics of Government departments, and by disinterested men that San Francisco is entitled to this water, then, of course, we do not expect the support of this body.

The protests against this bill on the ground that it creates a condition which would be injurious to a national park is a material ground for attack. This bill asks our Government to grant to San Francisco a part of the public domain, to grant to San Francisco the use of a portion of a national park; and it becomes material to determine whether or not that grant will be so injurious to the public domain and the purposes for which the park was created as to justify a refusal of the grant; but the question of the title to the water and the right to create power is immaterial and should not require the consideration of this

The State of California owns the Tuolumne River. It has granted that water to San Francisco, with the privilege of diverting at the Hetch Hetchy Valley. To do this a dam will be The site of the dam is Government land. question is, Will you confirm the State's grant or will you ob-There is in the bill a certain condition concerning water which, as a matter of fact, I admit should never have been in the bill. It was placed in the bill because the people who had been fighting the bill for years and had the power to prevent its passage demanded that it be placed in the bill for their protection. It was a concession to those demands, and those demands solely, that this extraneous matter was ever placed in the bill.

Mr. SMOOT. Mr. President, will the Senator from Nevada

tell the Senate who it was that had that power?

Mr. PITTMAN. Yes; certainly. It was the committee here representing the Turlock and Modesto irrigation districts before the House of Representatives. They had that power through the sentiment that they could create throughout the country in favor of the farmers of the irrigation districts. I want to say further

Mr. SMOOT. Let me ask the Senator-

Mr. PITTMAN. Let me first finish my answer.

Mr. SMOOT. Excuse me.

Mr. PITTMAN. I want to say, further, that if some of the Senators on the other side, no matter how honest their purpose may be, are successful in forcing upon this bill any amendment which will strike out any of that which is believed to be a protection to those people, the bill will not receive the approval of the Public Lands Committee of the other House or one-third of its vote. I believe this is a good opportunity to say that any Senator who wants to grant to San Francisco the privileges provided for in the bill can not do it if he votes for a single amendment to the bill.

Mr. CLARK of Wyoming. Mr. President-

Mr. SMOOT. Just let me ask another question. I should like to ask the Senator if he thinks that if the representatives of the water users' association alone had appeared here against those provisions and if Mr. Gifford Pinchot had opposed them instead of insisting upon them, they would have had the power to put them in the bill? Is it not a fact——

Mr. PITTMAN. Does the Senator want a question answered

or does he want to make a speech?

Mr. SMOOT. I do not want to make a speech; I want to ask a question; but if the Senator objects, I will not say another word.

Mr. PITTMAN. I am always glad to answer any question of the Senator if he will confine himself to asking a question.

Mr. SMOOT. Is it not a fact that the bill never could have passed the House in any shape against the opposition of Mr.

Gifford Pinchot? Mr. PITTMAN. Mr. President, I am not sufficiently familiar with the influence of Mr. Pinchot with the House Members to be able to answer that question, but I do know that the in-terests of the farmers of this country do have a great bearing upon legislation and a great bearing upon the sentiments of the representatives in both Houses of Congress. I believe that it is perfectly proper that the interests of that class of people should be conserved as well as the interests of any other class; and when those people came before the Houses of Congress and made a concerted fight, as they have made in years past, in the belief that they were going to be wronged, then I say to you that it was impossible to pass any character of bill at all, because then they changed the fight from the fight of the people of San Francisco against monopoly to a fight of the people of San Francisco against the farmers.

San Francisco acceded to the demand of the farmers, and the bill carried by an overwhelming majority.

Mr. SHAFROTH. I should like to ask the Senator a question for information, if he will allow me. I have heard it declared on the floor of this House several times that the farmers were being deprived of rights by reason of this bill; and inasmuch as the Senator lives in a neighboring State to California and no doubt knows the laws in California, I want to ask him whether

or not there could be an injury to the farmers?

I want to say that in my State of Colorado priority of appropriation gives priority of right to water. That being the case, it becomes a vested right, and nobody can be deprived of such a right, either by a State statute or by a United States

Now, I want to know how there can be any injury to a farmer if he has a vested water right. He can not be deprived of it in the State of Colorado. The only remedy that he might have would be an action against the party depriving him; or the usual proceeding is for the company which claims title to begin a condemnation suit and pay the farmer for whatever injury he may have sustained. I should like the Senator to state whether it is possible under the conditions in this bill that any farmer could be deprived of a right which he has

Mr. PITTMAN. Mr. President, I am going to devote but very little time to the answer-and I will apologize to the Senator for having to do so-for whenever there is plenty of water for all parties there is no use in discussing the legal priorities, and I intend to demonstrate to this body-and I believe I will be able to do so-that there is ample water on those watersheds to irrigate every foot of land tributary to the Tuolumne River and at the same time furnish, when needed, the 400,000,000 gallons daily to San Francisco. But before I leave that subject I simply want to say that I agree with the Senator that there is nothing that we could put in this bill that could possibly deprive any farmer in California of any water

WILLIAMS. Mr. President, have you not in the bill gone further than that and protected and conserved their rights by the very language of the bill?

Mr. PITTMAN. We have.
Mr. WILLIAMS. That is what I thought.
Mr. PITTMAN. I will come to that later.

But I must proceed, because I really want to get down to the question of the farmers of that valley, and on account of the short time I shall have to hurry along.

I am satisfied that the law of this matter has been argued as thoroughly as it can be, and I know I could add nothing to what has already been so ably presented on both sides of this body on that phase of the question; but reverting to the question as to whether or not there would be sufficient injury to a national park to justify this Government in refusing this grant, this is a material question, because the Government itself owns the property in the park; at least it owns that part of the property which by this bill San Francisco is seeking to use. That question has been presented most thoroughly to-day by the Senator from Nebraska [Mr. Norms], and I do not intend to go into it to any extent whatever. I believe the Senator from Idaho [Mr. BORAH] admitted that if it were solely a question as between maintaining the beauty of a small portion of a national park or conserving the interests of a great num-ber of human beings, whether they be in the city or on the farm, the injury to the park would naturally be justified.

There is no use of arguing as to the extent of this valley. We all know that this piece of ground in the park is in the extreme northwest corner; we all know that it is only one seven-hun-

dredth of the total area of the park. It is not to be desecrated, as would be some great falls, such as the one the Senator from Idaho spoke of last night and read about so beautifully. The falls that are in that valley will be preserved in all their beauty, because they are not touched. Below those falls, instead of being a valley with grass in it there will be a valley with a lake in it. As to which is the more beautiful artists would differ, and the difference would be perfectly natural. Through the literature we have received, often have we heard the name of John Muir mentioned as holding up his hands in a prayerful attitude and begging us not to desecrate this great national park in the creation of which he was one of the moving causes. Mr. Underwood Johnson, who has done so much advertising on the other side of the controversy to the desecration of this park, has frequently referred to John Muir. John Muir is a man who loves nature. I do not question his honesty, his motives, or anything else, and I do not believe anyone else does; but I want to say that in 1904, at the time when California ceded this park to the United States Government, there was created by act of Congress the National Park Commission for the purpose of determining what lands should be excluded, what new lands should be taken in, of reporting to the Secretary of the Interior where a road should be built into the park, estimating the cost, and generally to give the Department of the Interior such other information in regard to this great national park as would enable the Government to conserve it and protect it. I have here the report.

here the report.

Water resources within the park: The boundary as proposed excludes 542.88 square miles of the present park and adds 113.62 square miles, making a total diminution of area of 429.26 square miles. It excludes the greater part of private timber claims. It excludes practically all mineral lands and relieves the park of that never-ending menace to its future existence. It does not exclude the very valuable water resources, but fortunately these are all capable of a use which will enhance the beauty of the park and serve the public as well. If the needs of the country below ever necessitate the storage of water within the limits of the park the work can be done by the Government, or under Government supervision, in a way which will really contribute to the beauty of that region. The streams in the highlands, which come to the brink of Vosemite and Hetch Hetchy Valleys and pour over in cascades hundreds and even thousands of feet high, are one of the chief beauties of that region. But with the advance of summer the streams diminish greatly and in some cases dry up completely. Residents of the valley informed the commission that there is a marked falling off in visitors as soon as these falls disappear or are greatly diminished. Well-chosen reservoir sites in the upper valleys of these streams, if judiciously utilized under Government supervision, would add beautiful lakes to the landscapes, maintain the cataracts throughout the season, and at the same time conserve the water for the people below. This possibility is suggested merely to show that the park boundaries, as proposed by the commission, have nothing within them that should jeopardize the integrity or mar the natural beauty of the reservation in the future.

If any more indorsements are required, I do not know where to go for them. This commission, in making its report for 1904, admits that the Hetch Hetchy Valley would be beautified

by impounding the water.

Mr. LANE. Mr. President, I do not so understand him. I understand him to say that the building of reservoirs in the upper stretches of the stream, above the Hetch Hetchy Valley, would cause the storage of water by which the falls leading into the Hetch Hetchy Valley might be maintained in times of drought. I do not see how a reservoir made below the falls of the Tuolumne River would retain the water in the falls.

Mr. PITTMAN. Let us see. There are falls at the mouth of the Hetch Hetchy Valley.

Mr. LANE. But are not the falls above the Hetch Hetchy Valley

Mr. THOMAS. Not the falls of the Tuolumne.

Mr. LANE. The falls of the Hetch Hetchy Valley are at the head of the valley, are they not?

Mr. PITTMAN. There are some small ones in the valley.

Mr. LANE. I refer to the higher falls.
Mr. PITTMAN. But some of the falls of the Tuolumne, the beautiful falls that have been spoken of here, as the Senator states, are below these valleys.

What did the commission mean when it said that this water could be conserved for the people below, serving a good use, and at the same time making a beautiful lake in these valleys?

Let me call your attention to another thing. John Muir, in getting out his book on the Yosemite National Park, selects as a frontispiece a picture of a mountain scene with a lake in the valley in the foreground.

We come down now to the question as to the equities involved in this matter—as to whether or not the Senate is justified in depriving San Francisco of a right that has been granted it by the State by reason of some injury that it does to some other people in the State.

In discussing that question I am going to treat any possible injury that might be done to anyone in the State as material to this discussion. It seems to me, however, that when San Francisco has been granted all the water in the Hetch Hetchy except that which is admitted in the bill to belong to the irrigation districts, when San Francisco has been granted the right to build a dam at this very identical spot, there should be great cause shown to justify the National Government in obstructing

the State in carrying out that grant.

I do not believe it is the policy of the Federal Government to throw obstacles in the way of a State in the use of its property. The State owns that water, and the State has a right to grant that water, and the State has a right to grant the power of diverting that water. Under that right to grant the power of diverting that water. Under that right it has granted the water to San Francisco. It has granted the right to divert the water by a dam in the Hetch Hetchy Valley. It has sent those people now to the National Government, saying: "Go to the National Government and ask them to confirm this title by removing the obstructions that are in the way in this national park."

It seems to me that if anyone is injured in this matter he should first prove that he can not himself remove that injury before asking San Francisco to abandon this grant. Why, all the argument in this case has been made as though these farmers had the grant and it was a question as to whether San Francisco were to be allowed to take it away from them, whereas, as a matter of fact, San Francisco owns the grant, and the question is, Shall we take the grant away from San Francisco?

Why is it that all of the argument has revolved around the question as to whether San Francisco can get water somewhere else? Why is it not material to ask whether these farmers can get water somewhere else? Has there been any effort on the part of any of those opposing the bill to show that the farmers can not get water elsewhere? It seems to me that if anyone is attacking the bill, if anyone is trying to prevent the National Government from giving up a piece of land for a reservoir site on the ground that it will injure some irrigationists, he should show that those irrigationists can not get the necessary water somewhere else.

Mr. SHAFROTH. Would there not have to be compensation

to the irrigationists if they were injured?

Mr. PITTMAN. Oh, undoubtedly; but I am going to show that they will not be injured. I am going to show you that there has been no evidence presented here to prove that they would be injured, because you fail to prove that a man will be injured by being deprived of one reservoir site until you show that he can not get another reservoir site elsewhere that is just as good and just as cheap. I am going to show that there are better reservoir sites than the one in the Hetch Hetchy Valley for purposes of irrigation; that while they are not fit for the purpose of conserving water for domestic purposes, they are absolutely perfect for conserving water for purposes of irrigation. I intend to show that such reservoirs are closer to these small farmers, and the water can be more economically impounded in them.

Those are the questions that arise. I say they have been throwing on San Francisco the burden of the defense in this matter all the time, when, as a matter of fact, there is no excuse whatever for refusing to grant this right to the city of

San Francisco, and no cause that requires defense. They come in here and charge that San Francisco has other water sources. Suppose she has other water sources, and suppose the irrigationists have other water sources, then what is the equity in the matter? What is there to decide in a case of that kind?

I want to say to you that they have finally settled on two rivers as offering available water sources for San Francisco. One of them is the McCloud River, and the other is the Sacramento River. They have come down to that point, and they have gotten no farther. Consequently, I will take up the McCloud River and the Sacramento River for just five minutes, to show that they are not practicable and available water

I read from page 60 of the hearings before the House Committee on the Public Lands on this bill:

The Chairman. What would the protests amount to and where would they come from? Would they come from the irrigation people with whom we would interfere in this case?

He is speaking of the protests against San Francisco taking the McCloud River water.

The McCloud River water.

Col. Biddle. They are beginning now to put under irrigation a great part of the Sacramento Valley. There is a good deal of water in the Sacramento River, so that I do not know that there would be a great number of protests immediately, but eventually the sentiment would be practically the same.

Mr. Raker, Is it not a fact that the entire Sacramento Valley is now working and has been working for 12 years upon the idea of using the McCloud River and its tributaries for the water supply of the Sacramento Valley?

Col. Biddle. I did not know that they were working especially for the McCloud River, I do know, however, that they are rapidly putting

the whole valley under irrigation, and, of course, the McCloud River is a very important factor in that valley. I will say this: The McCloud River is a river which flows with great uniformity all the year around. In fact, it is the chief means of supply to the Sacramento River at times of low water. A large part of the irrigation in the Sacramento Valley comes from pumping from the Sacramento River, and, according to an act of Congress, as construed by the Chief of Engineers, they can not take water out of the Sacramento River, when it reaches a certain stage; that is, a stage of 2 feet above low water. When it reaches that stage of 2 feet above low water, no authority is given to pump water out of it. Now, the water in the Sacramento River reaches that stage about the time that irrigation is most important, and, therefore, if you should take away all or a large part of the McCloud River, that stage in the Sacramento River will come that much earlier and to that extent would affect irrigation. Mr. Raker. Is it not a further fact that the Government itself withdrew for irrigation projects, 10 or 12 years ago, all of those proposed sites that would be available here, while figuring on the Iron Canyon Dam, by which this water would be taken for the irrigation of the Sacramento Valley? Now, if this source of supply were considered, would it not, as a matter of fact, have the effect of bringing the people of the entire Sacramento Valley and of all the northern part of the Sacramento is represented by the sacrament of the sacrament o

Col. BIDDLE. I think they would ahead.

Mr. Raker. Yes; and they are doing that now.

Col. Biddle. I would like to state in this connection that there is no water-power development at all on the McCloud River. I would also like to state in reference to the McCloud River that this project consists mainly of the aqueducts to carry the water, and that to bring any water a large initial expenditure is necessary, whereas on the other systems the expenditure is more gradual.

Mr. Raker. You would consider that that would make a marked difference?

any water a large initial expenditure is necessary, whereas of other systems the expenditure is more gradual.

Mr. Raker. You would consider that that would make a marked difference?

Col Biddle. Yes, sir.

The Chairman. Let me ask you about these three last-named water systems, so as to get at the situation of that supply. Could the city of San Francisco, without any law, National or State, appropriate those waters? Could the city of San Francisco appropriate those waters or file on them, or are they already appropriated?

Col. Biddle. No, sir; they would have to buy out the private rights. The Chairman. From whom?

Col. Biddle. From the different owners; in some cases corporations and in some cases individuals.

The Chairman. They are all under private ownership?

Col. Biddle. Yes, sir; to a greater or less extent.

The Chairman. Is every supply that you investigated under private ownership save the Tuolumne supply?

Col. Biddle. And the Sacramento River.

The Chairman. And these supplies would have to come by grant, would they not?

Col. Biddle. The Tuolumne supply would have to come by grant. In the Sacramento River proposition there would be simply the question of pumping water out of the river.

That goes to show that the McCloud River affects navigation

That goes to show that the McCloud River affects navigation in the Sacramento River, and that whatever rights are there are owned by private individuals, and must be purchased if they

are taken at all. Now, I want to read again from the report of the Army board on the McCloud River. The report says, on page 124:

on the McCloud River. The report says, on page 124:
Filings prior to those of the proponents of this project on water for power development and applications for rights of way over public lands have been made. Conflicting rights are still unadjudicated.
There are extensive lumbering operations on this catchment area. There are also some agricultural and dairy interests.
Analyses of the water at Baird show it to be a very pure soft water, and the Government fish culturists have found it particularly well adapted to their uses.

Contamination by sewage from the sawmill town of McCloud will have to be guarded against, though no guidence of start.

Contamination by sewage from the sawmill town of McCloud will have to be guarded against, though no evidence of such contamination has been noted.

Those are the conditions surrounding the McCloud River, a river where there are conflicting claims, a river where a right can only be obtained by purchasing private interests, a river whose flow affects the navigation in the Sacramento River, a river whose watershed is subject to the contamination of sew-erage as it is settled upon. Curtis H. Lindley, of San Francisco, one of the ablest lawyers on the Pacific coast, as consulting counsel of the city of San Francisco, passed upon the titles to the McCloud River, and I have his opinion here, which I will not read unless I am asked to read it. He stated in that opinion that the title to the waters of the river were too insecure to warrant the city in investing money in such a site; that the locations made on it were too conflicting to justify the city in purchasing any of those sites.

Now, what becomes of the McCloud River? I leave it to Senators who are urging that San Francisco has another source of supply whether they, as counsel of any municipality, company, or an individual, would recommend the buying of such a watercourse. Have any of the Senators on the other side who have opposed this bill, or any on this side who have urged that there are other sources for San Francisco to purchase, shown from whom the water of the McCloud River can be obtained? Have any of them stated that there is any water in the McCloud River subject to appropriation by the laws of California? What difference does it make how large a river is or how great its flow is if the river can not be acquired? Are gentlemen prepared to come here and state that the McCloud River is an available source without showing how such source can be obtained?

Mr. SMOOT. I do not think the Senator will deny the fact that the board of Army engineers in their report recommend it as a superior source of supply, and state how many million gallons per day they can secure.

Will the Senator from Nevada pardon me for Mr. CLAPP.

Mr. PITTMAN. Certainly, Mr. CLAPP. The physical fact of supply might be there, but is the Senator from Utah prepared to answer the question of the Senator from Nevada? If the city of San Francisco can not

obtain the title, that is a matter of some importance.

Mr. SMOOT. That is a new question which I have not heard mentioned before. I will say that I do not believe the Army engineers who, in their report, call particular attention to the McCloud River would claim that there could be developed nearly 800,000,000 gallons of water per day and recommend it as an available source for the city of San Francisco unless they had made an examination of that question.

Mr. CLAPP. That would not follow at all. The Army board would not be supposed to deal with the question of title. They deal with the physical fact. I do not care to enter into a discussion, but it does occur to me that that is a vital question.

Mr. SMOOT. In answer to the Senator from Minnesota, I would say that all the water of the Tuolumne River is appropriated, and perhaps the same is the case with the McCloud River; but the reservoiring of the water would develop it just the same as the reservoiring of the Tuolumne River will develop the water, and whatever is developed and San Francisco files upon and appropriates she is entitled to, just the sare as she is entitled to the water that she has already filed upon in the Tuolumne River-nearly 161,000,000 gallons a day.

Mr. PAGE. May I interrupt the Senator from Nevada?
Mr. PITTMAN. Certainly.
Mr. PAGE. I have been following the Senator's argument with a great deal of interest, and it seems to me that the Senator has now struck a feature of it that is, to my mind, the

moral test of my judgment on this bill.

I believe that if it can be shown conclusively that San Francisco can obtain a supply of good water at a reasonable price at some other point, we ought not to vote for this measure. But now that the Senator is opening a new feature I hope he will be able to show affirmatively that San Francisco can not get good water at practically a reasonable figure except in the Hetch

I want to say that, so far as my general judgment on this measure is concerned, I have tried to study it with a good deal I know, as the Senator has remarked, that people in my State are very much opposed to this measure, and yet, for all that, I do not want their views to govern me unless my mind is in doubt. If it is, I shall let it be governed. My mind seems to reach the doubt when I come to this particular fea-Can not San Francisco get good water somewhere else? I wish the Senator would elaborate on that point further than he has explained to-night.

Mr. PITTMAN. I appreciate the importance of the questions the Senator from Vermont has in mind, and I intend to discuss

such subjects to-night.

Mr. BRANDEGEE. Would it inconvenience the Senator to answer me a question now?

Mr. PITTMAN. Not at all. Mr. BRANDEGEE. I have heard Senators in private conversation ask the question whether this project had been approved or indorsed by the Legislature of the State of California or not. I see in the House report-Report No. 41, Sixty-third Congress, first session-it is stated on page 16, that

The use of the Hetch Hetchy Valley in the Yosemite National Park as a reservoir for storing water for the city of San Francisco and other cities and for irrigation purposes is urged by the following:

Then follows a long list of bodies, among others the Legislature of California. I wish to ask the Senator if he has any knowledge on that subject.

Mr. PITTMAN. Yes, sir; it has been filed here among the indorsements. The legislature has indorsed it; indorsed it affirmatively; and not only indorsed it, but it has passed remedial acts to aid in the carrying out of this grant by the State.

Mr. BRANDEGEE. How long ago was that done?

Mr. PITTMAN. Those acts were passed about two years ago. I have not the dates, but I will get them.

Mr. BRANDEGEE. It was not passed with reference to this specific bill, but on the general program?

Mr. PITTMAN. It was passed in 1911. I will get it in a little

Mr. BRANDEGEE. I wish the Senator before he finishes would refer to it specifically.

Mr. PITTMAN. Certainly; the Legislature of California passed remedial legislation in aid of this project.

Mr. BRANDEGEE. What does the Senator mean by remedial

legislation?

Mr. PITTMAN. I mean legislation that would facilitate and legalize the taking over by the city of San Francisco of those rights that had been acquired by private individuals and at the same time confirming that title in San Francisco. San Francisco's rights are not alone dependent upon the location of these waters that have been sold to it, but the State, which has the sole and absolute jurisdiction over the waters of the State, has through its legislative body enacted a law confirming the title of San Francisco in this water.

Mr. BRANDEGEE. May I inquire if the Legislature of the State of California is in session at present?

Mr. PITTMAN. It is not. Mr. SMOOT. I will say to the Senator that the Legislature of the State of California can not transfer water to the city of San Francisco unless in conformity to the irrigation laws of that State, and that by filing on and appropriation of the

Mr. SMITH of Arizona. Which they have already done.

Mr. SMOOT. I will say to the Senator from Arizona that I have stated here a dozen times that San Francisco has filed on 161,000,000 gallons of water of the Tuolumne River daily, and no one can take that away from San Francisco, in my opinion, if she complies with the laws of California, not even the Legislature of California.

Mr. BRANDEGEE. Let me ask the Senator from Nevada one further question, and then I will have done. Has any legislature of the State of California in recent years passed any resolution or given vent to any expression of opinion in opposition to the storage of the water in Hetch Hetchy and the piping of it to San Francisco? Mr. PITTMAN. It never has.

Now, going back to the question I was on, I have stated that believe it is the duty of those who are trying to defeat this bill to show that San Francisco has other available sources of water supply, if they believe that that is a legitimate excuse water supply, it they believe that that is a legitimate excuse for voting against the bill.

Mr. STERLING. If the Senator will excuse me—

Mr. PITTMAN. Certainly.

Mr. STERLING. I should like to make a suggestion upon

that important question. It seems to me that the burden is upon the city of San Francisco claiming the right and asking for this legislation to show that there is no other available source of

Now, as to the immediate question of title, the board of Army engineers do discuss the question of title. They refer to it in discussing the McCloud River project. I call attention

to what is said on page 23 of the report:

The rights to the flow of the McCloud River are claimed by the Mount Shasta Aqueduct Corporation, represented by Mr. R. P. Doak, Mr. Doak has ofered to build the aqueduct or to sell the rights claimed by the corporation he represents to the city, though the offer is indefinite, being based on the estimated saving in cost over the Tuolumne project. The latest offer of the corporation proposes only selling its rights.

The inference, if anything, from the statement of the advisory

board is that the title can be procured.

Mr. STONE. Mr. President, before the Senator from Nevada answers, if he will permit me, I should like to say that there are Senators here who would like very much to hear the Senator from Nevada make his argument in a consecutive and intelligent way. He has given study to this subject and knows about it, and I would like to hear him; but if he is interrupted every moment or two it not only breaks in on his argument, but it very much interferes with those of us who are listening to it.

Mr. CLAPP. There are some Senators here with an open mind on this subject. The Senator from Nevada has given study to this question, and it does seem to me that if it is agreeable to the Senator from Nevada, as he proceeds, provided he is satisfied, that each Senator should have the right to inquire as to those matters that to his mind are in the way of reaching a conclusion one way or the other. Of course, if the Senator desires to go on without interruption, I would be the last to interrupt him. It seems to me that the only way we can get the light on this subject is by inquiring of those who, for one reason or another, with opportunity and time, have given more study to some of these details than the rest of us have been able to give to it.

While I am on my feet, if the Senator will pardon me, it seems to me that it is vital to this case; it is in my mind, as in the mind of the Senator from Vermont [Mr. Page], to know what the other opportunities are for San Francisco to get a supply of water. It was with that in mind that I made the inquiry relative to the title that might be obtained to the particu-

lar project the Senator was discussing.

Mr. PITTMAN. Now, then, referring to the Senator's inquiry, I want to read from the same report. In regard to the McCloud River it says this, further—it follows what the Senator from South Dakota [Mr. STERLING] has just read on page 124:

Filings prior to those of the proponents of this project on water for power development and applications for rights of way over public lands have been made.

Now, listen. The Senator would judge that there was only one filing on that river and that that was a prior filing. The Army board says this:

Conflicting rights are still unadjudicated.

There are extensive lumbering operations on this catchment area.

There are also some agricultural and dairy interests.

Now, Mr. Curtis H. Lindley, who is known to every lawyer in this Chamber as one of the ablest lawyers in this country, in passing on the title of Mr. Doak, the president of this company, on the title just read by the Senator, says:

Doak's proposition shows upon its face that he has nothing in esse to sell. It is all in posse. It is a purely speculative scheme upon its face. He proposes to acquire water and land in the drainage area of the McCloud River. There is no assurance that he will ever acquire either.

That is not all he says about it. I will read just a little of it, because I do not want to take the time. He further goes on and states that the appropriation is a purely perfunctory appropriation, without the intention of carrying it out, and there is no claim that the law was ever complied with. Consequently, Curtis II. Lindley, in advising the city, stated that these people did not have a title that could be purchased; that there were too many conflicting interests to acquire the water. The Army board found on its investigation that there was no water to appropriate there; that it was all claimed by private individuals with conflicting interests that were not adjudicated.

Consequently, there is not a lawyer in this body who would advise San Francisco to purchase from Mr. Doak, and Mr. Doak is the only man who is offering anything for sale.

Mr. STERLING. Mr. President, I can not agree with the Senator at all in that position. The city is asking for the concession, and the concession is asked on the ground that the city has not a sufficient water supply. The bur show that there is no other available supply. The burden is upon it to

Mr. PITTMAN. We are not asking for water. San Francisco already has it. We are asking for a dam site. As to the Sacramento River, the Sacramento River is purely and simply a pumping proposition. Of course, the water could be pumped to San Francisco. The water could be pumped on the land for irrigation, too, and for less money and with more practical results. The report of the engineers here shows that it would be very expensive to pump water for San Francisco. There would be the continual expense of pumping, and the water would have to be filtered.

Mr. LANE. I should like to say to the Senator that the proposition of pumping the Sacramento should not be considered at all. The water is unfit to use, and there is a permanent fixed

expense in pumping. It is not worth considering.

Mr. PITTMAN. Eliminating the Sacramento, we are then forced to the conclusion that San Francisco has no adequate, practical, available water supply other than the Hetch Hetchy.

Now, I want to come down to the other proposition, as to what effect the taking of the water out of the Tuolumne River will have on the farmers who have land tributary to that river. I believe that I can demonstrate from the maps I have here, which are taken from Government maps and from the reports upon which they are based, that there is sufficient water to supply San Francisco with 400,000,000 gallons daily and at the same time irrigate every foot of land within that whole district.

Mr. President, I want to read to you from the Army board report as to the farmers of this district, but before reading that want to call attention to this map of that district. river [indicating] running down through the center of this map is the Tuolumne River. On the north, above it, is the Stanislaus River; on the south, below it, is the Merced River. All three of these rivers are tributaries of the San Joaquin River. The All three San Joaquin is shown on the map flowing to the north. About where this map ends the San Joaquin enters into the bay

I want to call attention at this point as to where the Hetch Hetchy dam will be. It is indicated on the map by the figure "8." The farming country is in the lower and of the "8." The farming country is in the lower end of the Trolumne Valley, where I am now indicating. The dam of the irrigation districts is at this point [indicating], supplying the water for this section of the country. Above there and to the east [in-

dicating] is the mining country, and the mountains rise abruptly, so that this is a territory that is unsuitable for irrigation. This [indicating] is the Modesto irrigation district and this [indicating] the Turlock irrigation district. Off to one side, in vellow. is marked an additional area of 42,647 acres, which some are contending should be included in the water supply for that district and protected in the bill.

Let me now call your attention particularly to the location of the lands tributary to the Tuolumne River. The only land that could possibly be tributary to that river would be the land lying between the Stanislaus River on the north, the Merced River on the south, the San Joaquin River on the west, and the mountain ranges on the east. There can be no uncertainty as to the amount of land that is naturally tributary to the Tuolumne River. This area marked in pink [indicating] in each one of those districts indicates land where to-day the water stands on the surface or is 10 feet or less below the surface. Think for one moment of men contending that they are starving for water when there is water standing on and just below the surface of over two-thirds of the district.

Let me call your attention to something else. You see these lines in brown [indicating] running down in this direction through the pink. They represent drainage systems for that

land.

There was an oversupply of water on that land, partially caused from overirrigation, as is reported in a pamphlet issued in 1909 by the Agricultural Department, under the supervision of Mr. A. C. True, director of irrigation, whose report I will now read:

when irrigation was begun in these districts the ground-water level was 20 to 25 feet below the surface. Since that time it has risen very rapidly. In 1882 Miller McPherson sunk a well on his ranch, about 5 miles south of Modesto, near the lower end of the Turlock district, but not on the lowest ground in that section, and the rise of the water table in the well is probably close to the average for the district. When the well was dug the water was 18 feet below the surface and there was no noticeable rise until irrigation was commenced. By June 12, 1906, however, the water was only 8 feet below the surface, and by June 10, 1908, it had risen to 6 feet. For the past two years the water level under the town of Turlock has been but 5 feet below the surface. In the winter and spring of 1906 the level had risen throughout the districts until ponds were standing in the swales on the lower land. By 1907 these ponds had extended until a comparatively large acreage was submerged and rendered untillable. This rise of 15 to 20 feet within three years was the result of overirrigation, coupled with unusually heavy rainfall during the winter.

Mr. Burton Smith, superintendent of the Turlock irrigation

Mr. Burton Smith, superintendent of the Turlock irrigation district, said, December 31, 1910, that-

under present conditions, namely, the snow storage, the water supply is exhausted about the middle of July each year.

He further said:

This creates a desire among the irrigators to give the land an over-dose of water during the irrigation season.

Mr. J. H. Dockweiler, in a report placed on file in triplicate with the board of Army engineers July 15, 1912, concerning the necessity for drainage of the irrigated lands in these districts, reports as follows:

Despite the drainage ditches, the ground water stands at injurious heights over large areas of both districts; in the Turlock district it is between 5 and 6 feet below the surface in land through which the main drain passes. The Turlock district looks to solve the drain problem by means of electrically driven pumps placed in sumps below the level of the land. The water is to be pumped into the irrigation canals. The Turlock district has bonded itself for the sum of \$163,000 for the aforesaid pump installation, as per the statement of the chief engineer of said district.

Mr. SMOOT. Mr. President, I see it is 9.30 o'clock p. m. now. I do not want to interrupt the Senator, and shall not do so, but if I had time I should ask the Senator to let me explain that. It would, however, take too much time now, and I shall

not ask the Senator to yield to me for that purpose.

Mr. PITTMAN. Just a few words. I have shown here-and I have it by the Government reports and by the Geological Survey reports, which I have right with me if Senators desire to read them-that that area [indicating], which is two-thirds of those districts, is underlaid with water at a depth of 10 feet In those three districts there are 300,000 acres of or less. ground. This in yellow [indicating] is a new district which has been organized. The area of the two organized irrigation districts, which comprise nearly all the land tributary to the Tuolumne River, namely, the Modesto irrigation district and the Turlock irrigation district, is 257,000 acres, and to-day there are 119,000 acres in those two areas under cultivation out of 257,000 acres. That has been cultivated, mind you, by the natural flow of the Tuolumne River. They have just built three reservoirs—the Dallas and Warner Lakes Reservoir, the Davis Reservoir, and the Dickenson Reservoir. These three reservoirs will impound 138,000 acre-feet of water, which, according to the estimates of the engineers, will irrigate 54,000 acres more. Adding 119,000 and 54,000 gives 173,000 acres, which,

with their present works, are capable of being irrigated in those two districts right now, out of 257,000 acres.

Let us see how much water it will take. It will take 317,000 acre-feet of water to irrigate every bit of land in that whole district. They have a number of reservoir sites now under their proposed system, and the question is, Can they get any other reservoir sites? The demand these people are making upon the Senate is that they need the Hetch Hetchy as a reservoir site. Here [indicating] are the reservoir sites which they voir site. Here [indicating] are the reservoir sites which they can obtain that are not controlled by the Hetch Hetchy: Empire, 35,000 acre-feet; Coffin Hollow, 12,000; Lilly Lake, 15,000; Cherry Mouth, 8,200; Poopenaut, 44,300; Cottonwood, 25,000; Ackerson, 26,000; Stone, 26,000; Fernbrook, 26,000; Herndin, 25,000; Big Creek, 125,000; Moccasin Creek, 12,000; Upper La Grange, 200,000; Dry Creek, 325,000, making 792,000 acre-feet of reservoir sites below the Hetch Hetchy Reservoir site and because to this ferming area. Unidicatingly and the outplease of closer to this farming area [indicating], and the engineers estimate that these extra reservoir sites

Mr. CLAPP. Mr. President, a question arises here as to where they will get the water for those sites to which the Sena-

tor has just referred.

Mr. PITTMAN. I will gladly explain that to the Senator. The reservoir sites which I have indicated will impound 792,000 acre-feet, which will irrigate 317,000 additional acres of land, Now, we have reservoir sites

Mr. SMOOT. I think there is a difference of opinion as to

that.

Mr. PITTMAN. There may be a difference of opinion as to how much.

Mr. SMOOT. I take the Army board report for it.

The Army board report puts it at 21 acre Mr. PITTMAN. feet an acre, while the district wanted it 2% acre-feet to the acre. This calculation is based on the Army board report of 24 acre-feet to the acre, which means 317,000 acres' worth of storage.

Let us see whether or not they have got the water to store. According to the Government reports, and the Army reports, too-because they both conform-and, by the way, I want to call your attention to the fact that the Senator from Idaho, who requested the Department of the Interior for certain answers to certain questions in regard to this district, did not have time to read the answers to the questions which he propounded to the Secretary of the Interior; but the Secretary of the Interior has answered those questions through the proper channel, and we have the answers here: The Stanislaus River has an offflow of 1,380,000 acre-feet, and the annual average flow of the Tuolumne River, according to the measurements, is 2,040,000 acre-

Mr. SMOOT. Mr. President, the Senator will state, will he not, that all of the water of the Stanislaus River and also all of the water of the Tuolumne River has been filed upon and can not be used in the dozen reservoirs he has indicated if they had the reservoirs?

Mr. PITTMAN. No. All of the water in these reservoirs is filed on at low water; but here is the situation: San Francisco is entitled to 400,000,000 gallons of water, which is only

440,000 acre-feet.

Mr. SMOOT. The Senator means to say that the bill is going to try to grant her 400,000,000 gallons of water?

Mr. PITTMAN. I mean that if San Francisco obtains the maximum amount of water it seeks, 440,000 acre-feet will supply the 400,000,000 gallons per day, and there is an overflow going to the ocean of 2,400,000 acre-feet. The situation is this: When San Francisco has 440,000 acre-feet in this dam it has its supply of water. That leaves a big surplus of water here [indicating] running down this river. There is more water in the offflow of the Tuolumne River than can even be impounded by dams in the reservoir sites that are now known to exist, and the water must continue to flow.

The Merced River has an average offflow of 1,228,000 acre-There is only one-third of 1 per cent of that water impounded. Only one-third of 1 per cent of the Merced's great flow of 1,228,000 acre-feet is impounded. Of this great big river [indicating] bounding this same district on the north, the Stanislaus, with an annual average outflow of 1,380,000 acre-feet, only 7 per cent of it at this time is impounded, and the rest of it finds its way to the sea. Now, I candidly ask you who have been watching the situation if those two irrigation districts look as though they were in any trouble for water? Is there any question in your mind at all about that at this time with all of this vast territory? The Senator from Minnesota [Mr. Clapp] asked me where the water would come from to fill these reservoirs, and I have undertaken to answer his question. The water is there; the water is all above this point [indicating].

I do not wish to tire Senators, and I am not going to take up any extra time, but I want to call attention to another fact, that to-day this land [indicating] is being drained. want to call attention to the fact that the plans of the irrigationists for the irrigation of all this land to the west of the San Joaquin River in that valley [indicating] contemplate pumping We have the language here of Mr. Lehane, who came on here for the very purpose of fighting this matter before the Public Lands Committee of the Senate and gave the following

Mr. Lehane. I presume if Congress would do what our board of trade has asked the Senate committee to do and appoint a committee and give it power and authority to investigate our conditions out therewhich has never been done yet by any Congress—that we could make a showing from our actual conditions, so that this Congress or this Senate could determine, as a matter of fact, whether we had any reservoirs sufficient to store enough water to take care of our lands. Speaking for myself, I do not think we have, but I have no right to say so positively, because that has not been worked over from an engineering basis.

Again, on page 52 of the hearings, Mr. Lehane said:

Now, I want to say one word about the west side. The west side does not expect to get water out of this river, because it would have to pipe it across the river.

But even if there was a shortage of water from the Tuolumne River it would be much easier to irrigate the land by means of pumping than to attempt to supply San Francisco with water for domestic purposes by pumping. San Francisco by using the Hetch Hetchy project incidentally creates over 100,000 horsepower of hydroelectric energy, which will supply power to the farmers of the San Joaquin Valley if there should ever happen to be any shortage of the flow of the Tuolumne River. Lehane, in testifying before the Senate committee, said:

Mr. Lehane. Just a word there in connection with the west side. The west side has 100,000 acres of land. All they want is power. Power is synonymous with water. Here is what they intend to do and what they can do. They can go down to the lower end of the San Joaquin River and the Sacramento, put in a pumpling plant at what they call Old River. They will pump that out at the San Joaquin and run it down to the west side and raise all the crops they need.

Mr. Lehane testified before the committee that their plan for the irrigation of all this country is to pump water on the land down here [referring to map]. Consequently, it is only this area that requires irrigation. They have more than enough water, and they have more than enough reservoir sites, and they have too much water where you see the pink color on the map.

I tell you the whole situation, Senators, comes down to this: The committee that came on here was composed of men who had spent their lives in that district. They were men who, of their own experience, knew what that irrigation district required. They did not have to have somebody write them a telegram to tell them what the irrigation district required.

Mr. Church, the Congressman for that district, who was present when the pending bill was drawn up, who was a member of the Public Lands Committee that voted for the bill, did not have to ask anybody for information about that district. I tell you that if he did not believe their rights were amply protected in this bill, if he did not believe 2,350 second-feet of water was an ample amount for them and more than they ever could get in any other way on earth, he never would have stood for having it put in the bill, and he would have made a fight against it. I tell you that ex-Congressman Needham, who was in Congress for years and knew every foot of that district, would not have stood by the Public Lands Committee and said,
"This bill protects the people of our country, and therefore we
are satisfied that it shall pass," unless it actually had protected

That is the situation, Senators. The bill was properly drawn. The representatives of the district came here and got what they wanted. They knew what they wanted. They knew that all they wanted was that 2,350 second-feet of water should be permitted to run down in the river so as to get into their impounding dam, They were glad that a dam was going to be placed across Hetch Hetchy, because it would conserve waters that every year had been running to the sea, and those waters would be let down to them gradually so that they could keep their own reservoir up to a certain level.

Is it not natural, is it not common sense, that the men who came here should know what they wanted? Would it not be an unusual thing that five of the most prominent men of a district should come here, one of them an ex-Congressman, one of them a judge on the bench, and represent these people and should insist on the passage of a bill through Congress and should allow two or three months to go by and still be satisfied if the bill had not been properly drawn to protect their interests? I say to you that if it had not been, such conditions could not have existed.

Do you not believe that this is what happened: Do you not believe that some one went among those people and said, "Here, while this is enough water for us, we can induce the Senate of the United States to destroy San Francisco's rights up in that valley"? Do you not think it is natural that somebody should do that?

Mr. LANE. Mr. President—
The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Oregon?

Mr. PITTMAN. I do. Mr. LANE. I received a letter a short time ago from a woman rancher, who stated that they had had short crops, due to a lack of sufficient water for irrigation. I saw a man from there to-day, an engineer, I think he is, who tells me—whether it is true or not I do not know—that for 26 months, outside of the early season when there were a few inches of water from the melting snow, not one drop of water has gone down from the bed of the Tuolumne River below the irrigation districtnot a drop for 26 months. He tells me that there has been a precipitation of only 4 inches in 26 months, that they have had a drought there, and that their crops are drying up. I do not know that he is representing anyone, but he told me that, and gave me a map showing it. I handed it, for information, to the Senator from Idaho [Mr. Borah] to use, and he is not here at this moment.

Mr. PITTMAN. I have no doubt the Senator has received letters of that kind.

Mr. LANE. No; I saw the man in person. Mr. PITTMAN. I have no doubt there have been men here in person. There have been men here in person. I will say to the Senator, however, that he can not always rely entirely on what people say, even when they say it with the best of intentions and even when they are honest. You know that people are often mistaken as to conditions. Very frequently they exaggerate the conditions. It is a great deal better to take the actual records of engineers, the actual records of men whose business it was to study those things, and present them to the committee.

We had a Public Lands Committee which sat as a judge and

jury for the House of Representatives. It was composed of members of all parties. They heard evidence. These things were all thrashed out before them. The amount of water necessary for their irrigation was thrashed out before those people, and they were given that amount in the bill, and it satisfied them for several months.

For three or four long months we never heard a complaint. What is the complaint now? I will ask the Senator from Oregon. It is: "We do not want them to have any water. We will not accept any compromise. We will not accept any amount. We are going to fight them and prevent them from having any

That was the language of the telegram that was sent here. The explanation of the whole thing is that somebody has gone back there and has said to these people, "Here, I will tell you what we can do. We can get water for more than the lands naturally tributary to our river. We can not only get sufficient water to irrigate the lands tributary to the Tuolumne River, but we can get a power right. Then, when we get the power right, we can organize a great big district down here to the west of the San Joaquin River, and pump from it; and we can sell bonds and pumping contracts, whether we ever put the pumps in or not, and we can speculate in lands."

I tell you that if you will examine the hearings before the Senate Committee on Public Lands you will find out that some of the men who came here are speculators in land. The farmers down in that valley will regret the day they ever turned over

their interests to land speculators of that character.

I believe that to-day some of the men who are most sincere in behalf of these farmers are doing them the greatest injustice that ever was done any community in this country. I know they are sincere in their efforts. I know that. I want to tell you that the only way to equalize and extend the irrigation of that part of the country is to conserve the waters. I want to tell you that if they have only 10 per cent, if they have only the overflow of the waters from the Hetch Hetchy dam, they will get more water than they have there now; and if they must depend on reservoir sites they can get reservoir sites nearer to them than this one that are better than they ever have had in all that part of the country. I really think an injustice is being done to these people by some of those who are trying to help

Mr. LANE. I can not certify to the correctness of the statement I have made. I stated the way in which it was made to When it gets down to a matter of fact concerning the San Joaquin Valley, however, I can say something of my own knowledge. I was born out there. I have been out there now for nearly 60 years. For three or four years back the news has come up into our part of the country that there was a drought

in the San Joaquin Valley, and the farmers have gone down like flies before a frost. Drought has been burning out the richest valley in California. That valley is subject to drought. and needs waterworks wherever it can get them. It has had drought enough, and it is no matter of theory to say that it is having one now. If it is, it is simply what has often happened before.

You gentlemen can not make water out of nothing to put on that land. It must drop in from the sky. After you have taken the water out and impounded it and put it into a pipe line and run it to San Francisco, 120 miles away, those farmers will not be able to get, with a lemon squeezer, a teacupful of water out of 10 acres of land. [Laughter.]

Mr. PITTMAN. Yes; they have droughts in the San Joaquin Valley and they have droughts on the watershed of the Spring Valley at certain seasons of the year; the only difference is that the watershed of the Spring Valley is in the low foothills and depends entirely upon the rain, while the watershed of the Tuolumne is in the high Sierra Mountains and depends for its supply upon the accumulations of snow throughout the winter. San Francisco has suffered from drought of rain for three or four years and her reservoirs are now nearly empty. San Franfour years and her reservoirs are now nearly empty. San Francisco, we admit, would have 90 gallons of water per capita if her reservoirs were full, but as the reservoirs get lower the water gets scarcer and the people must use less. It is possible that if there is another dry season the reservoirs will be entirely empty. There never would be a drought in the San Joaquin Valley if the water that comes down from the Sierra Nevada Mountains in the freshet season did not run to waste in the early spring. The country fed by mountain waste in the early spring. The country fed by mountain streams is generally subject to freshets in the spring and to drought in the summer and fall. Impound all the waters of the Stanislaus, the Merced, and the Tuolumne and there will never be another drought in the San Joaquin Valley.

The Army board appointed by this Congress to investigate into the matter, after estimating all the flow of these great rivers and discovering the reservoir sites that are shown in the report and on the maps that have been presented to you to-day, give their final opinion in the conclusions to the report found

on page 50 in these words:

The board is of the opinion that the use of the Hetch Hetchy Valley as a reservoir site is necessary if the full flow of the upper Tuolumne is to be conserved. The board further believes that there will be sufficient water. If adequately stored and economically used, to supply both the reasonable demands of the bay communities and the reasonable needs of the Turlock-Modesto irrigation district for the remainder of this

Mr. MYERS. Mr. President, this forenoon the Vice President ruled that this calendar day would extend until noon to-morrow. I understand that later, while I was out of the Chamber, he changed that ruling and declared that this calendar

day would end to-night at midnight.

I ask now, in addition to the unanimous-consent agreement under which we are operating, as a supplementary unanimousconsent agreement, that the debate on the bill and pending amendments cease at 11 o'clock, and that at 11 o'clock we begin to vote on all pending amendments and on the bill without fur-

ther discussion.

My object in asking that is that, under the last ruling of the Chair, as I am informed, it is very apparent that we must finish consideration of this bill according to the original unanimousconsent agreement and finish our voting by 12 o'clock to-night. I do not know how many amendments are pending; I think two or three. It takes about 15 or 20 minutes to call the roll of the Senate. It seems to me that we shall have to quit debating by 11 o'clock in order to get through with the bill by 12. Therefore I make that request.

Mr. SMOOT. I suggest to the Senator that before we make any supplemental unanimous-consent agreements we shall have to get rid of the order which the Senate passed this morning to

adjourn at 11 to-night.

Mr. MYERS. I am glad the Senator called my attention to

Mr. WILLIAMS. Mr. President, the Senator from Utah is mistaken about that. If he will read the order he will see that it says, at the very end of it, "until otherwise ordered."

Mr. SMOOT. That is what I mean.

Mr. WILLIAMS. Any action of the Senate is "otherwise

ordering.'

Mr. MYERS. I will incorporate that in my request, thenthat instead of adjourning at 11 o'clock we shall cease debate and begin voting on pending amendments and on the bill itself at 11 o'clock, and stay here, remaining in session, until the amendments and the bill are finally disposed of.

Mr. SMOOT. In answer to the Senator from Mississippi, I wish to say that what I said was virtually what he said—that

automatically, at 11 o'clock, the Vice President would say that the Senate would stand adjourned unless the Senate otherwise ordered.

Mr. MYERS. I am asking that it be otherwise ordered in the unanimous-consent agreement that I am asking. I ask that

that agreement be made.

Mr. THOMAS. Mr. President, my information is that one or two Senators on the other side desire to be heard upon this matter, and it might be unfair to them to limit to 11 o'clock the time of commencing the balloting. I am sure the Senator now having the floor and those of us who have spoken in favor of the bill have no desire to prevent the expression of further views upon the subject that Senators may desire to express before a vote is taken. At the same time we are anxious to get through as soon as possible.

If it be true that the Senator from Wyoming [Mr. CLARK] and the Senator from Washington [Mr. POINDEXTER] desire to be heard further, I think we should consult their views in regard to the matter before arbitrarily determining to begin

balloting at 11 o'clock.

Mr. MYERS. I suppose that if those gentlemen consented to it, that would dispose of that matter.

Mr. THOMAS. Oh, surely. Mr. MYERS. They will have to consent in order to make a

unanimous-consent agreement.

Mr. CUMMINS. Mr. President, it seems to me—and I make this suggestion to the Senator from Montana—that if we enter into any further agreement, it ought to be that the Senate will adjourn to-day when this bill is disposed of. The effect of that would be to modify the general rule which has been adopted and at the same time it would leave the unanimous-consent agreement standing just as it is.

Mr. THOMAS. Let me ask the Senator from Iowa a question. That would virtually mean that the legislative day would be extended indefinitely, and we might be in session here for two

or three days?

It is the calendar day, not the legislative day. Mr. MYERS. Mr. CUMMINS. We have agreed to vote upon this bill during the calendar day. I assume that the calendar day will expire at 12 o'clock. The only possible construction that can be put upon the agreement is that we will begin to vote at 12 o'clock, for it is beyond human foresight to determine how much time will be involved in voting. If I were construing the unanimousconsent agreement, my construction would be that at 12 o'clock to-night, assuming now that we modify the general rule that has been adopted, we will begin voting upon this bill. If it takes us 30 minutes, we will be in session 30 minutes longer. If it takes us an hour, we will be in session an hour longer.

Mr. MYERS. Mr. President, that will be quite agreeable to me. I am only interested in seeing that the calendar day does

not expire without the bill having been disposed of.

I will now make a parliamentary inquiry. Would the Chair hold that we would have a right to begin the voting on the pending amendments and the bill itself at 12 o'clock and finish after 12 o'clock, taking as long as may be necessary for the

The VICE PRESIDENT. The Chair has already ruled that the Senate of the United States must construe this unanimousconsent agreement, and that it was the opinion of the Chair that the present calendar day ends at 12 o'clock to-night. The Senate, if it chooses to do so, can change that calendar day.

Mr. MYERS. That was my idea in making such a proposition

for unanimous consent as would finish the voting by 12 o'clock.

That is why I asked for it.

Mr. CUMMINS. That could not be. I think the ruling of the Chair is obviously right; but I think we will all have to concede that the unanimous-consent agreement must be interpreted to mean that we shall begin voting at the close of the calendar day.

Mr. THOMAS. That would be at 12 o'clock
Mr. CUMMINS. That would be at 12 o'clock. It would be impossible to enforce the unanimous-consent agreement in any other way, because, as I said before, you can not tell how long the voting will require, and the agreement might fall on account of that interpretation. If there is any way in which to avoid that difficulty, I should be glad to do it. I had hoped the Chair would put an interpretation upon the unanimous-consent agreement which would make possible the course I have suggested.

The VICE PRESIDENT. The Chair does not feel that the Chair can stretch a calendar day to contain more than 24 hours.

The Senate may do that.

Mr. SUTHERLAND. The unanimous-consent agreement is not, as stated by the Senator from Iowa, that we shall vote during the calendar day, but it is that we shall vote before adjournment on the calendar day. Now, that unanimous-consent agreement does not prevent the Senate, it seems to me, from fixing at 11 o'clock. I ask that that be put to the Senate.

an hour of adjournment. We have fixed the hour at 11 o'clock, at which time, under the order adopted this morning, the Senate will automatically adjourn, it seems to me, unless that order

is modified. It is directory in its expression.

Mr. WILLIAMS. I submit to the Senator from Utah that

we can not set aside the unanimous-consent agreement by an order adopted by a majority of the Senate.

Mr. SUTHERLAND. We have not set it aside.

Mr. WILLIAMS. But you have just been saying that we

Mr. SUTHERLAND. No.

Mr. WILLIAMS. You have been saying that notwithstanding the unanimous consent to take this vote upon the calendar day we will automatically adjourn at 11 o'clock.

Mr. SUTHERLAND. On the contrary, I have said that the order and the unanimous consent are not in conflict. We have provided that we shall adjourn at 11 o'clock. Therefore, under the unanimous-consent agreement, we must vote upon

this bill before 11 o'clock.

Mr. WILLIAMS. That is just what I understood the Senator to say. Prior to the adoption of the order there was a unanimous-consent agreement of the Senate that the vote should be taken upon this calendar day. The order adopted by the majority can not set aside a unanimous-consent agreement of the Senate.

Mr. SUTHERLAND. It does not set it aside.

Mr. WILLIAMS. The Senate under this particular calendar order, non obstante, does not adjourn at 11 o'clock, and remains in session until 12 o'clock.

Mr. MYERS. I ask the Chair to put a unanimous-consentagreement proposition that I think will clear up the situation.

Mr. WILLIAMS. I had not quite finished my sentence, but it

all right.

Mr. MYERS. I will take this opportunity, Mr. President, to ask unanimous consent that the Senate do not adjourn at 11 o'clock to-night, and do not adjourn until this bill and all pending amendments may be disposed of.

Mr. GALLINGER. Mr. President, that is in open violation

of the unanimous-consent agreement. I will take the liberty to suggest to Senators that we might just as well by unanimous consent extend the day from 24 hours to 25 hours as to extend the calendar day from 12 o'clock to-night. It can not be done,

Mr. WILLIAMS. If the Senator from Montana will pardon me, I think what he wants can be arrived at by asking unanimous consent that the voting shall begin at a certain hour,

and that will not conflict with anything.

Mr. MYERS. Senators on the other side say that 11 o'clock adjournment is in the way. I ask unanimous consent that we do not adjourn at 11 o'clock to-night, but that we remain in session until this bill and the pending amendments are disposed of.

Mr. WILLIAMS. The Senator should not put the request

in that shape. I do not want to have the pending currency bill interfered with by an indefinite legislative day that might go on forever, and we would be in a quandary.

Mr. MYERS. There is no danger of that.

Mr. WILLIAMS. If the Senator will ask unanimous consent that the voting shall begin at a certain hour during this calendar day and continue until all pending amendments and the bill are disposed of, he will accomplish his purpose.

The VICE PRESIDENT. The Chair has once ruled to-day, and from that ruling no appeal was taken, that the unanimousconsent agreement takes precedence of the resolution; and the Chair has announced that it is the opinion of the Chair that the calendar day ends at midnight to-night, but has said that it may not be within the power but it is within the discretion of the Senate at least to put more than 24 hours into the calendar day.

Mr. STONE. Mr. President, there is such a simple solution of this whole difficulty that it seems to me there ought to be no hesitancy about adopting it, and that is to begin voting within 15 minutes from this time.

Mr. CLARK of Wyoming. Mr. President, I ask for the regular order.

Mr. STONE. What did the Senator say?

Mr. CLARK of Wyoming. I say we are getting nowhere.

Mr. STONE. I ask unanimous consent to end the debate and begin voting at half past 10 o'clock.

Mr. CLARK of Wyoming. I can not give consent to that.

Mr. MYERS. Is there objection to my request?
The VICE PRESIDENT. The Chair understood that the

Senator from Wyoming objected.

Mr. MYERS. Then I will renew my request that we begin voting on the amendments and the bill, without further debate,

Mr. PITTMAN. I will state that I resign the floor entirely and will not take up another minute of the time if that is agreed to.

The VICE PRESIDENT. Is there any objection to the request of the Senator from Montana that the Senate shall commence voting on the bill and amendments thereto at the hour of 11 o'clock without further debate?

Mr. POINDEXTER. I object. Mr. SMOOT. Mr. President, I demand the regular order.

Mr. MYERS. Mr. President, we have entered into a solemn unanimous-consent agreement to finish this bill on the calendar day, and I ask those gentlemen who have objected what they will consent to. Are we to violate the unanimous-consent agreement? I renew the same request for 11.30 o'clock.

Mr. JAMES. Mr. President, I desire to submit to the Chair a parliamentary inquiry. I understand the unanimous-consent agreement reached in the Senate was that this bill should be voted upon before the end of the calendar day. The Chair has ruled that the calendar day ends at 12 o'clock. Is it possible that under that unanimous-consent agreement, entered into by the Senate, gentlemen can defeat it by a continuance of the debate up to the hour of adjournment?

The VICE PRESIDENT. The Chair has already ruled that unanimous consent agreements are exclusively in the control and resting upon the honor of Senators. The Chair has no power to enforce such an agreement nor to be the guardian of

the honor of any Senator in the Chamber.

Mr. JAMES. The Chair of course knows that there are a number of amendments, and is it not within the power of the Senate, under the agreement, to order the voting to begin at a sufficient time to conclude the voting upon the amendments and the bill before the end of the calendar day, as the agreement which was reached in the Senate contemplated?

The VICE PRESIDENT. The Chair has already ruled that it is purely a question of honor. Senators are as well advised as the Chair, and if the agreement is not kept it is not the fault

of the Chair but the fault of the Senate.

Mr. MARTINE of New Jersey. Mr. President, I desire to move to amend the motion of the Senator from Montana.

Mr. MYERS. There is no motion. My request was objected to. I make the same request for 11 o'clock and 15 minutes and ask that it be put by the Chair.

Mr. MARTINE of New Jersey. Make it 11 o'clock and 45

Mr. MYERS. No; I make my request for 11 o'clock and 15 minutes and ask that it be put.

The VICE PRESIDENT. Is there objection to beginning the voting at 11 o'clock and 15 minutes?

Mr. MARTINE of New Jersey. I object.

Mr. MYERS. Then I make the request for 11 o'clock and

Mr. MARTINE of New Jersey. I object.

Mr. MYERS. I ask the Senator from New Jersey to name a

Mr. GALLINGER, Mr. President, I call for the regular

Mr. MYERS. I want to say that if the bill is not disposed of to-night under the unanimous-consent agreement there shall never be another unanimous-consent agreement entered into as long as I am present on the floor of the Senate.

Mr. GALLINGER. Mr. President, who is entitled to the

The VICE PRESIDENT. The Senator from Nevada [Mr. PITTMAN] has the floor.

Mr. GALLINGER. I hope the Senator from Nevada will

Mr. MYERS. Mr. President, I make the same request for 11 o'clock and 45 minutes.

Mr. PITTMAN. If I still have the floor I want to yield it. I will discontinue any further discussion and yield the floor permanently so that other Senators may consume as much time

as they wish.

Mr. POINDEXTER. Mr. President, it is the obvious feeling of every Senator, I think, that we ought to conclude this discussion, and no Senator is more anxious to have this matter disposed of than I am. I listened with a great deal of attention to the argument of the Senator from Nebraska [Mr. Norris], and if I were to surrender the privilege of forming my own opinion upon the evidence presented in this case, there is not a Senator whom I would rather follow than the Senator from ebraska. But it is absolutely necessary-Mr. MYERS. Mr. President— Nebraska.

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Montana?

Mr. POINDEXTER. I yield.

Mr. MYERS. I was under the impression that I had the floor. I make the same request that I made a while ago, that the vote begin at 11 o'clock and 35 minutes, and I ask that that be put to the Senate.

Mr. POINDEXTER. I object to that, Mr. President. say that I think I will conclude what I have to say within 10

or 15 minutes. I see no reason why the matter should—
Mr. MYERS. I will make one more request, then. I will ask
that the same proposition be put for 11 o'clock and 25 minutes.

Mr. GALLINGER. Mr. President, I object to that, and I hope that the regular order will be proceeded with.

The VICE PRESIDENT. There being objection, the Senator

from Washington will proceed.

Mr. POINDEXTER. It is absolutely necessary to intellectual freedom that one should form his own opinion upon the facts presented. This case seems to have resolved itself, Mr. President, into a contest of assertion. The Senator from Nebraska devoted his remarks very largely to the water-power phase of the franchise which the city of San Francisco seeks to obtain under this bill. The Senator was very eloquent in his description of 100,000 horsepower going on forever, not requiring to be fed, lasting beyond the present generation with undimin-ished power, apparently based upon the assumption that the bill is for the purpose of developing water power. The assertion has been bandied about a great deal, both in the Senate and outside the Senate, that those who have opposed this measure are acting in the interest of water-power companies. One very peculiar thing that I have observed is that some of the assertions are contained in newspapers with which I am familiar, and I never have known them on any other occasion to oppose anything that a water-power company wanted. It seems to me that if in the long debate upon the bill the waterpower companies of San Francisco were concerned in its defeat somebody would have heard something from these water-power companies, and they would have had some representative to appear in opposition to the bill. I have received hundreds of communications on the subject of this bill, some in favor of it and some against it, but I have never seen anyone or heard from anyone who intimated that any water-power company was concerned in any way about it.

I have here and I have already had printed in the RECORD a document published by a very prominent association which contains the statement that the so-called water monopoly in the city of San Francsico-at least the president of the Spring

Valley Water Co., Mr. Bourne-is favoring this bill.

Mr. President, after hearing the account of the Senator from Nebraska as to the water power that will be developed if this bill is passed, to compete with the water-power monopoly which is said to have its hand upon the throat of the city of San Francisco, on turning to this very extensive and voluminous document which has been prepared for the city of San Francisco by the distinguished engineer, Mr. Freeman, at very great expense, with very great care, indicating the most comprehensive and thorough examination of every possible engineering phase of the case, and setting out the purposes of the city, I was very much surprised to find the statement that the city does not propose in the immediate future to build any plant for the development of hydroelectric power. I had supposed, from the debate which has been going on here to-day, that this was a water-power bill, and yet I see here in this report that it is not the intention of the city of San Francisco in the immediate future to build any plant for the development of hydroelectric power. The report states:

The city does not propose in the immediate future to build any plant for the development of hydroelectric power, but it plans to carefully conserve all reasonable opportunities for power development against the time when it may become expedient for the city to undertake such

To-day, with cheap oil fuel and with three large hydroelectric enterprises bringing electric current to the city and competing actively for business under the oversight of a public-service commission, no occasion appears for the municipality to go into the power business. Moreover, it is said that its charter does not permit the city to engage in this commercially.

If Senators will read the bill they will find that there is a provision in it that at some indefinite time in the future, without limitation, the city may begin the development of appliances for the production of hydroelectric power. It is not required that they shall begin it within any length of time, but there is a rather astonishing proviso that within 20 years after they begin work upon a water-power plant they shall have developed 60,000 horsepower.

The record of the debate in this case, among other things, will afford in future discussions of this great water-power question an indorsement by Democratic Senators of the proposition that the Federal Government may grant a franchise for the production of water power and attach conditions to the franchise as to the distribution of the power, as to the division of the water, as to how it shall be sold, as to the price which shall be charged. Whatever may be the fate of this measure, in the discussion of that question, in the bills which hereafter will inevitably have to be considered by the Senate, this debate will have afforded the advantage of having acquired the support of a great many Senators who have heretofore opposed the doctrine of Federal control of water power developed through dams or other appurtenances upon the public lands of the country.

But while the bill, Mr. President, on its face purports to reserve in the Federal Government the right to control the disposition of this power, the truth of the case is, so far as its actual effect is concerned, that it is a grant by the Federal Government of one of the greatest water-power projects that has been discussed in this body under any bill, and which left it entirely subject not simply to State control but to city control, and even to the control of a water district or of any munici-

pality.

The city of San Francisco, if it acquires the privilege of developing this power at some indefinite time in the future—the time not being limited; it being expressly provided in the bill that they may have 20 years after beginning the work, the time when they shall begin the work not being stated, they need only to supply 60,000 horsepower with a project that is capable of developing 160,000 horsepower—may grant to its grantees the privileges conferred by this bill, the only requirement being that it must be to a water district or a municipality. There is a specious provision in the bill that the city of San Francisco shall not grant to any private person the right to sublet or to sell the power or the water which it may acquire the right to develop or to use under this bill; but that is left entirely to the good faith of the city.

There is no forfeiture clause; there is no practical way in which the Federal Government could ever enforce that provision. It is not very long since the Congress of the United States for the purpose of giving cheap power to the city of St. Louis granted a franchise to a company to construct a dam in the Mississippi River called the Keokuk Dam. That company issued circulars and advertisements to the effect that the citizens of St. Louis would get cheap power. The result of it was that they sold their power to a subsidiary company at a reduced price, and that company disposed of the power to the same monopoly which has heretofore controlled the sale, disposition,

and use of power in the city of St. Louis.

I have heard the remark made from time to time by those who are in favor of developing the water-power resources of the country that it would never be possible to get Congress to give this franchise to a private corporation, that if the grants were ever to be acquired from the Federal Government this was the opportunity, because it went to a municipal corporation. result will be that the Federal Government to all practical intents and purposes will not only have parted with the power, but will have lost control over it, and the future disposition of it will be left for the puny contest of some little municipal corporation or water district or the city of San Francisco contending with a mighty special interest, which frequently overcomes even the legislatures of the States in the struggle to preserve the public welfare in dealing with these matters. I am not going to take the time of the Senate to discuss further that phase of this question.

I stated that it seemed to resolve itself into a contest of assertion. In very eloquent terms the Senator from Nebraska [Mr. Norks] made the assertion this morning that the eye of no woman had ever looked upon the Hetch Hetchy. We are entitled to judge, I suppose, the reliability of information which Senators have in discussing this bill by what we know of important statements which they make, and we will judge their other statements by those which we happen to know the accuracy of. The fact of the case is that hundreds of women—I do not

The fact of the case is that hundreds of women—I do not know that it makes any difference, but it shows the amount of the information of some of those who are advocating the passage of this bill—have visited this park, have written minute descriptions of it, and have taken photographs of the various details of its beauties, showing the grandeur of its scenery. Those photographs have been placed upon the table of the Secretary of the Senate, subject to the examination of Senators.

The Senator from Nebraska talked about this park as though it were a pesthole, that nobody who has ever visited it once has visited it again, whereas the truth of the case is that many of those who had the privilege of visiting it have visited it again and again year after year and if it is preserved for the benefit of the people, and particularly those living in the State of California, the accessibility of it will be increased, roads will be built, and opportunities will be given for tens of thousands to

visit it where only hundreds now visit it. I want to read from one of these women, whom the Senator from Nebraska says have never seen the park, a description, which seems to me is about as good a description of this portion of the Yosemite National Park as I have read. It is by Cora Calvert Foy and was published in the magazine called Out West of December, 1910. It says:

The Hetch Hetchy is a part of the Yosemite National Park, about 15 miles northwest of Yosemite as the crow files, an almost perfect replica of the Merced Yosemite; there is the same flat valley floor, with meadow, gardens, and parklike forests, river (the Tuolumne), falls, and cataracts, and granite walls rising sheer 2,000 feet, exactly the same scenic features that have made the sister valley over the ridge to be proclaimed the Queen of Queens by the people of the whole world, and to be protected and preserved inviolate forever by the Government of the United States for these same people of the whole wide world.

The Senator from Nebraska and other Senators have argued that the creation of an artificial lake will improve this park. The greatest landscape artists in this country, among them Mr. Frederick Law Olmsted, of Boston, who has given his opinion upon the question, are of the opinion that it would destroy the peculiar attractions of this valley, which consist in the details of its forests, of its flowers in immediate conjunction with the stupendous scenery, and of its towering cliffs 2,000 feet high.

But, Mr. President, while I do not for a moment underestimate the value of those features of this national part, while I believe that the principle of preserving the national parks and avoiding a precedent under which a raid will be started upon every natural object of commercial value in all of our national parks, I do not base my objection to the passage of this bill principally upon that phase of the case. However beautiful it may be, even though it were ten times as valuable as a park as it is, if it were necessary to supply the city of San Francisco with water, to take it, and to take every other national park in this country, if 400,000 people needed it to supply water for domestic use, as is claimed by the advocates of this bill, I would gladly vote to devote all of our national parks to that purpose; but the truth of the case is that San Francisco has no necessity, in fact, in my judgment, it is not advisable, although the city perhaps would be entitled, other things being equal, to make a choice-there is at least no reasonable ground why the source for the supply of its water needs should be granted by the United States.

It is admitted here that in 1914 the needs of San Francisco will be relieved by the development of the Spring Valley water system through the Calaveras Dam, which is now already in process of construction; and by 1916 the development of that project will produce 60,000,000 gallons of water c day in addition to the 42,000,000 gallons a day which are now in use. Not only is it not necessary for the city of San Francisco to destroy this park and to take this water power—which will not be developed, but under this bill will be tied up and the people deprived of the use of whatever water power can be developed for an indefinite time-but there is another consideration, and perhaps the most important one which enters into the case, and that i that with the increasing population, with the increasing encroachment upon the resources of the country of the needs of the people for food and opportunity, some 200,000 or 300,000 acres of land in the State of California will be forever condemned to aridity and to remain a desert if the waters of the Tuolumne River are conveyed to the city of San Francisco to take the place of other waters which are available from other

I am not going to take the time of the Senate to go into additional statistics and figures to support the statements which I have just made. I think the record is already sufficiently filled with evidence and with demonstration to support the statement that these lands can not be irrigated from any source except from the waters of the Tuolumne River.

There was handed me this evening an affidavit by a man named Thomas Caswell, who describes his experience as a farmer in the Tuolumne Valley, the value of the land when he went there before it was irrigated—something like \$34 an acre, which has increased to a value of \$150 an acre with water—and the struggle of these water districts, containing 250,000 acres and now irrigating 119,000 acres of land, to extend the irrigated area from the waters of the Tuolumne River. I will read a very short portion of his affidavit, signed and sworn to here in the city of Washington, in which he says:

Plans have been made and moneys are being raised by the issuance of bonds to extend the storage facilities of the districts. There has been a steady enlargement of the canals and ditches since I first went there, the aim being to increase the size of the main feeding canals as fast as new lands were leveled and checked for irrigation. The districts have reached the point where storage has become absolutely necessary, and it is a matter of common knowledge and observation on the part of those who have, like myself, lived in that country for many years that the districts must gradually draw on what might be termed the storm or extraseasonal waters of the Tuolumne if the remaining lands in

the districts are to be irrigated. Just outside the districts are about 150,000 acres of lands which also require water, making a total of over 400,000 acres under that particular watershed.

I am the president of the Ceres Water Users' Association, and I represent over 1,000 individual irrigators, who have sent me here to voice their protest and opposition to the proposed grant to San Francisco. I am ready and willing to submit further facts and details if desired.

On the other hand, Mr. President, in the Sacramento Valley, as I said earlier in the evening during the remarks of the Senator from Missouri [Mr. Reed], there is a surplus of water; and I have in my hand a bill, House bill 9912, which has been introduced in that body, calling for an appropriation of \$400,000 as a preliminary amount for taking care of the surplus flood waters of the Sacramento Valley, which are not only not used for irrigation, but are continually destroying property in the valley by their excess, whereas in the San Joaquin Valley, as is admitted by the Army engineers' report, there is an inadequacy even for irrigation. This bill has been introduced in pursuance of a plan proposed by the board of Army engineers for the control of floods in the rivers and streams of the Sacramento. the control of floods in the rivers and streams of the Sacramento Valley. In its report filed June 29, 1911, House Document No. 81, Sixty-second Congress, first session, pages 54 and 55, a detailed statement is set forth of the various features of this proposed flood control of the Sacramento Valley to the amount of \$30,000,000 for the completed project.

In the Army board's report, the officers of that board having examined the various sources of supply for San Francisco, and which report has been constantly relied upon by the advocates of this bill, is found the statement that water from this valley, which the Government is planning to protect from floods at an ultimate expenditure of \$30,000,000, can be obtained to supply

the domestic needs of San Francisco at a much less cost than water can be obtained from the Hetch Hetchy.

There is another source of supply, to which I want very briefly to refer, which has not been mentioned heretofore, and that is the Yuba River. On page 28 of the Army board's report I find this:

Yuba River: It is estimated that about 164 million gallons daily can be obtained from the Yuba River.

It should be borne in mind that 42,000,000 gallons a day is the amount now being consumed by the city of San Francisco.

It can not be combined economically with any other of the sources considered available. A report on this source has been submitted by the city of San Francisco, but in the final reports and in the comparison submitted of the costs of the various supplies it has not been further considered by the city.

In a report submitted by the Spring Valley Water Co. the total cost of supplying 200 million gallons daily at an elevation of 165 feet in San Francisco is given as \$38,224,460. It is proposed, in addition, to develop 191,677 horsepower at a cost of \$18,113,757, valued at \$20 per horsepower per year, which, capitalized at 4½ per cent, gives a value of about \$85,000,000, or a net value of about \$67,000,000.

There are other details in regard to the project, which includes, as will be seen from that statement, the development of a vast water power as well as an ample supply of water for the next 50 years for all the domestic needs of the city of San Francisco

It is claimed by some of the advocates of this bill that the passage of it can not affect the legal rights of the water users or of the city of San Francisco. In the first place, Mr. President, the legal rights of these parties are very uncertain as to what the city is entitled to and what the water users are entitled to, and, in the second place, it is admitted that there is a large portion of the water in this stream which is in dispute between them. However, the question which the Congress of the United States or any other department of our Government or the State government of California should have before it in dealing with this question is not the narrow technical decision of what legal rights have been acquired by the several parties to this controversy, but what adjustment can be made in the interest of the entire State of California, in the interest of the reclamation of several hundred thousand acres of land, enough land to make 5,000 farms capable of supporting a population of 25,000 in a State where already land is so scarce that they have brought this country almost to the verge of an international war in a controversy for the possession of the soil with aliens who have established themselves in some of their fertile valleys, in a section of the country where population increases so fast that instead of the western migration continuing as it has heretofore men are coming from the West back to the East and taking up the abandoned farms which their ancestors left when they went West.

Yet it is proposed here, because the city of San Francisco has taken a fancy to the peculiar advantages of this valley for a site for the construction of a dam, to ignore the general interests | water for irrigation, and the report of the Army board itself. I

of the country, and to refuse to take a comprehensive survey of the entire California Valley. Because they desire this particular water it is proposed to take it, although there is other water equally as good which they could obtain elsewhere without doing injury to a single soul.

The amount of water needed by the two irrigation districts which are already organized is enough to irrigate 257,000 acres. It is estimated that 4 acre-feet are required each season. total amount needed for the two irrigation districts each year is 1.028,000 acre-feet. The total run-off of the Tuolumne River for the year 1912 is 1,050,000 acre-feet. The total run-off of the Tuolumne River for 1913 is 1,080,000 acre-feet. The amount available for San Francisco during these years, if the districts obtained the amount they needed, as I have already said, would be nothing. The duty of water in the Modesto irrigation district per second-foot is 70 acres—that is, each second-foot will irrigate 70 acres of land. The total area, as stated before, is 257,000 acres. The amount of water needed by the Turlock and Modesto irrigation districts, as already set forth, is 3,670 second-feet. The amount they are allowed under this bill is 2,850 second-feet. The shortage of water under this bill will be 1,320 second-feet. That is without reference to the vast area of arid lands outside of the districts which ought to be taken into consideration in any wise disposition of the waters of this stream.

A great deal has been said about the action of the committee representing these districts and about the judge of the superior court who was a member of that committee. statement which was prepared for printing by that member of the committee on June 3, before he had made his compromise and his consent to the final form in which this bill was drafted in the House of Representatives. I will read very briefly from it. He says:

It is true that our rights to the waters are vested and can not be legally taken from us except by condemnation proceedings, and this at the present time would indeed be expensive.

We who know the true conditions here, the lack of an adequate supply of water for both San Francisco and these districts at all seasons of the year, are unalterably opposed to San Francisco sharing the water, which at times is even insufficient for our own needs in the districts, let alone the needs of the valley in general. If the San Francisco people who are honestly in this fight and who from good motives believe they should have some of the water from the Tuolumne River had knowledge of the run-off during the season of 1911–12 and for the season of 1912–13, they would not be so anxious to share in the water and might conclude they were being handed a "gold brick" by the proponents of the scheme. Why they are kept in ignorance by the politicians and the press is an enigma to me.

As the time is approaching when we must take a vote upon the bill, I will close what I am saying. I do not know what construction the Chair will place upon the rule, and I do not desire in any way to interfere with the carrying out of the rule to its true intent and purpose, whatever that may be held to be. I wish to refer very briefly, however, to one statement which has been repeatedly made here during this debate. I revert to the phase of this question of which I first spoke, namely, the character of the Hetch Hetchy Valley and the statement that was made that it would not be destroyed.

I have talked personally with one Senator whose sensibilities were very much outraged because of a publication in some magazine which said that the waterfall in this valley would be destroyed if it should be flooded under this bill. He said that that was a misstatement that was being made by those who were opposed to the passage of the bill. I was very much surprised, after hearing him express his indignation, to read the same statement in the Army board report. It says:

The relative beauty of the Hetch Hetchy Valley in its two conditions—as it is at present or dammed up into a reservoir—seems to be a matter of individual opinion. It is admitted that the Yosemite Valley is as a whole more wonderful than the Hetch Hetchy Valley, but the floor of the latter is more diversified in its trees and flowers and of at least equal beauty. Flooding the valley would destroy this floor and the falls of the Tuolumne at the head of the valley.

I do not know how much importance may be attached to that. As is stated in the report, that is a matter of individual opinion. I can see no reason, however, why magazines should be denounced for making that statement when it is contained in the report of the Army engineers who visited the scene of this particular project, although failing to visit the alternative project which had been proposed by those who were not in favor of the Hetch Hetchy project.

I only want further to call attention to the fact that heretoform I have gone into the question of the McCloud River source of supply and the Spring Valley source of supply, and more particularly into the amount of land in the San Joaquin Valley outside of this immediate district which must have this think there will be no harm in repeating that here, because it is only a few lines:

The San Joaquin Valley is relatively less well provided with water than the Sacramento Valley, both as to rainfall and as to run-off of rivers. The demands of the valley for complete irrigation are in excess of the water available.

Mr. President, there is no precedent for the grant of a national park, one of the great scenic wonders of the country, unless this bill should pass. If it should pass, there will be an application made for every water-power site that has value in any national park, and the whole purpose and system of the reservation of these parks will be at the beginning of its end. There is no occasion for setting a precedent of that kind when there is no necessity for it, and when the needs which are proposed to be supplied can be supplied from at least half a dozen other sources.

Mr. CLARK of Wyoming. Mr. President, I do not rise to discuss this bill as I had intended to do for the reason that time prevents, and I have no desire to prevent a vote upon the bill at the time appointed, although I do say that if we should fail to vote upon this bill to-night it would not deprive San Francisco of water. In my judgment there is no such immediate haste as is evidenced in this bill, notwithstanding the complaint of delay made by the Senator from Nebraska this morning and yesterday.

The bill involves questions that we have not considered, and questions of the highest importance. It involves more than the question whether or not San Francisco shall get her water supply from the Hetch Hetchy or the Sacramento Valley. When the charge of delay is urged, I want Senators to know, and I have a right to tell, the circumstances under which the

bill appears.

We all know that this is a log-rolling proposition. We all know that San Francisco never has asked that this bill should pass in all her years of former application for this water. San Francisco never has come before the Congress of the United States until within the last three months to ask that a bill like this should be passed. All she has asked for, all she wants tonight, is the privilege of building a dam at the site mentioned. She has always considered that so far as the water was concerned it was a matter to be settled by the State of California, and not to be assumed to be settled by the Congress of the United States.

This bill was introduced in the House, I think, in August. It passed the House. It came to the Senate in September, at a time when we all know it was the general understanding that general legislation should not be had. The Senate of the United States was adjourning three days at a time and only meeting once in three days, to avoid the inhibition of the Constitution—not meeting for business, but meeting to adjourn for three days again.

The bill came into the Committee on Public Lands. Certain members of the committee who were known to be opposed to the bill were compelled to leave the city. Assurances were given to those Senators that in their absence this bill would not be acted upon. The bill was acted upon and came before the Senate. At one of the sessions unanimous consent was asked that it be fixed for consideration at this time. In the absence of Senators opposed to the bill that unanimous consent was given, and now complaint is made that undue delay has occurred in the legislative course of the bill.

Mr. President, the question in my mind is not as to whether San Francisco shall get her water supply from the Tuolumne River or from the Sacramento Valley. I am willing that San Francisco shall get her water supply wherever the State of California, under her laws, says she can take it from. Senators upon the other side know, and have expressed upon the floor within the last two hours, that there are things in this bill that ought not to be there; and the intimation is made that the Senate of the United States stands in the humiliating position that we shall not amend a bill as it comes from another body.

Since when did anybody attempt to dictate to the Senate of the United States what should be its legislative action on any bill that came before it? Who was it that wrote into the bill the objectionable features that now are bringing forth the opposition of some Members of the Senate? It was not the city of San Francisco. The city of San Francisco is well content to rest her rights, her needs, and her necessities upon what the State of California shall give her of this water.

First, we have a compact. The city of San Francisco is anxious to get this grant, and probably she ought to have it. We will assume that she ought to have it. She is anxious to get this grant. She is willing to make concessions to the opponents of the bill if they will cease their opposition.

We talk about logrolling. It began then and there, when the city of San Francisco and the water users of the Tuolumne River entered into a compact that one would allow the Congress of the United States to give this water to San Francisco if their rights were not interfered with. Then what? Then, if I mistake not, certain gentlemen served notice upon the people of San Francisco that if they did not allow other provisions to be written in this bill they should not have the grant; and the provisions that were written in it on that demand are the provisions to which I most strongly object in the bill.

There never has been a grant of water power in this country within the last 15 years but that those same gentlemen have insisted upon writing into it, so far as they could, the very thing they have written into this bill. If the bill shall fail, it will not be because of the lack of merit of San Francisco, but because of the opposition of the gentlemen who say that the bill shall not be passed unless these objectional features are written into it; and these objectional features add not one whit to the relief that San Francisco wants. These objectional features give her not a drop of water that she would not get without them. These objectional features cut off her desires in no

way on the face of the earth.

The feature to which I refer is the feature that assumes to give to the Congress of the United States the right to go within the borders of a sovereign State and determine how that State shall dispose of the watercourses within her boundaries. Here is no question of a navigable stream. Here is no question of an interboundary water. Here is no question even of an interstate stream, but a stream lying wholly within the borders of a State from its source to its mouth, through every valley within the State—all within the State. Yet we are told that unless we write into the bill that the Government of the United States shall have some authority over the water impounded by the dam the bill shall not pass.

No. When San Francisco is looking about for those who are opposing her desire for water, when she is looking about for those who refuse to give water to the thirsty ones, as we have been so pathetically told, let her look to those who demand that there shall be written into this bill an unconstitutional

provision.

But some of my friends who agree with me say that there is no danger in it; it does not amount to very much. I see Senators before me who in public and private have combated as vital to the interests of their State and its development and happiness and prosperity that the General Government should not come within its boundaries and lay the governmental hand upon the resources of the State. Yet I fear that some of them are going to acquiesce in this bill that gives the Government of the United States the right to say how much water shall be granted to this one or to that one in the State of California. But, they say, we do not look at it just that way; we hardly think the bill provides that. It is at least a debatable question, for the best lawyers in this body have debated it on the floor this week. If it is a debatable question, my friends, it is a dangerous question.

Your vote to-night may determine which way the balance will swing. Do not put yourselves in the position of a man in the rapids above Niagara. He knows he is in the rapids, but he is callous to his danger. He says there is no danger in the Falls; yet many chances to one the next day that gentleman will be fished out of the pools below, and the following day friends will be sending flowers to the church and condolences to

the widow.

Now, you are going to allow to be written into this bill something that you do not think will hurt, but even you question whether it is not acquiescing in the doctrine that to the Government belongs the supervision and control over the waters of the State. Do you tell the Senate of the United States they shall not amend the bill in that particular? Do you come to the doors of the Senate Chamber with a threat that unless the demands of certain gentlemen are complied with in this respect we shall have no bill? Who suffers from it? The people of the city of San Francisco. They are the sufferers, and they suffer not because of honest opposition to the bill but because of the unconstitutional clauses that are forced into the bill at the demands of certain interests.

Mr. President, I have prepared an amendment to the bill. I want to call attention right now to the fact that the issue has been switched from the main feature in the bill. The issue has been switched as to whether San Francisco shall have the water to saying how she shall have it. The petition signed by 20,000 men and women, citizens of San Francisco, presented by the honorable senior Senator from California [Mr. Perkins], which was sent to the desk and read as an indorsement of this

bill, and as a prayer that this bill should be passed, asked for

nothing except water.

The amendment which I propose gives it. The petition says we need the water. The petition says, in effect, you have made a like grant to the city of Los Angeles. Can you refuse to us what you have granted to Los Angeles and Portland and Seattle? That is what they ask. They do not ask for the passage of a bill that shall have written into it the principle that the Government shall control, that California shall relinquish her control and her right over the water. are asking for is a bill which will give them what Los Angeles That is the question I am willing to meet and answer in the affirmative; and I have prepared an amendment, which will be offered at the proper time, which is in almost the very words of what Los Angeles got. Los Angeles came before the Congress of the United States setting forth her needs for the present and the future, and said: "We have got to go into the mountains a hundred miles and get a water supply. We must get it from the public domain. Give us the right to erect dams upon the public domain and we will impound the water under the laws of the State of California, looking not to the Government of the United States for the distribution of the waters, which is purely a local concern under State authority and State ownership." The right of way was granted. The appropriation of water was made, and that appropriation of water carries with it of necessity the power. Los Angeles has got her system under that grant.

San Francisco could have her water system under a like What, then, is the need of putting in these extraneous grant. matters, that add nothing to the comfort of San Francisco and yet raise up a valid and an honest opposition to the terms but

not the principles of this bill?

The amendment to which I have alluded follows the course of the Los Angeles bill. It gives to the city of San Francisco the land upon which to build this dam. It gives to the city of San Francisco the right to cross all the public domain that is necessary to reach the city of San Francisco. It gives a right of way and room to build power sites, to build conduits, to build everything that is necessary. It says nothing whatever about impounding the water. It says nothing whatever about the distribution of the water. It does nothing about guaranteeing the right of any user of the water, which is only properly determined in the judicial institutions of California. It gives them It does nothing about guaranteeing the It gives them the right of way. If San Francisco has the right or can acquire the right from the State of California to impound the waters and use the waters and distribute them, that is for California and San Francisco to settle and not for the Congress of the United States.

The Senator from Nevada, speaking upon another phase of this question, says it is only a small piece of land; the land does not matter. We all agree to that. But the statement that it is only a small piece of land inspires me to say to my friends who believe as I do on this matter of State control, it is only a small piece of legislation in this bill, but the principle is there, the assertion of authority is there, the attempt to carry

it out will be there.

The small piece of land, the small thing in the bill, may lead, if followed up, and if followed up will lead, to the assumption of all power by the General Government over the water powers, over the water itself, over the distribution of water within the lines of the States represented by every Senator upon

this floor.

Mr. President, I have prepared another amendment in case that should fail, and I hope it will not. I am frank to say that judging from the discussion I am afraid it will, but I hope it I do not see why, when San Francisco is asking us for a station for a water supply, we should go outside of the purposes of the bill and put on things that are entirely extraneous and which have been put in the grant of no other city that has gotten power sites or reservoir sites from the Government of the United States. But I have prepared another amendment.

We are told that there is no intention in this bill to interfere with the right of a State to conserve and distribute its own waters, but I am afraid we will not be able even to enunciate that doctrine if it is true that the Senate of the United States has gotten to the pass where it dare not amend the bill. The amendment that I had prepared is a short one. I will not read the other. In the eleventh section of the bill as reported by the committee occur the words which are said to put to rest all the doubts that I have expressed. There must be a doubt in there or there would not have been any necessity of putting it to rest. Section 11 contains these words:

That this act is a grant upon certain express conditions specifically t forth herein, and nothing herein contained shall be construed as

affecting or intending to affect or in any way to interfere with the laws of the State of California relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses.

Now, Mr. President, I have an amendment which I propose to add to that as follows:

Nor as giving or assuming to give a grant to the grantee herein any right to any quantity of water in excess of the amount to which it is or shall be entitled under the laws of the State of California, nor to give to said grantee any right to impound or distribute any quantity of water in excess of the amount which may be apportioned to its usu under the laws of the State.

If there is no intent for the Government to fix the appropriation of water, it would be more satisfactory, in view of the doubt that exists in the bill, to have a clear declaration of that in the form of the five-line amendment which I have proposed.

Mr. President, I had wanted to discuss this question at length; I had wanted to go into the sources of supply, but I am warned that I can not do it. I am not opposed to giving San Francisco all the water she needs and that she can rightfully get under the laws of the State of California. I am not opposed particularly, although there are grave arguments against the proposito granting this particular site. I would be willing to waive that. But I am opposed to the Government of the United States, by direction or indirection, controlling or assuming to control the appropriation, the division, or the distribution of the waters that belong to the State of California as I would be opposed to the strong hand of the Government coming into the State of Wyoming and setting aside her local laws in regard to matters which the Congress of the United States has said and which, without the law of the Congress of the United States is true, that each State is sovereign within her own borders as to her own property.

Mr. McCUMBER. Mr. President, if there was nothing more in this provision and in this bill than the mere act of granting to the city of San Francisco a right to construct a dam and secure water in the Hetch Hetchy Valley, I would take no time either in presenting any discussion upon the subject or offering any amendment to the bill. But there is something more than that provision at stake in this proposed law. There is, Mr. President, the principle of establishing the right of the Government of the United States to depart from its long-settled policy under the Constitution to hold all its property in every one of its States in trust for the people of that State and adopt a policy that is growing upon us to-day, that the Government shall utilize

all of its lands for its own profits.

Mr. President, there have been two schools of thought upon this great question-one the old school which held strictly to the trust idea of the Government, and the other the new school of thought which has grown into existence since we have started our conservation theories, to the effect that the Government owns the land for its own benefits and that it may utilize it for its benefit, destroying the idea of trustee and cestui que trust and compelling the beneficiary of that trust to pay a stipulated sum to the Government of the United States for enjoying the rights over the property within its own borders.

The subject has heretofore been discussed, Mr. President, by Members mostly from the Mountain States of the West. I have listened intently to their arguments and have in the main agreed with them. Had the Senator who occupied the seat in front of me for two years still been a Member of the Senate I doubt very much if a bill would have ever gotten before the Senate by consent or ever been disposed of in a week or two weeks which provided upon its face that the Government of the United States should exercise an authority over the waters of any other State and, above all that, it should lease or hire out to the public for a valuable consideration any of the rights within that State.

Mr. President, I am addressing my remarks mostly to the Senators from the western part of the United States. undisputed in this debate that the city of San Francisco has made an honest investigation to ascertain the best place to secure water for her use. I think that it stands undisputed that this particular project gives her under all circumstances the better opportunity to secure the requisite amount of water for

a given expenditure of money.

I wish to see my way clear in order to accord to the city of San Francisco the right to utilize the water supply of this valley, if it can be done without an injustice to those farmers who have filed an appropriating right upon the waters of that valley and if it can be done without being in conflict with my own sense of the right and duty of the Government of the United States toward the people for whom it holds in trust the soil over which it exercises its own jurisdiction.

Mr. President, I am not doubting for one moment what Senators say is the right, but I will not dignify it by the name of right. I am not doubting the power of the United States, as proprietor of land in any State, when she grants an easement over that land to affix to the contract of easement any conditions that she sees fit, even though the conditions may conflict both with the economic policy of the State and be in direct conflict with the laws of that State. But I deny that she can go further in that authority than to merely exercise it by the power of forfeiture. She can not inject her authority over the property of a State which belongs to that State. Now, in this instance she is exercising that authority, and it is the entering wedge for a great system by which the Government of the United States is to lease out her land, is to take possession of great sections of the Western States and exercise not the authority of a trustee for the benefit of the people but the authority of ownership over it, and for a valuable consideration to lease and rent it out.

I am not denying, Mr. President, the authority of the United States to take the mines in the State of Idaho which she owns and to mine them for her own benefit, or she can go further than that and lease them out for a given consideration; but what I do deny is her moral right under the Constitution and under the policy of this Government to lease out or sell any of these great properties for her own remuneration.

Now, let us look at the question for one moment, Mr. President, of her right to sell the electric power generated by the water which is owned by the State of California. I want to put the question directly to those Senators who represent the Western States and who have insisted that their States had authority over the water and the Government ought not to exercise indirectly a power that she can not exercise directly.

I want to put to those Senators the question whether they believe that the Congress of the United States, owning simply the land in trust for the people of the State of California, can so exercise its power over that land that she can sell for \$600,000 the right of the State of California to use her own waters to generate an electric current.

She is charging San Francisco \$30,000 a year, the equivalent of 5 per cent on her funded indebtedness of \$600,000, for the exercise of an ownership in a power that is generated by a property owned by the State of California. If you will eliminate that from the bill, and if you will eliminate other sections from the bill which attempt to project national authority as against the authority of the State over its own waters, I certainly shall vote in favor of it. But, Mr. President, I have offered an amendment to this bill, which I think will give to the city of San Francisco everything that she has asked-the right of way to secure the water, and, in addition to that, to secure the electric energy without the payment of a single dollar to the United States. I believe that is what she is entitled to, because the resources in any State are really for the benefit of the people of that State and of the United States. This Government has no more moral right to sell the electric energy generated by the water that flows through the State of California than she has a right to sell the electric current generated by windmills in the State of California. is the property of the United States.

It is no part of the function of this Government, and I want to keep this Government just as clear as it is possible for me to do so by a single vote from embarking upon this parental idea of owning its territory and renting it out for the benefit of the people. The Government has the right upon its ranges to raise cattle if it sees fit to do so; it has a right to cultivate its agricultural lands if it sees fit to do so; but it is no part of the governmental functions to do it. More than that, those lands belong really to the people of the United States.

The Government has a right to make a charge of \$10 for

The Government has a right to make a charge of \$10 for every man who enters the Yellowstone National Park—it might get quite an income from doing so—and it would be as much justified in obtaining an income and exacting it from the people of the United States for entering upon that park and observing its scenic beauties, which is one of the uses for which the people are entitled to hold the land, as it would have to charge for an electric energy generated by water belonging to the State of California.

I understand the purpose of this provision in the bill. I understand what it will mean to the States in the future when the Government owns all of the property and leases it out to the people to whom it absolutely belongs. It gives the Government a little income that it can utilize for pressing forward further into the field of ownership and control over the things which in reality belong to the State itself. Mr. President, I do not want the Government to exercise that authority; I do not want it to sell to the people and receive a remuneration from the people for that which honestly and, in fact, does belong to the people of the United States.

The amendment which I have offered is one of elimination I propose to leave in the bill everything that has been placed in it in connection with the granting of the right of way for water purposes. I have not gone into the question of the selling of electric current for the reason that I believe that the current generated should belong to the city of San Francisco and, if used for a public purpose, it should be controlled by the laws of the State of California. Under this bill that electric energy generated is to be sold under contract and is to be taken entirely without authority of the State of California unless it is to be used for a public or a quasi-public purpose. Suppose that the city of San Francisco wanted to use it for manufacturing purposes, there is nothing, then, in this bill which can compel her to sell it for a reasonable price or for an unreasonable price; but I want to ask some member of this committee this one question before I close: What is the value of this water power, a part of the electric energy of which you convey for \$30,000 a year? I do not believe that the Government of the United States ought to go into the business of developing water power which belongs to the people of the State and selling it to the people of the State; but you who do believe in it and are going to vote it into the bill, I want to ask what you are selling and what it is worth? I have not heard one syllable uttered on this floor indicating the value of the commodity of which you are disposing for an annual payment of \$30,000. Is it worth \$1,000,000, \$10,000,000, or \$20,000,000? If it is worth \$20,000,000, then you are making a mighty bad contract to sell the use of it for \$30,000 a year.

Mr. President, this exemplifies the objection that I made to the Government utilizing its great powers for its own benefit. To-day we are turning over to a corporation that which has great value, without the slightest idea among any of us of what the real value is. It ought to be left to the State that knows, if it is selling property, the value of that property.

I shall offer my amendment in order that we may have the opportunity of voting to the city of San Francisco the free and unrestricted right to go into this valley, construct its dams, take the waters, utilize those waters under rules governing them in the State of California, and use the electric energy generated under the laws of the State of California.

I come now simply to a single question about the rights of the farmers. I conceive that the rights of the farmers in that valley will be protected, as the Senator from Montana says they are protected, by their previous filings and the law under which they obtained their rights. If they have those rights they are really protected, if we do not attempt to cover them with a lot of conditions in this bill; and, Mr. President, from page 13 to page 21 will be found paragraph after paragraph, every one of them assuming authority on the part of the General Government to contract in reference to waterways in the State of California. I propose to eliminate every one of those provisions in the bill and to give the city of San Francisco everything she asks. More than that, I relieve her from being compelled to pay for what she now owns in conjunction with the balance of the cities in the State of California, and give her the free use of the waters of that State. I ask every Senator who has stood upon the floor year after year battling against this attempt of the Federal Government to control the waters of the States, directly or indirectly, or to assume a guardian-ship over this land in conflict with that of a pure trustee, a principle for which the late lamented Senator from Idaho, Mr. Heyburn, laid down his life in attempting to prevent bills of this character being enacted into law—I think I have the right to ask every one of those Senators to support a proposition that is entirely in harmony with what they have fought for during all of these contentious years. That is all I have to say concerning this bill.

Mr. WILLIAMS. Mr. President, in connection with this question there is an order of the Senate. That order was adopted by unanimous consent. It reads as follows:

It is agreed, by unanimous consent, that on Monday, December 1, 1913, immediately upon the conclusion of the routine morning business, the Senate will proceed to the consideration of the bill (H. R. 7207) granting to the city and country of San Francisco certain rights of way, etc., and that before adjournment on the calendar day of Saturday, December 6, 1913, the Senate will vote upon any amendment that may be pending, any amendments that may be offered, and upon the bill, through the regular parliamentary stages, to its final disposition.

Here is a unanimous-consent order which can not be set aside except by the Senate Itself, for the Chair was right in ruling that it is a question over which the Chair has no jurisdiction. The decisions are that the question, when raised, must be submitted to the Senate and can not be decided by the Chair. It is a question not within the honor of an individual Senator, but within the judgment of the Senate—all Senators, not a Senator.

Let us see. On February 24, 1902, a question of this sort coming up and the point being made that the proposition submitted was a violation of the unanimous-consent order, the then Presi-

dent pro tempore. Mr. Frye in the chair, ruled:

The Chair can not rule upon a question arising from a unanimousconsent agreement; it is for the Senators themselves to determine what

The responsibility of violating the agreement must rest with the Senars themselves. The Chair has no power to enforce it. tors themselves.

On March 2, 1909:

Mr. Heyburn moved to proceed to the consideration of the conference report on S. 2982, to codify, revise, and amend the penal laws of the United States.

The Vice President—

Mr. Fairbanks being the Vice President at that time-

That motion is in order and is not debatable.

Mr. Bailey. I understand, Mr. President; but the parliamentary inquiry which I desire to make is whether it is permissible, under the rule and practice of the Senate, to move to take up any order of business against a previous order made by unanimous consent.

The Vice President (Mr. Fairbanks). The Chair is of the opinion that it is in order. In the case of a unanimous-consent agreement it is for the Senate to determine whether it will violate its agreement.

I think the Chair would have used a better word if he had said "supersede" the agreement.

On May 8, 1906:

An objection was raised to the motion being entertained, as being a violation of the unanimous-consent agreement of April 30, limiting debate on amendments to 15 minutes until discussion thereon should be concluded.

The Vice President, Mr. Fairbanks, submitted the question to the Senate, Is the motion in order?

On May 14, 1906:

On May 14, 1906:

The same bill being under consideration with a pending amendment. On motion by Mr. Hale to lay the amendment on the table, Mr. Bacon raised a point of order, viz: That a motion to lay an amendment on the table before the same has been discussed, or when a Senator has expressed a desire to debate it, is in violation of the unanimous-consent agreement of April 30, which declares that discussion upon amendments shall proceed under the 15-minute rule until discussion thereon is concluded.

The Vice President, Mr. Fairbanks, stated that in the opinion of the Chair this question was settled by the Senate in its interpretation of the rule on the 8th instant, and decided that the motion to lay on the table was in order.

Now, Mr. President, I have read the unanimous-consent agreement, I have read the precedents, and I now move that it is the sense of the Senate that, in order to comply with the unanimous-consent order of October 7, it is necessary that the Senate shall now begin to vote upon the pending amendment and amendments that may be offered and upon the bill through the regular parliamentary stages to its final disposition. That is the exact language of the agreement. I make the point of order that the Chair has no control over the matter and must submit the motion to the Senate.

Mr. GALLINGER. It is debatable, though.
Mr. MARTINE of New Jersey. Will the Senator from Mississippi yield to me for a moment?

The VICE PRESIDENT. Does the Senator from Mississippi yield to the Senator from New Jersey?

Mr. WILLIAMS. It depends upon how long the Senator desires to occupy, because I want to be sure—
Mr. MARTINE of New Jersey. I will not occupy half as long

as the Senator has.

Mr. WILLIAMS. I do not care about that.

Mr. MARTINE of New Jersey. I do not care whether you do or not.

Mr. WILLIAMS. I do not care about that. Mr. President, if I can get time to have this motion voted upon, so that the unanimous-consent order of the Senate may be complied with in good faith, I could then yield the Senator three minutes

Mr. MARTINE of New Jersey. Mr. President, I want to say that I have no desire to interfere with the unanimous-consent order. It was my purpose and disposition to express some thoughts on this measure. I am absolutely and firmly against it, because I believe it to be an iniquity, a monstrosity, and a wrong. I am utterly opposed to it. Other Senators have a right to do what they please. I thought I might have had an opportunity to present my views to the Senate, but, for reasons I need not now explain, it seems to be impossible. As I have said, I am opposed to this bill, and I feel I would be justified in pursuing any method possible to defeat it, even to talk it out, if I could, but I will not do that. I will simply express my regret that I have not had an opportunity to say a few words on this question, and I will not interfere with the vote on the bill, but vote with all the earnestness of my nature and life against this thing as being undemocratic, ungenerous, un-American, and for the detriment and not for the welfare of the State of California and of the country at large.

Mr. WILLIAMS. Mr. President—
Mr. MYERS. Will the Senator yield to me for a moment?
Mr. WILLIAMS. There is not time to argue it.

Mr. MYERS. I am not going to argue it. Mr. WILLIAMS. I believe that perhaps it would be useless to make this motion.

SEVERAL SENATORS. Vote! Vote!

Mr. MYERS. If the Senator will yield to me-

Mr. WILLIAMS. But the Senator will defeat my purpose. If I yield too much, we can not possibly vote upon the bill.

Mr. MYERS. If the Senator refuses to yield to the chairman

of the committee having the bill in charge, then I will not ask to take the floor.

Mr. WILLIAMS. Mr. President, I have not yielded to the Senator. I believe I will first ask unanimous consent that we proceed to vote in five minutes.

SEVERAL SENATORS. Let us vote now.

Mr. WILLIAMS. Very well. I then ask unanimous consent, in order to comply in good faith with the order, that we proceed now to vote upon amendments to be offered to the bill through the regular stages to its final disposition.

Mr. MYERS. Mr. President—

Mr. MARTINE of New Jersey. I move that we vote.

Mr. WILLIAMS. I am going to ask unanimous consent be-

fore I make a motion.

The VICE PRESIDENT. Is there any objection to proceeding to a vote now? The Chair hears none.

Mr. CLARK of Wyoming. Mr. President, I offer the amendment which I send to the desk.

The VICE PRESIDENT. The amendment will be stated.

The Secretary. It is proposed to strike out all after the enacting clause, and to insert in lieu thereof the following—
Mr. CLARK of Wyoming. The amendment is somewhat long,

and in order to avoid the consumption of time, I will say that it is an amendment I spoke of that grants to San Francisco the same identical rights that we granted to the city of Los Angeles. I will not ask for the yeas and nays, but for a division of the Senate, on the amendment.

The amendment offered by Mr. Clark of Wyoming is to strike out all after the enacting clause, and to insert in lieu thereof

the following:

The amendment offered by Mr. CLARK of Wyoming is to strike out all after the enacting clause, and to insert in lieu thereof the following:

That there is hereby granted to the city and county of San Francisco, a municipal corporation of the State of California, all necessary rights of way, not to exceed 250 feet in width, over and through the public lands of the United States in the counties of Tuolume, Stanislaus, San Joaquin, and Alameda, in the State of California, and in, over, and through the Yosemite National Park and the Stanislaus National Forest; together with such lands in the Hetch Hetchy Valley and Lake Eleano Basin within the Yosemite National Park, and the Cherry Valley within the Stanislaus National Forest, in said State, irrespective of width or extent of said lands, as may be determined by the Secretary of the Interior to be actually necessary for the constructing, operating, and maintaining power and electric plants, poles, and lines for the generation and distribution of electric energy, together with such lands as the Secretary of the Interior may deem to be actually necessary buildings and structures to be used in connection with the construction, operation, and antructures to be used in connection with the construction, operation, and astructures to be used in connection with the construction, operation, and maintenance of said water, power, and electric plants, whenever said city and county shall have filed, as hereinafter provided, and the same shall have been approved by the Secretary of the Interior, a map or maps showing the boundaries, locations, and extent of said proposed rights of way for the purposes hereinabove set fortees after the passage of this act the city and county offices in the districts where the lands traversed by said city and county offices have for the purposes stated in section 1 of this act, but no construction work shall be commenced on said land until said map or maps showing the boundaries, location, and extent of said proposed rights of way for the purposes s

claimant or claimants thereof, or by due process of law and just compensation paid to such owner or claimant.

Sic. 4. That the said city and county of San Francisco shall conform to all regulations adopted and prescribed by the Secretary of Agriculture governing the forest reserves and the Secretary of the Interior governing the forest reserves and shall not take, cut, or destroy any timber within the forest preserves accept such as an observed and diumes, storage dams and reservoirs, and it shall pay to the United States the full value of all timber and wood cut, used, or destroyed on any of the rights of way and lands within forest reserves hereby granted: Provided farther, That the city and county shall construct and maintain in good repair bridges or other practicable crossings over its rights of way within the forest reserve and antionin good repair bridges or other practicable crossings over its rights of way within the forest reserve and and one of the United States Department of Agriculture, and elsewhere on public lands along the line of said works as required by the Secretary of the Interior; and said grantee shall, as said water-works are completed, if directed by the Secretary of the Interior, construct and maintain along each side of said right of way a lawful fence as defined by the laws of the State of California, with such lares Provided further, that the grantee shall clear its rights of way within forest reserve and national park of any debris or inflammable material as directed by the Forester of the United States Department of Agriculture: Provided further, That the said city and county shall allow any wagon road which it may construct within the forest reserves to be freely used by the forest officers and the officers of the United States Department of Agriculture and to the officers of the United States Department for official business only the free use of any telephones, tolegraphs, or roads it may construct and maintain within the forest reserves or on the public lands, together with th

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Wyoming.

There were, on a division—ayes 23, noes 35.

So the amendment of Mr. Clark of Wyoming was rejected.

Mr. POINDEXTER. Mr. President, I move that the bill be recommitted to the Committee on Public Lands.

The VICE PRESIDENT. The question is on the motion of the Senator from Washington that the bill be recommitted.

The motion was rejected.

Mr. CLARK of Wyoming. I offer the amendment which I send to the desk.

The VICE PRESIDENT. The Secretary will state the amendment.

The Secretary. After the word "thereunder" in line 15, page 26, it is proposed to insert:

Nor as giving or assuming to give or grant to the grantee herein any right to any quantity of water in excess of the amount by it heretofore or hereafter appropriated or owned under the laws of the State of California, nor to give to said grantee any right to impound or distribute any quantity of water in excess of such appropriation or owner-

Mr. CLARK of Wyoming. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. JAMES (when Mr. Bradley's name was called). My

colleague [Mr. BRADLEY] is unavoidably detained from the

Chamber. He has a general pair with the junior Senator from Indiana [Mr. Kern].

Mr. CUMMINS (when his name was called). On this question I am paired with the senior Senator from Oregon [Mr. CHAMBERLAIN], and therefore withhold my vote.

Mr. HOLLIS (when his name was called). On this question am paired with the senior Senator from Pennsylvania [Mr. Penrose]. If I were at liberty to vote, I should vote "yea.

Mr. KERN (when his name was called). I am paired with the senior Senator from Kentucky [Mr. BRADLEY]. know how he would vote on this amendment, and therefore I withhold my vote.

Mr. MARTINE of New Jersey (when his name was called). have a pair with the junior Senator from Pennsylvania [Mr. If I were at liberty to vote, I should vote "yea. OLIVER 1.

Mr. ROOT (when his name was called). I have a pair with the junior Senator from South Carolina [Mr. SMITH]. I transfer that pair to the junior Senator from Maine [Mr. BURLEIGH]

and will vote. I vote "yea."

Mr. SMITH of Georgia (when his name was called). pair with the senior Senator from Massachusetts [Mr. Lodge]. I transfer that pair for the balance of the evening to the senior Senator from West Virginia [Mr. CHILTON] and will vote. I

vote "nav.

Mr. STERLING (when his name was called). I have a pair with the senior Senator from South Carolina [Mr. TILLMAN]. If I were at liberty to vote, I should vote "yea."

Mr. SUTHERLAND (when his name was called). I have a

pair with the senior Senator from Arkansas [Mr. Clarke], who is absent. On that account I withhold my vote.

Mr. WILLIAMS (when his name was called). I have a pair with the senior Senator from Pennsylvania [Mr. Penrose]. That pair has been transferred to the junior Senator from New Hampshire [Mr. Hollis] and I am therefore at liberty to vote. vote "nay.

The roll call was concluded.

Mr. REED. I neglected to announce that on this vote I am released from my pair with the Senator from Michigan [Mr. SMITH] by virtue of the fact that I have been advised from him that he would vote the same way that I have voted.

Mr. GALLINGER. I have been requested to announce the absence of the junior Senator from Maine [Mr. Burleigh] on

account of illness

Mr. LEWIS. I desire likewise to announce that the absence of the senior Senator from West Virginia [Mr. Chilton] is caused by illness. He has a pair.

-yeas 25, nays 41, as follows: The result was announced-YEAS-25.

So the amendment of Mr. CLARK of Wyoming was rejected. Mr. McCUMBER. I offer an amendment, and ask that it be voted on without reading, as it has been already explained.

The amendment offered by Mr. McCumber is as follows:

The amendment offered by Mr. McCumber is as follows:
Strike out all after the enacting clause and insert the following:
"That there is hereby granted to the city and county of San Francisco, a municipal corporation in the State of California, all necessary rights of way along such locations and of such width, not to exceed 250 feet, as in the judgment of the Secretary of the Interior may be required for the purposes of this act, in, over, and through the public lands of the United States in the counties of Tuolume, Stanislaus, San Joaquin, and Alameda, in the State of California, and in, over, and through the Yosemite National Park and the Stanislaus National Forest, or portions thereof, lying within the said counties, for the purpose of constructing, operating, and maintaining aqueducts, canals, ditches, pipes, pipe lines, funnes, tunnels, and counties for conveying water for domestic purposes and uses to the city and county of San Francisco and such other municipalities and water districts as may be provided by

the laws of the State of California relative to the use and appropriation of the waters of said State, and subject thereto, for the purpose of constructing, operating, and maintaining telephone and telegraph lines, and for the purpose of constructing, operating, and maintaining roads, trails, bridges, tramways, railroads, and other means of locomotion, transportation, and communication, such as may be necessary or proper in the construction, maintenance, and operation of the works constructed by the grantee herein; together with such lands in the Hetch Hetchy Valley and Lake Eleanor Basin within the Yosemite National Park, and the Cherry Valley within the Stanisiaus National Forest, irrespective of the width or extent of said lands, as may be determined by the Secretary of the Stanisiaus National Forest, irrespective of the width or extent of said lands, as may be determined by the Secretary of the Stanisiaus National Forest adjacent to its right of way, within such distance as the Secretary of the Interior and the Secretary of Agriculture may determine, stone, earth, gravel, sand, tufa, and other materials of like character actually necessary to be used in the construction operation, and repair of its said waterworks, its said telephone and telegraph lines, and its said means of locomotion, transportation, or communication, under such conditions and regulations as may be fixed by the Secretary of the Interior and the Secretary of Agriculture, within their respective jurisdictions, for the protection of the public lands, the Yosemite National Park, and the Stanislaus National Forest: Provided, That said grantee shall file, as hereinate provided, a may expect the said grantee shall file as hereinate provided, as the said stanislaus said necessary to seed this st. wy and tands for the provided, as metally provided further, That the Secretary of the Interior shall approve no location or change of location in the national forests unless said location or change of location with laws been approved in writing by the S

map or maps with the register of the United States Land Office as provided for herein, which said map or maps and locations shall as in all other cases be subject to the approval of the Secretary of the Interior.

"Sec. 3. That the rights of way hereby granted shall not be effective over any lands upon which homestead, mining, or other existing valid claim or claims shall have been filed or made and which now in law constitute prior rights to any claim of the grantee until said grantee shall have purchased such portion or portions of such homestead, mining, or other existing valid claims as it may require for right-of-way purposes and other purposes herein set forth, and shall have procured proper relinquishments of such portion or portions of such claims, or acquired title by due process of law and just compensation paid to said entrymen or claimants, and caused proper evidence of such fact to be filed with the Commissioner of the General Land Office, and the right of such entrymen or claimants to sell and of said grantee to purchase such portion or portions of such claims are hereby granted: Provided, however, That this act shall not apply to any lands embraced in rights of way heretofore approved under any act of Congress for the benefit of any parties other than said grantee or its predecessors in interest.

"Sec. 4. That the said grantee shall conform to all regulations adopted and prescribed by the Secretary of the Interior governing the Yosemite National Park and by the Secretary of Agriculture governing the Stanislaus National Forest, and shall not take, cut, or destroy any timber within the Yosemite National Park or the Stanislaus National Forest, and shall not take, cut, or destroy any timber within the Yosemite National Park or the Stanislaus National Forest, and operate its said reservoirs, dams, and other structures above mentioned, but no timber shall be cut or removed from lands outside of the right of way until designated by the Secretary of the Interior or the Secretary of Agriculture, respecti

terior and the Secretary of Agriculture, respectively; and said grantee shall permit any road or trail which it may construct over the public lands, the Yosemite National Park, or the Stanislaus National Forest to be freely used by the officials of the Government and by the public, and shall permit officials of the Government, for official business only, the free use of any telephone or telegraph lines, or equipment, or railroads that it may construct and maintain within the Yosemite National Park and the Stanislaus National Forest, or on the public lands, together with the right to connect with any such telephone or telegraph lines private telephone wires for the exclusive use of said Government officials: And provided further. That all reservoirs, dams, conduits, bridges, fences, and other structures not of a temporary character shall be sightly and of suitable exterior design and finish so as to harmonize with the surrounding landscape and its use as a park; and for this purpose all plans and designs shall be submitted for approval to the Secretary of the Interior.

"Sec. 5. That all lands over which the rights of way mentioned in this act shall pass shall be disposed of only subject to such easements: Provided, however, That the construction of the aforesaid works shall be prosecuted diligently, and no cessation of such construction shall continue for a period of three consecutive years, and in the event that the Secretary of the Interior shall find and determine that there has not been diligent prosecution of the work or of some integral and essential part thereof, or that there has been a cessation of such construction for a period of three consecutive years, then he may declare forfeited all rights of the grantee herein as to that part of the works not constructed, and request the Attorney General, on behalf of the United States, to commence suit in the United States District Court for the Northern District of California for the purpose of procuring a judgment declaring all such rights to that part of th

United States.

"Sec. 6. That the word 'grantee' as used herein shall be understood as meaning the city and county of San Francisco and such other municipalities or water district or water district as may, in accordance with the laws of the State of California, hereafter participate in or succeed to the beneficial rights and privileges granted by this act.

"Sec. 7. That this grant is made to the said grantee subject to the observance on the part of the grantee of all the conditions hereinbefore and hereinafter enumerated:

"(a) That upon the completion of the Hetch Hetchy Dam or the Lake Eleanor Dam, in the Yosemite National Park, by the grantee, as herein specified, and upon the commencement of the use of any reservoirs thereby created by said grantee as a source of water supply for said grantee, the following sanitary regulations shall be made effective within the watershed above and around said reservoir sites so used by said grantee:

"First. No human excrement, garbase or other waters.

grantee, the following sanitary regulations shall be made effective within the watershed above and around said reservoir sites so used by said grantee:

"First, No human excrement, garbage, or other refuse shall be placed in the waters of any reservoir or stream or within 300 feet thereof.

"Second. All sewage from permanent camps and hotels within the watershed shall be filtered by natural percolation through porous earth or otherwise adequately purified or destroyed.

"Third. No person shall bathe, wash clothes or cooking utensils, or water stock in, or in any way pollute, the water within the limits of the Hetch Hetchy Reservoir or any reservoir constructed by the said grantee under the provisions of this grant, or in the streams leading thereto, within 1 mile of said reservoir or, with reference to the Hetch Hetchy Reservoir, in the waters from the reservoir or waters entering the river between it and the "Early intake" of the aqueduct, pending the completion of the aqueduct between "Early intake" and the Hetch Hetchy Dam site.

"Fourth, The cost of the inspection necessary to secure compliance with the sanitary regulations made a part of these conditions, which inspection shall be under the direction of the Secretary of the Interior, shall be defrayed by the said grantee.

"Fifth, If at any time the sanitary regulations provided for herein shall be deemed by said grantee insufficient to protect the purity of the water supply, then the said grantee shall install a filtration plant or provide other means to guard the purity of the water. No other sanitary rules or restrictions shall be demanded by or granted to the said grantee as to the use of the watershed by campers, tourists, or the occupants of hotels and cottages.

"(b) That the said grantee shall recognize the prior rights of the Modesto Irrigation District and the Turlock Irriration District and construct, under the direction of the Secretary of the Interior, such wells of the said grantee, and at any other point on the Tuclume River or its tributari

by the said Secretary, and also leading from said scenic road or trail a trail to the Tiltill Valley and to Lake Vernon, and a road or trail to Lake Eleanor and Cherry Valley via McGill Meadow; and likewise the said grantee shall build a wagon road from Hamilton or Smiths Station along the most feasible route adjacent to its proposed aqueduct from Groveland to Portulaca or Hog Ranch and into the Hetch Hetchy Dam site, and a road along the southerly slope of Smiths Peak from Hog Ranch past Harden Lake to a junction with the old Tioga Road, in section 4, township 1 south, range 21 east, Mount Diablo base and meridian, and such roads and trails made necessary by this grant and as may be prescribed by the Secretary of the Interior. Said grantee shall have the right to build and maintain such other necessary roads or trails through the public lands for the construction and operation of its works, subject, however, to the approval of the Secretary of Agriculture in the Stanislaus National Forest and the Secretary of the Interior in the Yosemite National Park. The said grantee shall further lay and maintain a water pipe, or otherwise provide a good and sufficient supply of water for camp purposes at the meadow, one-third of a mile, more or less, southeasterly from the Hetch Hetchy Dam site.

"That all trail and road building and maintenance by the said grantee in the Yosemite National Park and the Stanislaus National Forest shall be done subject to the direction and approval of the Secretary of the Interior or the Secretary of Agriculture according to their respective jurisdictions.

"(f) That the said grantee shall furnish water at cost to any authorized occupant within 1 mile of the reservoir and in addition to the

jurisdictions.

"(f) That the said grantee shall furnish water at cost to any authorized occupant within 1 mile of the reservoir and in addition to the sums provided for in section 7 it shall reimburse the United States Government for the actual cost of maintenance of the above roads and trails in a condition of repair as good as when constructed.

"(g) That in case the Department of the Interior is called upon, by reason of any of the above conditions, to make investigations and decisions respecting the rights, benefits, or obligations specified in this act, which investigations or decisions involve expense to the said Department of the Interior, then such expense shall be borne by said grantee.

cisions respecting the rights, benefits, or obligations specified in this act, which investigations or decisions involve expense to the said Department of the Interior, then such expense shall be borne by said grantee.

"(h) That the grantee shall file with the Secretary of the Interior, within six months after the approval of this act, its acceptance of the terms and conditions of this grant.

"(i) That the grantee herein shall convey to the United States, by proper conveyance, a good and sufficient title free from all liens and encumbrances of any nature whatever, to any and all tracts of land which are now owned by said grantee within the Yosemite National Park or that part of the national forest adjacent thereto not actually required for use under the provisions of this act, said conveyance to be approved by and filed with the Secretary of the Interior within six months after the said grantee ceases to use such lands for the purpose of construction or repair under the provisions of this act.

"(j) That the city and county of San Francisco shall sell to the United States, for the use of the War Department, such water as the War Department may elect to take, and shall deliver the same through its system in or near the city of San Francisco to the mains or systems of such millitary reservations in that vicinity as may be designated by the Secretary of War, under such rules and regulations as he may prescribe. In payment for such water and the delivery thereof the United States, shall pay to the said city and county of San Francisco a rental, to be calculated at a fixed rate per one thousand gallons, said rate not to exceed the actual cost of said water to said city and county for all the water so furnished, as determined by meter measurements: And provided further, That payment of said rental shall be made by the local disbursing officer of the War Department in the usual manner: Provided, however, That the grantee shall at all times comply with and observe on its part all the conditions specified in this act,

The VICE PRESIDENT. The question is on the amendment

offered by the Senator from North Dakota.

The amendment was rejected.

Mr. CUMMINS. I offer an amendment which I send to the desk. The VICE PRESIDENT. The amendment will be stated.

The Secretary. It is proposed to amend the bill by inserting, after the words "set forth," in line 3, page 4, the following:

Provided, That the grant herein made shall not take effect unless and until the Legislature of the State of California shall pass a resolution declaring in substance that the best interests of the people of that State will be served by allowing the city of San Francisco to use the lands of the United States described in this act in the manner and for the purposes herein named.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Iowa.

The amendment was rejected.

Mr. WEEKS. I offer the amendment which I send to the

The VICE PRESIDENT. The amendment will be stated. The Secretary. It is proposed, on page 12, line 11, to strike out "300" and insert "50."

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Massachusetts.

The amendment was rejected.

The VICE PRESIDENT. The bill is in Committee of the Whole and open to amendment. If there are no further amendments to be proposed the bill will be reported to the Senate.

The bill was reported to the Senate without amendment. Mr. POINDEXTER. I ask for the yeas and nays on the

passage of the bill.

The VICE PRESIDENT. That point has not yet been reached. Are there any amendments to be offered in the Senate? If not, the question is, Shall the bill be ordered to be read a third time?

The bill was ordered to a third reading and read the third time.

The VICE PRESIDENT. The bill having been read three times, the question is, Shall it pass? Upon that question the Senator from Washington [Mr. POINDEXTER] has asked for the yeas and nays

The year and nays were ordered, and the Secretary proceeded

to call the roll.

Mr. COLT (when his name was called). I have a pair with the junior Senator from Delaware [Mr. Saulsbury]. I transfer that pair to the senior Senator from Kentucky [Mr. Bradley] and will vote. I vote "nay."

Mr. CUMMINS (when his name was called). I have a pair with the senior Senator from Oregon [Mr. CHAMBERLAIN]. understand that if he were present he would vote "yea."

I were at liberty to vote, I should vote "nay."

Mr. HOLLIS (when his name was called). I am paired with the senior Senator from Pennsylvania [Mr. Penrose]. If I

were at liberty to vote, I should vote "nay."

Mr. WEEKS (when Mr. Lodge's name was called). I wish to say that my colleague [Mr. Lodge] is absent on account of

illness. He is paired on this question, but if he were present he would vote "nay."

Mr. MARTINE of New Jersey (when his name was called). I again announce that I am paired with the junior Senator from Pennsylvania [Mr. OLIVER]. If at liberty to vote, I should vote

Mr. ROOT (when his name was called). Announcing the same pair and the same transfer as on the previous vote. I vote

Mr. STERLING (when his name was called). I announce my pair with the senior Senator from South Carolina [Mr. Till-Man]. If I were at liberty to vote, I should vote "nay."

Mr. SUTHERLAND (when his name was called). I again announce my pair with the senior Senator from Arkansas [Mr. CLARKE]. On account of his absence, I withhold my vote. If I were at liberty to vote, I should vote "nay."

The roll call was concluded.

Mr. KERN. I have been authorized by the senior Senator from Kentucky [Mr. Bradley], with whom I am paired, to vote. I vote "nay."

Mr. BANKHEAD. I announce my pair with the junior Senator from West Virginia [Mr. Goff] and therefore withhold my

Mr. JAMES. I have been requested to announce that the senior Senator from Nebraska [Mr. Hitchcock] is unavoidably absent. He has a pair on this question with the junior Senator from New Mexico [Mr. Catron]. If he were present, he would vote "yea" and the Senator from New Mexico would vote "nay."

Mr. SMITH of Maryland. I wish to announce that my col-

league [Mr. Jackson] is absent on account of illness.
Mr. KERN. I desire to announce that the senior Senator from South Carolina [Mr. TILLMAN] is absent on account of

The result was announced—yeas 43, nays 25, as follows:

So the bill was passed.

The VICE PRESIDENT. The Senate stands adjourned until 10 o'clock a, m. on Monday next.

Thereupon (at 12 o'clock midnight) the Senate adjourned until Monday, December 8, 1913, at 10 o'clock a. m.

# HOUSE OF REPRESENTATIVES.

Saturday, December 6, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

The longer we live, O God our Father, the more profoundly are we impressed with the works of Thy hands; from the tiniest grain of sand on the seashore to the most stupendous star that shines above us; from the tiniest blade of grass that springs beneath our feet to the most gigantic tree of the forest; from the smallest germ cell to man with his wonderful capabilities. What wisdom, what skill, what power, what beneficence. The wonderful adaptation of means to ends. The vast variety of forms and conditions, the great diversity of gifts bestowed upon Thy children bring us to our knees in wonder, awe, admiration, and gratitude. Teach us wisdom, obedience, nobility of soul, that with singleness of purpose we may strive to do Thy will, and help us to realize that it is not the position we occupy, nor the work Thou hast called us to do, great or small, but the spirit we put into it that makes for righteousness. In His name. Amen.
The Journal of the proceedings of yesterday was read and

approved.

CONSTRUCTION OF LEVEES (H. DOC. NO. 390).

Mr. HUMPHREYS of Mississippi. Mr. Speaker, I ask unanimous consent to have printed as a House document an article written by Gen. Thomas C. Catchings, who was for 16 years a Member of this House, and for some time the chairman of the Committee on Rivers and Harbors. The article is on the subject of the power of Congress under the Constitution to provide money for the construction of levees.

The SPEAKER. The gentleman from Mississippi [Mr. Hum-PHREYS] asks unanimous consent to print as a House document an argument by Gen. Thomas C. Catchings, of Vicksburg, Miss., who was for 16 years a Member of this House, on the subject of the constitutional authority of Congress to appropriate money for the building of levees. Is there objection?

There was no objection.

ENEOLLED JOINT RESOLUTION PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States, for his approval, the following joint resolution:

H. J. Res. 155. Joint resolution extending the time for completion of classification and appraisement of surface of segregated coal and asphalt lands of the Choctaw and Chickasaw Nations and of improvements thereon, and making appropriation therefor.

LIEUT, COL. DAVID DU BOSE GAILLARD.

Mr. AUSTIN. Mr. Speaker-

The SPEAKER. For what purpose does the gentleman from

Mr. AUSTIN. Mr. Speaker, I rise for the purpose of asking unanimous consent for the consideration of a resolution in reference to the death of Lieut. Col. Gaillard, of the Panama

The SPEAKER. The gentleman from Tennessee asks unanimous consent to consider a resolution of regret or condolence on the death of Lieut. Col. Gaillard, one of the Panama Canal con-Is there objection? structors.

Mr. MANN. Mr. Speaker, reserving the right to object, let

us hear it read.

The SPEAKER. The Clerk will read the resolution.

The Clerk read as follows:

House resolution 332.

Resolved, That the House of Representatives has heard with profound sorrow of the death of Lieut. Col. David du Bose Gaillard, for whose conspicuous and valuable services in connection with the construction of the Panama Canal the Nation is indebted.

Resolved, That the Clerk of the House transmit a copy of these resolutions to the family of the deceased.

Mr. MANN. Mr. Speaker, reserving the right to object, I think ordinarily resolutions of this sort ought not to be presented or considered by the House, but I think this is a con-spicuous instance where we ought to vary from the ordinary rule, and therefore I do not object.

The SPEAKER. Is there objection? [After a pause.] The

Chair hears none.

The question was taken, and the resolution was agreed to.

SUSPENSION OF NAVAL-CONSTRUCTION PROGRAM.

Mr. HENSLEY. Mr. Speaker, I call up House resolution 298 and ask for its further consideration.

The SPEAKER. The Clerk will report the resolution by title.

The Clerk read as follows:

H. Res. 298. To authorize the President to cooperate with the United Kingdom of Great Britain to the end that naval construction may be suspended for a period of one year.

The SPEAKER. Night before last when the House adjourned the gentleman from Ohio [Mr. Sherwood] had yielded

10 minutes to the gentleman from Indiana [Mr. Gray]. Mr. GRAY. Mr. Speaker, it is a monstrous policy which has been announced in this House of continuing war to furnish employment to labor. Oh, workingman, what crimes are committed in thy name! Child labor, the sweatshop system, and many of the villainies against men and society have longbeen defended upon the ground of furnishing employment to labor, but this is probably its first use to justify a policy of war and human slaughter. I deny that the laboring men of America stand for war. I deny that the laboring men of America are asking for human bloodshed to secure employment. I deny that the laboring men of America are asking for the destruction of human life that they may secure wages. Of all men, let it be said, to the honor and credit of American workingmen, they have first stood for peace and against war. This demand comes not from labor, but from a commercialism that would coin blood and quivering flesh into profits. Shame on the man or men who would ask to continue war for selfish gain. War is a game which, were the people wise, kings, financiers, and

commercial pirates would not play.

Mr. Speaker, few men to-day will realize the full meaning or true significance of this movement. Few men to-day will comprehend the effect upon human society or the change to be wrought in the affairs of nations. I believe that this movement will mark a new era in the history of civilized men. I believe that the human race will here turn from strife and mortal combat, from gore and carnage, from the bloody channels of the past, from wanton destruction, from the slaughter of the innocent and the awful waste of human life—turn to mutuality of human effort, to a glorious future of peace and good will.

I believe that the black cloud of war is lifting from the earth. I believe that the dark night of human antagonism is breaking. I believe that a new day is dawning upon the human race, a day when there shall be no more war, and when men shall only strive in the arts of peace or to reach the goal of a higher and

a more exalted civilization. [Applause.] Humanity, Mr. Speaker, everywhere is groaning under the burdens of crushing war taxes. The nations of the earth are everywhere striving against the exhaustion of their resources from military rivalry. The sense of civilization is everywhere revolting against the horrors and atrocities of war. I believe the world is ready for this movement. The time for mere expressions of approval has gone by. Mr. Speaker, while I am in full and hearty accord with this resolution, and while I would not impair or detract from it, I would add to it. I would go further. I would have this Government take the initiative. want the Stars and Stripes to lead the way in this great movement of peace. [Applause.] I want this great Union to hold alort the torch that will dispel the black night of human antagonism. I want this Nation to herald the coming of this new day. I want this great constellation of States to give the signal to the world for the march to victory over war and the triumph of universal peace. [Applause.] And to that end I offer an amendment, which I send to the Clerk's desk to be read.

The SPEAKER. The Chair will state to the gentleman that

this resolution has not reached the stage for amendment.

I want to have it read and have it pending. Mr. GRAY. The SPEAKER. The gentleman can have it read. Is there objection?

Mr. MANN. Mr. Speaker, a parliamentary inquiry. The SPEAKER. The gentleman will state it.

Mr. GRAY. I will have it read in my time.
Mr. MANN. The resolution being before the House and not being considered in the Committee of the Whole, it is not subject to amendment. I do not think the gentleman from Ohio [Mr,

SHERWOOD] yielded to the gentleman from Indiana [Mr. GRAY] for the purpose of offering an amendment.

The SPEAKER. The gentleman from Indiana simply wants

it read.

Mr. GRAY. I want it read for information.

Mr. MANN. I have no objection to that, but if any gentleman secures the floor in his own right, he has the privilege of offering an amendment at this stage, as there is no other stage for consideration of this resolution. It is not ready for amendment.

Mr. GRAY. Mr. Speaker, I ask-

The SPEAKER. Will the gentleman from Indiana suspend minute until the Chair can get his wits together about this? The Chair would like again to hear what the gentleman from Illinois [Mr. MANN] said as to this matter.

Mr. MANN. In the Committee of the Whole, of course, the resolution is read for amendment under the five-minute rule. But this resolution is being considered in the House, not in committee, and an amendment may be offered by any gentleman who secures the floor in his own right at any time.

The gentleman did not secure the floor in The SPEAKER.

his own right.

Mr. MANN. I understood that. But I understood the Chair to state that an amendment was not in order at this stage of the proceedings. Of course, there is no other stage of the proceedings at which an amendment can be offered.

Mr. FOSTER. May I offer a suggestion? The gentleman

was given 10 minutes for debate-

I appreciate that fact. I stated the gentleman Mr. MANN from Ohio [Mr. Sherwood] did not yield for the purpose of offering an amendment, and the gentleman could not offer an amendment until he had the floor in his own right.

Mr. GRAY. Mr. Speaker, I ask unanimous consent that the Clerk read the amendment for information, in my own time.

Mr. MURRAY of Oklahoma. Mr. Speaker-

The SPEAKER. For what purpose does the gentleman from Oklahoma rise;

Mr. MURRAY of Oklahoma. I take it the gentleman could submit this as a portion of his argument.

The SPEAKER. That is what he has asked to do.
Mr. MURRAY of Oklahoma. And that he could do it with-

out unanimous consent, if he has the time.

The SPEAKER. Nothing can be read at the Clerk's desk without the consent of the House. The gentleman can take the amendment and read it himself.

Mr. MURRAY of Oklahoma. Certainly.

The SPEAKER. Is there objection?
Mr. MURDOCK. Now, Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.
Mr. MURDOCK. My understanding is that the gentleman from Indiana can not offer this as an amendment, because the time yielded to him was for debate and not for offering an amendment?

The SPEAKER. That is exactly true.

Mr. MURDOCK. Now, is it true in these proceedings that

some men can offer an amendment and others not?

If that rule is applied, and the ruling sug-The SPEAKER. gested by the gentleman from Illinois [Mr. Mann] is correct, that is precisely what could happen. Now, it has been ruled here time out of mind that any gentleman that secures a piece of time from another gentleman for debate can not offer an amendment during his speech or at any other time then.

Mr. MURDOCK. Then the remedy of the gentleman from Indiana [Mr. Gray] is to get time in his own right?

The SPEAKER. Of course that would straighten out that difficulty. That has been the universal custom here, and if it were not so, any man who could get a minute might bob up and offer an amendment that might knock a bill endwise.

Mr. GRAY. Mr. Speaker, then I will not offer the amendment now, but will send it up to be read for information in my own

time

The SPEAKER. That is exactly what the Chair was putting, to see if there was objection. Is there objection? [After a pause.] The Chair hears none.

The Clerk read as follows:

The Clerk read as follows:

And be it further resolved, That for the purpose of obviating the growing expenditures by the powers of the world to maintain the military forces of such powers, and to reduce such expenditures, and to secure an agreement by all the formidable nations of the world for the immediate suspension of the present naval construction program, the President be, and is hereby, empowered to invite and to provide for the reception and entertainment of members of the parliaments and national legislative bodies of all the countries of the world to meet in Washington, in the District of Columbia, in the United States, during the autumn months of the year 1914 to deliberate upon and to take action to secure the approval of such agreement; and to provide for such reception and entertainment of said members and to carry out

on the part of the United States the terms and conditions of such agreement a sum not exceeding \$500,000, as may be required therefor, be, and the same is hereby, appropriated out of any money in the Treasury not otherwise appropriated; and the Secretary of the Treasury is hereby authorized to pay said sum to the Secretary of State for the disbursement of the same for said purposes.

Mr. GRAY. Mr. Speaker, how much time have I left? The SPEAKER. The gentleman has five minutes.

Mr. GRAY. Mr. Speaker, while we are annually appropriating many millions of dollars for war and the instruments of human slaughter I am asking only in this amendment for a few thousand dollars in this one year for peace and the promulgation of the principles of good will.

We were told that the Panama Canal would more than double our naval power in the world. Scarcely has that great undertaking been brought to completion than the advocates of war are again before us clamoring not only for larger warships than ever before but for a greater number of warships than ever before. They tell us that we must still increase our Navy.

Mr. Speaker, if we increase our Navy to-day England will increase her warships to-morrow, and then, in turn, Germany will seek to outrival England, and then France to excel Germany, and then we must build again and again to keep pace in this mad rivalry of war. When will we reach the limit in arms and armament? How long until the nations of the world will exhaust their resources in militarism? How long until humanity falls prostrate under the burden of crushing war taxes? How long will we dwarf the institutions of civilization and all the charities that soothe and heal and bless for armies and navies in time of peace? How long will we refuse to supplant force and might with courts and the tribunals of civil justice? How long will civilized and enlightened men continue in such a vain and inglorious policy?

Mr. Speaker, the advocates of peace do not ask for a disarmament of the nations. They recognize that there is to-day, and long will be, a certain element of society which can only be restrained by force. But instead of every civilized nation of the world supporting an army and navy to cope with all the world they ask that all the civilized nations of the world together maintain an army and navy only sufficient to cope with the barbarous and uncivilized nations of the world.

Mr. SHERWOOD. Mr. Speaker, I yield the balance of my time to the gentleman from Virginia [Mr. SAUNDERS].

The SPEAKER. The gentleman from Virginia [Mr. Saunders] is recognized for 24 minutes.

Mr. SAUNDERS. Mr. Speaker, I yield for a moment to the gentleman from Alabama [Mr. Underwood].

Mr. UNDERWOOD rose.

The SPEAKER. For what purpose does the gentleman rise? Mr. UNDERWOOD. I desire to make a request. The gentleman from Virginia [Mr. Saunders] has yielded to me for the

Mr. Speaker, after consulting with the gentleman from Missouri [Mr. Hensley], I think there is business that will come up Monday that will probably defer the further consideration of this bill, and I wanted to see if we could reach an agree-ment to close debate to-night and take the vote on Monday In other words, many Members may not be here this morning. evening if the previous question is ordered, and I wanted to see if we could reach an agreement that when the House adjourns to-night the previous question shall be considered as ordered and the vote be taken on Monday morning on amendments and all.

I think that will be satisfactory. Mr. MANN.

Mr. MURDOCK. That will accommodate the men who are on the list?

Mr. UNDERWOOD. Yes; but it may be that some gentlemen on the list may not be able to take their full time.

Mr. MURDOCK. But it will let all in who desire to speak?

Mr. UNDERWOOD. Yes. I think, if it goes over to next week, it will probably take some time. We shall probably want a record vote on it on Monday morning, and if the vote is taken on Monday morning that will give everybody ample notice to be here.

Mr. MANN. I think it will be perfectly proper for the House to order the previous question to-night. I do not know what arrangement will be made to accommodate those who are on the list. I believe I am early on the list for recognition for I have no intention myself to take very much time. Possibly it would be better to have some arrangement about time, so that Members who are to have an hour each would not

take quite so much time.

Mr. UNDERWOOD. My purpose in asking to close debate to-night, and not to vote to-night, instead of moving the previous question, was to allow that much more time for debate.

Mr. MANN. I understand. Mr. UNDERWOOD. And then everyone will have notice that the vote will be taken on Monday morning. I think if we secure that agreement probably an arrangement can be made about the distribution of the time.

Mr. SLAYDEN. I should like to ask the gentleman from Alabama r question. As I understand, the gentleman is negotiating now with the gentleman from Illinois to bring about the conclusion of this discussion on the Hensley resolution.

Mr. UNDERWOOD. Yes.

Mr. SLAYDEN. How much additional time will be devoted to the discussion of the resolution?

My proposition was that the previous Mr. UNDERWOOD. question should be considered as ordered when the House adjourns to-day. Of course the House can run on this evening as late as it wants to, and have a night session if the House de-An arrangement of that kind will give to-day and to-night, if the House desires it.

Mr. SLAYDEN. I have no doubt a night session would be very agreeable to some gentlemen, because they always have a magnificent audience in the galleries. Unhappily I myself would nct be able to come to-night, and I do want an opportunity to

make a brief speech on this question.

Mr. UNDERWOOD. I have no doubt that an arrangement can be made by which the gentleman can have the time.

Mr. MANN. We could easily run, if necessary, until 6 o'clock. That will give us over five hours.

Mr. MURDOCK. The Speaker knows more than anybody else

about how much of a demand there is for time.

The SPEAKER. Is there objection to the request of the gentleman from Alabama, that when the House adjourns to-day the previous question shall be considered as ordered on this resolution, the vote to be taken immediately after the reading of the Journal on Monday?

Mr. HULINGS. Mr. Speaker, under that arrangement the House might adjourn at any time, after one, two, or three hours. There is no provision as to what time the House shall adjourn. I desire to give notice that I request an allotment of some time to address the House on this resolution before the previous question is ordered.

The SPEAKER. The gentleman is down on the list.

Mr. UNDERWOOD. I will say to the gentleman that I think it is necessary to order the previous question to-day, in order to get a vote on this resolution on Monday. Of course that can be done by a motion. My idea in asking unanimous consent is not to cut off debate, but really to allow a greater latitude for debate, because it does not take the time that would be occupied in calling the roll. It is not my purpose at all to attempt to cut off gentlemen from debate, but it is only to give them more time for debate.

Mr. Speaker, to make the statement clear, I will renew the request for unanimous consent that when the House adjourns to-day the previous question shall be ordered on this resolution and all pending amendments, that any amendments may be offered during the day and voted on during the day, and that the final vote shall be taken immediately after the reading of

the Journal on Monday next.

The SPEAKER. Does the gentleman mean by that that when man offers an amendment here the House shall vote on it immediately?

Mr. UNDERWOOD. Probably that could not be done, Mr.

Speaker, and I withdraw that.

The SPEAKER. The Chair only desires to know what the request is.

Mr. UNDERWOOD. I will ask unanimous consent that the amendments may be pending and be voted upon on Monday.

The SPEAKER. The gentleman from Alabama asks unanimous consent that when the House adjourns to-day the previous question shall be considered as ordered on this resolution and all pending amendments. Of course that will bring it up the first thing on Monday ordinarily. Something might happen in the way of a question of privilege or something of that kind. Is there objection?

Mr. ANDERSON. Reserving the right to object, I should like

to make a brief statement.

Some days ago I introduced a resolution of inquiry directed to the Postmaster General, asking for certain information relative to an order or instruction which the public press stated had been issued by that department relative to the mailability of game birds. The resolution is of some importance in my State, where we are trying to do all we can to prevent the total extinction of what game is left.

I asked manimous consent for the consideration of that resolution. The gentleman from Kentucky [Mr. Johnson], acting as leader of the majority at that time, objected to the con-

sideration of the resolution. I had previously asked the department for the information, and up to this date I have had no answer to my letter nor has the committee made any effort to get the information. Yesterday, acting upon my rights as a Member of the House, I moved to discharge the committee from consideration of the resolution, and the gentleman from Alabama very discourteously, it seemed to me, moved to table the motion, thereby shutting me off from any opportunity of stating the facts in relation to the resolution and having them considered by the House.

Gentlemen on that side of the House, acting, I have no doubt, as a matter of habit rather than of conviction, voted with the gentleman from Alabama and tabled the motion. I should have no complaint, I should accept the result with equanimity and cheerfully if the House had tabled the resolution after it had given me an opportunity to say what little I had to say about it; but I do feel that I was not treated fairly in connection with the resolution, and I here give notice that until I get the information I have asked for there will not be very many unanimous consents given in this House. I shall insist on every parliamentary rule being observed here. that there are many Members who believe that the rules give all the opportunity to every Member of the House that he ought to have. I do not concur in that view. But those gentlemen who do believe it will, I think, have an opportunity to demonstrate whether it is true or not.

Mr. UNDERWOOD. Mr. Speaker, I will say to the House in reference to this matter that it is impossible for the floor leader to keep up with all the resolutions of inquiry that come up. I think that it is a part of the duty of the chairmen of the committees to keep advised in reference to these matters and report the resolutions adversely or favorably. But I do not think it is proper, and it has not been the custom of this House, to allow resolutions of inquiry directed to departments to come up without the chairman of the committee to whom they are referred having some opportunity for a statement. I will say to the gentleman from Minnesota that I really know nothing

about his resolution.

As far as I am concerned, I might, if I investigated it, be entirely favorable to it. But when the gentleman offered a resolution the other day without advising me of his intention of doing so, without giving me an opportunity to send for the chairman of the committee that had the matter in charge, so that he might be present, and allow the man who really understood the situation an opportunity to be here on the floor and know what should be done, the gentleman offered his resolution-as I acknowledge he had a right to do-without giving any notice to me, without giving me a chance to advise with the chairman of the committee; and therefore I exercised my right as floor leader to not consult with the gentleman from Minnesota about the matter, but to move to lay the resolution on the table.

I will say this to the gentleman from Minnesota, that if he will advise with the gentleman from Tennessee, the chairman of that committee, possibly they may report his resolution. not, as far as I am concerned, I am perfectly willing for him to have a fair opportunity to be heard when the gentleman from Tennessee is here to state his opposition to the resolution, if he has any. If he has no opposition to it, I suppose it will go through by unanimous consent. But I do insist that if gentlemen want to offer resolutions of that kind on the floor of the House, if they do not want to be met with a motion to lay their resolutions on the table, they certainly should give notice to the floor leader on this side of the House, in order that he may have an opportunity to have the chairman of the committee

who has the matter in charge present.

Mr. ANDERSON. Mr. Speaker, I think I have made all the requests in this case that any Member of this House ought to be asked to make. I am not willing to do that which my distinguished friend, the leader of the Progressive Party, once said on an occasion, now historic-present myself at the door of the committee room, or at the door of the room of the gentleman from Alabama, with my hat in my hand, and ask for his permission to present a resolution. I will say that I have not done that before and I will not do it in the future,

Mr. UNDERWOOD. Mr. Speaker, I never asked anybody to present himself at my door hat in hand; but somebody must attempt in some way to drive the team; somebody must have the right of way; and if the gentleman from Minnesota is un-willing to consult the management on this side of the House as to what he desires to have done, then he must take the result and have his resolution laid on the table.

Mr. ANDERSON. I will say to the gentleman from Alabama that I was endeavoring to exercise my rights in the House with a great deal more courtesy and, I think, with a great deal more propriety than the gentleman from Alabama exercised in asserting his rights on the floor of the House yesterday afternoon

in connection with the omnibus war-claims bill.

The SPEAKER. Is there objection to the request of the gentleman from Alabama, that when the House adjourns to-day the previous question shall be considered as ordered on the Hensley peace resolution with all pending amendments thereto? [After a pause.] The Chair hears none, and it is so ordered.

The Chair will ask the indulgence of the House in order that he may submit a request to the Members. It is something that the Chair has been intending to do for some time. The Speaker of the House does not desire any Member to ask him permission to do something which the Member has a right to do, but when a Member has a resolution which he thinks is privileged, or which may demand quick action, which he desires to present, about which the Chair has to make up his mind quickly, would be very greatly obliged if the Member would notify him either in writing or by word of mouth that he desires to call it up. The reason for the request it seems to the Chair is plain. The Speaker does not know everything any more than anyone Some of these questions are very close, and it is difficult to decide at the moment whether they are matters of privilege or not. It is not unusual that when they are suddenly presented the House is in somewhat of an uproar, and there may be half a dozen gentlemen who are trying to get recognition to argue the matter. The Chair has no fair chance, unless he has been previously notified, to find out what ought to be done. There is nothing oppressive in the request, and there is nothing improper. Of course, cases will arise in which the Member does not desire anyone to know in advance what he intends to propose, and the suggestion submitted by the Chair does not apply to such cases.

The gentleman from Virginia [Mr. SAUNDERS] is recognized

for 24 minutes.

[Mr. SAUNDERS addressed the House. See Appendix.]

The SPEAKER. The gentleman from Missouri [Mr. Ham-LIN] is recognized for one hour.

Mr. HAMLIN. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. HAMLIN. I have concluded that I will not occupy my full hour, and intend to yield to a couple of my colleagues. desire to yield now, if I may be permitted to do so, before I

The SPEAKER. The gentleman can yield any part of his

hour that he wants to yield.

Mr. HAMLIN. I understood that, but I wanted to know whether I could do it now rather than at the close of my re-

The SPEAKER. The Chair thinks it does not make a particle of difference when the gentleman yields the time.

Mr. HAMLIN. Then I yield five minutes to the gentleman

from Georgia [Mr. Park].

Mr. PARK. Mr. Speaker, I take the resolution to mean and intend an act of simple courtesy of this great Republic to other

republics and nations of the earth.

It is a tender, which, if accepted, becomes nothing more nor less than a gentleman's agreement; but if not received favorably, leaves our people exalted in the respect and esteem of other civilized people by reason of the beneficence extended and

I understand the resolution to be as though one neighbor among others of doubtful bearing toward him should propose: "Let us stop whetting our swords for a year and let us plow and hoe awhile. Let us quit thinking of war for a season and let us think of peace. Let us attend to the use of the implements of peace and abandon for a time the making and sharpening of weapons of war. Let us assume the attitude of peace, and we will grow more friendly-the first step toward the establishment of universal peace."

The act is a genuine and not a dissembled courtesy and will find sympathetic response in the hearts of the masses, from whence come the men who bear the brunt and who fight the

battles of our country

The proposition which we are asked by the resolution to extend is not prompted by apprehensions of war, nor by mis-

apprehension of the attitude of other nations.

The Briton may justly boast that the drumbeat of the Engush soldiery is a ceaseless roll that follows the rising sun, and that the flag of England reflects continuously the unbroken light of day.

The German may proudly claim that under his country's splendid and superior preparation she can mass a million trained troops within a space of 24 hours; and other countries of perhaps equal dignity may claim equal rank in martial supremacy.

Yet, while the recognized greatness of England on the seas brings bubbling from the heart of the British tar the words of her national anthem, "Britannia rules the seas," still we of this great and proud Republic will ever be mindful and never forget that-

Above our gippling, tossing flag On Freedom's breeze outblown, With eye of flame and talons stretched, The Eagle guards his own.

and this simple and gracious resolution that the building of battleships do suspend for a period of 12 months aptly may come from the representatives of this unconquerable Nation, whose emblem is the proud bird of the sun, which strikes only from above and in the broad light of day.

Mr. Speaker, there is a deeper and broader and more sacred meaning to this resolution if acceded to by other nations. If it shall go into effect it will lift from the straining arms and shoulders of the struggling, toiling masses a part of the crushing

burden of taxation.

Instead of more battleships, we should provide for better public and post roads, for more and better public schools and longer school terms for the people who are hungering and thirsting for better educational advantages for their children.

It will be an act of charity and humanity to the people of this and other nations.

Let us swing the great funnel of the Treasury away for a time from the manufacturing places of great battleships to the places where good roads and better and longer term public schools are needed for the helpless and poor children of our country, and God will bless our act. [Applause.]

Sixty millions of dollars, the approximate cost of four great battleships, judiciously invested in public roads and common schools under State supervision, in my humble opinion, means more to this country's future welfare than three hundred millions expended for an increased Navy. [Applause.]

Mr. Speaker, if by adopting this resolution the result shall be that we may be able to care better for the needs of our people in times of peace, then in times of war our people and their children will take care of our common country.

May God speed the day when every act of this Congress shall be directed with intelligent and prayerful efforts to do the greatest good to the greatest number of our citizens.

I am in favor of the resolution. [Loud applause.]

Mr. HAMLIN. Mr. Speaker, I now yield 20 minutes to the gentleman from Ohio [Mr. Braumbaugh].
Mr. Brumbaugh. Mr. Speaker, this occasion seems to me to be a most opportune time to consider and to vote upon this great We have recently listened to, and there is yet fresh in our minds, one of the greatest presidential messages ever delivered by any President of these United States. [Applause.] A message that will have a far reaching effect for good, a message that will live in history, a message that in its human side wherein it deals with man's obligations to his fellowmen, to quote the President's own words uttered on another occasion, seems like a breath out of God's own presence."

Mr. Speaker, it is surely a matter of congratulation to the country and to us all, regardless of political affiliations, to observe how grandly and with what consummate ability our great President is meeting and measuring up to every delicate emergency. He is leading the thought of the world to higher planes and better things. I believe that in the future our school readers will contain, and the youth of the land will commit to memory, his great speeches for their classical diction, their literary eloquence, and their patriotic inspiration, just as they now commit the speeches and sayings of the immortal Jefferson and the immortal Lincoln.

It is a strange observation to note that when Lincoln delivered his great Gettysburg oration it took the country some time to appreciate it, and we came to know it in its full force and beauty only after the great magazines of the country had pointed out to us its grandeur and sublime eloquence.

The magazines of the country are beginning to point out to us that President Wilson's recent great oration at Gettysburg is a fitting companion piece to Lincoln's immortal oration delivered there 50 years ago. They form the milestones of 50 years that mark the Nation's loftiest thought and purest aspirations.

Mr. Speaker, this resolution seeks to have the great nations of the world agree to suspend naval operations for one year; or, in other words, to take a naval holiday. I shall most gladly support this resolution, because it points to the beginning of that better day for which prophets have prayed, poets have sung, and humanity has longed for; that day when we can beat our swords

and implements of warfare into plowshares, and when men shall learn the trade and art of war no more forever. That grand and sublime condition of human brotherhood among all God's

children is a consummation devoutly to be wished.

There has not been, nor do I think there can be, any real justiflable argument presented against the grand and almost holy

purposes of this resolution,

The horrors of war all admit; the burdens of war in blood and money fall upon all, but are necessarily heaviest on the unoffending, the innocent, the laborers, the workingmen, and the

Think of it, \$15,000,000 to build and equip just one battleship. With that great amount of money spent for just one battleship the Nation can build a good-roads highway of trade and commerce from ocean to ocean and, better still, thus preferring to build, would be building a highway of righteousness through the hearts of all mankind. the hearts of all mankind.

With that money spent for just one battleship we can succor and support every worthy old man or old woman, in their sunset of life, in the United States. But, my friends, the stupendous waste and folly is only apparent when we stop to ponder that, as the matter now stands, it is not just one battleship, but two or four, per year; and, as the matter now stands, in this insane, wicked waste and folly we must build in the future not 1 but 24 battleships to equal either of our great rivals—England or Germany. And then keep going on.

How long will labor and the people stand to be thus taxed to make up such stupendous tax burdens and wicked folly?

The amount of money expended for war preparations among the nations of the world, even while they are now at peace with each other, is appalling to contemplate. In the United States the amount expended for battleships and maintaining a warlike preparation, not to speak of pensions, exceeds the amount expended in support of our schools and colleges; our courts and public roads; the support of our churches and the promulgation of the gospel in foreign lands.

The amount of money expended among the nations of the world at large is not only appalling to contemplate, but staggers the imagination. Forty-two billions of dollars is the sum placed upon the backs of labor and the poor to equip and maintain the navies of the nations of the earth. The interest on this tremendous sum at 4 per cent amounts to more than one and one-half billions yearly, which equals the wages of more than 3,000,000 workingmen at the rate of \$600 per annum.

Nations are like men. One goes armed, the other feels that it must go armed. One nation builds four battleships, the other nation feels that it must build four battleships; and so the rivalry in building instruments of death and destruction goes on. These battleships, we are told, only last four or five years until they are obsolete, out of date, and only fit for the junk pile, and new, more costly, and more deadly battleships take their place.

Some of the nations of the world are now approaching bankruptcy and national-debt repudiation. Every nation on earth feels its heavy burdens and great drain in taxation, which rests most heavily upon the laboring people and the poor. This rivalry in battleship building must stop sometime—why not

[Applause.]

It has been argued that this resolution, Mr. Speaker, can do no good. It is sufficient answer, I think, to say that it can do no harm, and yet I do believe that it will in the end do great good. I believe we will so arrest the thought and attention of the world by this resolution and discussion that this agitation will go on, and I would not be surprised to see, and in fact I expect to see, the great political parties in the next convention incorporate a plank in the party platform dealing with this same great resolution. It has been argued that this resolution might lead to some humiliation to us from some quarters. It is sufficient answer to say, Mr. Speaker, that no real humiliation can come to any man or nation for attempting to do the right thing at any time or any place. As Lowell has so well put it:

Not failure but low aim is crime.

[Applause.]

It has been argued, Mr. Speaker, that this proposition has been withdrawn by Mr. Churchill. If that be true, then all the more reason why we should start it anew and be the pioneers in this laudable undertaking. It is not simply the ministers of the gospel and the reformers who are interested in this great matter. The men on the farms—the place where liberty has its home and patriotism its abiding place-are deeply interested in this proposition. The laborers and the labor organizations of the country are also deeply interested in this proposition. The farmers and laborers in factory, shops, stores, and mines make up the bone and sinew of our country, and they are all deeply interested in this proposition, because when war comes they furnish the blood and pay the taxes and carry the burden.

It has been argued, Mr. Speaker, that this might throw some men-the men employed in armor-plate factoriesployment, and some are very solicitous upon that score. Why, that same argument can be advanced in favor of any proposition that we might want to discontinue. One speaker asked, What will we do with the wood and the steel now used in the construction of battleships? How will we use all of these articles? We can easily find use for the wood in construction of homes; use for the steel in building steel cars on our railroads for the comfort and protection of the traveling public and the safety of the people. We could easily pension every man engaged in the manufacture of armor plate with a magnificent pension and then save large sums of money. The cost of one or two battleships would pension every man engaged in this industry for the balance of his life; and as for employment of the men themselves, we can use them in our great undeveloped domain in the United States or in that great wonderland of Alaska, the country that holds the future coal supply of the world, the country that has eight times more cultivatable acreage than Norway and Sweden, which support a population of from 12,000,000 to 15,000,000. We can use them all in developing that great country.

Mr. Speaker, we are getting over some of the old shibboleths of the past. Why, it used to be argued that even dread war was necessary for civilization and the education of the people. A great soldier once said that a little bloodletting now and then was a good thing. I thank God we are getting away from

such ideas as that. [Applause.]

Mr. Speaker, it was long ago said by a wise man that "war is a game which, were their subjects wise, kings could not play at. It is not necessary in arguing this question to claim that all of the wars of the past were unnecessary, but it will be a sad commentary upon the efficacy of our education and our religion if future wars shall be necessary in our dealings with our fellow men. I will not say, Mr. Speaker, that there are those now who would favor war simply for the thrill of famous victories or to be the heroes of those famous victories, but that was the low plane upon which many of our wars of the past were fought. No one has so fittingly described that low plane as the poet Southey, and if I can recall his lines I want to repeat them, for they show how fickle and unjustifiable are often the alleged grounds for war. The poet tells it thus:

It was a summer evening,
Old Kaspar's work was done,
And he before his cottage door
Was sitting in the sun,
And by him sported on the green
His little grandchild Wilhelmine, She saw her brother Peterkin
Roll something large and round,
Which he beside the rivulet
In playing there had found;
He came to ask what he had found
That was so large and smooth and round. Old Kaspar took it from the boy,
Who stood expectant by;
And then the old man shook his head,
And with a natural sigh,
"Tis some poor fellow's skull," said he,
"Who fell in the great victory.

"I find them in the garden,
For there's many here about;
And often when I go to plow
The plowshare turns them out,
For many thousand men," said he,
"Were slain in that great victory."

"Now tell us what 'twas all about,"
Young Peterkin, he cries;
And little Wilhelmine looks up
With wonder-waiting eyes;
"Now tell us all about the war,
And what they killed each other for."

"It was the English," Kaspar cried,
"Who put the French to rout;
But what they killed each other for,
I could not well make out;
But everybody said," quoth he,
"That 'twas a famous victory.

"My father lived at Bienheim then,
You little stream hard by;
They burnt his dwelling to the ground,
And he was forced to fly;
So with his wife and child he fled,
Nor had he where to rest his head.

"With fire and sword the country 'round,
Was wasted far and wide;
And many a nursing mother then,
And new-born baby died;
But things like that, you know, must be
At every famous victory.

They say it was a shocking sight
After the field was won;
For many thousand bodies here
Lay rotting in the sun;
But things like that, you know, must be
After a famous victory."

Tes, this is the cost of famous victories, but it is yet more than this. War stalks the earth to the music of widows' moans and orphans' sighs. It means broken homes, orphaned children, distracted country, and an embittered land. It has been fittingly described by the great soldier, Gen. Sherman, as hell let loose on earth, and the sad thing about it all is this: That those who are so willing often to plunge the countries and nations of the world into war are usually far removed from deadly shot and bursting shell, and that it so often happens that it is the weak, the innocent, and the unoffending who are the real sufferers.

The strong, brave, contending soldiers are not the only sufferers of war. There are other wounds than those made by shot and bayonet. The wives, the mothers, the fathers, the sisters—those necessarily are the keenest sufferers. No comradeship of tent or field, nor music of fife or drum can steal away their pain or heal their aching wound. [Applause.]

The maid who binds her warrior's sash
And. smiling, all her pain dissembles,
The while beneath the drooping lash
One starry teardrop hangs and trembles,
Though Heaven alone records the tear,
And fame shall never know her story,
Her heart has shed a drop as dear
As e'er bedewed the field of glory!

The wife who girds her husband's sword.

'Mid little ones who weep or wonder,
And bravely speaks the cheering word,
What though her heart be rent asunder,
Doomed nightly in her dreams to hear
The bolts of war around him rattle,
Has shed as sacred blood as e'er
Was poured upon the field of battle!

Was poured upon the held of battle:

The mother who conceals her grief
While to her breast her son she presses,
Then breathes a few brave words and brief,
Kissing the patriot brow she blesses,
With no one but her loving God
To know the pain that weighs upon her,
Sheds holy blood as e'er the sod
Received on Freedom's field of honor.

Mr. Speaker, it has been said of old that it is braver and better to dry a tear than to make a wound, and that is what this resolution will attempt to do. [Applause.]

If we do away with armed conflict—which God grant in His

If we do away with armed conflict—which God grant in His own good time we may—let none lament that courage will decline in the hearts or lives of men.

We will have need for all our bravery and courage on other battle fields—the battle fields of life, where the hot flashes of injustice and inequity and wrong dance along the nerve tracks of pain. If with an honest purpose we strive on these battle fields, we can be assured of this: That angel hands out of the skies will fan the weary brow, and the blessings of the Christ of peace will thrill our souls.

Mr. Speaker, this resolution is appropriately before the attention of the whole world at this season of the year, the season when the bells will soon be ringing out to all the land the story of Bethlehem. May we not hope that here now by this resolution we may begin a movement that shall be like a new star of Bethlehem, whose influences for good shall go round the world ringing and singing the old new song of peace on earth, good will to men until righteousness shall look down from heaven and peace and justice and love shall cover the earth as the waters cover the sea? [Loud applause.]

Mr. HAMLIN. Mr. Speaker, I do not know that anything I may say will illuminate this subject; indeed I feel that the proposition submitted here is so just, so humane, and so righteous that it is self-illuminating. I had hoped that there would not be a single voice raised in opposition to it. There may have been a time in the history of the world when wars were excusable in a way, and perhaps a necessity, though I am not quite clear upon that point in my own mind; but if true, it was at a time when civilization was at the very lowest possible standard, when men were little better than savages, and when the law of nations was the law of might. If such a time ever existed, certainly it does not exist now in this age

of civilization and of Christianity.

I would not say that I would never, under any circumstances, favor war. I can conceive of conditions which might arise where we would in self-defense be connelled to strike back.

favor war. I can conceive of conditions which might arise where we would, in self-defense, be compelled to strike back. Of course, if our country was being invaded by a foreign enemy or if some great principle of justice and right were at stake, I believe that no people would be any more ready to rise in defense of that principle or in defense of their homes, country, and liberty than we here in the United States. But in this age of the world those occasions are very rare, if indeed they shall arise at all. It is incomprehensible to me that any man will oppose this resolution. But there are a few here who have the temerity to do so. It has been somewhat amusing to me to listen to some of the reasons assigned in opposition to it. I re-

call that one Member said that if you adopt this resolution and the President should attempt to present the matter to the other nations of the world, he would be rebuffed and humiliated, and therefore the whole Nation disgraced. Another argument was from the standpoint, apparently, that if adopted, it meant a dismantling of all of the existing ships owned by us and the other nations agreeing to the resolution. Others suggested or argued as though they construed the resolution to mean that if we adopt it here it would have the effect of dismantling all of our fighting vessels, but not those of other nations, and therefore would give the other nations the advantage. I am persuaded that those gentlemen have not listened to the reading of the resolution or have not read it themselves. The first part of the resolution simply calls attention to the humane proposition submitted by Mr. Winston Churchill, of England, looking to one year's cessation in the building of naval armaments, and the other part of the resolution suggests to the President of the United States that if he can do so without jeopardizing in any way the interests of this country that he do what he can to bring about this agreement among the leading nations of the world. Therefore, if he should fall, no harm is done. If he succeeds, great good is accomplished; and whether he succeeds or whether he fails our status as compared with the other nations of the world will not be changed one particle, but will remain as it is to-day.

I recall that the gentleman from Alabama [Mr. Hobson] suggested that we could not afford to adopt this resolution now because Germany has 26 battleships and armored cruisers to our 12 and therefore we must continue to build and not agree to this naval holiday program, but try to catch up with Great Britain and Germany; but it occurs to me that if we were to build 14 more ships so as to bring our number up to 26 within the next two or three years Germany will not be idle, and when we shall have reached 26 in number Germany will turn up with 40, and our relative standing be not changed, but our people greatly impoverished. So the mad rush would go on and on and on, and where it can possibly end I can not conceive except in plunging the nations of the earth into bankruptcy and consequent anarchy. So, view it from every standpoint, I can not understand why any gentleman upon this floor who wants to serve God rather than mammon can oppose the adoption of this resolution. Of course I understand that we here are all more or less affected by our environment and by the conditions at home. We can boast of our independence of thought and ideas and action; but, after all, I know and you know that we keep in touch with the people at home, and when they speak in no uncertain tones their opinions are reflected, more or less, by our actions here.

I can understand, therefore, in that view of the case, why some gentlemen upon this floor would oppose this resolution, because certain interests, perhaps located within his district or in his home town, do not want any cessation in the building of armaments in this country because war is more profitable to them than peace. I regret to say that there are those, even, upon the floor of this House who seem to have heard the rumbling of the thunder and to have seen the flash of the lightning, the eddying smoke and destroying fire of Mount Sinai, but who failed to catch the message that was delivered by that sweet human voice on the mount of the beatitudes in the quiet of the early dawn, proclaiming:

Blessed are the merciful, for they shall obtain mercy.
Blessed are the peacemakers, for they shall be called the children of God.

[Applause.]

Of course, the people engaged in the building of armaments in this country and in Germany, or anywhere else, oppose any kind of a step taken which looks to world peace. They coin widows' tears into gold with which they build mansions, and yet there are those who have the audacity to refer to such as patriots. God save the mark!

I opine, Mr. Speaker, that if this naval program must go on, that if we are to continue to build great battleships with which to destroy our fellow men, if we will build all our future ships in the Government navy yards and then act favorably on the recommendations of the present Secretary of the Navy and build plants for the manufacture of our own armor and all of our powder and other ordnance, the place that has heard the voice of the big-navy advocate will hear him no more forever. [Applause.]

It was only a peculiar coincidence, perhaps, that up to the present time there has been only two discordant notes sounded in this debate, and one came from the City of Brotherly Love and the other from the city named after one of the greatest apostles of peace the world has ever known—St. Paul. [Applause.] But we, perhaps, can imagine some reason for this opposition.

Talk about patriots. Let me read an excerpt from the report of the Secretary of the Navy in regard to the establishment of our armor plants. I think that it gives us a very clear insight into the motives and purposes of some people in this country who grow frantic every time there is even a suggestion made to reduce the armaments here, and I think that it may give us some insight into the reason for the opposition to the adoption of this resolution. He says:

IMPORTANCE OF ARMOR-PLATE FACTORY.

I desire to recommend the passage at the earliest moment of a sufficient appropriation to begin the construction of a Government armor plant to relieve a situation which, in my estimation, is intolerable and at total variance with the principle of economy in spending Government money. It is not my intention to enlarge here upon the economic reasons that prompt me to make this recommendation, as I have already gone into them at length in a letter to the Senate in response to a request for information and which I add to this report as an appendix (p. 39). It is sufficient to mention here that only three firms in this country can manufacture armor plate, and that these firms have put in bids for armor plate seldom varying over a few dollars, and in many instances being identical to a cent. Asked for reasons as to the uniformity of these bids, two of the firms replied frankly that as the contract would be divided amongst them anyway the only effect of competitive bids would be to reduce the profits made by all of the three firms.

I want to call your attention to just what has been going on in

I want to call your attention to just what has been going on in

I want to call your attention to just what has been going on in these concerns. He says further:

The department has made every effort to secure real competition and reasonable prices, even to the extent of withholding awards until the necessity of building battleship No. 39 made it imperative that action be taken. After long negotiations the best efforts of the department resulted in securing a saving of \$111,875 by new "competitive" bids, a purely nominal competition, inasmuch as the successful bidder proposes to divide up the work with his rivals. This saving, while well worth the time it took to secure it, is after all very small as compared with the total cost of the armor. Prices charged by these firms for armor have been investigated by Congress a number of times and by special boards of experts, and in every case the investigators have reported that the prices charged are greatly in excess of the cost of manufacture. With the desire to be just, the Secretary offered to transmit to Congress any figures these companies cared to submit to show that their prices were reasonable, but they have refused to present the absolutely necessary data to the Secretary unless he would agree to accept it as confidential, which, of course, means that he would not allow Congress to analyze the figures. Confidential information about public expenditures was not desired and was not accepted. It is evident that without an armor plant of its own the Government in time of war or impending war would be entirely at the mercy of these three manufacturers and obliged to pay practically whatever price they asked. History does not warrant an assumption that the patriotism of these companies would prove superior to their desire for profits, inasmuch as during the time that war with Spain was imminent these companies refused to accept the price fixed by Congress after investigation as a just rate and declined to manufacture any armor until they got their own price of \$100 a ton more than that which Congress had determined on. In this

Do you call that patriotism? I call it treason. I do not think there is a man here who believes there is any patriotism in men behind a concern that will sell to the very people that they intend that we shall be prepared to fight war material for less

than they sell it to their own Government here at home.

Mr. CALLAWAY. What do you think of the judgment of a government that will purchase armor plate from a company at

that difference in price?

Mr. HAMLIN. I would have very little respect for it if they

had any opportunity to do otherwise.

Mr. CALLAWAY. Does the gentleman claim the Government has not had any other opportunity than to pay \$500 a ton for armor plate which these companies are selling abroad for \$360 a ton?

Mr. HAMLIN. I do not see how our Government can avoid it at the present time. If we are to continue this miserable policy of building battleships, we ought to prepare to manufacture our own material and put those concerns which now have a monopoly on the manufacturing of armor out of the business or make them reduce the price to the proper level.

Mr. CALLAWAY. Are there not other people who can manu-

facture armor plate except these fellows?

Mr. HAMLIN. No. No other companies are prepared to build this armor plate except the Midvale Steel Co., the Carnegie Co., and the Bethlehem Steel Co. That being true, they have formed a monopoly, and whenever one of them gets a contract they divide it up with the other two, and they admit that they do this.

Mr. CALLAWAY. And the Government is powerless to pre-

vent that?

Mr. HAMLIN. Yes; I think so, until it goes to work and prepares to manufacture its own war material.

Mr. CALLAWAY. Then these people have got the Govern-

ment in their hands?

Mr. HAMLIN. So far as the manufacturing of armor and other war material is concerned, yes. And yet they have the audacity to come on this floor and in the lobbies of this Capitol here and tell us that we are not patriots if we refuse to compete with Great Britain, Germany, and France in building machinery with which to destroy our fellow men.

Mr. HENSLEY. Mr. Winston Churchill says they are the

servants of the people and should obey.

Mr. HAMLIN. Of course they are servants, and the sooner we teach them that they are the servants and not the bosses in this country the better it will be for this country.

Mr. BUCHANAN of Illinois. Mr. Speaker, will the gentleman

yield?

Mr. HAMLIN. Certainly.

Mr. BUCHANAN of Illinois. Has the gentleman information as to the actual cost of manufacturing armor plate?

Mr. HAMLIN. I have not those figures here, because they were not available when the Secretary made his report. He was asked for those figures, but they were not available at the me. I am sorry that I can not give them to the gentleman. Mr. BUCHANAN of Illinois. It is my understanding that it

costs but \$200 a ton.

Mr. HAMLIN. That accords well with my understanding, but

I have not the figures at hand.

Now, Mr. Speaker, if we view this question from the standpoint of dollars and cents—and I submit to you that we could not consider it upon a lower basis—then the argument is all in favor of the adoption of this resolution. If the powers of the world should agree to it and there should be a cessation in the building of battleships for even one year, it would mean a saving to the United States of something like \$50,000,000. You take \$50,000,000 and divert it from military channels into the avenues of peace and use that \$50,000,000 in internal improvements, such as building good roads, post roads, and so forth, throughout the country, and you would double the wealth of the country in a few years and make rural life more attrac-

Mr. CALLAWAY. Mr. Speaker, will the gentleman yield? Mr. HAMLIN. In a moment. Make rural life more attractive and bring the schoolhouses and churches nearer the homes of boys and girls who are living in the country. Then you will attract more people to the country and make them happy Then you and contented. And I undertake to say that no nation can have a greater asset than a happy, prosperous, and contented people; and it will be an asset, Mr. Speaker, that will not become obsolete or even obsolescent within five or six years, like a battleship, but it will endure as long as this Nation shall stand. [Applause.]

Now, I will yield to the gentleman. Mr. CALLAWAY. The gentleman Mr. CALLAWAY. The gentleman from Missouri says we would save \$50,000,000, in round numbers—

Mr. HAMLIN. Yes; \$50,000,000, in round numbers, in one

Mr. CALLAWAY. If this resolution were passed and we stopped building battleships for one year?
Mr. HAMLIN. Yes.

Mr. CALLAWAY. That is nearly twice as much as the Agricultural Department has asked for in appropriations, is it not? Mr. HAMLIN. Yes; just about twice as much as they have asked for and more than twice as much as we have been giving them, and yet this is the greatest and most important department of the Government to-day.

Now, right there in that connection I want to call attention to the fact that I have believed for years in Government aid to good roads, and I claim for myself to be one of the pioneers of this idea. I recall back in 1902, on the 4th of July, I made a speech on the question of Government aid in the building of good roads. From that time on I have been contending for it, but that proposition, like every other great reform, comes slowly but surely, and I am firmly convinced that there is nothing that we could do, if we have the authority to do it, that would bring about as much good to all the people of the United States as aiding them in building good roads.

The people of the different States are becoming thoroughly alive to the importance of good roads, as the following state-

ment will show:

Expenditures in the United States for improvement of roads has more than doubled since 1904, according to figures compiled by the Office of Public Roads of the Department of Agriculture. In 1904 expenditures for this purpose amounted to \$79.771.417, while in 1912 the total was \$164,232,265, or an increase of \$84,450,948.

It is shown that the greatest progress in road construction took place in those States that aided in the work by appropriations out of their State funds. In 1904 there were 13 States that contributed \$2,607,000,

while in 1912 there were 35 States that appropriated to the extent of \$43,757,438.

The expenditures for this purpose in 1912 amounted to \$74.65 per mile, which was double that of 1904, when the per mile outlay was \$37.07.

Now, let us cut out battleships and use that money in help-

ing to develop our country.

They talk about the employees who work in these armor factories being thrown out of employment in case this resolution should be adopted. Suppose they are; we had much better force two or three thousand men to seek other kinds of employment than to continue to build great engines of warfare with which to destroy thousands of our fellow men. But I believe if you would take that money and make rural life more attractive, many of those fellows would be induced to go to the country. Millions upon millions of virgin acres throughout the length and breadth of this land are waiting to be cultivated, and that would go far toward solving this vexed problem of the high cost of living, and you would at the same time make your

people happy and prosperous.

Viewed from any standpoint, I say, it seems to me there can be only one conclusion reached in this matter. Many Members upon the floor of this House have had their attention directed to the enormous amount of money that we are spending each year in support of the Army and the Navy in these times of profound peace. I am sure my friend from Texas [Mr. Callaway] knows the amount of it, for he has been looking into the question, but perhaps there are others here who do not. I want to call your attention to the amount that we appropriated last year for military purposes. The total appropriations last year, exclusive of the amount payable from the postal revenues, were \$788,864,598.73. There was appropriated for the Army and Navy out of that amount \$335,440,612.35. Practically one-half of the total appropriation of this Government last year was for military purposes.

Mr. RUCKER. And you have not added pensions.

Mr HAMLIN. Yes; and when you add pensions, it is more than half of the total appropriations. So that while we are boasting on the floor of this House and from the stump in the country, echoing the sentiment expressed in the first part of the President's annual address the other day, the happy announcement that there are no war clouds upon the horizon, that we are at peace with the world, yet more than half of the tremendous amount of money appropriated each year goes to the support of the military arm of this Government.

After all, it is an evidence of our lack of civilization. Na-tions are not unlike people. If I strap a six-shooter around me and walk up to my friend here from Kentucky and make some insinuating remark-it may not be very insulting, but he will naturally resent the very manner of my approach—I am pretty liable to get into trouble; but if I have a difference with him and I go to him unarmed we will talk our difference over and instead of having a fight with him we will settle it peaceably and will be better friends in the future than we were in the past. And nations are not different from individuals.

Do you tell me that we ought not to pass this resolution for fear that the other nations will not agree? Let me remind you that nearly 2,000 years ago when the doctrine of peace on earth and good will toward men was first preached by the lowly Nazarene, there were those who said "It can not be; the people will not believe it; they will not accept it." They said it was no use, that He would be humiliated and insulted, and He was. Ah, they even took His life. But that same doctrine which He preached has come ringing down the ages for 2,000 years, until it has belted the entire globe, and there are millions dead and millions living who have gladly testified and do testify to the efficacy of the doctrine preached by Him, that the people of His time said would never be accepted by the people of this world. [Applause.]

Shall we decline to pass a resolution so just and so proper simply because, for sooth, some nation may decline to accept it; that our proposition may be rejected and we humiliated?

can not be humiliated in trying to do right—
Though scoffers ask, "Where is your gain?"
And mocking say, "Your work is vain,"
These scoffers die and are forgot;
Work done for God, dieth not. Press on; press on; nor doubt nor fear; Through every act these words may cheer, Whate'er may die or be forgot, Work done for God, it dieth not.

I want to say that if my colleague [Mr. Hensley] remains in Congress for 30 years-and I hope he may, if he wants toand if he never does anything else than what he has already done in presenting this resolution, his constituency and the people of this Nation will owe him a debt of gratitude that it will be difficult for them to repay. [Applause.] I am glad

to stand humbly by his side and help all I can. I would rejoice if, when the vote comes on Monday morning, this resolution could be passed unanimously and not a single vote be registered against it. [Applause.]

Mr. Speaker, I believe my time is about up. I simply want to say in conclusion that we are not to be discouraged, we are not to be deterred, simply because some nation may not accept this resolution now. We may not get it accepted in 1914. If not, let us try it in the good year 1915, and if we fail then, try again in the good year 1916. We ought not to be weary in welldoing. I believe as firmly as I believe I am standing here that there is coming a time when we shall have universal peace. The doctrine of peace has been preached ever since the night that the angels came to the shepherds upon the Judean hillside

Fear not. I bring to you glad tidings of great joy, which shall be to all people.

That announcement was accompanied by the angelic song-Peace on earth, good will toward men.

And I have not one particle of doubt that the time is coming when the world will be ruled by the principles taught by Jesus of Nazareth. [Applause.] We, as a people, owe it to ourselves, we owe it to our children, and we owe it to our God to do what we can to bring about that happy condition. And as He ascended to heaven you will recall that the angel said to the men who were watching:

Ye men of Galilee, why stand ye gazing up into heaven? This same Jesus, which is taken up from you into heaven, shall so come in like manner as ye have seen Him go into heaven.

And when He comes again He will rule for a thousand years, and there will be no wars or rumors of wars at that time. Why? Simply because the doctrine of love and peace that He preached will have permeated the hearts and minds of the people of the world to the extent that they will have abolished the savagery of war and stopped building great engines of warfare for the destruction of their fellow men, and peace will rule

throughout this world. [Applause.]
That illustrious bard, Shakespeare, looking forward to the time when wars should be no more, gave voice to this beautiful

sentiment:

Farewell the plumed troop, and the big wars,
That makes ambition virtue! O, farewell!
Farewell the neighing steed, and the shrill trump,
The spirit-stirring drum, the ear-piercing fife,
The royal banner, and all quality,
Pride, pomp, and circumstance of glorious war!
And, O you mortal engines, whose rude throats
Th' immortal Jove's dread clamors counterfeit,
Farewell!

Mr. Speaker, the time is coming when the nations "shall beat their swords into plowshares, and their spears into pruning hooks: nation shall not lift up a sword against nation, neither shall they learn war any more." I hope that my associates upon this floor will join with my colleague from Missouri [Mr. HENSLEY] in initiating the policy expressed in this resolution. Suppose, if you please, that Mr. Winston Churchill has abandoned this policy. I do not believe it, but suppose that he has. Let the United States, that stands for the greatest amount of liberty and christianity, take the initiative, take up the gauntlet where he has thrown it down, carry it across the sea, and say to him, "Here is your proposition, if you have abandoned it, we will take it up." Then go to Germany and Spain and all the other countries and make this reasonable proposition to them, and I believe that it will ultimately be accepted. It is founded upon the eternal principles of right and truth, and it can not fail. [Applause.] But, if not, we will have the satisfaction of knowing that we have done our duty. This proposition is right, and "Righteousness exalteth a nation, and the work of righteouness shall be peace." [Applause.]

The SPEAKER pro tempore (Mr. LLOYD). The gentleman

has eight minutes remaining.

Mr. HAMLIN. I yield that time to the gentleman from Ala-

bama [Mr. HEFLIN]

Mr. HEFLIN. Mr. Speaker and gentlemen of the House, let the people of this Republic rejoice and be glad, for their Representatives in Congress are preaching the gospel of peace and pleading for the friendship and good will of the nations of the We shall obtain that cordial friendship and lasting good will not by parading the seas in threatening manner with mighty engines of destruction, but by the humane impulses and Christian virtues of a peace-loving, patriotic people. [Applause.] The gentleman from Missouri [Mr. Hamlin] has said truly that this Government should take the lead in this great work of establishing peace among the nations of the world. [Applause.] The armor-plate trust and the steel trust, which consitute the shipbuilders' trust, are forever urging Congress to build more battleships. Millions of the people's money are expended building one

battleship after another, and the same interests in America that profit greatly whenever we build a battleship send their agents abroad to urge other nations to build more battleships because America is doing so. They sell material to this and other countries.

I am told that whenever we order the building of a new battleship this shipbuilder's trust makes a photograph of it and takes it to England and France and Germany. The picture is exhibited to these foreign powers, and they are told that they The picture is had better build more battleships, because America has just ordered a new one to be built. And on it goes. England is told to hurry and build another battleship, because America has just ordered one built. Then Germany is told to build one, because America and England have increased their navies. And then France is urged to build one, because America, England, and Germany are all building more battleships. Then they come back to America and show us the pictures of the new battleships of England, Germany, and France. We are urged to build another; and so on around this endless chain of America, England, France, and Germany. Let us enter into an agreement with two or three of these large powers that no more battleships shall be built for the period of one or two

Instead of the nations engaging in a contest as to who can build the most battleships in a given time, why not pause where we are and take a rest? We will save millions of the people's money and be relatively as strong as a naval power at the end of a year as we would be if we continued to build battleships. For instance, suppose England had five battleships, Germany had four, America had four, and France had three. Then the trusts that furnish the high-priced material for the construction of these battleships here and abroad should induce England. Germany, America, and France to add to their respective lists one more battleship. We would be, relatively speaking, just where we are now. England would have six, Germany five,

America five, and France four.

Let us devote some of our time and employ some of our energies and use our good offices in showing to other nations the farreaching benefits and everlasting good of peace universal. With united voices let us pray to the God of Nations;

Sow Thou the seeds of happy peace; All evil drive from us afar; And bid the rage and tumult cease Of hateful war.

A few years ago, Mr. Speaker, Argentina and Chile were forever at war with each other; killing each other's people was the order of the day. There they stood, arrayed against each other in mortal combat; but what happened between these two coun-Their representatives met on the border line and struck hands about a common center for the good of both countries and swore eternal friendship. They took their guns and battle blades and molded them into a mighty monument; and standing on that monument is a bronze figure of Christ, with a scroll in His hand, on which is written "Peace on earth, good will to Written on the base of that monument are these words:

Sooner shall these mountains crumble to their base than Argentina and Chile break the faith that they have this day plighted at the feet of Christ, the Savier.

[Applause.]

Mr. Speaker, instead of burdening ourselves beneath the weight of our own armament and squandering millions of money that should be used for other purposes, let us build at the principal seaports of this Nation, where every ship that sails may see, a colossal figure of Christ, with a scroll in His hand containing this message: "Peace on earth, good will to men." [Applause.]

I am glad, Mr. Speaker, to say a word in favor of this resolu-tion. I am heartily in favor of it. I am proud of my country. I love the United States, and I am glad to see it take the stand that it has. I am sorry that there is a dissenting voice heard here against this great resolution of the gentleman from Missouri [Mr. Hensley]. I want to say to him that the speech he made here a few days ago advocating 'his policy of peace has rung around this Republic like a bugle call. You have led in a movement, sir, that means good to the human race, and you have contributed to the cause of peace, and that speech will do good and the sentiments that you have uttered here will live long after we have passed from the service in this House. [Applause.]

Mr. MANN rose.

The SPEAKER pro tempore. The gentleman from Illinois is

recognized for one hour.

Mr. MANN. Mr. Speaker, in connection with the consideration of the peace resolution, I wish to make a brief reference to the parliamentary war that occurred in the House yesterday. In the course of the debate I said something which I regret con-

cerning my very distinguished friend the gentleman from Virginia [Mr. CARLIN], whom I have asked to be present and hear what I say, because I hope that what I say now will be more pleasing than what I said yesterday. I did not have in mind in any retort which I made yesterday any reflection upon the capacity or the value of the services of that gentleman, whom I have known with pleasure in the House for many years and for whom I have the very highest regard as one of the most valuable Members of this distinguished body.

Mr. CARLIN. Mr. Speaker, will the gentleman yield for a

moment?

Mr. MANN. I yield to the gentleman, always. Mr. CARLIN. Mr. Speaker, since my good friend has been so generous, I feel that I ought to say that at the time the lit-tle discussion between us took place, I did not at the moment think that anything very offensive had been said. Subsequently it occurred to me, in view of what others thought, that such a construction might be placed upon it. I did not make reply, because I knew that the gentleman who made the remarks would do the manly thing, which he has done here to-day and which is characteristic of him in his dealing with his fellow man. [Applause.] Mr. Speaker, I heartly reciprocate every kindly expression which he has uttered.

Mr. MANN. Mr. Speaker, what I have said here to-day has been said with great pleasure to myself. I thought it was appropriate to say it upon this occasion-entirely appropriate because it was true and entirely appropriate because of the reso-

lution which we are now considering.

When the gentleman from Missouri [Mr. Hensley] presented his resolution in the House and asked unanimous consent for its consideration without reference to a committee, it came before the House at a time when, in what seemed to me a laudable effort, I was endeavoring to persuade the majority side of the House to be here and attend to business, and for that reason not permitting them to do much business while they were ab-There was not a quorum present. I did not raise an objection to the consideration of the resolution at the time, because it seemed to me the gentleman from Missouri [Mr. Hens-LEY] had had an inspiration that was of value to us all, and that it was wise to have the consent granted by which the House would have an opportunity at some time of voting upon the resolution in a way that might give it some valuable effect

throughout the country.

Permit me to say, Mr. Speaker, that I think the consideration of this resolution is entirely apart from the question of making appropriations for battleships or for the support of the Navy. do not think the passage of the resolution or the consideration of it has anything whatever to do with the question of whether at this session Congress shall make appropriation for no battleships, for two battleships, for four battleships, or for the number which my friend from Alabama, Mr. Hosson, would like to make-and I do not know how many that would be, but I sup-

pose a dozen or two.

Mr. BARTHOLDT. Twenty-four in the immediate future. Mr. MANN. Mr. Speaker, it seems to me that the United States is peculiarly well situated to offer this proposition to the nations of the world. In the first place, we have greater resources of taxation than any other nation of the world; we expend more money annually for governmental purposes than any other nation of the world; we have greater wealth behind as than any other nation of the world; and we are quite willing, as they all know, when the necessity arises, to expend every dollar of money and every ounce of blood that is necessary for the position which we take. We are not in direct competition with any nation of Europe, such as exists probably between Germany and England or between some of the other powers of Europe in the preservation of the balance of power there. I think we can afford to pass a resolution which puts on record our expression of opinion, that the nations of the world might well halt in their rivalry to outdo each other in the building of

If we progress in the future far along the lines we are now pursuing, it is inevitable that the burden will become so great upon some of the nations of the world that a revolution will ensue repudiating public indebtedness. The nations of the world owe, I believe, something over \$42,000,000,000, which even at 4 per cent interest would amount to more than a billion and a half dollars a year interest, and that would practically maintain nearly 3,000,000 people working a year each upon the basis of \$600 a year, which probably is a reasonable basis for the amount of wages paid upon the average throughout the world. Shall we pursue that or shall we take the chance of passing a resolution which may bring about more economic consideration of these questions? This resolution proposes to request the President to use his efforts. We have been discussing it for several days. We give it long and grave consideration. If we pass the resolution, I take it, the President will then sound informally the various cabinets of the world interested in the proposition and see whether it be practicable, in their opinion, for the different great powers of the world, through a meeting of delegates or otherwise, to enter upon some

program which may save the expense.

It is certain, in my opinion, that if Great Britain keeps on increasing her navy as she has done in the past, that if Germany keeps on increasing her navy as she has done in the past and is doing now, that if the other great countries of the world keep on increasing their navies as they are doing now it will become inevitable that the United States, whatever burden it will bring to bear upon us in the future, will be compelled to build a navy large enough to preserve peace throughout the by force of arms if necessary. I do not want to see the United States undertake to police the world if it can be avoided, and therefore I think, Mr. Speaker, that the resolution ought to pass, and I hope that it will receive the support of practically all the Members of this House as an expression of opinion that this country can well afford to offer this proposition to the world. I do not think that it will affect injuriously our dignity if our offer should not be accepted. I do not think that any man or nation loses his dignity by a dignified offer of peace [applause], and whatever comes out of it, if nothing eventuates at present, it at least will help in the future as an expression of opinion of a great, dignified legislative body that we believe we can afford in this world to take some chance of peace without attempting to ruin ourselves by unnecessary preparations for war when all agree to it. [Applause.]

Mr. Speaker, how much time have I used?

The SPEAKER pro tempore. The gentleman has used 11 minutes

Mr. MANN. I yield 30 minutes to the gentleman from Texas

[Mr. SLAYDEN]. [Applause.]
Mr. SLAYDEN. Mr. Speaker, for some time I purposely concealed the fact that I expected to try to make a speech on this resolution, but when I look around at the seats in this House I see that I was not discreet enough. Information evidently leaked out and the House emptied. This debate has been useful, instructive, and interesting, and it has developed many things which will make us all feel proud of membership here. For example, it has offered an opportunity for a reconciliation, if that is the proper word, between the distinguished gentleman from Illinois [Mr. Mann] and the distinguished gentleman from Virginia [Mr. CARLIN], whose quarrel I had not heard of before they undertook to compose it here in our presence. It also gives me an unexpected and gratifying bit of information in the development of the evangelistic spirit and evangelistic power of our friend from Missouri [Mr. Hamlin] [Applause.] I am quite sure, if he should elect to abandon the House and go to the Chautauqua platform or to the Gospel tent, or any other theater in which such peculiar talents are to be exercised, that those who are now champions in such fields of work had better look to their laurels.

Whether this resolution or another differently worded shall be accepted by the House is not a matter of great importance, but it is important-and the value of it will be admitted on both sides of two great oceans-to show that the representatives of the American people are in sympathy with any reasonable project for relieving the taxpayers of a burden which has become almost intolerable. The discussion is valuable and will have a fine influence far beyond the walls of this Chamber. It has already had an echo on the other side of the Atlantic. Letters have been received in Washington from editors in London and from members of the British Parliament who had read an account of the preliminary discussion of the Hensley resolution and who cordially approve the spirit of it. These letters were from commoners and members of the House of Lords, and, aristocrat and democrat alike, both long for peace and believe that a declaration in favor of the spirit of this resolution by the American House of Representatives will contribute to that end.

The discussion itself is a hopeful sign and marks a tremendous change from conditions which prevailed for nearly 50 years after the founding of our Government. A hundred years ago men had only begun to dimly perceive and to point out the folly of war. Previous to that the brutality and the cost of it had been accepted as disagreeable but unavoidable facts of life. There was no peace party. The advocates of war were perfectly frank and did not do then as they appear to do now, mask their sympathy with strife by claiming to be the advocates of peace. They did not declare themselves for peace and support policies which make war inevitable. That is a development of more recent times when men are ashamed of the purposes of the great armament which they advocate. In those days they rejoiced in the prospect of slaughter and killed each other in private

gaged the people in wars which the exercise of a little patience and common sense would have avoided, and they were pro-claimed heroes. The greater the butchery, the more horror was piled on horror, the greater heroes they were. They were re-warded with titles from kings for whom they killed their fellow men and with large grants of money taken from the poor fools who fought the battles. But times have changed. between individuals was abolished by the quickened conscience of the people, and in spite of all that may be done to prevent it the duel between nations will also go. I am not dreaming dreams. I am not so hopeful as to believe that it will be done immediately and everywhere, but to doubt that it will be done is to impeach civilization and to flout the reason of men.

Time was when England and France were nearly always at war, but since the Corsican was sent to St. Helena, now nearly a century, they have been at peace. A century has elapsed since we were at war with England, and we are about to celebrate the hundredth anniversary of the close of that struggle. never had a real war with any other country in Europe, and we are now less likely to have it than at any period in our history, for we have become so strong that what might one time have been undertaken with a reasonable prospect of success no longer appears inviting. These prophets of evil who proclaim and seem to hope for a war make themselves ridiculous by

their raving.

I am convinced that this resolution, or one like it which will embody its spirit, will be agreed to by a tremendous majority, and it will be a message of hope to the war-cursed people of Europe and Asia.

I had hoped until Tuesday of this week that it would be agreed to by every Member of the House, but the opening remarks of my friend from Pennsylvania [Mr. Moore] convinced me of my error. The same influence which stirs up strife in Europe and prevents the peaceable composition of international quarrels the war traders-forbids.

And I want to say in passing, Mr. Speaker, that I admire my friend [Mr. Moore] for the frankness of his position. It is perfectly understandable. He does not mask his purpose by any pretended sympathy with a movement that leads in the opposite direction. With great frankness my friend exposes his reason for opposing the Hensley resolution. On page 77 of the Record of December 2 he says:

The passage of this resolution will not be unanimous by any means. It is a very important resolution, involving the employment of labor, the investment of capital, and the national welfare to a large extent.

There you have it baldly and frankly stated. We must not yield to a good impulse; we must not do what we can to abolish war, because it involves the employment of labor. And invested capital must not be disturbed. It must be left to earn its dividends at whatever cost in human misery. That is the true military spirit, the true spirit of the makers of and dealers in war material. It is the same spirit which controlled the great can-non makers of Germany—the Krupps—when they resorted to the bribery of a Paris newspaper to stir up hostility in France toward the Germans and reprinted the publications in Germany to stir up hostility in that country toward the French Republic. The fact that they were doing that which might cost the lives of hundreds of thousands of Frenchmen and Germans was of small consequence to "invested capital." That must not be disturbed. That must be left to earn dividends. That is the logic of the position of the gentleman from Pennsylvania [Mr. Moore].

When Dr. Liebknecht charged in the Imperial German Parliament that this great gunmaking firm had resorted to bribery and other dishonorable methods of promoting its business, he was denounced as a slanderer and his charges were indignantly denied; but in his statement in parliament he made so strong a case that the courts were compelled to take notice of his charges, and five officers and agents of the company and of the military service have been convicted. In pursuit of its dividends "invested capital" could not be halted by the groans of the dying or the weeping of widows and orphans, but it is hoped that the sight of its agents on the wrong side of a prison door may have a deterrent influence. Indeed, it may direct attention to the fact that there are other avenues of employment for capital, and that plows, harvesters, and other implements of domestic use offer the possibility of profit. Even Philadelphia manufacturers may so employ their capital and energies, which will be better for the world at large.

I am quite sure that every pacificist will be grateful to the gen-

tleman from Pennsylvania for admitting what has been so often charged and as often denied—that the demand for battleships and other war material has been largely made by those who profit in the trade.

Then there is our friend from Alabama, who has never failed to stand for the maximum demands of the war traders, and who has usually advocated more than they have the nerve to ask. and public quarrels and were not punishe! for it. They en- He also has spoken eloquently, although unconvincingly, against

this small effort to promote the cause of peace on earth to men of good will,

I know what a high-minded gentleman he is. I know how in other matters his sympathies are with the oppressed and the helpless, and I was curious to know, although convinced that he would oppose the resolution, just what attitude he would take in his opposition. I am quite sure that he will not misunderstand me or think that I mean to be offensive when I say that he is a most contradictory compound-a sort of political Dr. Jekvll and Mr. Hyde.

On the Chautauqua platform, when not asking for an office, he strikes a high if sometimes illogical note. He stands for the uplift, whatever that is; he preaches eugenics and prohibition in the interest of physical man, and is a sort of Whitfield in appeals to his fellows to forsake the ways of sin. But here in the House he invariably supports every project for military extravagance and glorifies war in perfervid speeches. He is, like the rest of us, a mixture of good and bad, of reason and unreason; but he has one virtue to a marked degree, he is consistent. He always stands for a greater and ever greater military force.

And it is quite impossible for a man of the most highly developed imagination, who is most reckless in his demands on the Treasury, to write a bill which will call for more in the way of appropriations for naval development than will meet the support and sympathy of my friend from Alabama.

The peace platform of the Nazarene makes no appeal to him. Before undertaking a reply to the arguments of the gentleman 1rom Alabama I would like to say a word or two about the Hensley resolution itself. Some gentlemen have pleaded to the letter of that resolution and ignored its spirit. Others complain that if it should be adopted it would be an action by this House based on newspaper advices, and that possibly information so received may not be accurate. But, Mr. Speaker, it is a matter of common knowledge that Mr. Churchill, First Lord of the British Admiralty, has twice suggested such a program for the consideration of his own and other governments in Europe, his second reference to it being seven or eight months after his first speech. That is pretty good evidence that he took the matter seriously, and that he had it in mind all the time. There is nothing wrong in acting on common knowledge about such matters, and I think that in the history of this House there can be found many instances where legislation involving appropriations has been adopted on no better basis than newspaper reports. The disaster in Martinique is one case that I call to mind at this moment. The resolution is not put forward as a treaty, but as a suggestion to the President by the House of Representatives that in its opinion it is worth while to try to save lives and treasure by abandoning for one year the preparations for war.

In passing I want to say, Mr. Speaker, I have an abiding faith that if we do get an agreement of this kind between the nations of the earth to suspend for one year the development of these great and expensive navies the people will have learned something. The people who pay these bills and for whom we will have saved these millions of dollars will have learned that they can get along just as well without these expenditures, and thereafter they can not be persuaded it will not be a good thing to get along without them for two, three, or five years, and thereafter, in my judgment, the naval programs of all the governments in the world will be modified and brought within the bounds of reason and made less unendurable to the people at large, and that, Mr. Speaker, is one reason why such people as my friend from Alabama oppose this resolution and all resolutions based on this thought. [Applause.]

The House is clearly within its rights in making such a suggestion, and I do not believe that it will or could give any offense to the President. So much for the resolution itself.

The gentleman from Alabama [Mr. Hobson] makes a long and interesting argument for the establishment of what he calls an equilibrium.

I listened carefully to his speech, Mr. Speaker, but I must confess that I have not learned yet exactly what the gentleman from Alabama meant by the term "equilibrium." It is a new panacea which he has set up for all the ills of the world, but concealed behind it is the certainty that there will be an expanding Navy, not only in this but also in other countries. His idea of an equilibrium appears to be to take the greater part of what the people of the United States pay into the Treasury in taxes and to spend it for battleships and war material. He says that we ought to have a fleet in the Atlantic equal to that of Germany, so as to maintain an equilibrium in He says that we ought to have a fleet in the Pacific

equal to that of Japan to maintain an equilibrium in that ocean. This is not the first time in the course of his legislative career that the gentleman from Alabama has made a speech on the

floor of the House suggesting or hinting that the Japanese or the Germans meditated an assault on the Government of the United States, its territories, and some of its policies. First one and then the other of these two powers has been put forward as an imminent danger.

I had hoped that the fact that we have never had any controversy with Germany, that our territories are not contiguous. and that there is no conflict of interests between us had made him ashamed of his position with respect to that country and that he would abandon the making of speeches which are calculated to arouse suspicion and create hostility where neither has existed heretofore. The fact that we outnumber the Japanese by two to one in population, and that the difference between the resources of that country and of ours is even greater, ought to allay his fears.

But if it does not he may comfort himself with the further information that the distance from the Pacific coast of North America to Japan is so great and the difficulty and risk of transporting an army across the ocean so evident that a county like Japan, which has domestic problems of a vexatious nature and no surplus in its treasury, is not likely to commit the folly of attacking one which it knows it can not finally defeat.

But, Mr. Speaker, I submit, in all fairness, that there is no reason for assuming that the Japanese are our enemies. I believe, on the contrary, that they desire nothing more than peace, and that from that source at least this country is absolutely unthreatened.

I think the gentleman's attention ought to be drawn to the fact that there is another very important sea on which at least two first-class powers and one of less strength border, and in which they maintain fleets. With Italy we have had controversies over her immigrants and an international quarrel about immigrants is just as apt to develop into a war as a quarrel about anything else. France has territory in the West Indies, and although she is traditionally and actually our friend I should think the gentleman would advance his theory of an equilibrium in the Mediterranean also.

But it is only about 18 years since we were on the verge of a quarrel with Great Britain about some worthless territory in which we had no interest whatever down in Venezueta. Now, Great Britain has a mighty fleet on nearly all the seas of the world, and as there is a remote possibility that we may some time quarrel with the British people why should we not establish an equilibrium with reference to that power also? Certainly if we learn anything from history we must regard England as the most likely of all our foes, for in the whole period of our existence we have only had four foreign wars and two of them have been with Great Britain.

In the discussion of this question with the gentleman from Illinois [Mr. Mann] the gentleman from Alabama said:

When America announces that proposition—that no matter what the size of the navy of any military power on the continent of Europe or Asia we propose \* \* to have a navy of equal size in the Atlantic and of equal size in the Pacific, respectively—that day we are practically left out for there can be no race with America.

The very weight of the unprofitable burden would bring these nations in the shortest time to seek an organization for peace that will take the place of armaments.

The gentleman from Illinois [Mr. Mann] asked him if he meant that early bankruptcy is necessary—is the shortest cut to the procurement of peace. His reply was:

Yes, if the European nations go on as they are now; and as, clearly, armany intends to go on, irrespective of propositions from Great Brit-Germany intend ain and others.

There can be no race with America. That is where the gentleman from Alabama laid down the extraordinary proposition that we should make appropriations, not to the verge of, but to actual bankruptcy, because when we had committed that colossal folly, that unparalleled crime, against the interests of the people, the other nations with less resources would be compelled to abandon the contest as hopeless, because they would be bankrupt before we were.

The peace plan of the gentleman from Alabama does not commend itself to me. I am not in favor of universal bankruptcy. I believe that it is better to make an appeal to the reason of all the nations of the earth, who in their own interest and to relieve themselves of what the gentleman from Alabama calls "the very weight of the unprofitable burdens," and when an appreciation of this condition is brought home to them I am convinced that they will accept arbitration and peace rather than war and bankruptcy.

The difference between ourselves and the gentleman from Alabama is that we avail of that opportunity and means at this time-an opportunity and a means which he scorns to em-We suggest the application of reason now. to defer it until after the world shall have been ruined.

In this connection I would like to call the attention of the gentleman from Pennsylvania [Mr. Moore], who in his address on Thursday last vehemently denied that these expenses were a burden, to the testimony of the expert from Alabama, who calls them an "unprofitable burden."

Touching this question of whether such expenses are a burden, I call another witness to the stand. In an address to the Parliament of his country the premier of Bavaria, Baron von Hertling, said on Saturday, November 29:

There must be a pause in armaments; the German possessions are not in a position to bear further burdens of this nature.

The Associated Press dispatch, which brought this extract from the speech of the Bavarian premier, commenting on the situation, said:

Bavaria is the second largest State of the German Empire. The Imperial Government, in proposing the latest increase in the army last spring, informed the federated States that it could not assume responsibility for the safety of the Empire unless the augmentation of the forces was agreed to. Bavaria was bound under such conditions to give her consent, but she did so without enthusiasm.

In that connection, Mr. Speaker, and as tending to show to what this madness for military expenditure is leading us, I will print here, under the leave to extend my remarks, an analysis of the new Germany army bill made by the American Embassy in Berlin and sent to me by the secretary of the embassy:

#### THE NEW GERMAN ARMY BILL.

The guiding idea of the bill is the further development of general compulsory military service according to population; it provides for an increase of 4,000 officers, 15,000 subordinate officers, and 117,000 common soldiers; 27,000 horses are also to be added. It is planned that the new measures shall go into effect in October, 1913. Extra expenses will also be incurred through the intended improvement of fortified places and the increase of the airship fieet. It is estimated that the recurrent expenses thus entailed will amount to 180,000,000 to 190,000,000 marks annually. The nonrecurrent expenses are estimated at 1,050,000,000 the parks.

will also be incurred through the intended improvement of fortified places and the increase of the airship fleet. It is estimated that the recurrent expenses thus entailed will amount to 180,000,000 to 190,000,000 marks annually. The nonrecurrent expenses are estimated at 1,050,000,000 marks.

It is proposed to meet the nonrecurrent expenses by means of the proceeds of a single extraordinary defense contribution (Wehrbeitrag), which is to take the form of a duty of one-half per cent on fortunes; in addition, a single tax of 2 per cent is to be levied on all incomes of 50,000 marks and over, unless derived from fortunes already taxed to such an amount. The contribution may be paid in two installments, and charged for a period not exceeding three years. Stock companies and commandite companies are likewise to be assessed. The proceeds of the contribution are estimated at from 975,000,000 to 1,000,000 marks, of which 373,000,000 must be available in 1913, whereas the bulk is expected to be paid in in 1914. Fortunes less than 10,600 marks are exempt from the single contribution.

The recurrent expenses are to be collected from the various States, which are required to increase their matricular contributions toward the common expenses of the Empire by 1.25 marks per head of their population, such increase to be filled by the proceeds of general fortune, income or inheritance taxes, which must be introduced if not existing, or increased if already in operation. Further funds are to be secured by amendments to the existing imperial stamp duty act whereby a stamp duty is to be levied on corporation and insurance contracts; the proceeds are estimated at 22,000,000 marks in 1913 and 44,000,000 in 1914 as well as 1915. Furthermore, the right of inheritance of the proceeds are estimated at 22,000,000 marks in 1913 and 44,000,000 in 190,000 marks annually.

That military bill had not gone into effect when I had the

That military bill had not gone into effect when I had the privilege of spending three or four weeks in Germany last summer, but it made such a tremendous draft on the resources of the people, an immediate draft of such huge proportions, and fixed upon them for all time to come such an enormous increase in the expenses of the Empire, that there was a degree of discontent, a muttering which was most ominous, and which is reflected in the quotation from the remarks by the Bavarian premier which I have just read to you.

I will give you just this much of the analysis. The new German military bill calls for an immediate outlay of \$270, 000,000 to supply weapons, clothing, barracks, and so forth, for the huge increase of the army. That is a nonrecurrent tax, because the weapons and barracks are presumed to last.

Then it calls for an annual permanent increase, a recurrent tax, of about \$60,0000,000 a year. You can easily understand how this is true, when it provides for 4,000 commissioned officers, 15,000 noncommissioned officers, and 119,000 men in addition to the regular army of Germany, and 27,000 horses to make provision for the cavalry and artillery. That costs a great deal of money, as we know, when we appropriated \$100,000,000 for our small Army last session.

Mr. SISSON. Mr. Speaker, will the gentleman yield? The SPEAKER. Does the gentleman from Texas yield to the gentleman from Mississippl?

Mr. SLAYDEN. Yes.

Mr. SISSON. Does the gentleman put into the RECORD in that statement what the expenses of the German military budget will be after this increase is made?

Mr. SIAYDEN. No; I merely tell the increase.
Mr. SISSON. Just the increase?
Mr. SIAYDEN. Yes.
Mr. SISSON. Can the gentleman tell the House what the probable expenses will be under this budget?

Mr. SLAYDEN. I have read it within a few days, but I

could not speak with sufficient accuracy to answer the gentleman's question now.

Now, the effective increase of the burden, if my friend from Pennsylvania [Mr. Moore] will only consent to the employment of that word to characterize the distribution of such manifest benefits, as he terms them—the effect of it has been to irritate the German citizens to a degree which has alarmed the Imperial Government.

Last summer, while I was in Germany, I had a friend go over the new army bill and make an analysis for me, this quite independent of that which had been made by the American Embassy in Berlin.

German citizens and the German Government itself choose to regard these great taxes as a burden, wherein they differ in their peculiar economic view from my friend from Pennsylvania [Mr. Moore].

In a letter to me returning the papers which I had sent him

my friend said.

First of all, the law is so carefully drawn that no matter how much you may try to find a loophole you will every time run into a cul-de-sac. There is no escape for either native-born or foreign-born residents in Germany.

If our friend from Tennessee had had this German military bill before him when he drew the income-tax provisions of our tariff law and had been so minded, he could have gathered revenue enough from that one tax to have built a navy of such a size that even the gentleman from Alabama would have been content.

On page 87 of the RECORD of December 2 the gentleman from Alabama referred to the so-called Venezuelan incident when a blockade was established by Germany and certain other powers in 1902. I will quote his language, because he makes some statements which are of great importance and would be of much greater importance if they were accurate.

With a solemn and mysterious mein, with the air of a man who is struggling to conceal secrets which would upset the

world, the gentleman from Alabama said:

world, the gentleman from Alabama said:

Mr. Speaker, if I remember correctly, it was in 1904 that Germany landed upon the soil of Venezuela and hoisted her flag. Of course it was then known that that act was in violation of the Monroe doctrine. This was undoubtedly realized in Germany, but the growing commerce with South America and the development of German colonies in South America prompted the step. Now, in 1904, Germany hoisted her flag in Venezuela. It was very fortunate that at that time—not from any concerted action on our part, not from any wisdom, but merely from the fact of the popularity of the national defense and the Navy as a result of the Spanish Wer—that we had a good fleet. We were the second naval power in the world, and our fleet available in the Caribbean, the Gulf of Mexico, and the Atlantic was probably 40 to 45 per cent superior to that of Germany, so that unquestionably if the man behind the gun in America was a good man—and he had demonstrated that he was—then America had undisputed control of the sea, and all Germany's armies could not send one soldier across the sea to Venezuela.

There was nothing for Germany to do, when we requested her to re-

Venezuela.

There was nothing for Germany to do, when we requested her to retire, but to retire, and she retired gracefully. But before we gave our request to her to retire we were human enough to assemble our whole fleet at Guantanamo, put it on a war footing, and dispatch Admiral Dewey from the Navy Department to take command; and when he was there with the whole fleet, we very courteously requested Germany to retire, and she retired gracefully.

This statement contains a number of errors. The Venezuelan difficulties were not in 1904, but in December, 1902. did not land on the soil of Venezuela and did not hoist her flag there. No act was committed by Germany in violation of the Monroe doctrine. We did not request Germany to retire, and she only "retired gracefully" when the purpose of the blockade which she had inaugurated was fulfilled. We did not at any time protest against Germany's action, and would have had no ground for so doing.

Ample proof of all of the foregoing is contained in Foreign Relations for 1903. From this it would appear, page 418, that on December 3 Mr. Dodge, of the American Embassy, informed Mr. Hay that the undersecretary of foreign affairs of Germany

told him that Germany's position-

had been explained and was perfectly understood by the United States Government, and that all Germany desired was that Venezuela should not shield herself behind the United States from fulfilling her just obligations

Later Mr. Hay informed Mr. Dodge that Seligman & Co. had been trying to make an arrangement to effect a settlement of the Venezuelan difficulties and that the President would be glad if such an arrangement could be made, as it might obviate the necessity of any force on the part of Germany and Great He was to understand, however, that the United States would assume no obligations whatever in the nature of a material or moral guaranty of any liability created by the transaction. On December 9 the German undersecretary for foreign affairs informed Mr. Dodge that negotiations were pending between the British and German Governments, but that nothing had so far been decided as to what form any armed intervention would take. A few days later Mr. Hay directed Mr. Tower to say to the German Government that the United States adhered

to the position taken by it in relation to the Cretan blockade in 1897 and did not acquiesce in any extension of the doctrine of pacific blockade which might adversely affect the rights of States not parties to the controversy or discriminate against the commerce of neutral nations, our Government reserving all its rights in the premises. On December 14 Mr. Tower informed Mr. Hay, upon statements from the German Government, that Germany was at first inclined to a pacific blockade, but that Great Britain insisted upon a warlike one; that Germany had yielded to the wishes of Great Britain and intended to establish a warlike blockade in a few days, but that Germany had no intention at that time to declare war or to proceed beyond the establishment of a warlike blockade.

At the suggestion of Mr. Hay, Mr. Tower inquired further of the German Government as to its intentions, and he was informed, among other things, that the united powers did not intend to make a declaration of war or to take any hostile step beyond the establishment of a warlike blockade. To all of this our Government interposed no objection, except as stated, and England and Germany proceeded to blockade the ports of Puerto Cabello and Maracaibo, with the result that finally an agreement to arbitrate was entered into between the blockading powers and Venezuela.

In the course of the difficulties three Venezuelan warships were seized and two were sunk. Some shots were fired by a German vessel at the fort at the entrance leading to Maracaibo. while some British sailors landed at La Guayra, rescuing British subjects and taking them aboard British war vessels.

This sums up the situation as shown by American official

documents, and from them it does not appear that a single German ever landed, even temporarily, on Venezuelan soil and Germany never hoisted her flag there, as stated by Mr. Hobson, and we never requested her to retire, but, on the contrary, accepted the German position that under the laws of nations she had the right to enforce a settlement of her claims in the manner sought by her. No bluster was indulged in by the United States toward Germany, nor were there any threatening acts.

The SPEAKER pro tempore (Mr. Murray of Oklahoma).

The time of the gentleman from Texas has expired.

Mr. SLAVDEN Mr. Speaker I would be seen to the content of the conten

Mr. SLAYDEN. Mr. Speaker, I would like to ask the gentle-man for a few minutes more. I can conclude in seven or eight minutes.

Mr. KENT. Is this in the time of the gentleman from Illi-

The SPEAKER pro tempore. Yes.

Mr. SISSON. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. SLAYDEN] may proceed for 10

The SPEAKER pro tempore. The gentleman from Mississippi [Mr. Sisson] ask unanimous consent that the gentleman from Texas [Mr. Slayden] may proceed for 10 minutes. Is there objection

Mr. CAMPBELL. Mr. Speaker, reserving the right to object, I assume that this will not come out of the time of the gentleman from Illinois [Mr. MANN].

Mr. SLAYDEN. I see the gentleman from Illinois [Mr. Mann] is here. If there is any objection, I will stop.
Mr. MANN. Mr. Speaker, I have promised the balance of

The SPEAKER pro tempore. This would not come out of the time of the gentleman from Illinois [Mr. Mann] anyhow. Is there objection to the request of the gentleman from Mississippi [Mr. Sisson]? [After a pause.] The Chair hears none, and the gentleman from Texas [Mr. SLAYDEN] is recognized for 10 minutes more.

Mr. SLAYDEN. In the latter part of his speech the gentleman from Alabama [Mr. Hosson] speaks with contempt of treaties between nations and of the ease with which they have been broken. I do not recall that anywhere he condemned this breach of faith. I will not say that he approves it, because I think he is too honest a man to do any such thing, but I do say that in making an address as important as his it is not wise to pass lightly over acts of bad faith, which have such a tremendous influence on the happiness and welfare of men. He apparently has no faith whatever in treaties. I suppose he thinks that they are not worth making. Can you conceive of the chaos, of the enmities, of the piracy and acts of criminal aggression to which the world would be subjected if all of the treaties of amity and of commerce between the nations of the earth were destroyed? His suggestion appears to be to have no solemn engagements to be honest and fair, but to build larger and always larger fleets. He appears to want to return to almost primal conditions, where each man and each country is armed to the teeth and relies upon his or its own strength

and skill for self-preservation. He describes with a good deal of interest and philosophic reflection the growth of civilization through the clans and tribes up to the establishment of orderly government, with adequate police protection for the lives and property of the people. But feudalism, as the gentleman must know, was abandoned in Europe, because with advancing civilization and intelligence the people realized that it would be better to abandon the habit of cutting each other's throats and to establish mutually satisfactory conditions for the peaceful cultivation of the soil. They covenanted with each other through statutes and by regulations, just as it is suggested now that the Governments of the world shall covenant with each other by treaty to establish better conditions throughout the universe.

The gentleman refers to the fact that in The Hague conferences the delegates were not given the authority which they should have had to make binding agreements for the keeping of the peace. He says that the military nations would not consent to give these delegates even advisory power. That is present to give these delegates even advisory power. That is pre-cisely what we complain of. The military nations and the military people, of whom the gentleman from Alabama is such a conspicuous example, stand in the way of agreements which would be for the benefit of the whole human family. He says

If there were appointed at The Hague conferences an adequate committee with power to codify what is known as international law in an authoritative way and practically lay down precedents of international obligations and establish a basis of international common law, then at some future Hague conference, through proper powers delegated by all the nations, actually giving jurisdiction to The Hague tribunal, we would have an evolutionary process going on for developing an adequate international judiciary.

It gives me pleasure to be able to assure the gentleman that the program which he outlines is practically being executed. The first and second Hague conferences have gone into history. They did a great work and have set forward the cause of peace and justice in a wonderful way, and if the gentleman from Alabama and those like him who prefer the violent method of settling international disputes will only get out of the way the time is not far distant when there will be such a court as he describes and international justice will be dispensed by the supreme court of the world. And in this connection it may be well to say that no supporter of The Hague idea abates in the slightest degree his patriotic sentiments or seeks to deprive his own country of any dignity or of any right. No important person has any serious thought that there will grow out of these Hague conferences any scheme of world government which will destroy the identity of nations or races. I mention this because there are some people who have professed to believe that the development of The Hague arbitral court would have a tendency to wipe out national boundaries, and that thought has aroused hostility to a movement which is thoroughly wholesome and thoroughly patriotic.

The gentleman from Pennsylvania is solicitous for the dignity of the President of the United States. He may be, in a certain sense, his brother's keeper, but I believe that Mr. Wilson would cheerfully relieve him of the duty of guarding his dignity in relation to the request embodied in the Hensley resolution. That resolution merely assumes the truth of public news by which we were advised that Mr. Winston Churchill did declare on two separate occasions that the United Kingdom was willing to cooperate with other Governments to secure a suspension of naval construction for one year, and no one has yet come forward to deny that such a proposition was made.

No one, unless it be my friend from Pennsylvania, will deny that it would be a relief to the taxpayers if governments would leave in their pockets the hundreds of millions of dollars which will be expended in the next year for battleship construction if the naval holiday idea is not adopted. In paragraph 2 of the Hensley resolution there is preferred a respectful request that if he can do so with due regard for the interests of the United States, the President shall do what he can to consummate the agreement suggested by Mr. Churchill. No resolution was ever more respectfully couched, nor can even hypercritical Members find anything in it which undertakes to direct the President against his own judgment. It requests him to do something which there is reason for believing would be in the line of his own wishes.

At another point in his speech the gentleman hints at the idea that the author of the suggestion only wanted to promote a peaceful understanding between Great Britain and Germany and that a dangerous factor-Japan-is altogether omitted from the contemplation of the author of the resolution.

Mr. Speaker, Japan spends hardly more than half as much for military and naval purposes as the Government of the United States. Yet within the last year or two the fremey-

dous burden of taxation in that country has caused the over-throw of one political party and has indicated a condition of unrest which is not promising for the internal peace of that Empire. But those are the domestic problems of Japan which we can not in good taste or good judgment discuss here. only say that in my opinion, basing it on information which is available to every student of the question, Japan is peacefully inclined; that she wants to be left alone to work out her own problems; and that, above all things, she does not desire to engage in any more foreign wars. The people of Japan are unusually capable. They know the strength and resources of every other government on earth, and even if they cherished warlike ambitions they know where they could engage in war with a reasonable prospect of success, and they are clever enough to understand that a war with a country as rich as this would be exhausting. But I prefer not to discuss the Japanese question from the point of view of possible war. I prefer, rather, to look at it from the point of view of a friendly nation asking the right to live and competing for commerce in an honorable I believe that Japan would like to be assured of an indefinite prolongation of the peace of the world, for in that lies her opportunity for the development of an Empire which has amazed the world by its rapid development, by its brilliant accomplishments on the field of battle, and by its more impressive victories in the field of intellectual endeavor. Japan is not the foe of anyone in this House, unless it be the gentleman from Alabama, who seems generally hostile, or the gentleman from Pennsylvania, whose interests are frankly commercial. [Applause.]

The SPEAKER pro tempore. The gentleman from Illinois [Mr. Mann] is recognized for 19 minutes.

I yield that much time to the gentleman from

Mr. MANN. I yield that much time to the gentleman from Pennsylvania [Mr. HULINGS]. Mr. HULINGS. Mr. Speaker, I am in favor of every measure that will abolish war. I am in favor of an authoritative announcement by the Government of the United States that it will agree with the other great powers to build no warships for a

There is no great likelihood that other nations will agree, but no great harm will be done if they refuse; and if they should agree, an enormous sum of money that would be expended on warships could be diverted to productive industries. But in any case it would serve as further evidence of the desire of this great Republic to abolish war and substitute other methods of settling national disputes than resorts to arms and brute force

I do not agree with my colleague from Pennsylvania [Mr. MCORE !. who opposes this resolution on the ground that the building of battleships furnishes work for the laborer and the artisan, and that for that reason the building of them should not be suspended.

I do not agree with him, for I believe that all such expendi-

tures are a tax upon the energies of the country.

All labor that is unproductive or that does not aid in production or its distribution and enjoyment is a burden, a tax

upon the energies of the country.

The pay of the policeman who guards our streets is a tax pure and simple, a burden imposed on society by the wrongdoers whom the policeman is employed to watch; a burden which would be lifted if there were no wrongdoers, and society would be the gainer and relieved of the tax if he were to turn to some productive labor.

In the same way the cost of insurance of our property against fire is a tax, a burden upon productive industry, the measure of which is the imminence of fire, precisely as the fire itself, should it occur, would be a burden upon the energies of the

Now, the policeman must be paid, and the agents and clerks and staff of the insurance companies must be paid; but it would be a poor argument against the reform of the lawbreaker to say he should not reform, because if he did the policeman would be out of a job; and it would be a queer sort of argument in favor of conflagrations to say we must have them, for if there were no fires the insurance agents would have to go to farming. [Applause.]

The very best that can be said of naval or military expenditures is that they are an insurance against war; but nevertheless they are a tax, a burden, upon the energies of the Nation precisely as insurance against fire is, but with this difference: If all persons were to cease paying for insurance, the fires would still occur; while if all nations were to quit building warships naval warfare would cease.

Mr. Speaker, I am not one of those who regard war as an unmitigated evil.

As the struggle of the young pine tree in the thicket upward for the breath of life produces the clear stuff and the tall timber, so in human life struggle, toil, and arduous effort are the atmosphere that develops the grand qualities of the race.

The man who in pursuit of some worthy purpose has not held on until he could taste blood, who has not persisted until every breath became a gasp, has never tasted the real wine

The boys who endured the stern discipline of that long and bloody Civil War returned to civil life self-reliant, seasoned. disciplined men; their beards had sprouted in the smoke of battle; they returned to the works of peace; they engaged in the internal development of the country with a surge of energy and achievement that amazed the world.

They undertook the building of the great railroads and of

wonderful bridges.

What to them were the risks of the peaceful arts? had builded the like under the storm of hostile bullets. They had no fear to undertake anything their daring brains could

In the great tuition of war they had learned to play the game with their lives as counters, unblanching and unafraid. and I firmly believe that the country owes, in a great measure, the wonderful industrial achievements of the generation past to the tuition of the men of the North and the South in the great Civil War.

The stairway of human progress is an escalade of battles.

War-horrid, wicked, illogical as it is-is not without its compensations.

The Almighty framed His universe upon a plan of benevolence, and in His gracious goodness ordained that out of our very blunders and foolishness may come blessings, so that even in the jaws of the lion honey may be found. He in His goodness makes it possible that our sufferings and experiences in wickedness become stepping stones to better things.

Evolution to higher standards is the natural order. The day will come when war shall be no more.

The day may come when men will not fight or steal. The day may come when the only function of the policeman

will be to help lame ladies over crowded streets.

The day will come when nations will settle their disputes in a great international court precisely as individuals are required to settle their disputes in civil courts.

But such times will come by natural evolution. The power and majesty of the human spirit in its inventive genius and command of material forces is making war more and more expensive and less and less possible.

The aerial ship will make untenable the armed camp and the embattled fortress. The submarine boat in its development

will laugh to scorn your superdreadnoughts.

Within a few days an invention was reported by which at a distance of 8 miles, without wires or other attachments, one may explode gunpowder inclosed in an iron box submerged in 21 feet of water. If this is true, and I have no doubt it will be true, what becomes of your war fleets, your arsenals, and your

The mounting expense of the enginery of war and militarism, the invention of newer and more frightful engines, will make war impossible and drive nations into more rational ways of

Human nature will probably not greatly change. Mankind will remain selfish, but the world is beginning to see that altruism is but enlightened selfishness.

The nations will perceive that war no longer pays, that an enlightened selfishness forbids war.

It is in this natural way the day will come when nations will

Resolutions will not bring peace. Peace societies will not stop war. The Hague Tribunal will not stop war. Solemn treaties have not prevented war. The halt in war-ship building will not stop war. They are helpful to show that we are advancing in enlightenment.

They are indices showing the awakening conscience of mankind to a realization that there are better ways of settling dis-

putes than with grape and canister.

The groans of European millions under the burden of milltarism and the awakening sense of the power of democracy throughout the world are doing more to stop war than all other agencies whatsoever.

The curse of war will be lifted when an enlightened democracy realizes that war does not pay.

eace will never be secured by disarmament.

Disarmament is a chimera that will only become real after peace is established. Peace societies are following a "will-o'-

the-wisp" in disarmament. The Hague Tribunal has broken down; it lacks power,

The way out is clear. War has been the court of last resort. The world is awearying of its expense, its injustices, and its inhumanities and seeks a better court.

A great international high court of last resort, whose decrees will be enforced by the power of the community of nations, as the civil courts enforce their decrees by the power of the community of individuals, is the clear, logical, evolutionary substitute for war.

Until that day the best assurance of peace is to be prepared for war.

Until that day the policy of this country, firm in rectitude, should be ready with the hand of peace and good fellowship for every nation, ready for disarmament, ready to establish an international court, but ready in case of assault to curl up like the porcupine, bristling at every point, impregnable to attack.

Avoiding offenses, scorning the tricks of diplomacy, standing up to the spirit and letter of her contracts, convincing the world that she will seek no evasion of treaties, whether it be concerning Panama Canal tolls or a canal site; demanding her rights with a magnanimity comporting with her greatness, yet with the disposition and power to maintain them. Thus the United States, with the greatest potential military strength of all nations, would be the champion of peace. [Applause.]

I do not see how the resolution can do any harm as it is

I do not see how the resolution can do any harm as it is written, although I agree with the gentleman from Minnesota [Mr. Stevens] that it would better be referred to committee and amended so that it will be simply an authoritative statement that this Government would agree to join the great nations in suspending war-ship building for a specified time, or in any other concerted effort to abolish war.

I fear its only effect will be to show the peaceful disposition of this country, but that is important, showing what our disposition is.

In case of their refusal, I think our Navy should be rapidly increased, so that we should be paramount beyond compare in the Western Hemisphere; and then, secure against invasion, we should take up the "white man's burden" within our own boundaries by attending to our own affairs. [Applause.]

Mr. KENT. Mr. Speaker-

The SPEAKER pro tempore. The gentleman from Illinois [Mr. Mann] has two minutes more, if he desires to control the time.

Mr. MANN. I do not desire to occupy it, but I will reserve it.

The SPEAKER pro tempore. Very well. The gentleman from California [Mr. Kent] is recognized. [Applause.]

Mr. KENT. Mr. Speaker, I should not have taken the time of the House to consider this question except that the gentleman from Missouri [Mr. Hensley], who has had the honor of introducing this resolution and has had the privilege thereby of doing this great service to the country and to the world, requested me to say something.

It is practically impossible to cover any new ground in this connection. War is not being outgrown solely on account of advancing morals. War is becoming outgrown on account of changes in the economic conditions of war. If an Indian went to war with another Indian, he would jeopardize little except his life. If he got away, he could haul more brush and construct another habitation. His warlike activities were not productive of waste and of poverty to his tribe.

In older days there was profit to be made by the brigandage of collective murder and organized robbery.

Not only were goods obtained by the victors, but in the enslavement of the vanquished beasts of burden were obtained for the nation, tribe, or clan.

War no longer furnishes the incitement of collective profit, although the powder makers, the ordnance purveyors, the battleship builders reap a great reward from public spoliation. Their reward, however small in proportion to national waste, has been sufficient to cause them to incite extravagance and to encourage distrust and trouble.

The fomenters of war are the lead-pipe thieves of civilization. From an enormous destruction they reap a petty reward.

They should be obliterated by the assumption of armament production by the nations themselves.

Step by step war has become more and more unspeakable from the standpoint of economics and the standpoint of bad morals, until now we are reaching a point where the absurdity is obvious, in spite of the patriotic periodicity gentleman from Alabama [Mr. Hobson]. Dreadnoughts now going at \$14,000,000—for utterly useless floating flatirons. A broken-down artillery horse on the Continent of Europe can be eaten up when no longer fit for other use; but I do not believe anyone has ever

found use for a discarded battleship. We have left far behind the need of personal contest. No man needs longer to protect his personal honor by shooting up somebody else or being shot. We must reach the same state of mind as regards this question of what people loosely term "national honor." The individual who has had to rough it in the world, who

The individual who has had to rough it in the world, who has had to associate with people of rather crude ideas of their personal honor, who does not desire to kill or to be killed, has found out—and I have talked with many of them and have had some experiences of the sort myself—that a man can better afford to be insulted than to start personal reprisals that would result in killing. In other words, a man or a nation can assume the attitude, however hard it may be, that one who goes out to bandying insults is not the sort to insult those who claim good manners and decent breeding. Such a view carries with it calm courage and should be coupled with an unalterable determination to stand for rights and against aggression.

There is an element of bluster and bragadocio that has often led to war. It seems fine to our jingoes to think how easily we could send 10,000 men down through Mexico to the City of Mexico. It would make some of them very proud to consider that we could do it; but we must turn around and consider the cost, consider the ultimate result, consider the morals of the proposition; and then if we are civilized, as we claim, if we are capable of logical thought, we know that we should take no pride in the ability to assault a neighbor—that the unpardonable wrong would react on ourselves.

Nations are more backward along this line of civilized development than are individuals. The individual has come to think that as the choice of evils a lawyer may be better than brass knuckles or a battleship, but the nations have not yet reached that point.

One thing that has shocked me here in Washington, in connection with this House and the other House at the other end of the Capitol, has been the tendency that I have seen here to totally disregard what seemed to be international obligations. I remember the abrogation of the Russian treaty, which treaty should have been abrogated, because it was not tenable by either party to it; but that it should have been done in an offensive manner, a manner which under the old doctrine of national honor would have brought on war, is something horrible to contemplate. The talk here in the House and in the Senate were both sufficient, under the old-time doctrine of national honor, to lead to war.

We had an international convention concerning the seal fisheries. That convention had been laboriously worked out between the nations. It might or might not have been a worthy proposition. There was a difference of opinion. But in some of the discussion—not all of it, by any means—there was carried the idea that we would do as we pleased about those seals, irrespective of the rights of other nations on the ocean.

We had some discussion here about Panama Canal tolls. Part of that discussion was addressed to the merits of the case and to what the treaties really meant; but there was another tone here, and that was that we would do what we pleased with our canal, and that treaties were not to be particularly considered.

It is these international bad manners that we must cure. I think these sessions of the House that have been devoted to this resolution are most hopeful in promoting peace—that so many of us should get together here and solemnly resolve, as far as we are personally concerned, as we are doing by our attitude, that we are not going to be taken off our balance by any jingo outcry, that we realize that war is a serious matter, and that it is a national disgrace unless it is forced upon us.

Peace, after all, is not a physical condition; it is a state of mind. It is found in the soul of man. The Romans had what they called peace, the peace of those that were down and crushed, the truce of the defeated, but that was not peace; and so the peace that Diaz maintained in Mexico was simply the peace of power. It meant the confinement of explosive gases, as we have since learned.

It seems to me that on the other side of the water the greatest movement that has been made toward peace has come from the calm contemplation of the subject by the working people of England and of Germany. Thousands upon thousands of them have enrolled under the banner of peace, and have stated, although that would have been considered treason in the old days, that they would not fight one another.

that they would not fight one another.

I do not believe that the time has passed when we need policemen. I differ to a certain extent with my friend from Texas [Mr. Slayden] as to the attitude of one of the nations that he mentions. It seems to me that when a nation demands for its emigrants the right of citizenship in this country, demands the right to own our land, we may consider that there is in such aggressive impudence a lingering possibility of trouble.

I am not prepared at the present moment to say that I shall never vote for another battleship. I hope it will never be necessary. [Applause.]

I am delighted to add my word in favor of this resolution, and I would go further and say that it seems to me that the logic of the situation is that if two or three important nations join together in the movement contemplated by this resolution they thereby are practically entering into an alliance for the sake of peace, and that nations which violate the rights of other nations and break into the world's peace that would be started toward an establishment by this measure, the nations that heedlessly infringe upon such a mutual understanding for the promotion of peace, and the abolition of economic waste, such nations will have enlightened allies joined in an international police force to fight with. [Applause.]

I yield 30 minutes to the gentleman from Ohio [Mr. Sharp]. Mr. SHARP. Mr. Speaker, I have been generously given half an hour by my friend from California [Mr. KENT] in which to discuss the pending resolution. I would ask, out of courtesy to my colleague from Pennsylvania [Mr. BAILEY], that at the end of 28 minutes I be notified, because I want to yield two minutes to him, upon his request, as he is not upon the regular list of those asking for time.

Mr. Speaker, I am not at all hopeful of advancing any new thoughts upon this very important resolution. A man would be indeed very egotistical if he had any such thought in mind after hearing from perhaps 20 or 30 of our best speakers on this subject. I think, however, if I may be permitted to say so, that most of them have made the mistake of treating the opposition too seriously. It develops that there have been three Members in this House who have by speech opposed this resolution, if I am correct. I would not for a moment want to believe that any one of them had any real opposition to it, but I think that out of the kindness of their hearts each has consented to occupy the position of a real straw man, so that the rest of us could punch the stuffing out of him. [Laughter.]
I remember as a young law student one of the first lessons

that came to me was to learn that, in order to perfect the pleadings in a case, you would have to join issue of some kind. So that I rather think, to take a charitable view of it, that these three able gentlemen-and I am glad from a nonpartisan view one comes from our side and two from the other side of the aisle—have agreed to assume that rôle in order that the pleadings may be perfected and that we may have an issue before this House.

If it can be said that there is no serious opposition to this resolution, let me say that nevertheless from my experience, covering five or six years in this body, I do not know of any measure that has been more important, that may bear more fruit for good, than the one that we have been considering during the past two or three days. I am very glad, Mr. Speaker, that it comes at the beginning of the session rather than at its close, so that we can have sufficient time in which to discuss its features.

The distinguished gentleman from Alabama [Mr. Underwood], in asking time for the consideration of this resolution, made the prediction that it would receive almost the unanimous support of the House. I think he was entirely right in that statement; but to my surprise there have been editorials appearing during the past two or three days that would lead me to believe that, whatever may be the sentiment of the House on this question, there is some opposition to it among the news-

papers of the country.

About the severest indictment that has been leveled at this resolution came from the lips of the gentleman from Minnesota, my good friend Mr. Stevens, who said that it was about as effective and had about the same characteristics as a last year's bird's nest. But, if I may further use that rather homely comparison, let me say that many of the very greatest reforms, both national and international, have reposed in last year's bird's nests a great many years. We know that the great Magna Charta slept many years in that kind of a domicile, and in that kind of a house of straw and rags reposed the agitations that finally led up to the Declaration of Independence more than 100 years ago. So with the antislavery movement, and many other reforms that have come to fruition only as a result of a half century of agitation.

I want to take half a minute of time, and I do not want to spend much time reading, because it comes out of the time which I must devote to other phases of the subject. I want to read from a letter of Thomas Jefferson, the patron saint of the Democratic Party. It is an expression of his views of 90 years ago, in a letter to President Monroe, pertaining to the Monroe doctrine. It seems to me to be particularly appropriate at this time.

Mr. Jefferson, commenting upon the situation then presented. away back in 1823, as the outgrowth of the Monroe doctrine, said:

The question presented by the letters you have sent me is the most momentous which has ever been offered to my contemplation since that of independence. That made us a nation; this sets our compass and points the course which we are to steer through the ocean of time opening on us. And never could we embark on it under circumstances more auspicious. Our first and fundamental maxim should be never to entangle ourselves in the broils of Europe. Our second, never to suffer Europe to Intermeddle with cis-Atlantic affairs.

One nation, most of all, could disturb us in this pursuit. She now offers to lead, ald, and accompany us in it. By acceding to her proposition we detach her from the bands, bring her mighty weight into the scale of free government, and emancipate a continent at one stroke, which might otherwise linger long in doubt and difficulty. Great Britain is the nation which can do us the most harm of any one or all on earth, and with her on our side we need not fear the whole world. With her, then, we should most sedulously cherish a cordial friendship.

Those were prophetic words that have come on down to us through almost a hundred years; but I wish to read now an echoing sentiment, as expressed by a writer in one of the great London dailies within the past few weeks, upon the Mexican situation. I would be very glad to have the gentlemen present listen to this, because it is not only beautifully expressed, but it is so completely in harmony with the Jeffersonian idea above set

The Daily News, in a strong editorial, demands the recall of Sir Lionel Carden on the ground that he is doing his best to help President Huerta in his design to set the British and American Governments at logserheads. The newspaper says:

"The maintenance of American friendship is the keystone of British policy. Not all the British capital invested in Mexico would compensate for the risk of losing America's friendship, and under the present circumstances it would be our duty and plainest common sense to acquiesce in the American policy, even though we thought it mistaken.

"But President Wilson's policy is not a mistaken one. All that has happened in Mexico confirms the keenness of his insight and justifies the courage of his conduct. We are not prepared to sacrifice the friendship of the United States at the dictation of a few rich speculators."

That is the sentiment, Mr. Speaker, that prevails to-day on the other side of the Atlantic, and is in complete harmony, I take it, with the feeling that prevails throughout this country. But the object of this resolution, or the probable result of it, has been likened and compared in effectiveness to a last year's bird's nest. I have only to cite the splendid exhibition of statesmanship displayed in the handling of the Mexican situation by the gentleman who now graces with such signal ability and patriotism the highest office in our own country-President Woodrow Wilson-to show that whereas there were abroad some pessimistic views-and, I am sorry to say, shared by some of the people of our own country at the beginning of that conflict-yet they unite to-day in extolling the wisdom of that great Executive. [Applause on the Democratic side.]

His attitude toward that unfortunate country receives to-day the commendation and approval of all the nations of the world. There is not a country on the face of the earth that stands in a stronger position to-day to bring about a world-wide disarmament than the United States of America.

But while I have referred to the words of commendation of the movement for a world-wide peace, yet I am sorry to see sounded in the press this morning a different sentiment. I refer to an article appearing this morning in the editorial col-umns of the Washington Post, which usually stands for sensible things. I am surprised and disappointed to find in its leading things. I am surprised and disappointed to find in its leading editorial a criticism very marked and pointed, not only upon this resolution—though it does not specifically refer to it—but to the attitude taken yesterday by Mr. Joseph Choate, formerly our ambassador to England. There is contained in the editorial to which I refer a very remarkable statement. The editorial is headed "Mr. Choate on canal treaties." I will take two or three minutes to read the pertinent extracts to which I wish to refer:

Mr. Joseph Choate's tribute to Lord Pauncefote and Secretary Hay is worthily bestowed, but his intimation that a treaty as written and understood by such men ought to be regarded as the last words in the matter and lived up to without question does not logically and necessarily follow. It is not the way of the world. It is not a rule of practical statesmanship in affairs diplomatic.

A treaty is a law, and Mr. Choate is so good a lawyer that he need not be told by a layman that all laws are open to challenge and review.

This last assertion is only partially true, and sometimes a half truth is a great deal worse than an entire falsehood. The dictionaries define a treaty thus: "A treaty—a formal agreement or compact as between nations. The act of negotiating for an agreement; also the agreement so made."

It is in truth, as the writer of that editorial says, a law after it is negotiated, but there is this very essential and important difference between a mere law and a treaty. Once executed, it has the binding effect of a law; but when you enter into a treaty it takes two, according to the old adage, to make a bargain, and, as the dictionaries define it and as every man knows to be the truth, it contains the essential element of mutuality and agreement between nations, so that it radically differs in its nature from being merely a law. I read the concluding paragraph of that editorial:

Europe is falling away from the mockery-

This refers to a further consultation and mutual exchange of views at The Hague—

not so much from distrust of the United States as from a realizing sense that the ends of practical statesmanship as again displayed across the channel are better served by setting other nations together by the ears than by employing the processes of arbitration.

Now, Mr. Speaker, if we were to believe that, then we might just as well close the doors, draw down the blinds, and make no further effort to better mankind. If human nature is so mercenary as depicted in the concluding paragraph of this editorial, then there would be no further hope of international, world-wide peace. But let me here take occasion to say that we not only have as Chief Executive at the White House one who is determined to have peace if it can be brought about with honor, but we have also a great statesman in the person of Mr. Bryan, who was pronounced at a banquet at which I had the pleasure of attending the other evening by a gentleman who stands high in the councils of the party on the opposite side of the aisle-I do not think he will care if I mention his name-Mr. Bartholdt, of Missouri-who, as toastmaster, introduced Mr. Bryan not only as a great Secretary of State but as the greatest Secretary of State since the beginning of our Government. Surely if there is any power in the national mandate voiced by the President and the Secretary of State, I know, my colleagues, we will have peace; and I believe before the end of the present administration we shall have taken greater strides toward the final consummation of the policy of peace and good will among the peoples of the earth than has been accomplished during the last quarter of a century

I have spent the most of my life upon the shores of Lake Erie, one of that great chain of lakes which constitutes a part of the border line between Canada and the United States. Since the time that the treaty of peace was signed between Great Britain and the United States there have been billions of tons of the freight of commerce carried up and down those Great Lakes undisturbed by frowning fortress or the thundering of a single cannon to impede their progress. This happy condition grew out of that treaty, which provided that henceforth there should be no armament upon those lakes except the maintaining of a single little gunboat of 100 tons capacity, each such gunboat bearing a single cannon of 18 pounds force; a craft so light that it would hardly be dignified in comparison with many of

the private yachts which ply those waters to-day.

I believe that what Great Britain and America consumated and have carried out effectively during the past 100 years can be done with other nations. The author of the resolution before us [Mr. Hensley] well pointed out the other day that it was foolish to consider any serious complications with a country like Germany, when we have 20,000,000 of descendents of her people, who are now good American citizens. The same applies, although in less number, to Italy, France, Austria, and Russia. We are emphatically, then, the one nation on the face of the earth that can make the greatest impression on all our sister nations by the adoption of this resolution. And I do not know but, as in the case of the abrogation of the Russian treaty, which was made all the more emphatic, that the dissension in our ranks was represented by only one vote at that time. If we have only three votes now in opposition to this resolution, and the balance of the membership for it, it will be a happy event.

Before I conclude, I want to illustrate the power of public sentiment by giving just one simple, concrete illustration. We endeavored for a great many years in this country to abate the destructive manner—equally useless I was going to say—of celebrating our national Independence Day. You remember that, up to two or three years ago, when you picked up the morning paper under the date of the 5th of July, you saw the conspicuous headlines announcing so many deaths by lockjaw, so many people having their limbs blown off, so many, through carelessness, who were nearly killed or maimed for life. The accidents became so numerous that one of our great daily papers, the Chicago Tribune, if I remember correctly, made a yearly chronicle of the number of accidents or deaths that followed from that foolish, senseless policy of trying to kill off our children in order to show that we really rejoiced over our Independence Day.

Well, all at once a reform came about; had it been predicted the year before it would have seemed absolutely impossible to

accomplish. The newspapers, the greatest agency on the face of the earth with which to build up a healthy sentiment or destroy it, the greatest moral reform agency on earth, we have come to realize, finally took up the agitation for what they called a "safe and sane Fourth." Within two years' time they had brought about a condition, awakened such a public sentiment, and crystallized it in such a concrete manner that not only city councils adopted ordinances against the use of these deadly instruments of injury, but State legislatures enacted laws to the same end.

The last year showed the beneficent effects of that kind of a law. I have not the figures before me, but the number of deaths and accidents during the past two or three years, incident to our celebrations of the Fourth of July, have been cut down to one-tenth of what they were before. Why, as a result of those celebrations they used to have hundreds of cases of tetanus, or lockjaw, in the city of New York alone; the last year they had less than a dozen, I believe. Of course they have new and more effective remedies with which to treat lockjaw, but at the same time the accidents were few. That reform was brought about in a few short years, because the people came to realize that the great annual toll of death was a useless one. So will we come in time to regard the destruction of wars.

I want to predict in closing—because I want my friend from Pennsylvania [Mr. Balley] to have the remaining two or three minutes—that even though we may not see the immediate fruit of this resolution to be adopted here by the American House of Representatives to-day, we will have taken a long step in advance toward securing peace among nations and the settlement of their disputes by arbitration. And if, as a result of 10 years' advocacy of this point, we bring it about, we will certainly be very glad that, collectively and individually, we have been given the glorious privilege of standing upon this floor and, by voice and vote, advocate the passage of this resolution. [Applause.]

Mr. Speaker, I yield the few remaining minutes to the gentle-

man from Pennsylvania [Mr. BAILEY].

The SPEAKER pro tempore. The gentleman from Pennsylvania [Mr. Bailey] is recognized for five minutes.

Mr. BAILEY. Mr. Speaker, if I were to make a criticism of the resolution which is pending, it would be that it does not go far enough. I believe in a naval holiday, not for one year,

but for all time, if it could be brought about.

And, Mr. Speaker, referring to an expression of hope on the part of the gentleman from Minnesota [Mr. Stevens] to the effect that he might be given an opportunity to vote for a proposition that would really promise something in the way of a naval holiday, I believe that something has been offered. In a bill which I had the honor to introduce a few days ago I proposed that these big navy boomers should themselves be given an opportunity to pay for the Navy. In other words, I proposed that a supertax or surtax be placed upon large incomes for the support of the naval establishment; and I believe with all my heart that that would go very far toward discouraging these demands for a great navy.

That was one of the reasons, but not the chief reason, for

That was one of the reasons, but not the chief reason, for the introduction of that bill; not because I believe in a great navy, but because I would discourage it, and I believe that if the jingoes had to pay for jingoism we would have a great deal

less of it. [Applause.]

One of the gentlemen who spoke the other day, my distinguished and eloquent colleague from Pennsylvania [Mr. Moore], referred to the employment which is given to labor in the construction of battleships, in the production of steel that goes into the making of these great dreadnoughts. Well, I happen to come from one of the greatest steel towns in America; at least a town in which one of the greatest steel establishments in the world is located, and I stand here to say that if we were producing armor plate, if we were producing guns, and if we were producing any of these other materials that enter into the construction and maintenance of the Navy, just the same I would stand up here opposing the expenditure of the public money in the maintenance of that establishment, in the construction of battleships.

For I can not think of those people employed in the navy yard or in the shipbuilding establishments of Philadelphia without thinking also of those people back in the mines, back in the forests, back in the fields, who are laboring to support these people in their useless employment, because the building of a battleship is not a gainful occupation; it is nothing which adds to the wealth of the world or to the comfort of humanity. For that reason I believe that the plea of my colleague from Pennsylvania [Mr. Moore] made the other day is not one that

is in the interest of labor, not one that is to be considered for

a moment as an economic proposition.

Some one has said here—I think in the discussion this after-noon—that in the support of this Hague tribunal, this court of the world, this supreme court of the universe, it must have power behind it. While the gentleman from Pennsylvania [Mr. HULINGS], I think, was speaking for this resolution, he at the same time declared for force. He said we must have a great force to back this supreme court. Well, we have had an institution in this country ever since the Republic was an institution in this country ever since the Republic was founded that has been supported wholly, or almost wholly, I should say, by public opinion, and I believe to-day that public opinion is the greatest force in all the world. We have an electoral college. We have had men chosen for presidential electors since the beginning of the Government, and there has never been a single man since the foundation of that political part of our establishment who has violated the unwritten law which governs the elector and requires that he shall carry out the mandate of his party or the mandate of the people whom he represents. There has been no recreancy there. There has been no need of policemen, no need of any power, save alone the power of public opinion. And I believe we might appeal with greater certitude to that power than to any other force in all the world. [Applause.]

But my jingo friends—and it is with regret that included

among them must be the gifted and gracious and ordinarily pacific Secretary of the Navy-insist on keeping up the pace. We must spend uncounted millions on battleships, destroyers, submarines, and other instruments of war. We must relax nothing in the amazing course which Republican imperialism

Well, my answer to such demands is embodied in the bill before alluded to—II. R. 9322. It provides for a supertax of 5 per cent on incomes of \$20,000 and over to meet the cost of

This proposition has met with a howl of protest from our plutocratic friends as wild as the one which rose up from the landlords of Great Britain when something of the same sort was suggested by Lloyd-George. There was a dreadful hubbub raised by the Tories over what they said was the design of the to abandon the two-power standard. The British Chancellor of the Exchequer came back with the assurance that the Tories could have battleships and dreadnoughts to their hearts' content.

But we shall ask our Tory friends to supply the funds-

Said the chancellor-

We can not impose the burden on the already bowed back of labor; bor is even now being crushed by the load it must carry, so we prose to go to the land values of the country, and a share of these will taken to maintain the two-power standard which his lordship and is grace so vehemently demand.

So Lloyd-George is making the jingoes shoulder the burden of jingoism. He is making the privileged foot the bills for a policy designed to protect and aggrandize privilege. Is there any reason why we should not adapt the Lloyd-George idea to our own situation? We may not directly impose the burden of jingoism on the land monopolists of this country, but we can lay it on the great incomes, resting well assured that most of

them are derived from some form of landlordism.

A naval establishment limited in size only by the patriotism of our plutocrats! Why not? Is the proposition so monstrous? Jingo organs have denounced it from one end of the country to the other. But what does that argue? Only that the privileged class in this country are no keener than the privileged class of Great Britain to go down in their own pockets for the needed coin to build battleships and destroyers. the real big Navy enthusiasts. They are the inspiration behind our Hobsons and our Deweys. There is gain to the privileged class in militarism, imperialism, and their concomitants, but none for the man in the factory or in the furrow. These latter we do not hesitate to draft when any fighting needs to be done. But our plutocrats rarely do any fighting. Their patriotism usually takes the form of loaning money at excessive rates to the Government in times of deadly peril. The unprivileged masses do the fighting. It is they who brave the leaden hail and the hardly less fearful ordeals of the camp in time of war.

I am offering, and I want Congress to offer, our millionaires the first real chance they have ever had in this country to show the genuineness of their patriotism. They should seize it with joy and they should exert their tremendous influence in favor of my bill. According to my calculations, this bill will raise a total revenue of \$143,581,250, a little less than the estimates of Mr. Underwood and Mr. Simmons of the amount required for the Naval Establishment for the fiscal year 1914. As far as I can make out, the great body of the people are not suffering. Well, if war is hell, and peace such as we have had in the last

for a big Navy. The demand for naval exploitation comes almost exclusively from those upon whom this supertax would fall, and I feel sure that they will not, or ought not, protest against paying for what they so ardently want. If we enter into a competition such as that which the big-navy boomers advocate it will take a lot of money. I recall that the Demo-cratic Party at Baltimore pledged itself to a lessening of the burdens of taxation, but this pledge can not be fulfilled if the big-navy boomers are to have their way, or, having their way, are not required themselves to foot the bill.

Personally, I regard this naval competition as in the last degree unwise. There should, indeed, be a "naval holiday," and it should last not for a year but indefinitely. There is no more sense in nations going around armed than there is in the private citizen making of himself a walking arsenal. Just as we have progressed in civilization we have dispensed with the loaded hip pocket; and it is a material blot upon this civilization that we have not likewise abandoned the national hip pocket as symbolized in our great Navy and our huge standing

But if we must have this great Navy, it is my thought that it should be supported by the special interests that never miss an opportunity to clamor for it. That is the thought which is back of my bill, and I am grieved to note that this thought is not meeting with that generous response in plutocratic circles

which innocently had been expected.

Mr. Speaker, I can not help feeling that the proposal in the pending resolution of a "naval holiday" can be most effectively promoted by the plan modestly suggested by me. do not mean to say or to imply that all who shrick for a big navy are rich or that all who oppose a big navy are poor. I mean to say is that without the support of certain great plutocratic interests big-navy demands would receive scant attention, either in the newspapers and magazines or in the Congress of the United States. The big-navy propaganda is purely plutocratic in its inspiration; it derives its vitality from sources of privilege; and we can not more certainly check its progress than by calling privilege to the captain's desk and making it fork over the passage money.

The SPEAKER. The gentleman from California [Mr. Kent]

has 16 minutes left.

Mr. KENT. Mr. Speaker, I yield the balance of my time to the gentleman from Nebraska [Mr. Sloan].

Mr. MANN. And, Mr. Speaker, I yield back the two minutes I have remaining to the gentleman.

The SPEAKER. The gentleman from Nebraska [Mr. SLOAN] is recognized for 18 minutes.

Mr. SLOAN. I do not expect, Mr. Speaker, to argue at length the merits of this resolution. It would be decidedly unfashionable so to do. The real merits of this controversy seem to have been generally ignored. Since the gentleman from Ohio has referred to the discussion of the gentleman from Minnesota [Mr. STEVENS], I feel like accepting the challenge and saying that from my viewpoint in this discussion, although there has been a great deal of elequence unbottled, he almost alone really argued the question before this House.

It was well said by the leader of the majority [Mr. UNDERwood] that probably nearly everybody would vote for this resolution. I believe it is true. The discussion should have taken place along the line of wording the resolution and the basis of fact therefor, so that we could place ourselves before the country and the world in the most satisfactory way and

with the strongest possible footing.

It was said that only one Member from the majority side and two from the minority side opposed this resolution. I think the Members on the minority side referred to were the militant son of Mars, Maj. Moore, of Philadelphia, the City of Brotherly Love, and the gentleman from Minnesota [Mr. STEVENS]. Of course, they included for the majority the hero of the Merrimac, Capt. Hobson. But I want to call attention to the fourth Member, coming from the majority side, the rather bellicose giant from Mississippi [Mr. Sisson], who laid down a proposition here that is astounding and unique. He said that if there is one thing more cruel than war itself, it is the burden borne by the taxpayers in preparation for war in time of peace. That is a very startling proposition. If we eliminate the pensions based upon former wars and every dollar that would be necessary for the purpose of keeping down domestic insurrection, all that we spend on armament on land and sea would not be a dollar apiece per annum for the people of the United States.

It is a serious proposition for a great man to say on the floor of this House to the world, that paying a dollar per capita in the United States for preparation is more cruel than actual war. The great Gen. Sherman said, "War is hell." Perhaps it is. 16 years is worse, we must have been living in a superhell of a condition here in the United States for the last 16 years. [Applause.]

But it is just such propositions as that that are magnified into a stature and volume which lead the outside world to an erroneous conclusion, and that is one trouble with this resolu-

Winston Churchill, a marvelous young man with American blood coursing through his veins, which is entirely to his credit, finally became First Lord of the Admiralty of Great Britain. Last April, when saying what the Government expected to do, he proposed a national armament-building holiday. The proposition went primarily, of course, to Germany as the one nation most distinctly concerned. The wise The wise old chancellor of Germany waited to see what Churchill meant in the concrete, and when the Germans heard it, they said, with practically one voice, "Denken Sie ein Deutscher ein Gans war?" Because, after the proposition of Winston Churchill had been discussed and rejected by every leading Government and opposition organ in the great British Empire, he took it before the ministry so that he might have its approval to meet the demands of the German chancellor and tell what it meant. He said that he did not mean a national holiday for all armament building. He went up into Manchester in October, in the northwestern part of Great Britain, away from London, the Channel, Strait, North Sea, and the Thames. Up there, where the pulse of Liverpool is not so distinctly felt, surrounded by people like some of those in the interior of this country who do not like battleships, he said:

The proposal I put forward in the name of the Government for a naval holiday is quite simple. Next year, apart from the Canadian ships or their equivalent, apart from anything that may be required by any development in the Mediterranean, we shall lay down four great ships to Germany's two. Now, we say to Germany, "If you will put off beginning to build your two ships for 12 months, we will put off, in absolute good faith, the building of our four ships for exactly the same period," while the relative strength of the two countries would be absolutely unchanged.

That is the proposition that we are to consider in this resolution, that is what it means, and that is what it is confined to. The Times, the great "thunderer" of England, said :

It is impracticable. Naval strength can not be reckoned in terms of capital ships alone. Such a proposal, if accepted, would not preclude Germany from spending the money which she thus saved upon minor warships or upon submarines.

Once again the first lord of the admiralty exposes England to the deep humiliation of seeing an appeal regarded, as this is certain to be—

Observes the Standard-

either as a sign of weakness or an artifice to delude a rival into a feeing of false security.

The proposal is assuredly one which no foreign Government will accept—

Is the final verdict of the Daily Chronicle.

What justification-

Angrily asks the Birmingham Post-

has Mr. Churchill in mind for hoping that his latest advance will be any more successful than the others.

And after Germany received the proposition and had it reduced to the concrete, this is the response by their Government organ (Lokal Anzeiger):

He thinks to anticipate the production of Germany's naval estimates, doubtless recognizing the fact that if he could make them appear wrong on any one point, the Reichstag would throw out the whole of them. Now, what does this proposal mean? It means that England would either build three ships herself or get them from Canada. It is well known that Austria and Italy intend to enlarge their programs in the Mediterranean. England would meet this by building two ships. England would therefore have five new ships, abstain from building five more, and expect Germany to build none.

Mr. HENSLEY. Will the gentleman yield right there?

Mr. SLOAN. Yes.

Mr. HENSLEY. I want to know the pamphlet from which the gentleman reads.

Mr. SLOAN. The Literary Digest, which is regarded as pretty good authority, internationally as well as here.

Mr. KINDEL. I would like to ask the gentleman from Nebraska who the gentleman from Mississippi was that he referred to?

Mr. SLOAN. Mr. Sisson, who made such a remarkably belligerent speech on the 28th of April directed at our neighbor, Japan, of the Far East, in which he was ready to go to war upon the slightest provocation. A few days before that he had voted against two battleships. He is like a great many distinguished gentlemen who are always in favor of a gunless war and a shipless navy.

Now I want to call your attention to this resolution (sec. 1): Resolved, That in the opinion of the House of Representatives the declaration of the Lord of the Admiralty of Great Britain, the Right Hon. Winston Churchill, that the Government of the United Kingdom is willing and ready to cooperate with other Governments to secure

for one year a suspension of naval construction programs offers the means of immediately lessening the enormous burdens of the people and avoiding the waste of investment in war material.

Stripped of confusing verbiage it means:

It is the opinion of the House of Representatives that Churchhill's declaration of the British Government's readiness to cooperate with other governments to secure one year's suspension of naval construction programs offers means of lessening great tax burdens.

The proposition of Churchill was not to suspend naval construction for a year. At most, it was a doubtful modification of its own. This was proposed primarily to Germany, and in effect contingently to others, and was rejected by Germany. That this status of the proposition does not offer the means of lessening great tax burdens immediately is a necessary conclusion which will probably cause our President to smile at the

grotesque lack of foundation of our solemn opinion.

In the face of these facts will we still say it is our opinion and say it offers the means of immediately lessening the enormous burdens of the people and avoiding the waste of investment in war material? Upon what can we predicate such an Why, gentlemen, it is a shrewd move on the part of Winston Churchill, who desires to have this shipbuilding stop, as far as the North Sea is concerned. Germany has little present interest in the great Mediterranean. The Mediterranean Sea is to be the scene of great naval activity during the next two decades, as it was of the centuries past. It was the scene of three of the great naval battles of the world-Actium, Navarino, and Trafalgar. It may be the same in the next 20 years. Nobody knows it better than England. Since the Italian war, since Turkey has been driven to desperation and with little foothold in Europe, since Austria has been put on a new footing, with Greece rejuvenated and revived, and all these nations preparing a naval program, with England seeking to protect her interests at the two ends of the Mediterranean, this would give her an opportunity to use every dollar of her surplus to protect her interests in the Suez Canal and keep Gibraltar the rock of her refuge. And further, the fleets of the air and the construc-tion of the "cavalry of the sea," and the submarine terrors, will now furnish great channels for expenditures, none of which does Churchill propose to diminish.

Mr. HENSLEY. Will the gentleman yield?

Mr. SLOAN. Certainly.

Mr. HENSLEY. If the gentleman were persuaded beyond doubt that England was acting in good faith and there was a prospect of bringing to consummation this plan which the resolution tends in the direction of, would the gentleman be in favor

Mr. SLOAN. I favor peace, so far as that is concerned, and will probably go so far as to vote for the resolution, because I will strain a great point not to even appear as voting against peace, but it ought to be amended instead of being based on the precarious footing of the proposition given out by England's first lord of the admiralty, which is discountenanced at home, rejected abroad, and has no standing anywhere. Why try to galvanize a corpse? I believe there is genius enough in America, I believe there is talent enough in this House to draw a reso lution and submit it and have it passed by this House and this House go upon record as being in favor of peace, and to that end favoring a reduction of armament by ourselves and those nations abroad.

But I do not think that the gentleman from Missouri-I have called his attention to this matter heretofore, as he will remember-would desire to pass on to fame, as I hope he will, in driving a proposition of this kind through in this form by using an excellent plank which he nails to a poor, little, broken, rejected lath. Would a man who could build his house upon a rock go abroad for a mass of quicksand for it to rest upon?

Mr. HENSLEY. Mr. Speaker, I want to say to the gentleman that I have no thought of entering this thing for fame. I want to accomplish as much as possible by this simple resolution.

Mr. SLOAN. I am willing that the gentleman should have it, and I am willing to help do it; but I do not think the people of the United States or the world, when they study this proposition and understand where it stands, or, rather, where it does not stand, or that you or anybody else will have any pride therein because it involves us in expressions of opinion, that as time goes on will embarrass us and which the general eagerness

to vote for peace will not justify or atone. Further, should we, that division of the legislative branch of our Government which has nothing to do with treaty making, say to the President of the United States with all the force of an almost unanimous vote that this is our opinion, that these facts exist, which we know do not exist? We should recall that this resolution will go direct to the President and will not pass

through that other body, which has not entirely surrendered its right or practice of deliberation.

I now read section 2 of the resolution:

SEC. 2. That a copy of this resolution be furnished the President with the request that, so far as he can do so, having due regard for the interests of the United States, he use his influence to consummate the agreement suggested by the Right Hon. Winston Churchill,

What was the agreement that Mr. Churchill suggested? The agreement was primarily between Great Britain and Germany. Great Britain proposed it, and it went primarily to Germany. Germany has rejected it, and you are asking your President to try to get nations to agree to a thing that one first proposed,

then pruned, and the other has already rejected.

It is unusual, and it should be, for this House to ask the President to take a definite step, as it should be unusual for the Executive to ask Congress or its Members to take a legislative We should therefore consider well the basis of our request before making it. I assume the President, following the example of his distinguished predecessors, has been making all efforts making for peace that international conditions and diplomacy would seem to warrant. So that before a request like this be preferred in this form some extraordinary circumstance must have occurred of such commanding moment and of such wellestablished character that large progress might be made by moving and great prejudice result from its neglect.

Personally, I am for peace by whatever honorable means it may be gained or maintained. If we can promote it by passing this resolution, burdened as it is and by no means supported by

the Churchill crutch, well and good.

If we can establish and continue peace by regular treatymaking procedure, so much better. I regret the weakened position we hold by reason of the rejection of recently negotiated treaties.

If we can in extremity maintain or restore peace by an American Navy, then will I favor that way, because the battles fought upon the sea are usually short and decisive. The fighting there is usually done by the professional fighters; while if the enemy break through the cordon of our naval defense, the breasts of our volunteer boys become the targets for the enemy's bullets. And great as may be the cost of battleships, battleships are cheaper than boys. [Applause.]

The SPEAKER. The time of the gentleman from Nebraska has expired. The gentleman from Ohio [Mr. FESS] is recognized for an hour. [After a pause.] Mr. Fess not desiring to speak, the gentleman from Texas [Mr. Hardy] is recognized

for an hour.

Mr. MANN. Mr. Speaker, will the gentleman from Texas vield?

Mr. HARDY. Yes. Mr. MANN. How much time does the gentleman expect to use?

Mr. HARDY. I have an hour, but I expect to yield to two gentlemen who have asked for some of my time.

Mr. MANN. Does the gentleman expect to occupy the full

Mr. HARDY. Really, I do not know how much these gentlemen will want.

Mr. MANN. May I ask, Mr. Speaker, how many more gentlemen expect to be recognized to-night?

The SPEAKER. Ten.

Mr. TOWNSEND. Each one entitled to an hour?

The SPEAKER. Each one entitled to an hour if he desires it. Mr. MANN. Each one will be, if he gets recognized, but I do not think he will be recognized, for each one will not be

Mr. TOWNSEND. The gentleman perhaps shares my hope

that we might get away for an early dinner.

Mr. MANN. Oh, I am in no hurry.

The SPEAKER. The gentleman from Texas is recognized for an hour.

Mr. HARDY. Mr. Speaker, this debate or discussion has been a disappointment to me. I did not expect it to result in the change of one word in the resolution itself or of one vote upon it, but I was in hopes that the interest manifested and the presence of the Members during the discussion would arouse an interest in the purpose of the resolution. If all the Members of Congress had remained present, the fire of the discussion would have been much more intense and we would have had something along the line I had hoped. In other words, this discussion was intended to be educational, to go out among the people of this country and of the world and help build that spirit of peace which shall ultimately put an end to war.

In ancient times poets began their immortal verses with invocations to the muses, praying for a heavenly flame to kindle

their thoughts into noble and worthy expression.

I do not pray for such inspiration, only because I realize how inadequate to the task my capacity is; but I do pray that some one here during this discussion, or elsewhere and ere long, with breadth and depth of intellect, with heart and mind affame with the zeal of the crusader; some poet, some philosopher, some statesman, will touch the chords that shall wake the conscience of all mankind against the crime of war.

Not feebly wake it to mild and aimless protest, or to such false professions of abhorrence as yoke themselves with preparation for slaughter, but wake it to the wild, fierce zeal that will muster the nations into legions of peace, and make indi-vidual men willing to sacrifice and, if need be, die for the glories of peace, as men and nations have sacrificed and died for the

mad, red glories of war.

Why should we burden ourselves and mortgage our posterity to imbrue our hands in the innocent blood of our brother men? We want peace. We praise peace, but "in time of peace prepare for war." There may have been a time when the motto In time of peace prepare for war" was wise. When ambitious kings and tyrants, without justice and without pity, ruled: when nation levied tribute on nation, and armies brought their captives home for slaves; when conquest meant rapine and plunder; good men, unambitious men, peace-loving, God-fearing men, believed in that motto.

When that maxim was wise the so-called great men did not want peace; they thirsted for the glories and prizes of power and empire and personal grandeur. To-day kings and lords no longer rule the great nations of the earth; the people rule, and all men except the fool, the fanatic, and the vainglorious bigot or the vile schemer for some selfish interest want peace, and no man dares to say he prays for war. Still, there is the martial spirit in our animal make-up, the spirit that quickens the blood when the drum beats, that thrills to the music of the "Marseillaise" or "Dixie," the spirit that the jingo war orator can appeal to, even in this country of ours, if he is careful while

appealing for war to profess that he loves peace.

Mr. Speaker, if here, to-day, a man should walk among his neighbors visibly armed for conflict and yet declaring that he was in favor of peace with all men, who would believe him and who would care to keep company with him in the walks of life? I listened—without pleasure, I confess—to the gentleman from Alabama a day or two ago. He told us what he has so often told us before-how much he loves peace and what stupendous, what fearful preparations he would make for war. He says he thinks the United States can do more for universal peace than any other nation in the world to-day. I think so, too; but he hardly takes time to voice this thought before he launches out with a list of the battleships and statements of the war footing of the nations of the earth. How accurate his statements are I shall not inquire; but it is somewhat strange that his statement makes Germany's navy more than twice as strong as ours, while Senator Burron declares in a well-written magazine article that the Navy of the United States is now second in cost to that of Great Britain-more costly than that of Germany-and Mr. Burron is a student of the navy question.

But the gentleman from Alabama tells us that England has or is building 46 battleships; Germany, 24; the United States, 12; Russia and France, 11 each; Japan, 10; and Italy, 9. Then he says that the proposal stated in this resolution comes from Mr. Churchill at this time with peculiar ill grace—to use my own expression of his thought—and thinks that because England has nearly twice the battleship strength of any other nation she ought not to be heard to propose at this time to suspend battleship construction for a period of one year. And yet, after he had so criticized England, he progressed but a short time until in substance he declared that before the United States should accept the proposition of Mr. Churchill she ought to get in the same position on the Western Hemisphere that England, as he says, occupies on the Eastern Hemisphere to-day. He proposes that before we listen to the proposition to suspend naval construction we shall build until we have an armament on the Atlantic equal to the armament of Germany and an armament on the Pacific equal to that of Japan; that Germany, having 26 battle-ships, we must build up to that on the Atlantic, or, rather, since Germany now has 26, and is building at the rate of 2 battle-ships per annum, and we have only 12 ships now, we must build as many ships per annum as Germany and build 14 more before we are ready to listen to any proposal for the suspension of battleship building on the Atlantic side. And then, Japan having 10 battleships on the Pacific, we must build 10 on the Pacific and as many more as Japan shall build be-fore we should listen to proposals to suspend building battleships on that side. England has been criticized because she hus put forth the proposition to suspend armament building while she has the naval strength of two nations and because, she claims, so it is said, that she ought to be allowed to have such strength; that is to say, that England should maintain a navy equal to that of any two other nations in the Old World.

Our friend from Alabama seems to be one of those critics, and yet he makes exactly the same proposition for the United That shows that he has at least some English blood in his veins. He does not want to agree to suspend until we have the double or the two nation standard here. If we must have a Navy equal to Germany on the Atlantic side and one equal to Japan on the Pacific side, why should he criticize England? fancy that if we already had that navy no one, and the gentleman from Alabama least of all, would expect us to destroy part of it in order to equalize ourselves with some other nation. The gentleman from Nebraska [Mr. SLOAN] tries to show that in some speech made by Mr. Churchill he had abandoned his proposition; that he had declared it was not England's purpose to abandon her hold in the Mediterranean, and therefore that England would not consent to lessen the burden of the nations. Yet the very speech he quotes declared Mr. Churchill's desire to suspend the building program of England of four great battleships if Germany and other great nations would agree. situation now is, Mr. Speaker, that England has a navy-building program of four and Germany of two great battleships, and the Secretary of the Navy asks us to build two battleships this year; France likewise is to build two more battleships. What the building program of Japan, Italy, and Russia is I do not know. The proposition of Mr. Churchill is that England will not build her four battleships if Germany will not build her two, the United States not build her two battleships, France not build her two, and Russia, Japan, and Italy will suspend their building program, whatever it is; and yet the gentleman from Nebraska says this proposition of Mr. Churchill to suspend this building program for one year would not lessen the burden of the toiling masses of the nations.

As I understand the cost of building great battleships—that is, fifteen to seventeen millions each—it would save four times fifteen, or \$60,000,000, to the people of Great Britain; it would save twice fifteen, or \$30,000,000, going out of the Treasury of the United States; and it would save the overburdened toiling people of the great Continent of Europe a proportionate Of course, such sums do not amount to anything to men who love peace but must prepare for war. I have been told by a member of the Naval Committee that these great dreadnoughts will cost \$17,000,000 each for construction and equipment; and after you have built one of them, the gentleman from Alabama [Mr. Hobson] says, you must write off for depreciation one-tenth every year. It costs, at the best estimate I can find, \$1,000,000 per annum to maintain one of these battleships; that is, to keep the soldiery on it and keep it running. Seventeen million dollars plus \$10,000,000 to maintain it for 10 years means \$27,000,000 for each battleship that is put affoat; and the chances are that in four or five years after launching the battleship will be superseded and thrown aside. If the toiling millions of the people of this country and every other country can be saved these monstrous sums, I want it done.

Mr. Speaker, let us figure on this a little. England puts, say, \$60,000,000 per annum in building four battleships. In 10 years she will spend \$600,000,000 for new construction. These ships—40 of them in all—will have been maintained an average of five years each, which would make a cost of \$200,000,000 more, or \$800,000,000 in all. This does not take into account her present navy and the cost of maintaining it, which latter cost I think might be conservatively estimated for the 10 years at \$2,000,000,000.

If the nations go on as they are now going, in the next 10 years England must spend on her navy at least \$2,800,000,000. I was about to say that, to be conservative, I would estimate the cost of our naval bill for the same period at half that sum, but when I paused I reflected that that would only make our bill \$1,400,000,000, or \$140,000,000 per year, and we already exceed that. If we build two battleships this year, our naval bill will exceed \$160,000,000, and our bill is jumping every year. I think I have underfigured the whole thing; but in God's name are not these figures staggering? I firmly believe that unless something is done to check the present mad race of nations in building battleships our naval program will cost us more than \$300,000,000 per annum in less than 10 years. In 1886 our naval bill was less than fourteen millions; in 1900, 14 years later, it was fifty-five millions; in 1914 it will be, if the Secretary's program is met, over one hundred and sixty millions. What will it be in another 14 years?

I will not conjecture; but if England, Germany, and the United States each had a Hobson in the seat of power, they would all be bankrupt before 1928.

One gentleman says the near future of naval action is going to hang around the Mediterranean shores, because some of the great battles of the past were fought there; and therefore I presume he wants us to put a navy in the Mediterranean. When the battle of Actium was fought all the civilization of the earth was around the Mediterranean. Subsequently civilization came westward to the shores of Great Britain, and then across the Atlantic Ocean; and in the future, if we keep these armaments, although the smaller nations may fight among themselves, the great nations of the earth will find their theater of naval action not in the Atlantic or the Mediterranean but, if at all, in the Pacific Ocean. I think even the gentleman from Alabama [Mr. Hobson] has not yet urged us to put a fleet in the Mediterranean,

Let me try to conceive what the future may hold in store for the toilers and taxpayers of the world. By going back 15 years we can imagine what the next 15 years will bring. This Democratic régime, I believe, is starting out on a career of 15 years of power. If we do not stop, we will have \$350,000,000 of annual naval expenditure before our 15 years of rule is ended. It will be far greater than that if we can not check the Hobsons and the naval constructors and battleship building interests.

The gentleman from Alabama says that it is not necessary for us to build against England, because the tendency in England is to be friendly with the United States. I suppose he realizes the difficulty of holding up before an American audience at this time the prospect of building a navy to equal the navy of Great Britain, which would call for us to build 34 great vessels before we would catch up with the position in which England is now, and unless something is done England would perhaps have 34 more vessels then. To equal England, we know we would be compelled to build more than 60 great vessels in the next 10 years. Even the Alabama gentleman shied from that proposition, and said that we must only build to equal Germany on the Atlantic, and when we start to do that he says that Germany, realizing the greater length of our purse, will fly the track, because she would realize it would bankrupt her to keep up with us. Why, Mr. Speaker, Germany is not building her vessels because we are building vessels. Germany is building because of the menace as she sees it, or as her battleship builders and her jingoes see it-the menace of England. I ought perhaps to pause here to tell something of the war scare that was manufactured in Germany by the battleship builders about the time Germany was getting ready to lay down her naval program, but I will not.

Germany is not hard to frighten with the bugbear of England, nor England with the bugbear of Germany. And notwithstanding that England has 46 to her 24, or 22 vessels more than she, Germany is not weary of the fight or the race and is still plugging along in her attempt to overtake England.

Why has England so great naval power? Well, I will try England has inherited a policy centuries old. England has been a naval power and a maritime nation almost from the days of Alfred the Great. Certainly from the days of Cromwell she has been a great maritime nation. She first built her navy when her shores were subject to frequent menace and not infrequent attack, when Europe was a boiling cauldron of ambition-mad kings and empires. Her commerce in barbarous times depended much upon a navy. By her wars with Spain and France and other nations of Europe she learned in darker times to make her navy her idol. She not only had her home and fatherland surrounded by water and defended by her navy, but she used it and by it gained possessions in all the quarters of the earth. Across the sea she has had Australia and Canada, and she had possessions and colonies in the isles of the seas to the south of us. She has the same kind of jingo statesmen at home that we have here, who talk that it is still necessary to build up a great navy in order to defend the shores of Canada on the east and on the west; who talk that it is necessary to build up a great navy in order to protect the little islands in the Caribbean Sea; who talk that it is still necessary to build up a great navy to protect the shores of Australia and all her islands in the East and her great possessions on the Continent of Asia, and under the same kind of logic that the gentleman from Alabama uses so eloquently here, England has been induced to believe that it is necessary for her to have a greater navy than any other nation on the earth. I confess that if any nation needs a great navy England does. Consequently she has perhaps claimed that she ought to be entitled in this race of naval construction to have a navy equal to that of any other two nations.

But Germany has begun to have islands and possessions far across the water. Germany has commercial interests all over the earth, and Germany begins to rival the pretensions of England, and says: "I want a navy commensurate with that of England." Germany has not had a thought of ranging herself

in a contest with the United States.

What, then, does Mr. Hosson's position amount to? just this: We must build upon the Atlantic until we equal the navy of Germany. Germany must build until her navy equals that of England. Germany will struggle to equal the navy of England, and we on the Atlantic must struggle to equal the navy of Germany. Put the three together and it means that before the program the gentleman from Alabama advocates is arrived at, before we may say to the world that we are willing to rest, we must have a navy equal to the navy of Great Britain on the Atlantic coast and we must have a navy that is equal to the navy of Japan on the Pacific coast, so that the United States must stand not only at a two-nation standard, but at a two-nation standard which shall embrace England as one of those nations

I have tried to figure that up, and I want to give you what that amounts to. But before I get to that I want to call your attention to some points of the gentleman's discussion, which when sent out before the people without any answer to them, seem to be persuasive. He argues that our Navy is going to keep us out of wars. He stated that Germany left Venezuela in 1904 because we had a better Navy than Germany had when we demanded her withdrawal. I deny the correctness of that statement. He simply assumes that the controversy between the United States and Germany was settled peaceably because our Navy was the greater. I want to inquire why Great Britain left Venezuela in 1894, when we did not have a

Navy equal to that of England, or one-tenth of it?

If we had had a Navy equal to that of England in 1894, when our diplomatic controversy was far more strenuous than it ever was with Germany and when Mr. Cleveland caused England to recede from the position she had taken with regard to Venezuela, our friend from Alabama [Mr. Hobson] would have declared that our great Navy made England recede. But inasmuch as we did not have that Navy he is silent upon that Anglo-American controversy. I believe the gentleman from Alabama claims that France left Mexico in 1866 because we I had always understood that it was behad a great Navy. cause if she feared the United States at all she feared our Army

crossing the Rio Grande.

I have heard the gentleman from Alabama claim on occasion that all the great pivotal events of the world had been decided by great naval battles. When he thinks of war he forgets all history except naval history. He forgets Tamerlane and Mahomet and Cæsar and Alexander and Frederick and Na-poleon and Lee and Grant. He forgets all about the fact that nearly all the great historical battles of the world, except Actium and the Nile and Trafalgar, were fought on land. He forgot that even Waterloo was not fought at sea. He forgot that the great conflict between the North and the South, while it had around its edges at a port here and there and on the Mississippi some naval conflicts, yet it was a great fight between men on land.

Mr. HENSLEY. He just remembers the Merrimac.
Mr. HARDY. I think the Merrimac is remembered. The trouble, unfortunately, is this: We have two old warriors with us. One of them addressed us this evening. The other has been with us since I have been here—Gen. Sherwood, of Ohio. He made an eloquent plea for this resolution yesterday. What hairs he has left are snow white. Both of these saw the fearful terrors of the war for four long years when they fought. They are both earnestly and zealously for peace and for this resolution. But our friend from Alabama has been a naval hero many years more than he was a soldier. He was a soldier for the sinking of the Merrimac, and since then he has been the hero of the Merrimac. He can not help it. Was it the Merrimac he sunk?

Mr. HENSLEY. Yes, Mr. HARDY. Now, our friend has lived, and in his subsequent years has dreamed of the Merrimac and the Navy. It has filled his sky, it has filled his slumbers. It is fast obsessing and obscuring all his waking hours. With him it is always war, war, preparation for war. "We have peace, it is true, and no prospect for war; but let us not be caught napping; let us devote all the time of peace to preparing for war." But that splendid old soldier, Gen. Sherwood, who fought at the front for four long years of hard, fierce war, says, "Peace, peace, and by peace I mean peace." Let us not prepare for war, but prepare for

Let me mention another subject. Here we are to-day talking of Mexico as barbarous, and we censure the people of Mexico

for engaging in a barbarous, cruel, and ruthless kind of strife, We see them doing as the ancient Greeks did. Classic history is full of the stories of pillage and plunder, of Huertas and They all fought in the name of patriotism and professed to love peace while preparing for war. Such peace lovers destroyed Carthage and Athens and Babylon and are tearing poor Mexico's quivering heart out. In what way are we a better or more civilized people, when we have no more control of ourselves and are willing to go to no further pains to secure the blessings of peace than those people on our south? you had a Madero who overthrew a Diaz; a Huerta assassinated a Madero; a Carranza now stands out against Huerta; and when Huerta shall fall, who next will ascend the throne of power in Mexico? We call those people barbarous, and yet we are pursuing the same policy with reference to our naval equipment. We are doing the ridiculous thing for which we chide the ancients when they engaged in the wager of battle. They tried causes between men with lance and helmet or sword and shield; if the persons themselves did not engage in the conflict, then each one was allowed to choose or hire a champion, and those champions went upon the field of battle to determine who and what was right. And we, a Christian Nation, tell our people that by the length of the gun, by the size of the ship, by the thickness of our armor plate, by the weight of our projectiles and by the strength of the powder that propels them, we will determine international questions of right. Is it not the old gage of battle? Truly the nations yet must walk through fire.

On this question of armament the civilized nations of the earth stand on no higher plane than did the Greeks when Troy fell or than do the Mexican people to the south of us. we are in worse attitude, for ours is cold-blooded and deliberate, while the Mexican acts under the impulse of boiling passion, when his blood is hot and his vision blurred. But we look with the calmness of the Sphinx over the waste and war wreck of the ages, and we read the story of past and gone civilizations destroyed in the fury and ruin of war and covered by the weary rolling sands of time; and still we plan and still plan to spend our substance and mortgage posterity in order to get the means to imbrue our hands in our brothers' blood, and we

call ourselves Christians.

But look a little further. It occurs to me that it is a re-markable thing that the spirit of a Member of Congress from the Southland, once desolated by the iron heel of war, should prompt him to rise in this House urging that the United States should rule the seas, should dominate the Atlantic in order to maintain the Monroe doctrine, and dominate the Pacific in order to secure the open-door policy for our trade and traffic there.

And yet that is his proposition. This brings me back to a point from which I digressed a while ago. At what cost shall we do this? Bear in mind we must build to equal Germany and therefore England on the Atlantic Ocean, and to equal Japan on the Pacific.

I know we can not carry out such a program in the next 10 years for \$300,000,000 per year, but let us suppose we could.

That would amount to three billions in 10 years

Now, what might we do with that \$3,000,000,000 in 10 years? My State has 200 good big counties, and with this three billions we might build 100 schoolhouses in each county of 50 States like Texas, each costing \$2,000 and have left over one-third of our three billions. But we have not so many States like Texas, so I will say that in these 10 years we might dot the hills and val-leys of every State in the Union with schools, give each State a splendid university and magnificent library, build all the hospitals needed in big and little cities out of the two billions, and with the remaining billion we could build Roosevelt Dams enough to irrigate all the arid land where irrigation was possible, and could redeem all our swamp lands between the Pacific and Atlantic Oceans, and build good roads through every community.

The program of the gentleman from Alabama calls for and would take all this money and put it in a Navy to be dumped into the sea at the end of 10 years or superseded in less time, when to-day there is not a cloud above the horizon indicating the possibility of a war with any nation on the earth.

Do we want to bind and sell our souls to hades? I can imagine that Mephistopheles in that quaint, pathetic story of Faust, when he pointed the old sinner to his fearful bond and said "sign," had the aspect and appearance of my smooth-faced friend from Alabama. He promised poor Faust dominion over this world, the gratification of every ambition. Will you sign the bond?

The gentleman may believe all he says. He has the unction of a zealot. He seems to be in earnest. But in this country and day and time of ours there are no men who believe in such

things except under some strain of imagination or overbrooding. In Germany and England many men are perhaps wrought up to fever heat through the mutual menace and jingoes and hot commercial rivalry of the two nations, and because they have here-tofore extended their power and commerce by war, but we have no such men. We want peace. We do not want to add to our territory by conquest. We do not desire to spread our commerce by war. A thousand battles won by us over weaker nations can add no glory to the Stars and Stripes.

If I was called upon to classify the motives prompting the attitude of men, however, I would say that the motive professed by the gentleman from Alabama is as high above that professed by the gentleman from Pennsylvania [Mr. Moore] as Heaven is above the earth. Our friend from Pennsylvania says that he wants to keep up our program of two, four, or six battleships— the more the better—in order to give employment to labor in his God save the mark. Labor appeals for the destruction of mankind; labor to have employment would build the weapons to pour shot and shell into the ranks of the innocent and help-Why, in Germany and France labor is rebelling against going to war, and the French and German artisans, I understand, not long ago in great meetings, when Germany and France were about to be embroiled in war over Morocco, carried huge banners inscribed, "All Morocco is not worth the bones of one German or French workingman." The empires of the Old World are going to find themselves up against a wall when they undertake to make war on each other, and that wall will not be the battleships of each other, as taught by Mr. Hobson, but laboring men refusing to go to battle. Labor in favor of building battleships in order to give employment. Again, God save the mark.

Do you know what made war heretofore? It has been the fact that ambitious or avaricious men have brewed wars in order that they might themselves feed their passion for power or lust for gold. It has brought about the age-old agony poverty of the masses of the nations of the Old World. hear people talk about the prosperity of this country being due to the tariff or to this Government policy or to that or the other, and then we are told that our prosperity is due to the natural fertility of the soil and the infinite resources of our country and splendid industry of our people, and we say that we had prosperity in spite of the tariff and other harmful laws. tell you one thing that made our country happy, lightly burdened, and prosperous. France is laboring under a national debt of six billions of dollars, accrued and accumulated by war; England and Germany under a national debt each of about three and one-half billions; Russia of four and a half billions; Italy about two and a half billions; and poor old Spain of nearly two billions, while we have less than one billion of such indebtedness. We are now proposing by the route of our Navy and Army to climb into this heavy-debt class of nations. you not know that when something has to be paid, somebody must toil in order to pay it? Do you not know that when they pay interest in France on six billions of dollars, the hornyhanded sons of toil have got to sweat in order to pay that interest, and the working people have begun to learn that war debt means poorly paid labor and toil for them? The gentleman from Alabama actually has in substance proposed that since by peace and industry we have become the wealthiest of nations, we now enter the battleship contest and drive all other nations into bankruptcy. When we have bankrupted England or Germany or France, how are we affected, except to lessen the markets for our produce and increase the pauper labor competition of impoverished nations? How long, Mr. Speaker, will it take good men all over the world to learn that not the poverty but the prosperity of any nation helps every other nation? The gentleman from Wyoming [Mr. MONDELL] said that in the olden days nations had not learned the art of making a national debt, and when war swept over the country, present desolation came, but when the war chest was empty the war had to cease. This was true, but he said further that in modern times we have learned by the process of creating a national debt, the art of putting a blanket mortgage upon posterity and prolonging the war. This also is true. In warfare and preparing for war to-day, not only do we burden and pillage and plunder and murder the children of our own generation, but we mortgage and plunder the children of unborn generations.

I have here a book from which I desired to read, but at this late hour I will not attempt to do so, but will tell what it was that I desired to read. In the Middle Ages a condition of almost continuous great and petty national and baronial warfare became chronic; the lords and underlords, kings and dukes, and those next to kings waged eternal and ceaseless war against

each other. They could not mortgage their posterity-they had not then learned that art-but so grave became the situation, this lord and that baron building his castle, fortifying it, holding his retainers there to feed upon the less virile portions of the people and going out to make raids on his neighbor, every day in the week and all the year round, that something had to be done, else these feudal lords might have mutually destroyed each other and their peoples. The spirit of the living God was not dead in those days, but slumbered, it seems. The church had seemed powerless to prevent, and sometimes, I fear, not innocent of provoking the human crime under the name of war; but, finally, the church awoke. The historian Myers says that in the midst of this intolerable anarchy the church lifted up a protesting voice; that in the eleventh century there was a movement in France which aimed at complete ending of war be-tween Christians. The church, in the name of the God of peace, commanded all men to refrain from war and strife. Then, seeing they could not suppress the evil entirely, they concluded to try to limit it, and in A. D. 1041 they promulgated what was called the "Truce of God." All men were commanded to maintain holy and unbroken peace for four days of each week; that is, on Thursday, Friday, Saturday, and Sunday, for those, they said, were the days of our Savior's death and burial. His lying in the grave, and His resurrection, and therefore hely, so that man might not war from Wednesday night till Monday morning. Also this truce was to hold during certain sacred seasons of the year. All who might violate this decree were threatened with the severest penalties of the church. We need not be told that this decree was not entirely obeyed. historian says it did at least something in the eleventh and twelfth centuries to better conditions and "render life more tolerable!

The centuries from then till now have rolled by. They are stained with the crimes of a thousand wars. A new continent has been found and her shores drenched in the blood of savages, slain by Christian soldiers, in the name often of Christ, but really for the sake of gain. The blood stains have not been always from savage veins, but even more Christian than pagan blood, all shed by Christians has blackened the annals of those centuries. Religious frenzy and madness has shed some of the blood. But the spirit of the Man of Gallilee has grown in the hearts of men. The triumphs of peace have exalted man as never before, but with the wheat there has grown the thistle. The ambitious man, the battleship builder, who would fan our fears and keep alive the spirit of war, is with us, and we the descendants of those crude peoples of the Middle Ages have come to a period in our civilization, when by reason of agitation for greater battleships and more battleships, greater guns and more guns, greater armies and more armies, we need some one to proclaim for us anew a "Truce of God," so that at least one year we may rest from our labors of building instruments for the destruction of our fellow men.

I wanted every Member here to take an interest in this discussion, so when we came to take a vote on this question of whether we agree and even ask the other nations to have a "truce of God" and stop building these engines of destruction we would have in view something of the meaning and scope of this program and of this resolution. What is it? Shall we build and build and build in order that we may kill and kill and kill or shall we for one year have a truce of God? When Isabella pledged her jewels to raise the money that Columbus might take the voyage that sent him far across the sea to the discovery of this continent of ours it was a mortgage worthy of the object sought and an object worthy of the mortgage given, but when we as a civilized people propose and do place a mortgage upon our childrens' toil and heritage to make ours the most powerful and warlike Nation on earth we make a mortgage for an object not worthy of the sacrifice. If we place a mortgage on posterity in order that we may construct highways, in order that we may construct public buildings, in order that we may do this work and that work for the public good, it is worthy and posterity may well bear some of those burdens, but when we put a mortgage on posterity in order to gratify our ambition for power we are unworthy of the name of a Christian nation. I favor this resolution first because I am in favor of any provision looking to peace and some definite step toward the procurement of peace. As I said in the beginning, however loudly I may say I am for peace, if I arm myself with weapons of destruction when no man threatens me, no man in his senses will believe my profession. That is my first reason. I am for this resolution secondly because I know our strength and that no nation on earth will wantonly attack us, and every man in the sound of my voice and every sane man between the Atlantic and the Pacific knows that is true.

I am for this resolution thirdly because I do not believe that questions of right and wrong are rightly decided in the clash

of battle or by the biggest gun or strongest arm.

Fourthly, I am for this resolution because our peculiar position, our isolation far away from the strong nations of the world, makes us peculiarly favored for the adoption of a new line of conduct in regard to the settlement of national contro-Then I am for this resolution because I believe our Nation stands for justice and not for the attainment of our ends by might. Then I am for this resolution because we would hurt ourselves if we went to war. Should we conquer, we would hurt ourselves only less than we hurt the nation we It used to be that wars were waged for conquest, with the idea of levying tribute. Rome all over the world waged wars of conquest, and tribute was brought to the coffers of the home city. Slaves followed the chariot wheel of the conquering general; rich men were given provinces to govern and plunder, and these brought their riches home to the great But when a nation like Germany or England or the United States to-day conquers or acquires the government of another nation, they do not bring tribute home. They start in at once with the burden of sanitation and education and better government and the general elevation of the nation they have conquered or acquired. The story of wrong and oppression by the Belgian King of the savages of the Kongo is perhaps the last story of that kind to be written of Christian rulers or nations. What fools these mortals be, when England and Germany are menacing each other's peace. Suppose that Germany should cross the little channel and invade England and capture and dictate terms of peace in London. The next people after the English to suffer would be the Germans. Every merchant, every banker, every laboring man, every industry in Germany would feel to its hurt the thrill of suffering caused by the overthrow of the English Government and the disturbance of her industries or lessening of her prosperity. Let England conquer Germany and what is the result? Simply that among nations England would suffer next to Germany. In either case both nations would pile up debts and both peoples suffer. Is it possible that men are such fools that in this day and time that petent feet will not avend to them. that patent fact will not appeal to them? Are men such fools or such slaves of tradition or heredity they will not act upon that patent fact and stop preparing for war? If they are slow, if they are loath to act, let us take the initiative with those great nations far across the water, standing as they are along-side of each other, and lead them.

Suppose we should conquer Mexico. We could do it. I do not say that in a spirit of pride. We are so much bigger and stronger and richer in resources it would be no matter of pride for us to do it—no demonstration of our superiority as a people. We could put 100,000 men in the field and cross the Rio Grande and, in the present condition of disorder, we could march without difficulty to the City of Mexico. There would be no Battle of Chapultepec or Monterey, that in the forties made some names famous. It would be a hard and dusty march, and instead of scaling heights we might walk leisurely down their streets. After we got there what would we do? For 5 or 10 years we would struggle with the problems of restoring order and erecting a new civilization on the ruins of what is in Mexico to-day. Ten thousand of our boys would die on the weary way, 10,000 more would be diseased for the remaining years of their lives, and a long list of pensions would stand till you go down to the grave, and your children after you, and their children toddling after them, grew to manhood and old age. And when we have conquered Mexico what tribute would our conquering soldiers bring home? Surely none. The magnificent poise of the man who sits in the White House to-day has accomplished one thing that is an all-important thing. Nine months ago there were scattered all over our land hot-heads who said: "Cross the Rio Grande and show those people that they must respect American property and the Americans that are among them. March to Mexico and take possession, establish order, and annex them or rule them." Hot-heads were here and there and everywhere talking that way, but the voice of the occupant of the White House has made our people think, and when they began to think they began to say: "What good will come of it? Will we bring any captives in triumph home? Will we make any slaves of the people there to toil for their conquerors? Will we levy any tribute? Will we lighten any burden of our people? Will we exact any compensation for making the contest?" No. Our No. Our people know it now. They know also that we will stay there 5 or 10 years, and at the end of that time we will have a new pension list, we will have thousands and thousands of our boys in their graves and thousands more diseased, while if we do not intervene a hundred or two hundred Americans may die

at the hands of one party or the other. But I did not intend to go into that matter, and will only add that the wisdom of the President's policy toward Mexico shows him the fit leader of the greatest of all nations.

I am in favor of this resolution, further, because we have no vengeance to wreak and harbor no malice against any other

people or nation.

It has been argued here that it is futile to pass this resolution; that the nations of the earth will not pay any attention to That would be true if nations were not advancing toward the light. If ambitious men still ruled that would be true, but one has said in the course of this debate that if we do not succeed in such a thing here now, try, try again. Somebody said our President would be humiliated by the rejection of the proposition. He can not be humiliated by its rejection. Let the President make the proposition. It may not be in our day and time acceded to. It may be like the story of the cross, when the early apostles preached it. The doctrine was new and hateful to some. The learned doctors differed as to what course to pursue to put an end to the condemned doctrine, but one of them said: "Let it alone. If it be of God, you can not strike it down; and if it be not of God, it will come to naught." Let this proposition be rejected if it shall. What difference does it make to us? It is a doctrine that is of God, and it will live. Aye, if the shepherds were assembled again on the hills of Judea, and the angels above them could see this resolution scattered among the sons of men, and being read of all nations, I believe those shepherds might again hear the voices of the heavenly choir chant the old, old hymn, "Peace on earth, good will to men," as fitting to celebrate the introduction and passage of this resolution and the spreading of it abroad by the President of the United States among the nations of the earth; and if it is rejected by them, then will the Prince of Peace himself cry again, "Father, forgive them; they know not what they do." [Applause.]

Now, Mr. Speaker, the rest of my time I want to parcel out.

How much time have I left, Mr. Speaker?

The SPEAKER pro tempore (Mr. Callaway). Seven min-

Mr. HARDY. I will ask, Mr. Speaker, to reserve that time until I can dispose of it.

Mr. HENSLEY. Mr. Speaker, I ask that all Members who have spoken and those who may yet speak upon this resolution may be given five legislative days in which to extend their I ask that by unanimous consent.

The SPEAKER pro tempore. The gentleman from Missouri [Mr. Hensley] asks unanimous consent that all gentlemen who have spoken on this resolution may have five legislative days in which to revise and extend their remarks in the RECORD.

Mr. HENSLEY. Or who may yet speak upon the question.

Mr. MANN. All who speak. Mr. HENSLEY. Yes; all who speak.

The SPEAKER pro tempore. Is there objection?

There was no objection.

Mr. HENSLEY. Now, Mr. Speaker, I ask unanimous consent to amend the resolution, on line 2, after the word "the" and just before the word "Lord," by inserting the word "First," so as to make it read: "That in the opinion of the House of Representatives the declaration of the First Lord of the Admirality," and so forth.

The SPEAKER pro tempore. The Clerk will report the amendment offered by the gentleman from Missouri [Mr.

HENSLEY ].

The Clerk read as follows:

In line 2 of the resolution, after the word "the," insert the word "First," so that the resolution will read: "That in the opinion of the House of Representatives the declaration of the First Lord of the Admiralty," etc.

Mr. MANN. Mr. Speaker, that goes over. The previous question was ordered on the resolution and all pending amendments to be voted on on Monday.

The SPEAKER pro tempore. The Chair understands that the gentleman from Missouri asks unanimous consent.

Mr. HENSLEY. I will withdraw that, Mr. Speaker, and ask to have it considered as an amendment pending.

Mr. MANN. I have no objection to its being amended by unanimous consent.

Mr. HENSLEY. Then I ask unanimous consent, Mr. Speaker, that the resolution be amended in the way I have suggested.

The SPEAKER pro tempore. The gentleman from Missouri [Mr. Hensley] asks unanimous consent that the resolution be amended in the respect as read by the Clerk. Is there objection? [After a pause.] The Chair hears none, and the amendment is agreed to.

Mr. HARDY. Mr. Speaker, I want to yield the balance of my time to the gentleman from Illinois [Mr. BUCHANAN]; but before I do that, the gentleman from Oklahoma [Mr. Weaver] desires time, and I yield to him.

Mr. WEAVER. Mr. Speaker, on October 31, 1913, the gentleman from Missouri [Mr. Hensley] offered the following reso-

lution, No. 298, now pending before this House:

Intion, No. 298, now pending before this House:

Resolved, That in the opinion of the House of Representatives the declaration of the first lord of the admiralty of Great Britain, the Right Hon. Winston Churchill, that the Government of the United Kingdom is willing and ready to cooperate with other Governments to secure for one year a suspension of naval construction programs offers the means of immediately lessening the enormous burdens of the people and avoiding the waste of investment in war material.

Resolved, That a copy of this resolution be furnished the President, with the request that, so far as he can do so, having due regard for the interests of the United States, he use his influence to consummate the agreement suggested by the Right Hon. Winston Churchill.

I favor the resolution, hecause it is in over accord with well-

I favor the resolution, because it is in exact accord with wellconsidered opinions held by me for years and with the platform declarations I submitted to the Oklahoma people, which they

approved and ratified by electing me to this Congress.

I will discuss, in the first place, the proposition that the historic policy of the United States is for world peace; in the second place, the waste and wickedness of war; and, in the third place, the cost of war and who pays it. Then, I will suggest some uses to which vast sums now expended for the arm of the Government might wisely be diverted, military and finally I will inquire what practical remedies may be devised to relieve the peoples of the world from the burdens of military establishments.

What constitutes a sound policy of government for a Commonwealth? The foreign policy of a State and the domestic policy of a State are interwoven and inseparable. Let me give you what I conceive to be some of the great basic principles of the national policy for any Government—principles that will guide the administration of Woodrow Wilson. Some of the ideas I suggest are contained in the writings of Mr. Jefferson, especially the first inaugural address, which is the Sermon on the Mount to disciples of Democracy and to the lovers of liberty the wide world over. For some I am indebted to the great speech delivered by Mr. Gladstone, at West Calder, in November, 1879, on the "Domestic and foreign affairs of the British Empire," and others I draw from the history of our country and the spirit of our own times.

The first sound principle of foreign policy is good government at home. Economy and wise legislation produce wealth-national wealth and individual wealth-and they produce contentment and happiness of the people, confidence of the people in their Government, devotion to their Government-the very

sheet anchor of its safety.

The second great policy is that of avoiding entangling alliances with other nations. Washington said in his farewell address:

Against the insidious wiles of foreign influence the jealousy of a ee people ought to constantly awake, since history and experience ove that foreign influence is one of the most baneful foes of republican government,

Another principle is that every act of our Government in all its relations with its own citizens, with the several States, and with foreign nations shall be inspired by a deep love of individual freedom and of national independence.

They must be free or die Who speak the tongue that Shakespeare spake, The faith and morals hold that Milton held.

A fourth principle is to acknowledge the equal rights of all nations; to acknowledge that other nations have the right to be what the Colonies declared themselves to be-free and independent States. Acting upon this principle, the administration is preparing the way for the ultimate independence of the Philippines. All nations are not equal any more than all individuals are equal, but they are entitled to the same rights under international law, and in the phrase of the great Milton ought to be "If not equal all, yet free, equally free." Acting upon this principle the United States has recognized the independence and sovereignty of the Republic of China.

The United States in the year 1823, when but a feeble power among the nations of the world, yea, compared to its present stature an infant in swaddling clothes, assumed an unselfish and benevolent protectorate over the Latin-American nations by the famous message of President Monroe, in which he said:

In the discussions to which this interest has given rise, and in the arrangements by which they may terminate, the occasion has been deemed proper for asserting, as a principle in which rights and interests of the United States are involved, that the American continents by the free and independent condition which they have assumed and maintained, are henceforth not to be considered as subjects for future colonization by any Europeon power. \* \* \* We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their

part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the governments who have declared their independence and maintain it, and whose independence we have on great consideration and on just principles acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States.

The nations of Europe, or some of them at least, long claimed that such a deciaration was not altruistic on the part of the American Government. They believed that under the pretense of the development of American trade we had ultimate designs for the acquisition of territory. In the year 1836 some thousands of Americans who had settled in the Mexican State of Texas revolted against the despotism and misgovernment of that distracted country and on the battle field of San Jacinto-the Marathon of the New World-under the leadership of the heroic Houston, established the Texas Republic with the banner of a single star. That revolution resulted in the partial dismemberment of Mexico in the war by the United States with Mexico and in the acquisition by this country of the vast southwestern territory with California and the golden coast. The march of history has given color to the contention of Europe

But it remained for the President of the United States in the year 1913, in his speech before the Southern Congress at Mobile, to strip from the Monroe doctrine all semblance or possibility of selfishness and to maintain it inviolate, with the limitation

that-

Never hereafter will the United States voluntarily acquire one foot of additional soil upon the American Continent.

And the last essential of sound national policy I give in the language of Mr. Gladstone:

The aim, of foreign policy ought to be to preserve to the nations of the world—and especially, were it but for shame—when we recollect the sacred name we bear as Christians, especially to the Christian nations of the world—the blessings of peace.

On Tuesday, December 2, 1913, you heard the President of the United States, exercising the duty and prerogative enjoined by the Constitution, read a State paper to both Houses, a message marked by the characteristic sound judgment of the author and by a felicity and mastery of English speech possessed by the President alone. The President said:

President alone. The President said:

The country, I am thankful to say, is at peace with all the world, and many happy manifestations multiply about us of a growing cordiality and sense of community of interests among the nations, foreshadowing an age of settled peace and good will. More and more readily each decade do the nations manifest their willingness to bind themselves by solemn treaty to the processes of peace, the processes of frankness and fair concession. So far the United States has stood at the front of such negotiations. She will, I carnestly hope and confidently believe, give fresh proof of her sincere adherence to the cause of international friendship by ratifying the several treaties of arbitration awaiting renewal by the Senate. In addition to those, it has been the privilege of the Department of State to gain the assent, in principle, of no less than 31 nations, representing four-fiths of the population of the world, to the negotiation of treaties by which it shall be agreed that whenever differences of interest or of policy arise which can not be resolved by the ordinary processes of diplomacy they shall be publicly analyzed, discussed, and reported upon by a tribunal chosen by the parties before either nation determines its course of action.

There is only one possible standard by which to determine controversies between the United States and other nations, and that is compounded of these two elements: Our own honor and our obligations to the peace of the world. A test so compounded ought easily to be made to govern both the establishment of new treaty obligations and the interpretation of those already assumed.

This auspicious and optimistic declaration met immediate, spontaneous, enthusiastic approbation from Progressives, Republicans, and Democrats, because it declares not a partisan

but an American policy.

The historic policy of the United States is a peace policy.

Washington said, in September, 1796, in the farewell address to the people of the United States on his approaching retirement

from the Presidency:

from the Presidency:

Observe good faith and justice toward all nations; cultivate peace and harmony with all; religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at no distant period, a great nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt that, in the course of time and things, the fruits of such a plan would richly repay any temporary advantages which might be lost by a steady adherence to it?

Steb in the counsel of him whom Informan described as a very

Such is the counsel of him whom Jefferson described as our first and greatest revolutionary character, whose preeminent service had entitled him to the first place in his country's love and destined for him the fairest page in the volume of faithful history.

Jefferson himself, in stating what he deemed to be the essential principles of our Government and those that would shape

his administration as President, declared for-

Peace, commerce, and honest friendship with all nations, entangling alliances with none.

John C. Calhoun, in a speech in the Senate, paid eloquent tribute to the same exalted ideal:

A peaceful intercourse with the nations of the earth points to that inspiring day which philosophers have hoped for, which poets have seen in their bright dreams of fancy, and which prophets have beheld in holy vision—when men shall learn war no more. Who can contemplate a state of the world like this and not feel his heart exult with the prospect? I am against war because peace—peace is, above everything else,

state of the world like this and not reel his heart exuit with the propect? I am against war because peace—peace is, above everything else, our policy.

Our great mission as a people is to occupy this vast dominion; to level the forests and let in upon their solitudes the light of day; to clear the swamps and make them ready for the plow and the sickle; to spread over hill and dale the echoes of human labor and human happiness; to fill the land with cities and towns; to unite its most distant points by turnpikes and railroads; to scoop out canals and open rivers that may serve as highways for trade.

If we can preserve peace who shall set bounds to our trade or our success? With one foot planted on the Atlantic and the other on the Pacific, we occupy a position between the two old continents of the world—a position which necessarily secures to us the commerce, the influence of both. If we abide by the counsels of common sense, if we succeed in preserving our ilberties, we shall in the end exhibit a spectacle such as the world never saw.

I know this one great mission is encompassed with many difficulties, but such is the energy of our political system and such is its expansive capability that it may be made to govern the widest space.

If by war we become great, we can not be free; if we will be both great and free, our policy is peace.

If I had the gift of genius to paint a picture of war, I would

If I had the gift of genius to paint a picture of war, I would cast against a background of night the faint silhouette of the doomed city of Troy, and with a pencil "dipped in the gloom of earthquake and eclipse," I would draw the figures of Laocoön and his sons in their death agony, strangled by the serpents' coils.

The story of war is the oldest and yet the latest of the human race. While I speak our neighbor Republic of Mexico, as the President said, has no government. It is engulfed in the red maelstrom of civil war. The story of war is older than man. In his book The Descent of Man, Darwin discusses the "law of battle" existing, according to his theory, among man's progenitors

The survival of the fittest is the law of animate life.

For nature is one with rapine,
A harm no preacher can heal.
The May fly is torn by the swallow,
The sparrow speared by the shrike.
And the whole little wood where I sit
Is a world of plunder and prey.

Hobbs, the English philosopher, and Rousseau, the French philosopher, agree that warfare is the natural state of man. Rousseau celebrates the independence of savage life. He draws from it a lesson for the necessity of laws providing an armistice between States and for peace treaties among the nations.

At the time of the American Revolution the work of Montesquieu, The Spirit of Laws, was deeply studied. It was a fountain of living waters, where the constructive statesmen of that great age were accustomed to drink. Montesquieu holds that the beginning of war is simultaneous with the beginning of society.

Milton, in his great epic, Paradise Lost, draws a grand picture of war. He describes the fallen archangel walking with uneasy steps over the burning marl or standing on the

shore of the inflamed sea to call his legions:

the inflamed sea to call his legions;

He spake, and to confirm his words outflew
Millions of flaming swords, drawn from the thighs
Of mighty Cherubim; the sudden blaze
Far round illumined hell; highly they raged
Against the highest, and flerce with grasped arms
Clash'd on their sounding shields the din of war,
Hurling deflance toward the vault of heav'n.

The oldest books of man are books of battle. The Iliad tells of the nine years' war "far on the ringing plains of windy Troy." And in the eighteenth book is the description of the shield of Achilles forged by Vulcan, who wrought thereon bronze figures depicting all the life of Greece. He wrought two fair cities upon the shield. One with marriages and feasts, brilliant torches, and bridal songs; but the other city was besieged, for around it sat two hosts, glittering in arms, ready to destroy it.

The poetry of the ancient Hebrews celebrates the triumphs of battle:

I will sing unto the Lord,
For He hath triumphed gloriously;
The horse and his rider
Hath He thrown into the sea.
The Lord is a man of war;
The Lord is his name.
Pharaoh's charlots and his host
Hath He cast into the sea;
His chosen captains also
Are drowned in the Red Sea.

What story so terrible as the Bible story of the woman, who had robbed Naboth of his vineyard, thrown from the window of her palace, her flesh torn by dogs, her blood sprinkled on the horses, trodden underfoot by Jehu, the furious rider?

Go see now this cursed woman and bury her, For she is a king's daughter.

Such is an ancient picture of war, with its horrors, perhaps suggesting the lines from Byron's Siege of Corinth;

He saw the lean dogs beneath the wall Hold o'er the dead their carnival, Gorging and growling o'er carcass and limb; They were too busy to bark at him!

But he better could brook to behold the dying, beep in the tide of their warm blood lying, Scorch'd with the death-thirst, and writhing in vain, Than the perishing dead who are past all pain. There is something of pride in the perilous hour, Whate'er be the shape in which death may lower; For Fame is there to say who bleeds, And Honour's eye on daring deeds! But when all is past, it is humbling to tread O'er the weitering field of the tombless dead, And see worms of the earth, and fowls of the air, Beasts of the forest, all gathering there; All regarding man as their prey, All rejoicing in his decay.

Perhaps the destruction and the waste of war are a greater calamity to the world than its sickening cruelties. Let me bring to your minds a passage from a speech of the brilliant Sheridan before the British House of Lords in the prosecution of Warren Hastings, describing the desolation of the spoliated Hindoo Province of Oude:

If, my lords, a stranger had at this time entered the Province of Oude, ignorant of what had happened since the death of Sujah Dowlah—that prince who with a savage heart had still great lines of character, and who with all his ferocity in war had, with a cultivating hand, preserved to his country the wealth which it derived from benignant skies and a prolific soil—if, observing the wide and general devastation of fields unclothed and brown, of vegetation burned up and extinguished, of villages depopulated and in ruin, of temples unroofed and perishing, of reservoirs broken down and dry, this stranger should ask, What has thus laid waste this béautiful and opulent land, what monstrous madness has ravaged with widespread war, what desolating foreign foe, what civil discords, what disputed succession, what religious zeal, what fabled monster has stalked abroad and, with malice and mortal enmity to man, withered by the grasp of death every growth of nature and humanity, all means of delight, and each original, simple principle of bare existence?—what would have been the answer?

OKLAHOMA WINS THE PRIZE.

OKLAHOMA WINS THE PRIZE.

Let me read to you now an article on war, written by a citizen of my own State. Some day, by leave of my colleagues not to interfere with public business, I propose to deliver an oration in this House on "Oklahoma," a State that produces more than half the total broom-corn crop and more than one-fourth of the total petroleum product of the United States—in fact, more broom corn and less tobacco, more oil and less whisky, than any other State in the Union.

I would like to tell the story of a great State evolved from the primal solitude by the genius and the toil of the American ploneer and the story of a great city—Oklahoma City, my home, the capital and the metropolis, a city of 75,000 people where 25 years ago was but a wind-swept prairie swell—a story more wonderful than the building of the palace of Aladdin.

While Right Hon. James S. Bryce was rewriting his American Commonwealth, five or six years ago, he went down to Oklahoma to see at first hand the making of an American Commonwealth. In the appendix to the first volume of the new edition, to illustrate the growth of progressive government on this continent, Mr. Bryce prints first the Articles of Confederation; second, the Constitution of the United States; and, third, the constitution of Oklahoma, to prove that

Time's noblest offspring is the last.

In the New York periodical, Life, in the issue of September 30, 1913, appears an article on "War," which I take great pleasure and pride in presenting to the House. That periodical offered a prize of \$300 for the best original arraignment of war in 500 words or less. Two thousand four hundred and ninetytwo articles were received, and from the total number the judges of the contest selected the one written by James Logan Mosby, of Francis, Pontotoc County, Okla.:

WAR.

(By James Logan Mosby, of Francis, Pontotoc County, Okla.)

(By James Logan Mosby, of Francis, Pontotoc County, Okla.)

I was conceived in passion, hatred, envy, and greed; born in the morning of antiquity, and have a genealogy whose every page drips with the red blood of murdered innocence. I respect neither the feebleness of gray hairs, the helplessness of infancy, nor the sacredness of virtue, and walk, iron-shod, ruthlessly and impartially over the form of the weakling or the form of the giant.

I paint the midnight skies a lurid glow from the burning homes I have ravaged, and I turn peaceful scenes of rural beauty, where God's own creatures dwell together in amity, into a raging hell. I set neighbor against neighbor in deadly combat, and I incite the brother to slay his brother.

I make puppets of kings, princes of paupers, courtiers of courtesans, and thieves of respected subjects, and empires melt before my breath as does mist before the morning sunlight.

I make of religion fanaticism; the heathen I make a field incarnate; and of all men I make playthings devoid of reason and justice. Through intrigue I make the intelligent powerful, the unscrupulous wax fat on the spoils of blood-won victories gained by others, and the less learned suffer for their own ignorance.

Famine, want, and misery follow in my path; I lay waste green fields and still the hand of industry. I pillage the land of its resources, but contribute nothing of benefit to mankind, leaving pestilence to stalk ghostlike in my wake and complete the work of destruction.

I lay a heavy tribute upon my most loyal subjects for the maintenance of my establishment; I squander the vitality and lives of those who serve me faithfully, yet return to the world nothing but ruin and ashes. The baubles of fame I confer on some are the empty shells of false standards wherein the license to commit murder and rapine is held to be the insignia of glory by a mistaken civilization.

I can offer no excuse for my having come into existence nor can I give one plausible reason why I should not cease to be, other than that so long as men who wield influence are permitted to gratify their self-ish desires and ambitions at the expense of the many who must carry the burdens and endure the suffering, that long will I continue to exact my toil of sorrow, devastation, and death. For I am pitiless, devoid of all feeling; I fear neither man nor God; I am amenable to no law; and I am in myself the law and the last resort.

Mr. Speaker, I recreet the absence of the santilements.

Mr. Speaker, I regret the absence of the gentleman from Alabama [Mr. Hobson], whose speech on Tuesday against this resolution was marked by a technical knowledge superior, perhaps, to that of any other Member of this House and bore a resemblance so striking to the speech of my good friend on the other side of the Chamber, the eloquent gentleman from Pennsylvania [Mr. Moore], who represents with great ability the opinions and the interests of his constituents, his Philadelphia constituents, engaged in the legitimate and very remunerative business of building battleships. Indeed, the two speeches were so much alike that if we had not known that the "Whispering Stones" were under the Dome of the Capitol and not in this Chamber we might have concluded there was but one speech and the responsive echo.

The proposal of the gentleman from Alabama [Mr. Hobson] for the United States to build a navy in the Atlantic equal to the greatest European navy, and one in the Pacific equal to the greatest Asiatic navy is the very essence of militarism. Such a program would bankrupt our Nation. It is unworthy of the American spirit and more in keeping with the temper of the warlike Greeks when Sparta was a vast military camp and when even in beautiful Athens, with its ivory gods and its tem-ples of snowy marble the Greek conception of the highest manhood was not Phidias the sculptor, nor Pericles the orator, nor Aristotle the thinker, but the highest type was the victorious soldier crowned among his comrades in arms in the field with garlands, and when fallen in battle fabled to belong to the

golden race.

The gentleman from Alabama [Mr. Hobson] appeared to exhibit a more intimate knowledge of the man behind the gun and the gentleman from Pennsylvania [Mr. Moore] of the man who made the gun. But both gentlemen were alike oblivious of any consideration affecting the welfare of the man who pays for

The distinguished gentlemen, I do not question, are sincere in the advocacy of their cause, and, of course, as much entitled to their views as I am to mine. But they greatly mistake the temper of the American people if they imagine such a policy will find sympathy with the tax-burdened masses who pay the cost of building battleships. The American people hear the cry, "Awake, arise, or be forever fallen."

They are deeply and strangely moved by the spirit of the times to the study of great public questions of their own Government. They are inquiring as never before. They are asking questions—what Webster called "miserable interrogatories"—ques-

tions like these:

What is the cost of battleships? Who pays the cost of battleships? Are they worth what they cost?

What do I get out of it? What is all this worth?

When I was a boy in my native State of Texas Richard Coke, one of their United States Senators, was a popular idol. He was a plain, blunt, old-fashioned man, with a level head, and the Texas people called him "Old Brains." This rough sobriquet came into my mind the other day when the gentleman from Tennessee [Mr. Sims], speaking in favor of this resolution, condensing the whole matter in a few words, said (I read from the Congressional Record of December 2):

Mr. Sims. Mr. Speaker, I am not versed in technical learning with reference to naval equipment. I am not going to try to use that character of language that gives the impression that a man has studied the technique of this thing but it has developed in this debate that one of these ships to be constructed is to cost practically \$15,000,000. It does not take technical knowledge of naval affairs or naval construction to know that \$15,000,000 is \$15,000,000 and when we we \$1,000,000,000,000 it does not take a man technically equipped to know that you can pay \$15,000,000 of that debt with what it will cost to create one of these instruments of destruction by which the national debt will be further augmented. We will make no mistake if we do not build a single battleship, and if we have money to build instruments of destruction, then we have the money to pay that much of our national debt and stop the interest thereon.

What is the cost of battleships? I am advised by the Bureau of Ordnance of the Navy Department that the cost of the Pennsylvania is approximately \$14,000,000 and the cost of the Texas \$12,000,000. The Texas, one of the newest, which is just about to go into commission, has for her main battery ten 14inch 45-caliber guns. The cost of these guns, manufactured at the Washington Navy Yard, is \$51,763 each. These guns can be fired 175 rounds each before it is necessary to remain when this is done it will cost approximately \$15,000 per gun. ammunition fired in target practice costs \$240.43 per round. The cost of ammunition per round used in battle is \$777.19 per round

It is thus seen that to fire a single cartridge in battle from one gun costs nearly \$800, and that is more money than the average farmer or wage earner gets for a year's hard work. The cost of firing the 10 guns one time in battle is approximately \$8,000.

I read from an official statement of the Department of the Navy a summary of vessels in the Navy July 1, 1913, including those ratified by act of Congress approved August 22, 1912:

Summary of vessels in the United States Navy July 1, 1913. [Including those authorized by act of Congress approved Aug. 22, 1912.]

	Fit for service, including those under repair.		Under con- struction.		Authorized.		Total.

1912	123, 924, 783, 27

Total for 30 years\_

The naval appropriations have increased from the minimum of about \$16,000,000 in 1884 to the maximum of \$139,000,000 in 1909. These vast sums of money, incredible to contemplate, are the expenditures of but a single branch of the military estab-

lishments of the country—the Navy alone. I come now to the second inquiry I suggested, and that is, Who pays the cost of battleships? Why, the people pay for them, of course. The revenues of the Government are based upon tariff taxes and tariff taxes are a tax on the consumer. It follows, therefore, that the cost of battleships is paid in almost direct proportion to the population of the country. The total naval appropriations for the last seven years-since my State of Oklahoma was admitted to statehood-is the sum of \$857,899,371.27. On the basis of population the people of the single State of Oklahoma, one of the new States of this Union. besides the burden of local taxation, in seven years have had \$17,000,000 taken out of their pockets to pay for the main-tenance of the United States Navy, a single item of expense during a period of profound peace. Do you believe that if the tax was direct instead of indirect that the proud, self-respecting citizens of the great Commonwealth of Oklahoma, already oppressed with the burdens of taxation-always oppressive in a new community and doubly so in Oklahoma, where much of the Indian land is nontaxable—do you believe they would pay this tax without protest? No. Such injustice would lead to revolu-

Not only do the people, the masses of the people, pay the cost of maintaining armies and navies in time of peace, but they fight the battles of the country in time of war. You can not name a war of history that was not a rich man's war and a poor man's fight.

Plutarch has preserved for us a fragment of the speech of Tiberius Gracchus more than a hundred years before the Christian era, depicting the wrongs of the private soldier:

The wiid beasts of Italy have their caves to retire to, but the brave men who spill their blood in her cause have nothing left but air and light. Without houses, without settled habitations, they wander from place to place with their wives and children; and their generals do but mock them when, at the head of their armies, they exhort their men to fight for their sepulchers and the gods of their hearths, for among such numbers perhaps there is not one Roman who has an altar that has belonged to his ancestors or a sepulcher in which their ashes rest. The private soldiers fight and die to advance the wealth and luxury of the great, and they are called masters of the world without having a sed to call their own.

The next question is, Are they worth what they cost? and I will let the Secretary of the Navy, Mr. Daniels himself, answer that. In a recent speech referring to the proposal of Lord Winston Churchill, Mr. Daniels said:

I believe that such an agreement must be made sooner or later for economic reasons. The hysteria of naval preparations is proving too great a burden for the people. We ourselves are spending about \$140.000,000 annually on our Navy and an equal amount on our Army. New vessels are superseding and making obsolete all that have been built before. The world to-day is facing the anomaly of making its navy less adequate by increasing it, for when new vessels are built with their more powerful armament they render useless the smaller warships, save for coast defense.

But the menace to the Navy by reason of the small vessels becoming obsolete on account of the building of dreadnoughts is not the only menace to the Navy. It was stated by a naval expert, the gentleman from Alabama [Mr. Hobson], in his speech the other day, that the vessels suffer a deterioration of 10 per cent per year from rust and ravages of time, so that according to his calculation in 10 years the vessels go to the junk pile for old iron. Again the development of submarine bonts will probably in the near future result in the most powerful battleships being defenseless against an enemy, invisible, fighting from the deeps of ocean.

In the third place, a greater menace is the navigation of the air, wherely powerful explosives falling from the clouds upon the battleships, their decks dense with human life, will engulf vessel and crew in one appalling ruin-

To sink into the depths with bubbling groan, Without a grave, unknelled, uncoffined, and unknown.

So that the prophecy of 50 years ago, written by England's poet laureate, will be realized:

For I dipt into the future, far as human eye could see; Saw the vision of the world, and all the wonder that would be; Saw the heavens fill with commerce, argosies of magic sails, Pilots of the purple twilight, dropping down with costly bales; Heard the heavens fill with shouting, and there rain'd a ghastly dew From the nations' airy navies grappling in the central blue.

The United States does not need an Imperial Armada. The frontiers of Europe oscillate on the map, but the boundaries of our country are changeless and eternal where the eastern and the western seas beat on their cold, gray stones. Three thousand miles of dark and deep blue ocean roll between us and Europe. Six thousand miles and more between us and nearest Asia; and there is not a world power that can land an army on American soil for a day without destruction to that army. The War between the States demonstrated the latent strength of a sleeping giant—the citizen soldier of America. In 1847, in the city of New Orleans, at a public reception of the volunteers in the War with Mexico, returning from Gen. Taylor's army, the eloquent Sergeant Smith Prentiss, once a Member of this House, paid a just tribute to the volunteer soldiers, true then and true now. He said:

now. He said:

We honor the Army, but we look upon our citizen soldiers with a different and peculiar pride. They are part and parcel of ourselves. They have taught us the secret of our vast strength. We now know the mighty nerve and muscle of the Republic. We evoke armies as if by magic, rapidly as they came forth from the sowing of the dragon's teeth; at a nod they disappear, as though the earth had swallowed them up. But they are not gone. You will find them in the forest, in the field, in the workshop, in the chambers of the sick, at the bar, in the councils of the country. They have returned to their old professions and pursuits. Let but the trumpet sound and again they spring up, a crop of armed men. Indeed, it is a noble sight, worthy of the genius of this great Republic, to behold, at the call of the country, whole armies leap forth in battle array, and then, when their services are no longer needed, fall quietly back and commingle again with the communities from whence they came. Thus the dark thunder cloud, at nature's summons, marshais its black battalions and lowers in the horizon; but at length, its lightnings spent, its dread artillery silenced, its mission finished, disbanding its frowning ranks, it melts away into the blue ether, and the next morning you will find it glittering in the dewdrops among the flowers, or assisting, with its kindly moisture, the growth of the young and tender plants.

Ours is not the only country where the substance of the people

Ours is not the only country where the substance of the people is wasted in preparations for war. The public debt of the United States on the 1st day of July, 1913, was \$1,028,564,055.14. With resources fractional compared to ours, the great powers of Europe reel and stagger under burdens heavier far than ours. I read you a statement showing the public debt in the year 1912 of some of the great powers:

Great Britain	\$3, 527, 270, 000
Spain	1, 911, 254, 000
Russia	4, 650, 607, 000
Japan	1, 271, 745, 000
Italy	2, 669, 748, 000
German Empire	1, 224, 808, 000
German States	3, 671, 205, 000
France	6, 280, 791, 000
Austria	1, 403, 048, 000
Hungary	1, 159, 554, 000

The debt of the past wars, maintenance of military establishments, and preparations for future wars constitute a deadly virus that burns in the veins and eats into the heart of the nations of Europe like the poisoned blood of the envenomed robe of Hercules.

Such was the condition of France before the days of the French revolution; such the condition that led to the reign of terror when the fiery Danton cast his high defiance at the nations of Europe:

The coalized kings threaten us, We hurl at their feet as gage of battle The head of a king.

To pass this resolution for a suspension, even for a year, of a program of building battleships and to get the great powers of the world to agree to that proposition is a step in the right direction. This House will pass the resolution by almost a unanimous vote. No one doubts that the Executive and the Department of State will cooperate with this House through diplomatic channels in so noble a consummation. Indeed, the administration already has accomplished a great and noble achievement on behalf of world peace, an achievement that will live perhaps in history when the Underwood tariff law and the Glass currency law and the farmers' credit law and the trust legislation of this Congress, beneficent as they will be, are for-

Hardly had Mr. Bryan entered upon the duties of his great office until he presented to the nations of the world a practical proposition in the interest of reconciling international differences without war, a proposition which, I believe, will be productive of infinite good. I will read you President Wilson's peace proposal and the supplementary memorandum by the Secretary of State:

PRESIDENT WILSON'S PEACE PROPOSAL

The parties hereto agree that all questions of whatever character and nature, in dispute between them, shall, when diplomatic efforts fail, be submitted for investigation and report to an international commission (the composition to be agreed upon); and the contracting parties agree not to declare war or begin hostilities until such investigation is made and report submitted.

The investigation shall be conducted, as a matter of course, upon the initiative of the commission, without the formality of a request

from either party; the report shall be submitted within (time to be agreed upon) from the date of the submission of the dispute; but the parties hereto reserve the right to act independently on the subject matter in dispute after the report is submitted.

SUPPLEMENTARY MEMORANDUM BY SECRETARY OF STATE.

SUPPLEMENTARY MEMORANDUM BY SECRETARY OF STATE.
